A & R Project # 16-106

## EXECUTIVE SUMMARY

Traffic impacts were evaluated for the added traffic from the proposed Longacre industrial development located on Roy Carlson Boulevard between SR 13 (Buford Highway) and I-985 in Buford, Georgia. The development will consist of:

- Warehousing: 947,520 square feet
- Industrial Park: 455,600 square feet
- Shopping Center: 40,000 square feet

The development proposes access via Roy Carlson Boulevard, and, for the purpose of this analysis, an additional right-in/right-out/left-out access point on Thompson Mill Road between Bryant Road and I-985. Existing and future operations after completion of the project were analyzed at the intersections of:

- SR 347 (Friendship Road) at I-985 Northbound Ramps
- SR 347 (Friendship Road) at I-985 Southbound Ramps
- SR 347 (Friendship Road) at SR 13 (Atlanta Highway)
- SR 13 (Buford Highway) at Roy Carlson Boulevard
- SR 13 (Buford Highway) at Thompson Mill Road
- SR 13 (Buford Highway) at S. Hill Street/Hamilton Mill Road
- Thompson Mill Road at Bryant Road
- Thompson Mill Road at N. Bogan Road

The analysis included the evaluation of Future operations for “No-Build” and “Build” conditions, both of which account for increases in annual growth of through traffic. The results of the analysis are listed below:

## System Recommendations and Improvements

Improvements that are identified as “System Improvements” address deficiencies that are found within the existing road network prior to any impacts from the proposed development’s added traffic. A summary of the system improvements, which address deficiencies that are found within the existing road network for the “No-Build” conditions, is provided below with more detailed information on each intersection in the following narratives.

### **Summary of Recommended System Improvements**

- Construct a dedicated channelized right turn lane on the northbound, southbound, and eastbound approaches to the intersection of Thompson Mill Road at N. Bogan Road.

#### **Thompson Mill Road at N. Bogan Road**

Several approaches to the intersection of Thompson Mill Road at N. Bogan Road will begin to operate at a level-of-service “E” or “F” in the “No-Build” conditions. As traffic will increase over the next ten years, it is recommended that a dedicated right turn lane be installed per local standards on the northbound, southbound, and eastbound approaches.

## Site Access Configuration

The following access configuration was utilized when modeling the proposed site driveway intersection.

- Site Driveway #1: Truck and employee access via Roy Carlson Boulevard
  - This intersection will be upgraded as part of GDOT project PI #132950 to include signalization as well as the relocation of Thunder Road to align with Roy Carlson Boulevard.
  - As access to SR 13 (Buford Highway) via Thunder Road and Bryant Road will be eliminated, the existing traffic at the intersection was shifted to the proposed signal at Roy Carlson Boulevard as part of the “No-Build” and “Build” analyses.
  - This driveway will consist of two entering lanes and two exiting lanes. The westbound (driveway) approach is assumed to operate with a dedicated left turn lane and shared through/right turn lane.
  - Entering left turn movements will be made from a dedicated southbound left turn lane. It is recommended the signal include a southbound protected + permissive phase for entering left turns (See Appendix).
  - Entering right turn movements will be made from a dedicated northbound right turn lane.
- Site Driveway #2: Right-in/right-out/left-out access on Thompson Mill Road
  - For the purpose of this study, this driveway will only be used by employee/car traffic. Truck traffic will be able to use this access only in emergency situations.
  - As this access geometry was agreed upon by Gwinnett County DOT for the purpose of this study, further discussions will need to take place on the final layout of the driveway.
  - This driveway will consist of one entering lane and one exiting lane.
  - Entering right turn movements will be made from a dedicated westbound right turn lane.
  - The intersection will be unsignalized with a STOP sign on the southbound approach.

## Site Mitigation Recommendations and Improvements

Improvements that are identified as site mitigation improvements address deficiencies that are caused by site traffic and can be identified as related to the proposed development. A summary of the site mitigation improvements is provided below, with more detailed information in the following narrative.

### Summary of Recommended Site Mitigation Improvements

- It is recommended a second westbound left turn lane be constructed using the existing striping at the intersection of SR 347 (Friendship Road) at SR 13 (Atlanta Highway).

#### SR 347 (Friendship Road) at SR 13 (Atlanta Highway)

After the addition of site traffic, the intersection of SR 347 (Friendship Road) at SR 13 (Atlanta Highway) will begin to operate at an overall level-of-service “E” during the AM and PM peak hours. Due to the added amount of westbound left turns at the intersection, it is recommended a second westbound left turn lane be installed using the existing striping and given protected signal phasing. With this improvement, the intersection will begin to operate at a level-of-service “D” in the AM and PM peak hours.

# INTRODUCTION

The purpose of this study is to determine the traffic impact that will result from the proposed Longacre industrial development located on Roy Carlson Boulevard between SR 13 (Buford Highway) and I-985 in Buford, Georgia. The development will consist of:

- Warehousing: 947,520 square feet
- Industrial Park: 455,600 square feet
- Shopping Center: 40,000 square feet

The development proposes access via Roy Carlson Boulevard, and, for the purpose of this analysis, an additional right-in/right-out/left-out access point on Thompson Mill Road between Bryant Road and I-985. The AM and PM peak hours have been analyzed in this study. In addition to the site access point on Thompson Mill Road, this study includes the evaluation of traffic operations at the intersections of:

1. SR 347 (Friendship Road) at I-985 NB Ramps
2. SR 347 (Friendship Road) at I-985 SB Ramps
3. SR 347 (Friendship Road) at SR 13 (Atlanta Highway)
4. SR 13 (Buford Highway) at Roy Carlson Boulevard
5. SR 13 (Buford Highway) at Thompson Mill Road
6. SR 13 (Buford Highway) at S. Hill Street/Hamilton Mill Road
7. Thompson Mill Road at Bryant Road
8. Thompson Mill Road at N. Bogan Road

Recommendations to improve traffic operations have been identified as appropriate and are discussed in detail in the following sections of the report.

## STUDY NETWORK DETERMINATION

The study network was determined by evaluating the amount of traffic that the proposed development will add to each roadway segment in the area. According to GRTA requirements, a roadway segment carries a “significant” amount of traffic if the project contributes 7% or more trips to the two-way daily service volumes of the roadway at the appropriate level of service standard. Upon agreement with GRTA a level of service standard of “D” was used for determining the study area network.

