**DATE**: Nov 26 2012 **ARC Review Code**: R1211261

TO: Mayor Mario Avery

ATTN TO: Jessica Guinn, City of Fairburn FROM: Doug Hooker, Executive Director

The Atlanta Regional Commission (ARC) has completed a preliminary regional review of the following Development of Regional Impact (DRI). ARC reviewed the DRI with regard to conflicts to regional plans, goals, and policies and impacts it might have on the activities, plans, goals, and policies of other local jurisdictions as well as state, federal, and other agencies. The preliminary report does not address whether the DRI is or is not in the best interest of the local government.

Name of Proposal: Exeter Expansions

**Review Type**: DRI **Submitting Local Government**: City of Fairburn

<u>Date Opened</u>: Nov 26 2012 <u>Deadline for Comments</u>: Dec 11 2012 <u>Date to Close</u>: Dec 16 2012

<u>Description</u>: This project, located in the City of Fairburn, is a proposed expansion to an existing warehouse development. The two existing buildings are 346,288 square feet and 400,255 square feet. The proposed expansion will include two additional buildings will be 353,400 square feet and 382, 705 resulting in an overall project square footage of 1,482,648 square feet. The proposed project is located northeast of the Oakley Industrial Boulevard and Fayetteville Road intersection.

### **DRI Checklist Preliminary Summary:**

Regional Consistency Assessment (50%): 100%

Local Impacts Assessment (30%): 100%

Quality Development Assessment (20%): 100%

Overall Weighted Score: 97%

Draylo R. Hoke

### PRELIMINARY COMMENTS:

Regional Context:

According to the ARC Unified Growth Policy Map (UGPM) and the Regional Development Guide (RDG), the proposed Exeter Expansions development is within an area designated as Developing Suburbs and is also located within an Industrial/Logistics area.

The RDG states that Developing Suburbs are areas in the region where suburban development has occurred and the conventional development pattern is present but not set. These areas are characterized by limited commercial and residential development. These areas represent the extent of the urban service area, and the region's first attempts at suburban smart growth can be found in these areas. The region should strive to develop these areas in a more sustainable way than the existing development model. To this end, there is a need for additional preservation of critical environmental locations, as well as agricultural and forest uses adjacent to rural areas.

Limited existing infrastructure in these areas will constrain the amount of additional growth that is possible. Some transportation improvements may be needed within these developing suburbs, but care should be taken not to spur unwanted growth.

The RDG states that Industrial and Logistics Areas represent the major intermodal freight facilities and major logistics centers of the region. As a strategic economic sector, the region should strive to protect these areas and ensure they are well served by the regional transportation network.

#### Comments:

The proposed development is located in an area that is rapidly changing and is becoming dominated by industrial and warehouse uses. It is important to promote compatible uses where possible, as well as identify and mitigate potential land use conflicts as the area continues to develop.

Based on the submitted project location map and the USGS coverage for the project area, the proposed project site is located entirely within the Flint River Water Supply Watershed which is a large water supply watershed (greater than 100 square miles in area) as defined in the Part 5 Environmental Minimum Planning Criteria. Under the Part 5 Criteria the only criteria that apply in a large water supply watershed without a water supply reservoir are requirements for hazardous waste handling, storage and disposal.

The USGS coverage for the project area and the submitted site plan show a blue line stream running along a portion of the north side of the project property. No development is shown within City or State buffers on the submitted site plan. All proposed development on the property near the stream will need to conform to the requirements of the Fairburn Stream Buffer ordinance's 75-foot stream buffer as well as the State 25-foot Sediment and Erosion Control Buffer. Any other waters of the state on this property will also be subject to the State buffer requirements.

See additional comments from ARC staff and comments from GDOT.

