Executive Summary

A new mixed-use development is planned for the Midtown Improvement District Atlanta city block bounded by West Peachtree Street, 12th Street, Peachtree Walk, and 13th Street. The 156,837 square foot (sf) site will be occupied by a new building containing 946,759 sf of office, hotel, residential and retail use space with 1,550 parking spaces, to open in 2019. The building will contain approximately 686,230 sf of offices, 156 hotel rooms, 65 apartments, and 16,688 sf of retail space. The parking areas will be accessed on 12th and 13th Streets NW by full-movement intersections mid-block and on West Peachtree Street NW by a right in/out intersection mid-block. These vehicular access points will provide access to all parking spaces within the building. Truck docks on 13th Street and a curb cut on Peachtree Walk will provide access for trash removal. Pedestrians will access the building on all sides of the block. The site is currently zoned SPI-16 Sub-Area 1 (Midtown Commercial)

A Special Administrative Permit (SAP) is being requested from the City of Atlanta and because this development exceeds the building size threshold, is subject to DRI review.

The only programmed improvements are expected to be completed by 2019 of converting one of the five West Peachtree Street northbound lanes to a bike lane was included in the traffic impact analyses.

The purpose of this report is to identify the expected traffic impacts expected to be generated by the new vehicular trips generated by the 1105 West Peachtree development when completed as a single phase. The traffic study includes background traffic growth, trip generation, directional distribution, and traffic impacts at intersections within the area. There were no improvements identified in the analyses with the reduction of a northbound through lane on West Peachtree Street to allow for construction of a bike lane as indicated by changes in the Levels of Service (LOS) expected for vehicular traffic volumes including new project trips from in the year 2019.

However, when the predominately residential use buildings on the north side of 13th Street are completed and occupied, installation of a traffic control signal at the intersection of 13th Street and West Peachtree Street primarily to provide safer pedestrian access should be considered. A traffic signal at this intersection would also allow safer vehicular movements across West Peachtree Street (assuming 13th Street is reconfigured as two-way). Collection of pedestrian, bike, and vehicle counts when the three buildings are completed and substantially occupied would be needed for a signal warrant analysis. Realignment of 12th Street westbound at West Peachtree Street to allow westbound crossing vehicles should also be considered to provide better access. Neither improvement were identified as required.

Approximately 5,974 new vehicular trips (entering and exiting) are expected to be generated when the development is complete in 2019. On typical weekdays during the morning and evening peak volume traffic hours, approximately 655 morning entering and 157 exiting vehicles with 178 evening entering and 590 exiting vehicles are expected. Of these, approximately 6 vehicles already passing by the site during the evening peak hour are expected to enter and exit the site. Approximately 126 morning peak hour and 32 evening peak hour trips are expected to originate and terminate within the site as internal captured trips and are not included in the new external vehicular trips totals above. Approximately 25% of new vehicular trips that would be normally be expected to be generated by the project land uses on a site without pedestrian, bicycle, bus and transit availability were removed from the totals above, since the location of this project provides for other modes of transportation. Assignment of the new trips was based on the existing directional traffic patterns in the area.

The expected additional background trip volumes were calculate using a one percent (1%) annual growth rate applied for three (3) years to the existing intersection peak hour turning movement counts..

1. Introduction

A new mixed-use development (1105 West Peachtree) is planned for the Midtown Improvement District Atlanta city block bounded by West Peachtree Street, 12th Street, Peachtree Walk, and 13th Street. The 156,837 square foot (sf) site will be occupied by a new building containing 946,759 sf of office, hotel, residential and retail use space with 1,550 parking spaces, to open in 2019. The building will contain approximately 686,230 sf of offices, 156 hotel rooms, 65 apartments, and 16,688 sf of retail space.

The parking areas will be accessed on 12th and 13th Streets NW by full-movement intersections mid-block and on West Peachtree Street NW by a right in/out intersection mid-block. These vehicular access points will provide access to all parking spaces within the building. Truck docks on 13th Street and a curb cut on Peachtree Walk will provide access for trash removal. Pedestrians will access the building on all sides of the block.

The development is expected to be completed in 2019.

The purpose of this report is to identify the expected traffic impacts expected to be generated by new vehicular trips generated by 1105 West Peachtree when completed as a single phase. The traffic study includes background traffic growth, trip generation, directional distribution, and traffic impacts at site access points and study intersections within the area.

The study area was defined as the site vehicular access points and the existing intersections on West Peachtree Street and Peachtree Walk at 12th & 13th Streets on either side of each new site access point.