The traffic generated by the proposed project was then assigned to the area roadways using the trip distribution to determine the site-generated traffic on each roadway segment. The boundaries of the study network extend to the most distant intersections where at least 7% of the service volumes on the segment are attributed to project traffic. The following study intersections fell within the 7% rule and/or have been selected as being suitable for evaluation in discussions with GRTA, GDOT, Gwinnett County and the City of Buford:

1. SR 347 (Friendship Road) at I-985 NB Ramps
2. SR 347 (Friendship Road) at I-985 SB Ramps
3. SR 347 (Friendship Road) at SR 13 (Atlanta Highway)
4. SR 13 (Buford Highway) at Roy Carlson Boulevard
5. SR 13 (Buford Highway) at Thompson Mill Road
6. SR 13 (Buford Highway) at S. Hill Street / Hamilton Mill Road
7. Thompson Mill Road at Bryant Road
8. Thompson Mill Road at N. Bogan Road

The location of the development and the surrounding study network is shown in Figure 1. Other intersections within this corridor, such as unsignalized side streets, right-in/right-out driveways or private driveways have not been included in the study network.

### Existing Roadway Facilities

The following is a brief description of each of the roadway facilities located in proximity to the site:

#### ***Interstate 985***

Interstate 985 (I-985) is a north-south, four-lane, median-divided roadway with a posted speed limit of 70 mph in the vicinity of the site. GDOT traffic counts (Station IDs 1390407 & 1350269) indicate that the daily traffic volume on I-985 is 61,700 vehicles per day south of SR 347 (Friendship Road) and 61,700 vehicles per day north of Hamilton Mill Road.

#### ***SR 347 (Friendship Road)***

SR 347 (Friendship Road) is an east-west, four-lane, median-divided roadway with a posted speed limit of 45 mph in the vicinity of the site. GDOT traffic counts (Station IDs 1390403, 1390405 & 1390487) indicate that the daily traffic volume on SR 347 (Friendship Road) is 16,300 vehicles per day west of SR 13 (Atlanta Highway), 19,200 vehicles per day west of I-985, and 14,900 vehicles per day east of I-985. GDOT classifies SR 347 (Friendship Road) as a Minor Arterial.

### ***SR 13 (Buford Highway/Atlanta Highway)***

SR 13 is a north-south roadway known as Atlanta Highway in Hall County and as Buford Highway in Gwinnett County. Atlanta Highway is a two-lane, undivided roadway with a posted speed limit of 45 mph in the vicinity of the site. Buford Highway is a two-lane, undivided roadway to the north of Sawnee Avenue and a four-lane, median-divided roadway to the south of Sawnee Avenue. Buford Highway has a posted speed limit of 45 mph to the north of Roy Carlson Boulevard and 50 mph to the south of Roy Carlson Boulevard.

GDOT traffic counts (Station IDs 1390165 & 1390163) indicate that the daily traffic volume on SR 13 (Atlanta Highway) is 10,600 vehicles per day north of SR 347 (Friendship Road) and 10,700 vehicles per day south of SR 347 (Friendship Road). GDOT traffic counts (Station IDs 1350101, 1350098 & 1350096) indicate that the daily traffic volume on SR 13 (Buford Highway) is 12,500 vehicles per day south of Thunder Road/Bryant Road, 20,100 vehicles per day north of Hamilton Mill Road, and 27,400 vehicles per day south of Hamilton Mill Road. GDOT classifies SR 13 (Buford Highway/Atlanta Highway) as a Minor Arterial roadway.

There is a planned GDOT project PI #132950 that will widen SR 13 (Buford Highway) from Sawnee Avenue in Gwinnett County to SR 347 (Friendship Road) in Hall County. The length of the project is approximately 1.53 miles and will widen SR 13 (Buford Highway) to a 4-lane urban facility with a 20-foot raised median, 4-foot bike lanes, curb and gutter and a 5-foot sidewalk on both sides. As this project is slated to be completed before buildout of the proposed Longacre development, the updates to the road network have been analyzed in the “No-Build” and “Build” conditions.

### ***Roy Carlson Boulevard***

Roy Carlson Boulevard is an east-west, four-lane, median-divided roadway with a posted speed limit of 25 mph in the vicinity of the site. GDOT traffic counts (Station ID 1358227) indicate that the daily traffic volume on Roy Carlson Boulevard is 1,670 vehicles per day east of SR 13 (Buford Highway). GDOT classifies Roy Carlson Boulevard as a Local roadway.

### ***Thunder Road***

Thunder Road is an east-west, two-lane, undivided roadway with a posted speed limit of 25 mph in the vicinity of the site. GDOT project PI #132950 will cul-de-sac the existing Thunder Road and relocate it to align with Roy Carlson Boulevard. Moreover, a traffic signal will be installed at the intersection and dedicated left and right turn lanes will be constructed on SR 13 (Buford Highway).

### ***Thompson Mill Road***

Thompson Mill Road is an east-west, two-lane, undivided roadway with a posted speed limit of 45 mph in the vicinity of the site. GDOT traffic counts (Station ID 1350474) indicate that the daily traffic volume on Thompson Mill Road is 7,580 vehicles per day east of SR 13 (Buford Highway). GDOT classifies Thompson Mill Road as a Major Collector roadway.

### ***Hamilton Mill Road***

Hamilton Mill Road is an east-west, four-lane, median-divided roadway with a posted speed limit of 45 mph in the vicinity of the site. GDOT traffic counts (Station ID 1350481) indicate that the daily traffic volume on Hamilton Mill Road is 20,600 vehicles per day east of SR 13 (Buford Highway). GDOT classifies Hamilton Mill Road as a Major Collector roadway.

### ***S. Hill Street***

S. Hill Street is an east-west, two-lane, undivided roadway with a posted speed limit of 25 mph in the vicinity of the site. GDOT traffic counts (Station ID 1350695) indicate that the daily traffic volume on S. Hill Street is 4,470 vehicles per day west of SR 13 (Buford Highway). GDOT classifies S. Hill Street as a Major Collector roadway.

### ***N. Bogan Road***

N. Bogan Road is a north-south, two-lane, undivided roadway with a posted speed limit of 40 mph in the vicinity of the site. GDOT traffic counts (Station IDs 1350492 & 1350489) indicate that the daily traffic volume on N. Bogan Road is 2,820 vehicles per day north of Thompson Mill Road and 10,700 vehicles per day south of Hamilton Mill Road. GDOT classifies N. Bogan Road as a Major Collector roadway.

## **Existing Bicycle and Pedestrian Facilities**

The following is a brief description of each of the bicycle and pedestrian facilities located in proximity to the site:

### ***Nearby local or regional trails***

There is no trail located near the study area.