### DEVELOPMENT OF REGIONAL IMPACT **REOUEST FOR COMMENTS**

Instructions: The project described below has been submitted to this Regional Development Center for review as a Development of Regional Impact (DRI). A DRI is a development of sufficient project of sufficient scale or importance that it is likely to have impacts

beyond the jurisdiction in which the project is actually located, such as adjoining cities or neighboring counties. We would like to consider your comments on this proposed development in our DRI review process. Therefore, please review the information about the project included on this form and give us your comments in the space provided. The completed form should be returned to the RDC on or before the specified return deadline. Preliminary Findings of the RDC: **Exexter Expansions** See the Preliminary Report. Comments from affected party (attach additional sheets as needed): Individual Completing Form: Local Government: Please Return this form to: Jon Tuley, Atlanta Regional Commission 40 Courtland Street NE Department: Atlanta, GA 30303 Ph. NOTE: This and other DRI Review forms provided by the Department are intended for use as tools to assist regional staff in the formulation of their recommendations to their executive directors and Regional Councils and to the communities they serve. Their proper use facilitates statewide procedural consistency and service delivery. Regardless of the recommendations generated by this form, all findings subsequently issued by the Regional Commission are reflective solely of the Commission's own judgment and discretion. Nothing presented in this form is binding upon the exercise of the authority granted to the Regional Commission by Georgia law and Departmental rules. The findings issued by the Regional Commission are purely advisory and are in no circumstance binding upon the authority granted to the host local government by Georgia law.

#### EXETER EXPANSIONS OAKLEY INDUSTRIAL BOULEVARD DRI

### City of Fairburn Environmental Planning Division Review Comments

### November 19, 2012

### **Water Supply Watershed and Stream Buffer Protection**

Based on the submitted project location map and the USGS coverage for the project area, the proposed project site is located entirely within the Flint River Water Supply Watershed which is a large water supply watershed (greater than 100 square miles in area) as defined in the Part 5 Environmental Minimum Planning Criteria. Under the Part 5 Criteria the only criteria that apply in a large water supply watershed without a water supply reservoir are requirements for hazardous waste handling, storage and disposal.

The USGS coverage for the project area and the submitted site plan show a blue line stream running along a portion of the north side of the project property. No development is shown within City or State buffers on the submitted site plan. All proposed development on the property near the stream will need to conform to the requirements of the Fairburn Stream Buffer ordinance's 75-foot stream buffer as well as the State 25-foot Sediment and Erosion Control Buffer. Any other waters of the state on this property will also be subject to the State buffer requirements.

### **Storm Water/Water Quality**

All projects should adequately address the impacts of the proposed development on stormwater runoff and downstream water quality. During construction, projects should conform to the relevant state and federal erosion and sedimentation control requirements. After construction, water quality will be impacted due to polluted stormwater runoff. ARC has estimated the amount of pollutants produced after the construction of the entire proposed development, based on the submitted site plan. These estimates are based on some simplifying assumptions for typical pollutant loading factors (lbs/ac/yr). The loading factors are based on the results of regional storm water monitoring data from the Atlanta Region. The assumed impervious surface amounts and percentages are those that are typical for each land use type in the Atlanta Region. Actual loadings will reflect actual impervious amounts and other existing conditions on the site. The total site area, as shown on the submitted plans, is used for this calculation. The following table summarizes the results of the analysis for this proposal:

### **Estimated Pounds of Pollutants per Year**

Land Use	Land Area (ac)	Total Phosphorus	Total Nitrogen	BOD	TSS	Zinc	Lead
Heavy Industrial	92.37	133.94	1777.20	11823.36	73434.15	153.33	19.40
TOTAL	92.37	133.94	1777.20	11823.36	73434.15	153.33	19.40

Total Percent Impervious: 80%

In order to address post-construction stormwater runoff quality, the project should implement stormwater management controls (structural and/or nonstructural) as found in the Georgia Stormwater Management Manual (<a href="www.georgiastormwater.com">www.georgiastormwater.com</a>) and meet the stormwater management quantity and quality criteria outlined in the Manual. Where possible, the project should utilize the stormwater better site design concepts included in the Manual.