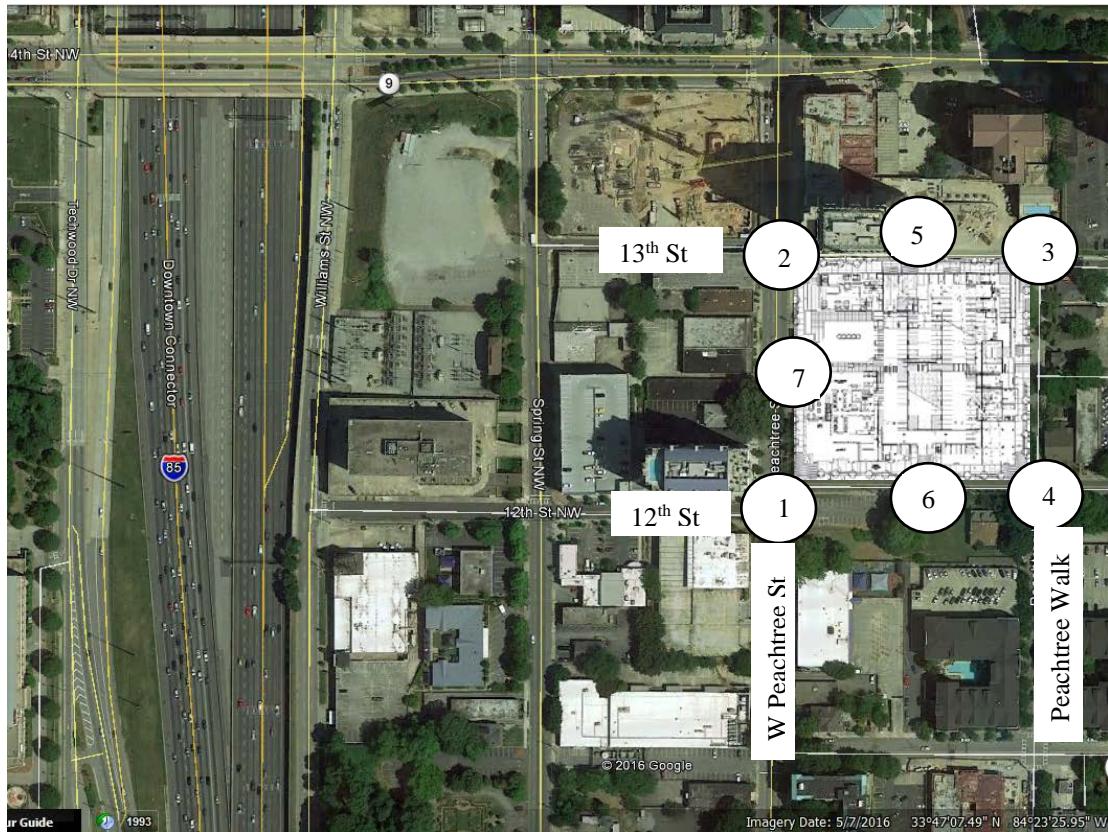

Figure 1 shows the site location and Figure 2 shows the study intersections. The site plan is included with this report.

DRI 2659 1105 W Peachtree Mixed-Use Development

Figure 2: Study Intersections

2. Proposed Development Description

The proposed new mixed-use development (1105 West Peachtree) is planned for the Midtown Improvement District Atlanta city block bounded by West Peachtree Street, 12th Street, Peachtree Walk, and 13th Street. The 156,837 square foot (sf) site will be occupied by a new building containing 946,759 sf of office, hotel, residential and retail use space with 1,550 parking spaces, to open in 2019. The building will contain approximately 686,230 sf of offices, 156 hotel rooms, 65 apartments, and 16,688 sf of retail space.

The parking areas will be accessed on 12th and 13th Streets NW by full-movement intersections mid-block and on West Peachtree Street NW by a right in/out intersection mid-block. These vehicular access points will provide access to all parking spaces within the building. Truck docks on 13th Street and a curb cut on Peachtree Walk will provide access for trash removal. Pedestrians will access the building on all sides of the block.

2.1. Phasing

This traffic study considers the full build-out and occupancy of the site in 2019 as a single phase.

2.2. Programmed Improvement Projects

There are no planned STIP, RTIP, or local planned roadway improvement projects within the proposed study area. Nearby projects are AT-270 Peachtree Corridor Complete Street Retrofit, AT-277 and 277A Cycle Atlanta Phase 1.0, and AT-278 Midtown Atlanta Regional Activity Center Pedestrian Mobility and Safety Improvements (completed). The existing intersection geometries and control will be used for the intersection capacity analyses for existing, background, and future with project volumes, with the exception of reducing the five-lane West Peachtree Street cross-section to four lanes to accommodate the installation of a curb bike lane.

3. Existing Conditions

3.1. Transportation Facilities

West Peachtree Street NW is a five-lane one way northbound Urban Arterial roadway with a 35 MPH posted speed limit providing access from downtown Atlanta to the south to I-85 northbound ramps to the north. The adjacent and land uses are residential, office, and retail, primarily in multi-story buildings, in the project study area.

12th Street is a two-lane east-west local street between Williams Street and Piedmont Ave with a 25 MPH speed limit. The adjacent and land uses are residential, office, and retail.

13th Street is a two-lane east-west local street between Spring Street and Crescent Ave with a 25 MPH speed limit. 13th Street is currently closed to through traffic between Spring Street and West Peachtree Street. When adjacent construction is completed, a single lane in each direction is expected. The adjacent and land uses are residential, office, and retail.

Peachtree Walk is a two-lane north-south local street between 11th Street and 13th Street with a presumed 25 MPH speed limit. The adjacent and land uses are residential, office, and retail.

14th Street is a four-lane east-west Urban Arterial roadway with a 35 MPH posted speed limit between Howell Mill Road, crossing I-75/85 with southbound entry and exit ramps at Techwood Drive, a northbound I-75/85 exit ramp and a northbound I-75 entry ramp at Williams Street, and terminating at Piedmont Ave to the east. The adjacent and land uses are residential, office, and retail, primarily in multi-story buildings.

Spring Street NW is a four-lane one way southbound Urban Arterial roadway with a 35 MPH posted speed limit from I-85 south to I-75/85. The adjacent and land uses are residential, office, and retail, primarily in multi-story buildings, in the project study area.

LOS E will be considered the minimum standard due to the close proximity to two MARTA stations (walking distance), unless existing conditions are lower.

The existing lane configurations and traffic controls are shown in Figure 3.

3.2. Traffic Volumes

New traffic counts were collected on Tuesday, January 31, 2017, from 7-9 AM and 4-6 PM while schools were in session at the following intersections:

1. 12th Street and West Peachtree Street
2. 13th Street and West Peachtree Street
3. 13th Street and Peachtree Walk
4. 12th Street and Peachtree Walk
5. 12th Street and Spring Street
6. 14th Street and Spring Street
7. 14th Street and West Peachtree Street

The existing morning and evening peak hour turning movement counts at the study intersections are shown in Figure 4. The count worksheets are included in the Appendix.