### ***Bicycle paths or sidewalks***

Sidewalks and pedestrian facilities are present along the following roadways in the study network:

- SR 13 (Atlanta Highway/Buford Highway): various points along the east and west sides of the road between S. Lee Street and SR 347 (Friendship Road).
- SR 347 (Friendship Road): north and south sides of the road between McEver Road and I-985.

Bike paths are present along the following roadways in the study network:

- SR 13 (Atlanta Highway/Buford Highway): GDOT Project PI #132950 plans to construct a 4-foot bike lane along SR 13 from Sawnee Avenue to SR 347 (Friendship Road).

## **Existing Transit Facilities**

There is no public transit service near the site.

LOCATION MAP AND STUDY INTERSECTIONS

FIGURE 1

## STUDY METHODOLOGY

In this study, the methodology used for evaluating traffic operations at each of the subject intersections is based on the criteria set forth in the Transportation Research Board's Highway Capacity Manual, 2000 edition (HCM 2000). Synchro software, which utilizes the HCM 2000 methodology, was used for the analysis. The following is a description of the methodology employed for the analysis of unsignalized and signalized intersections.

### Unsignalized Intersections

For unsignalized intersections at which the side street or minor street is controlled by a stop sign, the criteria for evaluating traffic operations are the level-of-service (LOS) for the turning movements at the intersection and the level-of-service for the overall intersection. Level-of-service is based on the average controlled delay incurred at the intersection. Controlled delay for unsignalized intersections includes initial deceleration delay, queue move-up time, stopped delay, and final acceleration delay. Several factors affect the controlled delay for unsignalized intersections, such as the availability and distribution of gaps in the conflicting traffic stream, critical gaps, and follow-up time for a vehicle in the queue.

Level-of-service is assigned a letter designation from "A" through "F". Level-of-service "A" indicates excellent operations with little delay to motorists, while level-of-service "F" exists when there are insufficient gaps of acceptable size to allow vehicles on the side street to cross safely, resulting in extremely long total delays and long queues. The level-of-service criteria for two-way stop-controlled and all-way stop-controlled (unsignalized) intersections are given in Table 1.

| TABLE 1 — LEVEL-OF-SERVICE CRITERIA FOR UNSIGNALIZED INTERSECTIONS |                      |
|--------------------------------------------------------------------|----------------------|
| Level-of-service                                                   | Average Delay (sec)  |

### Signalized Intersections

For signalized intersections, it is necessary to evaluate both capacity and level-of-service in order to evaluate the overall operation of the intersection. The capacity analysis of an intersection is performed by comparing the volume of traffic using the various lane groups at the intersection to the capacity of those lane groups. This results in a volume/capacity (v/c) ratio for each lane group. A v/c ratio greater than 1.0 indicates that the volume of traffic has exceeded the capacity available, resulting in a temporary excess of demand. Although the capacity of the entire intersection is not defined, a composite v/c ratio for the sum of the critical lane groups within the intersection is computed. This composite v/c ratio is an indication of the overall intersection sufficiency.

Level-of-service for a signalized intersection is defined in terms of average controlled delay per vehicle, which is composed of initial deceleration delay, queue move-up time, stopped delay, and final acceleration delay. The level-of-service criteria for signalized intersections, based on average controlled delay, are shown in Table 2. Level-of-service “A” indicates operations with very low controlled delay, while level-of-service “F” describes operations with extremely high average controlled delay. Level-of-service “E” is typically considered to be the limit of acceptable delay, and level-of-service “F” is considered unacceptable by most drivers.

| TABLE 2 — LEVEL-OF-SERVICE CRITERIA FOR SIGNALIZED INTERSECTIONS |                             |
|------------------------------------------------------------------|-----------------------------|
| Level-of-service                                                 | Average Control Delay (sec) |
| A                                                                | $\leq 10$                   |
| B                                                                | $> 10 \text{ and } \leq 20$ |
| C                                                                | $> 20 \text{ and } \leq 35$ |
| D                                                                | $> 35 \text{ and } \leq 55$ |
| E                                                                | $> 55 \text{ and } \leq 80$ |
| F                                                                | $> 80$                      |

## EXISTING TRAFFIC ANALYSIS

Existing traffic counts and intersection geometric data were obtained at the following study intersections:

1. SR 347 (Friendship Road) at I-985 NB Ramps
2. SR 347 (Friendship Road) at I-985 SB Ramps
3. SR 347 (Friendship Road) at SR 13 (Atlanta Highway)
4. SR 13 (Buford Highway) at Roy Carlson Boulevard
5. SR 13 (Buford Highway) at Thompson Mill Road
6. SR 13 (Buford Highway) at S. Hill Street/Hamilton Mill Road
7. Thompson Mill Road at Bryant Road
8. Thompson Mill Road at N. Bogan Road
9. SR 13 (Buford Highway) at Bryant Road/Thunder Road\*

Turning movement counts for cars and trucks were collected on Wednesday, October 19, 2016. All turning movement counts were recorded during the AM and PM peak hours between 7:00 a.m. to 9:00 a.m. and 4:00 p.m. to 6:00 p.m., respectively. The four consecutive 15-minute interval volumes that summed to produce the highest volume at the intersections were then determined. These volumes make up the peak hour traffic volumes for the intersections counted and are shown in Figure 2.

\*It should be noted that turning movement counts were collected at this intersection in order to shift the existing traffic to the intersection of SR 13 (Buford Highway) at Roy Carlson Boulevard after completion of GDOT project PI #132950 that will realign Thunder Road across from Roy Carlson Boulevard. This intersection was not modeled in the analysis.

### Existing Traffic Operations

Existing traffic operations were analyzed at the study intersections in accordance with the HCM methodology. A queue length analysis was also performed. The results of the analyses are shown in Tables 3 and 4. The existing traffic control and lane geometry for the intersections are shown in Figure 3.

*\*95<sup>th</sup> percentile queue generated from SimTraffic model*

The results of existing traffic operations analysis indicate that the side-street approaches to the intersection of Thompson Mill Road at N. Bogan Road are currently operating at a level-of-service "E" or "F" during the AM and PM peak hours. These areas are addressed in the Future Traffic Operations section.

## PROJECT DESCRIPTION

The proposed site will be located on Roy Carlson Boulevard between SR 13 (Buford Highway) and I-985 in Buford, Georgia. The development will consist of:

- Warehousing: 947,520 square feet
- Industrial Park: 455,600 square feet
- Shopping Center: 40,000 square feet

The development proposes access via Roy Carlson Boulevard, and, for the purpose of this analysis, an additional right-in/right-out/left-out access point on Thompson Mill Road between Bryant Road and I-985.