Figure 3: Existing and Planned Lane Configurations and Traffic Control

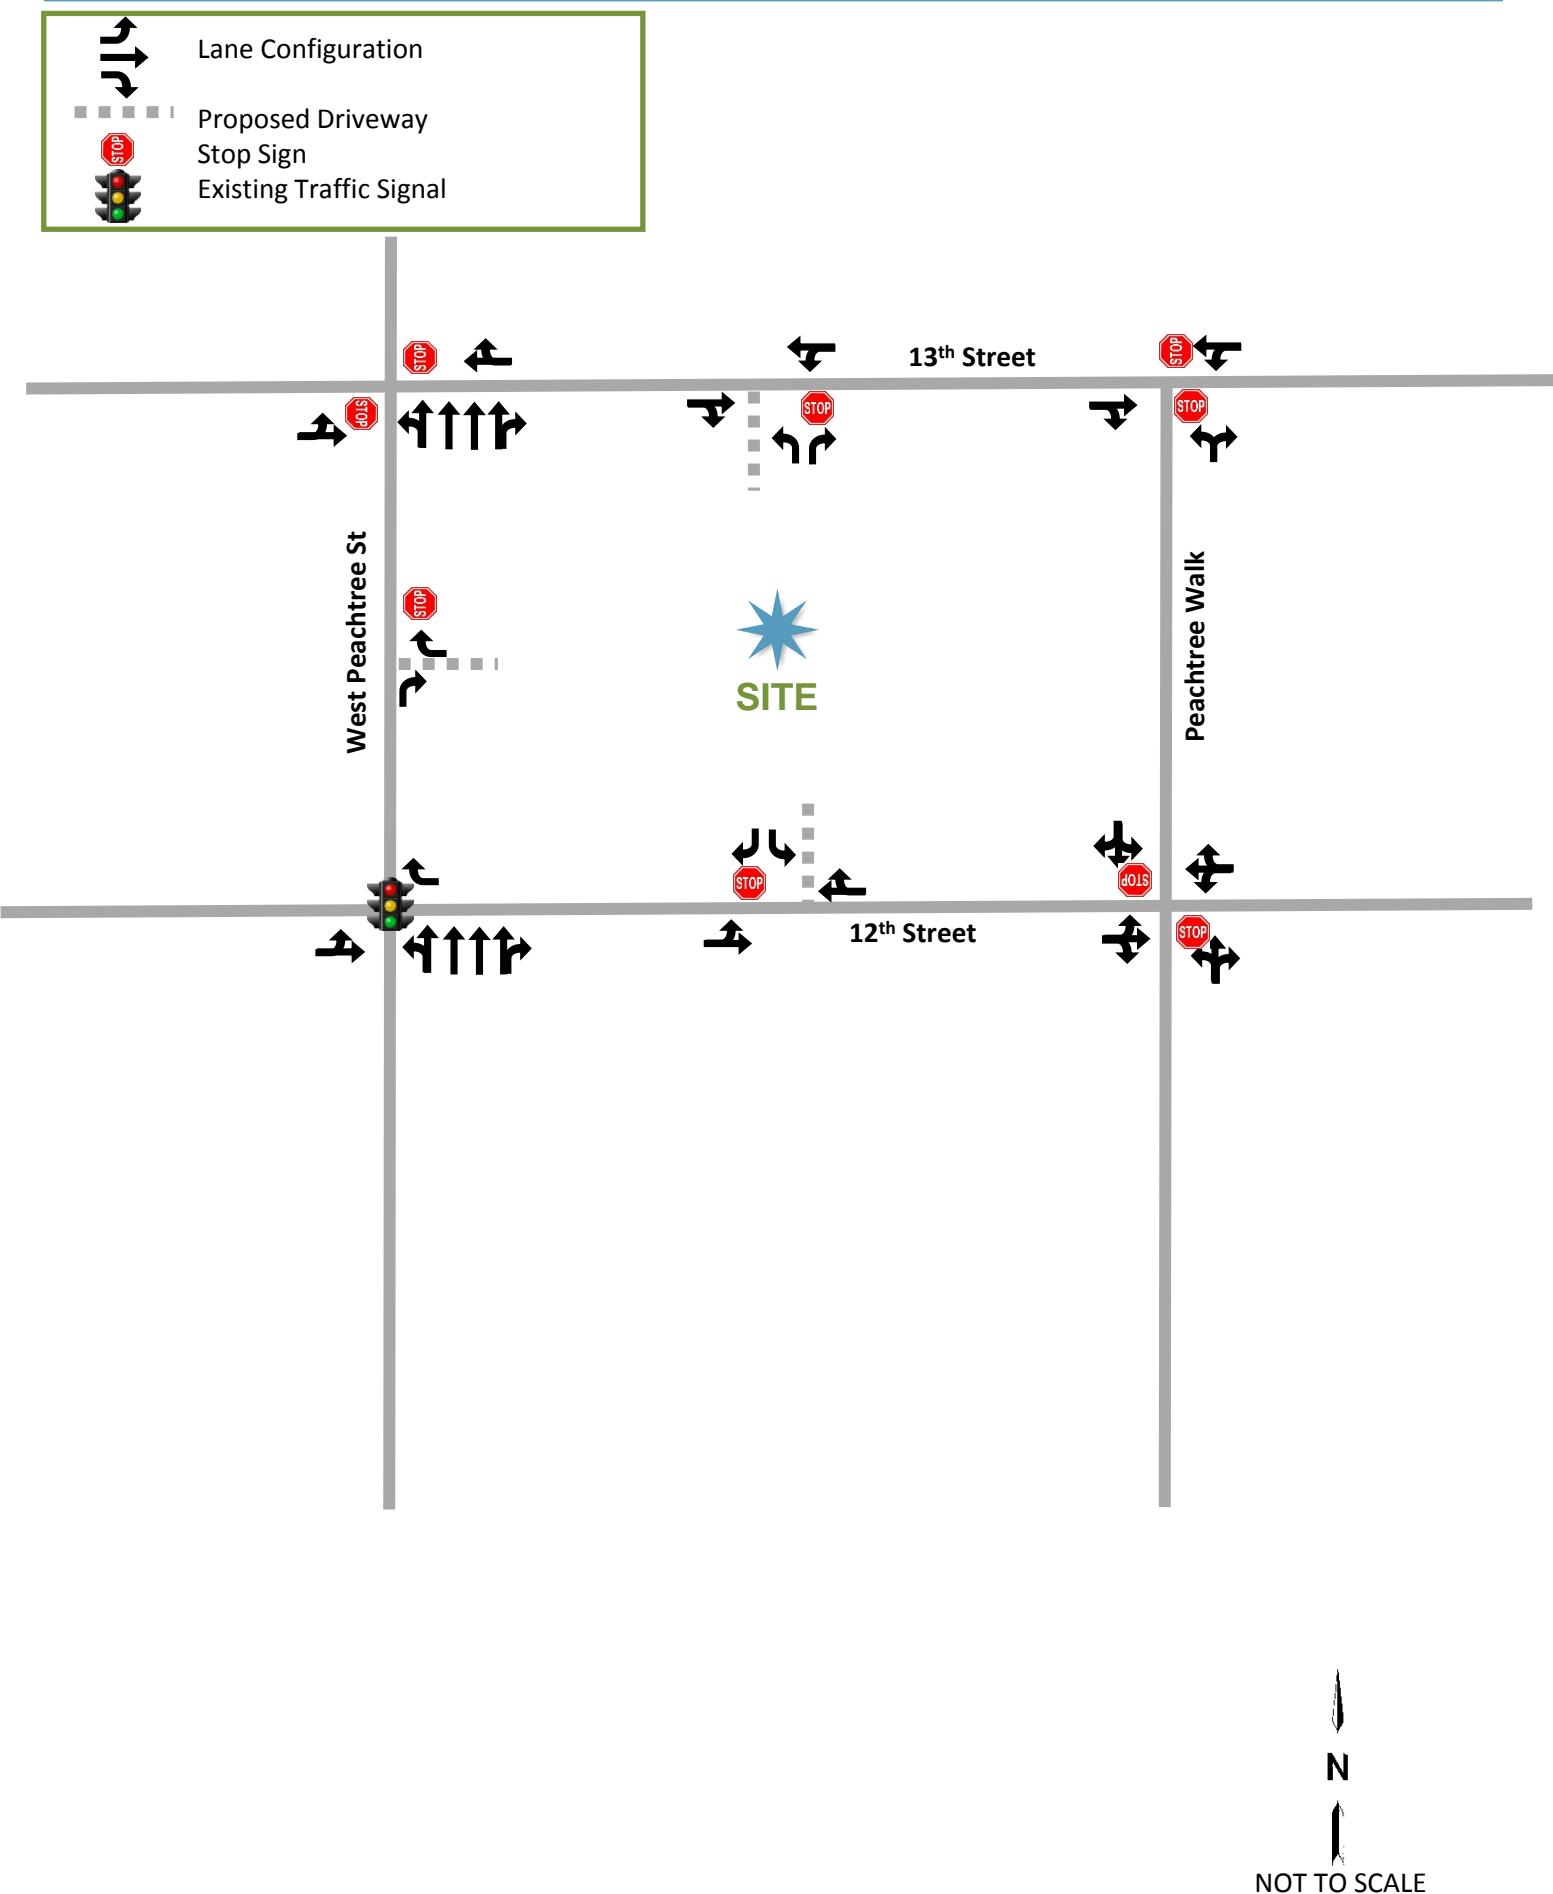

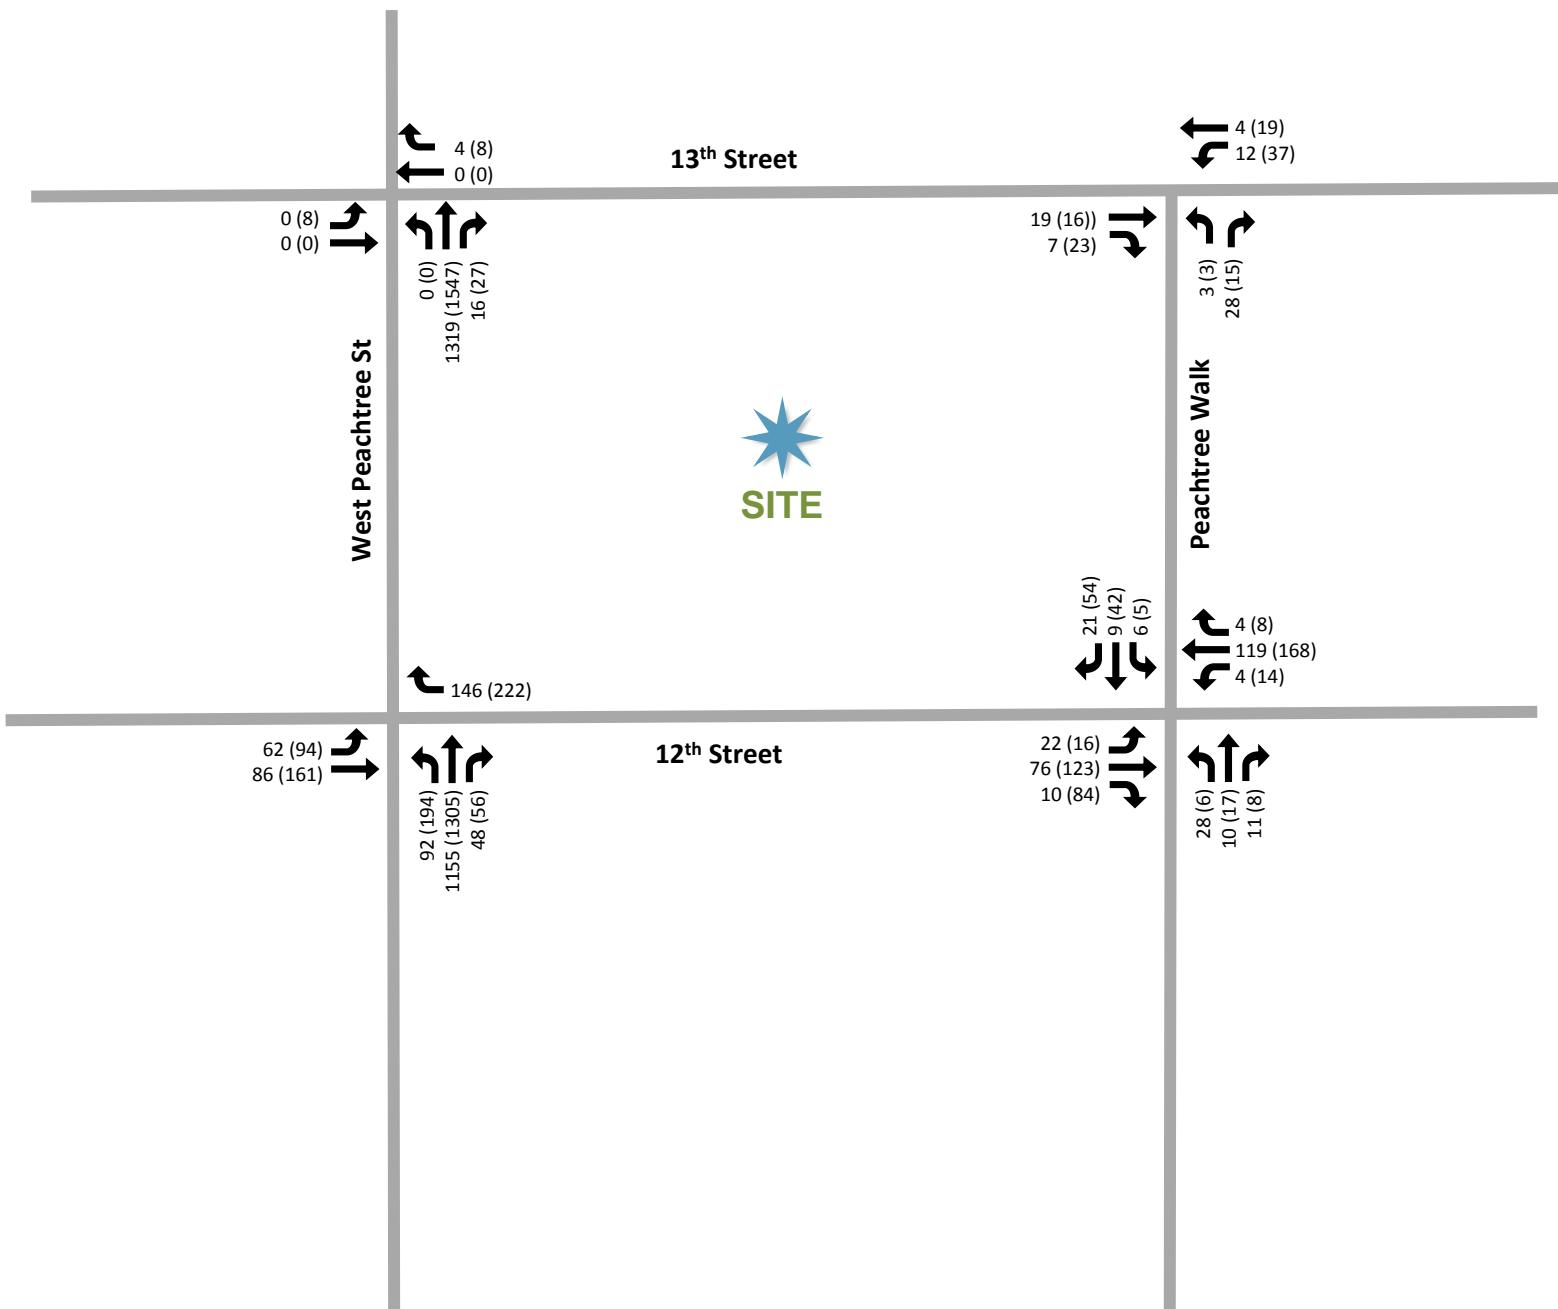

Figure 4: Existing Traffic Volumes

##(##)→ AM(PM) Peak Hour Traffic Volume

3.3. Existing Capacity Analysis

The results of the intersection capacity analysis are shown in Table 1 for existing volumes. Average vehicular delays are calculated and reported as Levels of Service (LOS) as defined by the Highway Capacity Manual (HCM). Synchro output reports are included in Appendix C.