### Site Plan

A site plan is shown in Figure 4. A larger size drawing and a digital copy of the site plan are also provided with this report.

#### ***Planned Bicycle and Pedestrian Facilities***

The on and/or off-site provisions for non-motorized travel included in the planned construction of the proposed development are as follows:

- The convenience and flexibility of the site benefit from public access to adjacent streets and internal connectivity between some of the parcels.

#### ***Planned Transit Facilities***

There is no public transit service near the site.

### Consistency with Adopted Comprehensive Plan

The following is an explanation as to how the proposed DRI relates to the local government's Comprehensive Plan in particular the transportation and capital improvements element, and any transportation improvements listed in the Short-Term Work Program(s) within the vicinity of the DRI. The City of Buford 2030 Comprehensive Plan lists the project area not within the City of Rest Haven as an Industrial Commercial Area in their Future Development Map.

### Project Phasing

For the purpose of this analysis, the project has been evaluated for the complete build-out of the development in 2026.

### Trip Generation

Trip generation estimates for the project were based on the rates and equations published in the 9th edition of the Institute of Transportation Engineers (ITE) Trip Generation report. This reference contains traffic volume count data collected at similar facilities nationwide. The trip generation was based on the following ITE Land Uses: 130 – *Industrial Park*, 150 – *Warehousing* and 820 – *Shopping Center*. Due to

the nature of the development, pass-by and mixed-use reductions have been applied per ITE standards. The calculated total trip generation for the proposed development is shown in Table 5.

| TABLE 5 — TRIP GENERATION                   |            |              |            |            |              |            |            |              |

*\*pass-by trips (AM) PM; 24 Hour pass-by trips estimated by considering PM pass-by as 10% of daily*

Per ITE manual it was assumed that 20% of Land Use 150 trips would be trucks, and 13% of Land Use 130 trips would be trucks. The distribution of the new external trips separated into vehicular trips and truck trips is shown below in Table 6.

| TABLE 6 — NEW EXTERNAL TRIPS DISTRIBUTED INTO CARS AND TRUCKS |              |           |            |              |            |            |              |

## Trip Distribution

The trip distribution describes how traffic arrives and departs from the site. An overall trip distribution was developed for the site based on a review of the existing travel patterns in the area and the locations of major roadways and highways that will serve the development. Separate trip distributions were developed for car and truck traffic. The site-generated peak hour traffic volumes, shown in Table 5, were assigned to the study area intersections based on these separate distributions. The outer-leg distribution and AM and PM peak hour new traffic generated by the site are shown in Figure 5 (Industrial Vehicular Traffic), Figure 6 (Industrial Truck Traffic) and Figure 7 (Retail Vehicular Traffic).

## **FUTURE TRAFFIC ANALYSIS**

The future traffic operations are analyzed for the “Build” and “No-Build” conditions. This provides a basis of reference for determining both the contribution of the site to overall traffic conditions and the additional improvements needed to provide sufficient site access and capacity for passing traffic. Note that survey and construction drawings would be needed to verify the feasibility and extent of additional right-of-way required for any recommended improvements.

Improvements that are identified as “System Improvements” address deficiencies that are found within the existing road network prior to any impacts from the proposed development’s added traffic. Improvements that are identified as “Site Mitigation Improvements” address further impacts that are a result of the proposed development’s added traffic.

### **Future “No-Build” Conditions**

The “No-Build” (or background) conditions provide an assessment of how traffic will operate in the study horizon year without the study site being developed as proposed, with projected increases in through traffic volumes due to normal annual growth. AS GDOT Project PI #132950 will be completed before construction of the proposed development, shifts in traffic from the intersection of SR 13 (Buford Highway) at Thunder Road/Bryant Road to the intersection of SR 13 (Buford Highway) at Roy Carlson Boulevard were included in the Future “No-Build” volumes. The Future “No-Build” volumes consist of the existing traffic volumes (Figure 2) plus increases for annual growth of through traffic and shifts in existing traffic due to the GDOT project on SR 13 (Buford Highway).

### **Annual Traffic Growth**

In order to evaluate future traffic operations in this area, a projection of normal traffic growth was applied to the existing volumes. The Georgia Department of Transportation recorded average daily traffic volumes at several locations in the vicinity of the site. Reviewing the growth over the last five years at four count locations revealed growth of approximately 0.5% in the area. This growth factor was applied to the existing traffic volumes between collector and arterial roadways in order to estimate the future year traffic volumes prior to the addition of site-generated traffic. The resulting Future “No-Build” volumes on the roadway are shown in Figure 8.

### ***Planned and Programmed Improvements in Study Area***

The following improvements have been identified in the Regional Transportation Plan (Plan 2040), GDOT GeoPI, and/or the local comprehensive transportation plan. These improvements are within the vicinity of the proposed development.

TABLE 7 — PLANNED AND PROGRAMMED IMPROVEMENTS

| ARC#/GDOT#/<br>County#       | Project                                                            | Type of<br>Improvement            | Network<br>Year | Source |
|------------------------------|--------------------------------------------------------------------|-----------------------------------|-----------------|--------|
| <b>132950/<br/>GW-099C</b>   | Widening of SR 13 from Sawnee Avenue to Friendship Road.           | Reconstruction/<br>Rehabilitation | 2020            | GDOT   |

| <b>0004430/<br/>GW-020A1</b> | Widening of SR 20 from W. Mountain Ridge Rd to Peachtree Ind. Blvd | Reconstruction/<br>Rehabilitation | 2017            | GDOT   |
| <b>M005451</b>               | Restriping of I-985                                                | Maintenance                       | 2017            | GDOT   |

Projects included in the model for the Future conditions include:

**GDOT Project PI #132950:** This project will widen SR 13 (Buford Highway) from Sawnee Avenue in Gwinnett County to SR 347 (Friendship Road) in Hall County. The length of the project is approximately 1.53 miles. The proposed project will widen SR 13 (Buford Highway) to a four-lane urban facility with a twenty foot raised median, four-foot bike lanes, curb and gutter and a five-foot sidewalk on both sides. Construction of the project is slated to open in the year 2020.

## Recommendations for System Improvements

Improvements that are identified as “System Improvements” address deficiencies that are found within the existing road network prior to any impacts from the proposed development’s added traffic. A summary of the system improvements, which address deficiencies that are found within the existing road network for the “No-Build” conditions, is provided below with more detailed information on each intersection in the following narratives.