Table 1: Existing Intersection Capacity Analyses

Intersection	Control	Approach	Peak Hour LOS (sec delay)	
			AM	PM
West Peachtree St at 12 th Street	Signal	Overall	C	C
West Peachtree St at 13 th Street	Side St Stop Sign	NB	A	A
		EB*	A	A
		WB	A	A
Peachtree Walk at 13 th Street	Side St Stop Sign	NB	A	A
		EB*	A	A
		WB	A	A
Peachtree Walk at 12 th Street	Side Street Stop Sign	NB	B	B
		SB	B	B
		EB*	A	A
		WB	A	A

As can be seen in Table 1, the existing study intersections operate adequately overall during both morning and evening peak volume hours with the existing lane configurations and traffic controls.

Intersection capacity analyses worksheets are included in the Appendix.

4. Trip Generation

Table 2 summarizes the project trip generation calculated using the Institute of Transportation Engineers' (ITE) *Trip Generation Manual*, 9th Edition, 2012 and *Trip Generation Handbook*, 3rd Edition, 2014. The worksheets are included in the Appendix.

Table 2: Project Trip Generation

Project Land Use (LUC)	Project Density	Vehicular Project Trips		
		Total	Inbound	Outbound
Office (710)	686.23 ksf Daily AM Peak Hour PM Peak Hour	5674

New Vehicular Trips	at Access Pts Daily AM Peak Hour PM Peak Hour	5974*	2987*	2987*
		812	655	157
		756	172	584

*Does not include daily Internal Capture and Retail Pass-By Trips reductions (estimated 7%)

4.1. Trip Distribution and Assignment

The assignment and directional distribution of new project trips was based on the existing traffic patterns in the area. The directional distribution for new trips is as follows:

- 75% to the north from site on West Peachtree Street to 14th Street and from the north on Spring Street to 12th & 13th Streets (14th Street north west of the site provides access to/from I-75/85 northbound and southbound and to/from west of the site while West Peachtree Street and Spring Street provide access to/from the north)
- 15% to/from east of site on 12th and 13th Streets
- 10% from south of site via West Peachtree Street and to the south on Spring Street via 12th & 13th Streets

Figures 4 and 5 show the directional distribution and volumes of the new vehicular project trips.