### Summary of Recommended System Improvements

- Construct a dedicated channelized right turn lane on the northbound, southbound, and eastbound approaches to the intersection of Thompson Mill Road at N. Bogan Road.

#### Thompson Mill Road at N. Bogan Road

Several approaches to the intersection of Thompson Mill Road at N. Bogan Road will begin to operate at a level-of-service “E” or “F” in the “No-Build” conditions. As traffic will increase over the next ten years, it is recommended that a dedicated right turn lane be installed per local standards on the northbound, southbound, and eastbound approaches.

## Future “No-Build” Traffic Operations

The future “No-Build” traffic operations were analyzed using the volumes in Figure 8 and the results are shown in Tables 8 and 9 below. The results of the analyses including the recommendations for system improvements are discussed in the next section.

**TABLE 8 — FUTURE “NO-BUILD” INTERSECTION OPERATIONS**

(AM) PM

FUTURE (NO-BUILD) PEAK HOUR VOLUMES

## Future “Build” Conditions

The “Build” or development conditions include the estimated background traffic from the “No-Build” conditions plus the added traffic from the proposed development. In order to evaluate future traffic operations in this area, the additional traffic volumes from the site (Figures 5, 6, and 7) were added to base traffic volumes (Figure 8) to calculate the future traffic volumes after the construction of the development. These total future traffic volumes (Figure 9) were used to evaluate the “Build” condition, which includes the projected site traffic. The results of the “Build” operations analyses with the assumed site access configuration are shown in Tables 10 and 11.

## Site Access Configuration

The following access configuration was utilized when modeling the proposed site driveway intersection.

- Site Driveway #1: Truck and employee access via Roy Carlson Boulevard
  - This intersection will be upgraded as part of GDOT project PI #132950 to include signalization as well as the relocation of Thunder Road to align with Roy Carlson Boulevard.
  - As access to SR 13 (Buford Highway) via Thunder Road and Bryant Road will be eliminated, the existing traffic at the intersection was shifted to the proposed signal at Roy Carlson Boulevard as part of the “No-Build” and “Build” analyses.
  - This driveway will consist of two entering lanes and two exiting lanes. The westbound (driveway) approach is assumed to operate with a dedicated left turn lane and shared through/right turn lane.
  - Entering left turn movements will be made from a dedicated southbound left turn lane. It is recommended the signal include a southbound protected + permissive phase for entering left turns (See Appendix).
  - Entering right turn movements will be made from a dedicated northbound right turn lane.
- Site Driveway #2: Right-in/right-out/left-out access on Thompson Mill Road
  - For the purpose of this study, this driveway will only be used by employee/car traffic. Truck traffic will be able to use this access only in emergency situations.
  - As this access geometry was agreed upon by Gwinnett County DOT for the purpose of this study, further discussions will need to take place on the final layout of the driveway.
  - This driveway will consist of one entering lane and one exiting lane.
  - Entering right turn movements will be made from a dedicated westbound right turn lane.
  - The intersection will be unsignalized with a STOP sign on the southbound approach.

## Future “Build” Traffic Operations

The “Build” conditions are evaluated to determine effectiveness of the recommended system and site mitigation improvements. Recommendations on traffic control and lane geometry are shown graphically in Figure 10.

## **Recommendations for Site Mitigation Improvements**

Improvements that are identified as site mitigation improvements address deficiencies that are caused by site traffic and can be identified as related to the proposed development. A summary of the site mitigation improvements is provided below, with more detailed information on each intersection in the following narratives.

### **Summary of Recommended Site Mitigation Improvements**

- It is recommended a second westbound left turn lane be constructed using the existing striping at the intersection of SR 347 (Friendship Road) at SR 13 (Atlanta Highway).

#### **SR 347 (Friendship Road) at SR 13 (Atlanta Highway)**

After the addition of site traffic, the intersection of SR 347 (Friendship Road) at SR 13 (Atlanta Highway) will begin to operate at an overall level-of-service “E” during the AM and PM peak hours. Due to the added amount of westbound left turns at the intersection, it is recommended a second westbound left turn lane be installed using the existing striping and given protected signal phasing. With this improvement, the intersection will begin to operate at a level-of-service “D” in the AM and PM peak hours.

## CONCLUSIONS AND RECOMMENDATIONS

Traffic impacts were evaluated for the added traffic from the proposed Longacre industrial development located on Roy Carlson Boulevard between SR 13 (Buford Highway) and I-985 in Buford, Georgia. The development will consist of:

- Warehousing: 947,520 square feet
- Industrial Park: 455,600 square feet
- Shopping Center: 40,000 square feet

The development proposes access via Roy Carlson Boulevard, and, for the purpose of this analysis, an additional right-in/right-out/left-out access point on Thompson Mill Road between Bryant Road and I-985. Existing and future operations after completion of the project were analyzed at the intersections of:

- SR 347 (Friendship Road) at I-985 NB Ramps
- SR 347 (Friendship Road) at I-985 SB Ramps
- SR 347 (Friendship Road) at SR 13 (Atlanta Highway)
- SR 13 (Buford Highway) at Roy Carlson Boulevard
- SR 13 (Buford Highway) at Thompson Mill Road
- SR 13 (Buford Highway) at S. Hill Street/Hamilton Mill Road
- Thompson Mill Road at Bryant Road
- Thompson Mill Road at N. Bogan Road

The analysis included the evaluation of Future operations for “No-Build” and “Build” conditions, both of which account for increases in annual growth of through traffic. The results of the analysis are listed below:

### System Recommendations and Improvements

Improvements that are identified as “System Improvements” address deficiencies that are found within the existing road network prior to any impacts from the proposed development’s added traffic. A summary of the system improvements, which address deficiencies that are found within the existing road network for the “No-Build” conditions, is provided below with more detailed information on each intersection in the following narratives.

#### **Summary of Recommended System Improvements**

- Construct a dedicated channelized right turn lane on the northbound, southbound, and eastbound approaches to the intersection of Thompson Mill Road at N. Bogan Road.

#### **Thompson Mill Road at N. Bogan Road**

Several approaches to the intersection of Thompson Mill Road at N. Bogan Road will begin to operate at a level-of-service “E” or “F” in the “No-Build” conditions. As traffic will increase over the next ten years, it is recommended that a dedicated right turn lane be installed per local standards on the northbound, southbound, and eastbound approaches.

## Site Access Configuration

The following access configuration was utilized when modeling the proposed site driveway intersection.

- Site Driveway #1: Truck and employee access via Roy Carlson Boulevard
  - This intersection will be upgraded as part of GDOT project PI #132950 to include signalization as well as the relocation of Thunder Road to align with Roy Carlson Boulevard.
  - As access to SR 13 (Buford Highway) via Thunder Road and Bryant Road will be eliminated, the existing traffic at the intersection was shifted to the proposed signal at Roy Carlson Boulevard as part of the “No-Build” and “Build” analyses.
  - This driveway will consist of two entering lanes and two exiting lanes. The westbound (driveway) approach is assumed to operate with a dedicated left turn lane and shared through/right turn lane.
  - Entering left turn movements will be made from a dedicated southbound left turn lane. It is recommended the signal include a southbound protected + permissive phase for entering left turns (See Appendix).
  - Entering right turn movements will be made from a dedicated northbound right turn lane.
- Site Driveway #2: Right-in/right-out/left-out access on Thompson Mill Road
  - For the purpose of this study, this driveway will only be used by employee/car traffic. Truck traffic will be able to use this access only in emergency situations.
  - As this access geometry was agreed upon by Gwinnett County DOT for the purpose of this study, further discussions will need to take place on the final layout of the driveway.
  - This driveway will consist of one entering lane and one exiting lane.
  - Entering right turn movements will be made from a dedicated westbound right turn lane.
  - The intersection will be unsignalized with a STOP sign on the southbound approach.

## Site Mitigation Improvements

Improvements that are identified as site mitigation improvements address deficiencies that are caused by site traffic and can be identified as related to the proposed development. A summary of the site mitigation improvements is provided below, with more detailed information on each intersection in the following narratives.

### Summary of Recommended Site Mitigation Improvements

- It is recommended a second westbound left turn lane be constructed using the existing striping at the intersection of SR 347 (Friendship Road) at SR 13 (Atlanta Highway).

#### SR 347 (Friendship Road) at SR 13 (Atlanta Highway)

After the addition of site traffic, the intersection of SR 347 (Friendship Road) at SR 13 (Atlanta Highway) will begin to operate at an overall level-of-service “E” during the AM and PM peak hours. Due to the added amount of westbound left turns at the intersection, it is recommended a second westbound left turn lane be installed using the existing striping and given protected signal phasing. With this improvement, the intersection will begin to operate at a level-of-service “D” in the AM and PM peak hours.

**RE: DRI 2636 Longacre Development**

Dear Mr. Terrell:

The purpose of this letter is to document the discussions during the Pre-Review and Methodology Meeting held at ARC's office on October 3, 2016 regarding **DRI 2636 Longacre Development**. Some of the following items were discussed in this meeting and should assist you and your consultant team in preparing the DRI Review Package.

### PROJECT OVERVIEW

- The project is located in City of Buford. The proposed development is located on the eastern side of SR 13/Buford Highway with existing direct access from Roy Carlson Boulevard. Additional access is proposed onto Thompson Mill Road, just west of I-985 Bridge.
- The DRI trigger for this development is a land disturbance permit.
- The proposed development consists of 1,403,120 square feet light industrial and warehouse space and 40,000 square feet commercial/retail use.
- The vehicular (including freight) trip generation is estimated to be 10,104 gross daily trips using the *ITE Trip Generation Manual 9<sup>th</sup> edition*, land use codes 130 – *Industrial Park*, 150- *Warehousing*, and 820 – *Shopping Center*.
- The projected build out for this DRI is 2026.
- The applicant is applying for approval under GRTA's non-expedited review process.

### STUDY NETWORK

1. SR 347 (Friendship Rd) @ I-985 NB Ramps
2. SR 347 (Friendship Rd) @ I-985 SB Ramps
3. SR 347 (Friendship Rd) @ SR 13 (Atlanta Hwy)
4. SR 13 (Buford Hwy) @ Roy Carlson Blvd/Site driveway
5. SR 13 (Buford Hwy) @ Thompson Mill Road
6. SR 13 (Buford Hwy) @ Hamilton Mill Rd/S. Hill St
7. Thompson Mill Road at N. Bogan Road
8. Thompson Mill Road at Bryant Road
9. Site driveway at Thompson Mill Road

### METHODOLOGY

- All intersections identified as within the study network shall be analyzed during the AM and PM peak hours for (1) existing conditions, (2) future "no-build" conditions [may not be applicable for the site

driveways], and (3) future “build” conditions. This DRI shall be reviewed in one phase to be completed by 2026.

- Capacity analysis shall be based on turning movement counts collected not more than 12-months prior to the date of the actual DRI submittal to GRTA. As appropriate, pedestrian counts and heavy vehicle counts shall be collected with vehicle counts and considered within the capacity analysis. Turning movement counts shall be collected while local schools are in session and ordinarily not between the week of Thanksgiving and the second week of January or any week of a major holiday.
- A 0.5% background traffic growth rate shall be used for all roadways.
- The level of service standard for all analyses shall be LOS D.
- No alternate mode trips reductions are allowed. Standard mixed use and pass-by trip reductions are allowed.
- Default values should not be assumed in the traffic modeling. Existing conditions shall be taken into account.
- The applicant shall research TIP, STIP, RTP, and GDOT’s construction work program, as well as any local government plans (SPLOST, CIP, etc.), to determine the open-to-traffic date, sponsor, cost of the project, funding source(s), for future roadway projects in the project vicinity. This information shall be included within the traffic analysis.

#### ADDITIONAL INFORMATION

Every roadway segment and intersection listed above will be analyzed for “required improvements.” If the existing LOS for the segment or intersection is below the applicable level of service for a particular time period (e.g., A.M. peak period, P.M. peak period, etc.), then the measured LOS service for that segment and time periods is the standard by which the “base” and “future” traffic conditions will be designed. For example, if the County’s LOS standard is LOS D, but an intersection or segment currently operates at LOS E for a certain peak period, then the LOS standard for that intersection or segment for “base” and “future” conditions becomes LOS E (only for that intersection and only for that peak period). The “base” is the phase year traffic without the development traffic (also called future “no-build” conditions) and the “future” is the phase year with the development traffic (also called future “build” conditions). As required in the technical guidelines, specific “required improvements” will be identified to bring the “base” LOS and “future” LOS for every roadway segment and intersection up to the applicable LOS standard. If the existing LOS for the segment or intersection is LOS F, then the future “no-build” and future “build” LOS standard will be LOS E. The improvements required to achieve the desired LOS standard will be provided in a table and graphic within the study. The traffic study should indicate the existing roadway laneage at each studied intersection as well as the laneage required (to meet the LOS standard) for future “no-build” and future “build” conditions. The improvements may include both programmed improvements and improvements identified in the study.