Figure 5: Directional Trip Distribution

##%(##%) IN(OUT) Distribution New Trips

Proposed Driveway

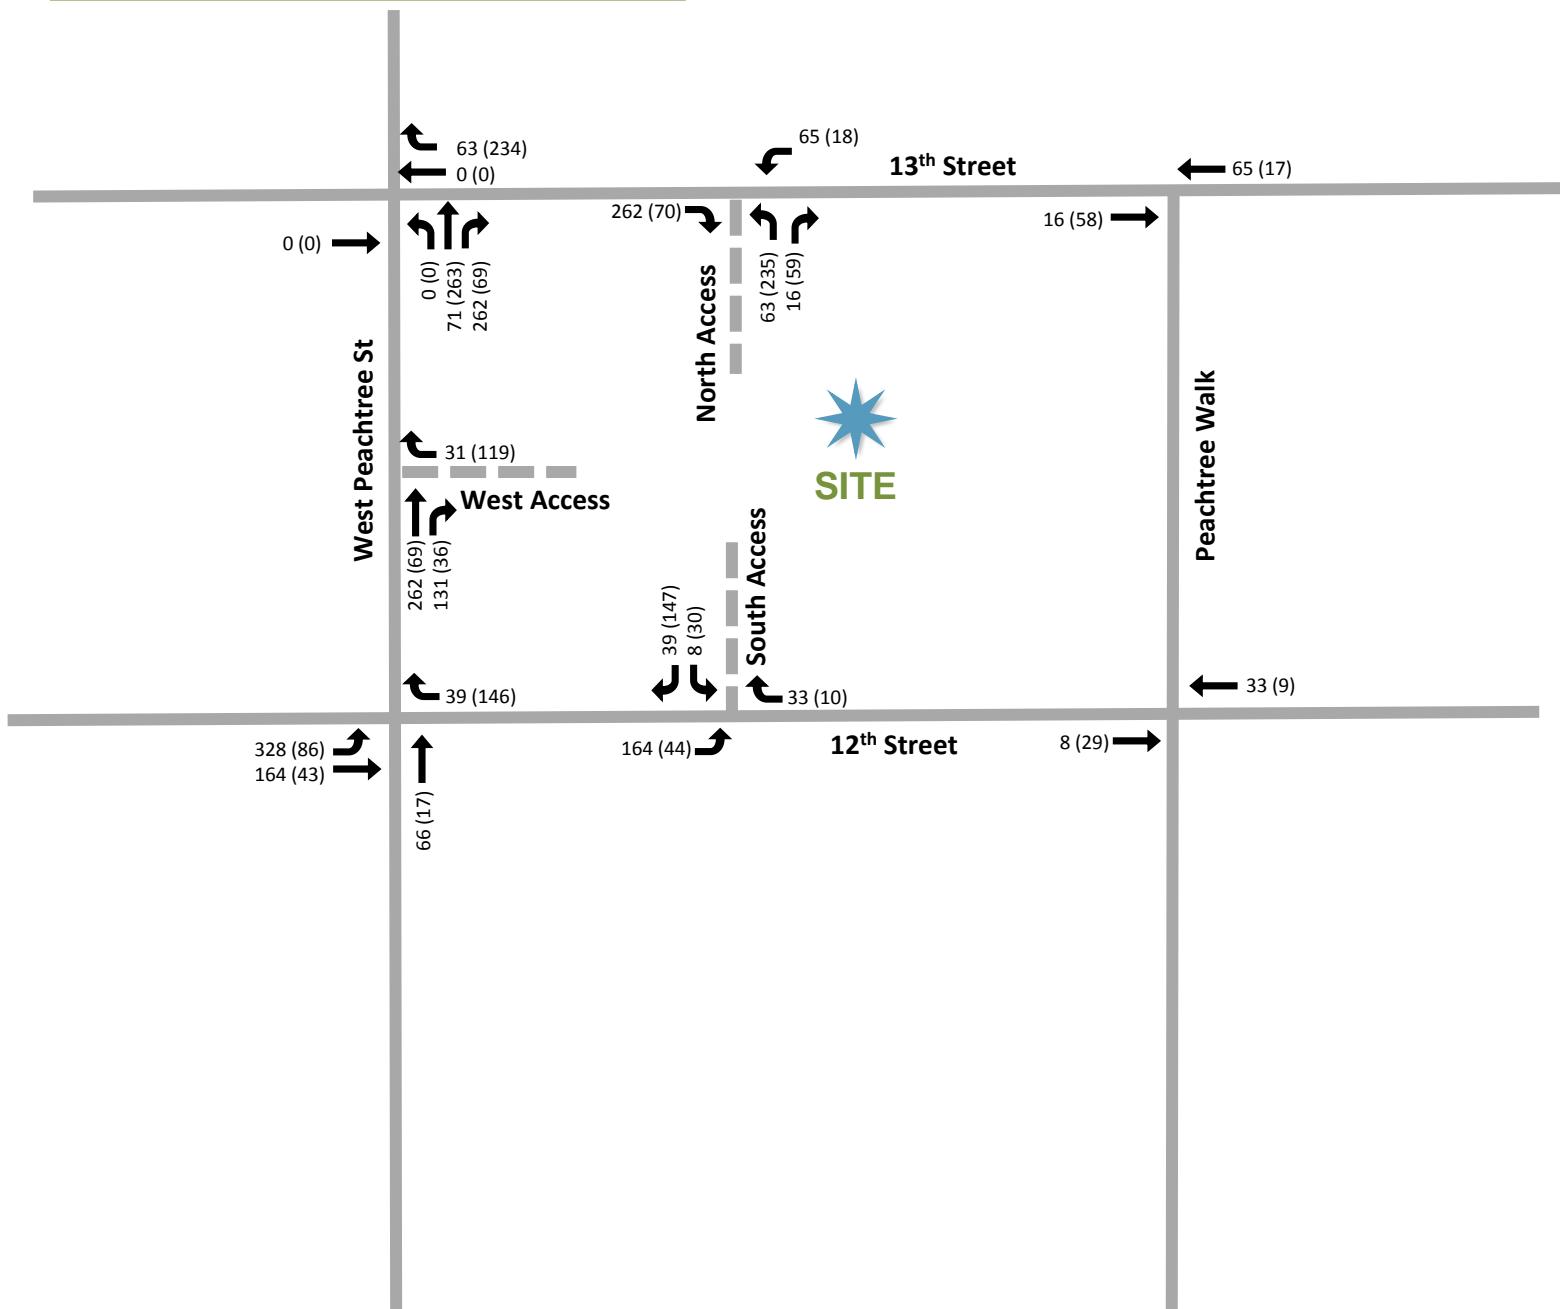

N

NOT TO SCALE

Figure 6: Project Traffic Volumes

##(##) → AM(PM) Peak Hour Traffic Volume
 — Proposed Driveway

N

NOT TO SCALE

5. Background Conditions Capacity Analysis

A 1% annual growth rate for three years was applied to the existing traffic volumes to calculate the future intersection turning movement volumes at the end of 2019 without new project trips. The background volumes are shown in Figure 7 and the expected Levels of Service (LOS) are shown in Table 3.