The planned and programmed improvement should indicate the project sponsor, the anticipated funding by source (federal, state, city/county, developer, CID, etc.), the year open-to-traffic, and estimate of the total project cost. All other required improvements identified in the study should, to the extent known, identify the cost, sponsor, funding, and timing. If any of these elements are not known, please state as “unknown.”

The future “no-build” and the future “build” analyses should NOT automatically include/assume the additional lanes/capacity associated with planned and programmed improvement projects unless those roadway projects are currently under construction. Instead, the traffic consultant should recommend the additional laneage required to satisfy the level of service standard.

### DRI REVIEW PACKAGE CHECKLIST

Please use the DRI Review Package Checklist to help you prepare your GRTA DRI Review Package for expedited review of your application. The Checklist reflects the understandings set forth in this letter, and is incorporated into this letter by reference.

The site plan shall be prepared in accordance with Section 4-104 of the DRI Review Package Technical Guidelines and it shall be dated, and shall be at a scale of 1"= 200' or larger (showing more detail). The site plan shall be consistent with GRTA's Site Plan Information Guidelines, which represents the minimum required information on site plans.

The applicant shall indicate on the site plans all adjacent land uses, current zoning, and future land use as indicated on the future land use map. Additionally, all existing and proposed sidewalks, existing and proposed pedestrian trails, and existing and proposed roadway laneage should be indicated on the site plan.

### DRI REVIEW PACKAGE SUBMITTAL

At the time you are ready to submit your DRI Review Package to GRTA, please note the following:

- Provide one (1) paper copy of all materials:
  - Transportation analysis
  - Site Plan
- Provide one (1) CD-ROM with electronic versions of all submittal documents:
  - Provide a PDF of each document
  - Provide the native format for each document
    - .dwg is the preferred CAD format (AutoCAD)
    - .doc is the preferred word processing format (Word)
    - .xls is the preferred spreadsheet format (Excel)
    - .sy6, .sy7, .sy8 or .sy9 is the preferred capacity analysis format (Synchro)

As part of the completeness certification process, please have your consultant forward one copy of the completed GRTA DRI Review Package (traffic analysis, site plan, CD) to the GDOT District Office, Regional Commission and local government Planning & Development and Transportation group (contact information provided below). GRTA shall be copied on each of the transmittal letters.

| <b>GDOT DISTRICT 1</b>                                   | <b>GWINNETT CO DOT</b>                                         | <b>CITY OF BUFORD</b>                                | <b>ATLANTA REGIONAL COMMISSION</b>                                |

| Mgmt Let Date: | 6/17/2016 | The proposed project would widen Buford Hwy (SR 13), an urban minor arterial, from Sawnee Avenue in Gwinnett County to Friendship Road in Hall County. The length of the project is approx. 1.53 miles. The existing roadway currently consists of two lanes with a variable width, with only a few locations with left turn and right turn lanes along the project length. The proposed project would widen Bufor Hwy (SR 13) to a 4-lane urban facility with a 20-foot raised median, 4-foot bike lanes, curb and gutter and a 5-foot sidewalk on both sides. |

Gwinnett

CS 1178/SOUTH LEE ST FM SR 13 TO CS 1086/WEST MORENO STREET

Mgmt Let Date:

5/20/2016

The project will construct new or expanded sidewalks for 0.9 miles along both sides of the corridor using a combination of brick and concrete. In addition, these improvements would include planting street trees and shrubs within a 4' pedestrian buffer zone and a center median, and it would install raised curbs, defined pedestrian crossings and shared lane bicycle markings, pedestrian scale lighting and other street furnishings, and ADA-accessible curb ramps. Concurrent with this work, storm sewer upgrades would be completed with project funding, and existing overhead utilities would be buried by the City with local funds in order to enhance the corridor's aesthetics while removing other pedestrian impediments. Improving pedestrian facilities along South Lee Street would facilitate greater connectivity between historic commercial uses along Main Street, as well as the goods and services located along Buford Highway.

| Mgmt Let Date: | 1/18/2013 | The proposed project would widen SR 20 from a two lane rural section to a four lane urban section from approximately 1,000 feet west of Mountain Ridge Road to Peachtree Industrial Boulevard in Gwinnett County. The typical section will include four- through lanes, a 44-foot grassed median, 16-foot shoulders, curb & gutter on the outside pavement edges, and five-foot concrete sidewalks on both sides of the roadway. Design will accommodate for the future widening of two additional lanes. Project length is 3.91 miles. |

## Intersection Summary

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 19 (16%), Referenced to phase 2:EBT and 6:WBT, Start of Green

Natural Cycle: 60

Control Type: Actuated-Coordinated

Splits and Phases: 2: I-985 SB Ramps &amp; SR 347 (Friendship Rd)

# HCM Signalized Intersection Capacity Analysis

## 2: I-985 SB Ramps & SR 347 (Friendship Rd)

## Intersection Summary

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 80 (67%), Referenced to phase 2:EBTL and 6:WBTL, Start of Green

Natural Cycle: 105

Control Type: Actuated-Coordinated

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

## Splits and Phases: 3: SR 13 (Atlanta Hwy) &amp; SR 347 (Friendship Rd)

## Intersection Summary

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 72 (60%), Referenced to phase 2:NBTL and 6:SBTL, Start of Green

Natural Cycle: 50

Control Type: Actuated-Coordinated

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 5: SR 13 (Buford Hwy) &amp; Makita Co. Drwy/Thompson Mill Rd

# HCM Signalized Intersection Capacity Analysis

## 5: SR 13 (Buford Hwy) & Makita Co. Drwy/Thompson Mill Rd

## Intersection Summary

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 0 (0%), Referenced to phase 2:NBTL and 6:SBTL, Start of Green

Natural Cycle: 105

Control Type: Actuated-Coordinated

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

## Intersection Summary

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 38 (32%), Referenced to phase 2:EBT and 6:WBT, Start of Green

Natural Cycle: 90

Control Type: Actuated-Coordinated

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 1: I-985 NB Ramps &amp; SR 347 (Friendship Rd)

## Intersection Summary

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 93 (78%), Referenced to phase 2:EBT and 6:WBT, Start of Green

Natural Cycle: 60

Control Type: Actuated-Coordinated

m Volume for 95th percentile queue is metered by upstream signal.

## Splits and Phases: 2: I-985 SB Ramps &amp; SR 347 (Friendship Rd)

## Intersection Summary

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 35 (29%), Referenced to phase 2:EBTL and 6:WBTL, Start of Green

Natural Cycle: 105

Control Type: Actuated-Coordinated

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

## Intersection Summary

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 69 (58%), Referenced to phase 2:NBT and 6:SBTL, Start of Green

Natural Cycle: 60

Control Type: Actuated-Coordinated

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 5: SR 13 (Buford Hwy) &amp; Makita Co. Drwy/Thompson Mill Rd

# HCM Signalized Intersection Capacity Analysis

## 5: SR 13 (Buford Hwy) & Makita Co. Drwy/Thompson Mill Rd

## Intersection Summary

Cycle Length: 115

Actuated Cycle Length: 115

Offset: 0 (0%), Referenced to phase 2:NBTL and 6:SBTL, Start of Green

Natural Cycle: 115

Control Type: Actuated-Coordinated

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 6: SR 13 (Buford Hwy) &amp; S. Hill St/Hamilton Mill Rd

# HCM Signalized Intersection Capacity Analysis

## Intersection Summary

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 86 (72%), Referenced to phase 2:EBT and 6:WBT, Start of Green

Natural Cycle: 90

Control Type: Actuated-Coordinated

Splits and Phases: 1: I-985 NB Ramps &amp; SR 347 (Friendship Rd)

# HCM Signalized Intersection Capacity Analysis

## 1: I-985 NB Ramps & SR 347 (Friendship Rd)

## Intersection Summary

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 18 (15%), Referenced to phase 2:EBT and 6:WBT, Start of Green

Natural Cycle: 70

Control Type: Actuated-Coordinated

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 2: I-985 SB Ramps &amp; SR 347 (Friendship Rd)

# HCM Signalized Intersection Capacity Analysis

## 2: I-985 SB Ramps & SR 347 (Friendship Rd)

## Intersection Summary

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 73 (61%), Referenced to phase 2:EBTL and 6:WBTL, Start of Green

Natural Cycle: 115

Control Type: Actuated-Coordinated

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

## Intersection Summary

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 29 (24%), Referenced to phase 2:NBT and 6:SBTL, Start of Green

Natural Cycle: 50

Control Type: Actuated-Coordinated

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 4: SR 13 (Buford Hwy)/SR 13 (Atlanta Hwy) &amp; Relocated Thunder Rd/Roy Carlson Blvd

# HCM Signalized Intersection Capacity Analysis

Future No-Build AM

## 4: SR 13 (Buford Hwy)/SR 13 (Atlanta Hwy) & Relocated Thunder Rd/Roy Carlson Blvd 11/16/2016

## Intersection Summary

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 72 (60%), Referenced to phase 2:NBTL and 6:SBTL, Start of Green

Natural Cycle: 55

Control Type: Actuated-Coordinated

Splits and Phases: 5: SR 13 (Buford Hwy) &amp; Makita Co. Drwy/Thompson Mill Rd

# HCM Signalized Intersection Capacity Analysis

## 5: SR 13 (Buford Hwy) & Makita Co. Drwy/Thompson Mill Rd

Future No-Build AM

11/16/2016

Intersection Summary

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 0 (0%), Referenced to phase 2:NBTL and 6:SBTL, Start of Green

Natural Cycle: 115

Control Type: Actuated-Coordinated

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 6: SR 13 (Buford Hwy) & S. Hill St/Hamilton Mill Rd

## Intersection Summary

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 73 (61%), Referenced to phase 2:EBT and 6:WBT, Start of Green

Natural Cycle: 90

Control Type: Actuated-Coordinated

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 1: I-985 NB Ramps &amp; SR 347 (Friendship Rd)

## Intersection Summary

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 6 (5%), Referenced to phase 2:EBT and 6:WBT, Start of Green

Natural Cycle: 60

Control Type: Actuated-Coordinated

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 2: I-985 SB Ramps &amp; SR 347 (Friendship Rd)

# HCM Signalized Intersection Capacity Analysis

## 2: I-985 SB Ramps & SR 347 (Friendship Rd)

Future No-Build PM

11/16/2016

## Intersection Summary

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 68 (57%), Referenced to phase 2:EBTL and 6:WBTL, Start of Green

Natural Cycle: 115

Control Type: Actuated-Coordinated

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

## Splits and Phases: 3: SR 13 (Atlanta Hwy) &amp; SR 347 (Friendship Rd)

# HCM Signalized Intersection Capacity Analysis

## Intersection Summary

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 15 (13%), Referenced to phase 2:NBT and 6:SBTL, Start of Green

Natural Cycle: 50

Control Type: Actuated-Coordinated

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 4: SR 13 (Buford Hwy)/SR 13 (Atlanta Hwy) &amp; Relocated Thunder Rd/Roy Carlson Blvd

## Intersection Summary

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 60 (50%), Referenced to phase 2:NBTL and 6:SBTL, Start of Green

Natural Cycle: 60

Control Type: Actuated-Coordinated

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 5: SR 13 (Buford Hwy) &amp; Makita Co. Drwy/Thompson Mill Rd

# HCM Signalized Intersection Capacity Analysis

## 5: SR 13 (Buford Hwy) & Makita Co. Drwy/Thompson Mill Rd

## Intersection Summary

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 16 (13%), Referenced to phase 2:NBTL and 6:SBTL, Start of Green

Natural Cycle: 125

Control Type: Actuated-Coordinated

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 6: SR 13 (Buford Hwy) &amp; S. Hill St/Hamilton Mill Rd

## Intersection Summary

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 86 (72%), Referenced to phase 2:EBT and 6:WBT, Start of Green

Natural Cycle: 90

Control Type: Actuated-Coordinated

Splits and Phases: 1: I-985 NB Ramps &amp; SR 347 (Friendship Rd)

# HCM Signalized Intersection Capacity Analysis

## 1: I-985 NB Ramps & SR 347 (Friendship Rd)

Future No-Build AM - Improved

## Intersection Summary

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 18 (15%), Referenced to phase 2:EBT and 6:WBT, Start of Green

Natural Cycle: 70

Control Type: Actuated-Coordinated

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 2: I-985 SB Ramps &amp; SR 347 (Friendship Rd)

# HCM Signalized Intersection Capacity Analysis 2: I-985 SB Ramps & SR 347 (Friendship Rd)

Future No-Build AM - Improved