Table 3: Background LOS

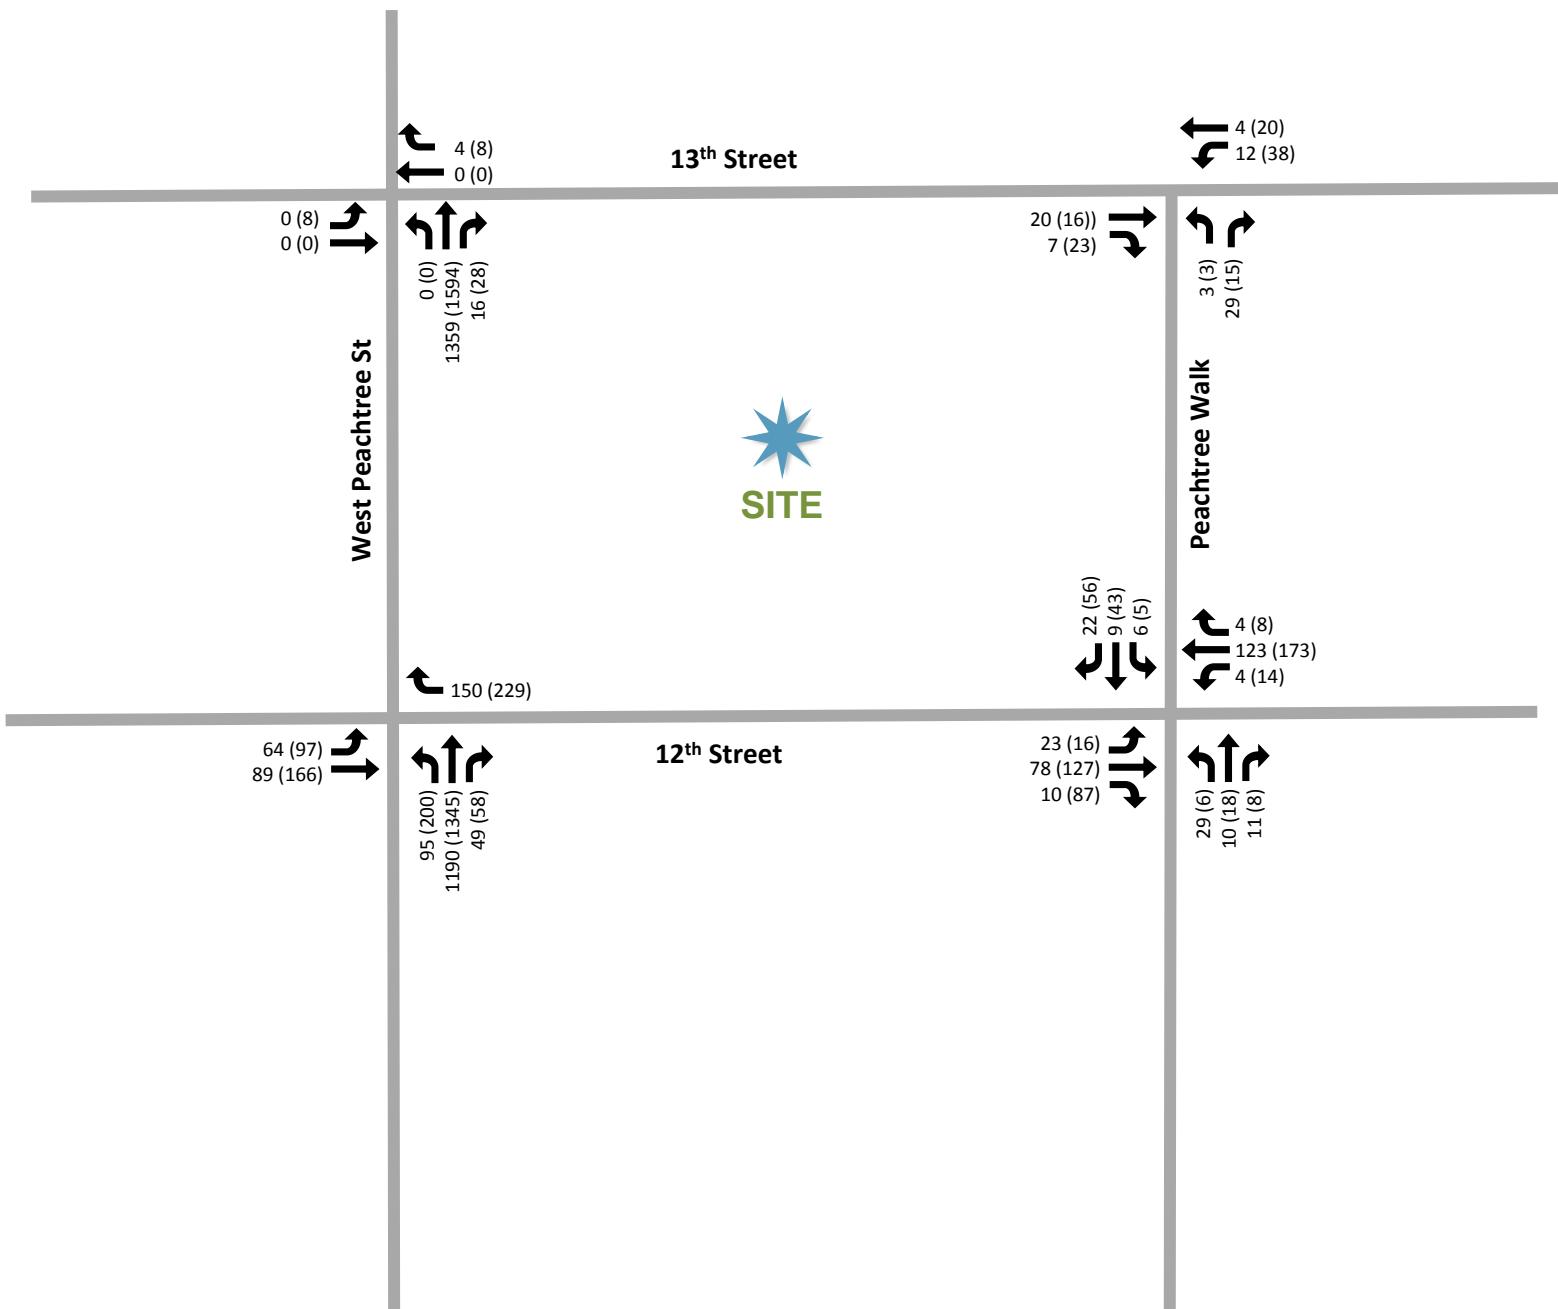

Intersection	Control	Approach	Peak Hour LOS (sec delay)	
			AM	PM
West Peachtree St at 12 th Street	Signal	Overall	C	C
West Peachtree St at 13 th Street	Side St Stop Sign	NB	A	A
		EB*	A	A
		WB	A	A
Peachtree Walk at 13 th Street	Side St Stop Sign	NB	A	A
		EB*	A	A
		WB	A	A
Peachtree Walk at 12 th Street	Side Street Stop Sign	NB	B	B
		SB	B	B
		EB*	A	A
		WB	A	A

As can be seen in Table 3, the study intersections are expected to operate adequately overall in 2019 for expected background (no build) traffic volumes during both morning and evening peak volume hours with the new development's new traffic.

Capacity analyses worksheets showing the background 2019 traffic conditions for existing lane configurations and traffic control are included in the Appendix.

Figure 7: Background Traffic Volumes

##(##)→ AM(PM) Peak Hour Traffic Volume

NOT TO SCALE

6. Future Conditions Capacity Analysis

The results of the intersection capacity analysis are shown in Table 4 for existing with project volumes.

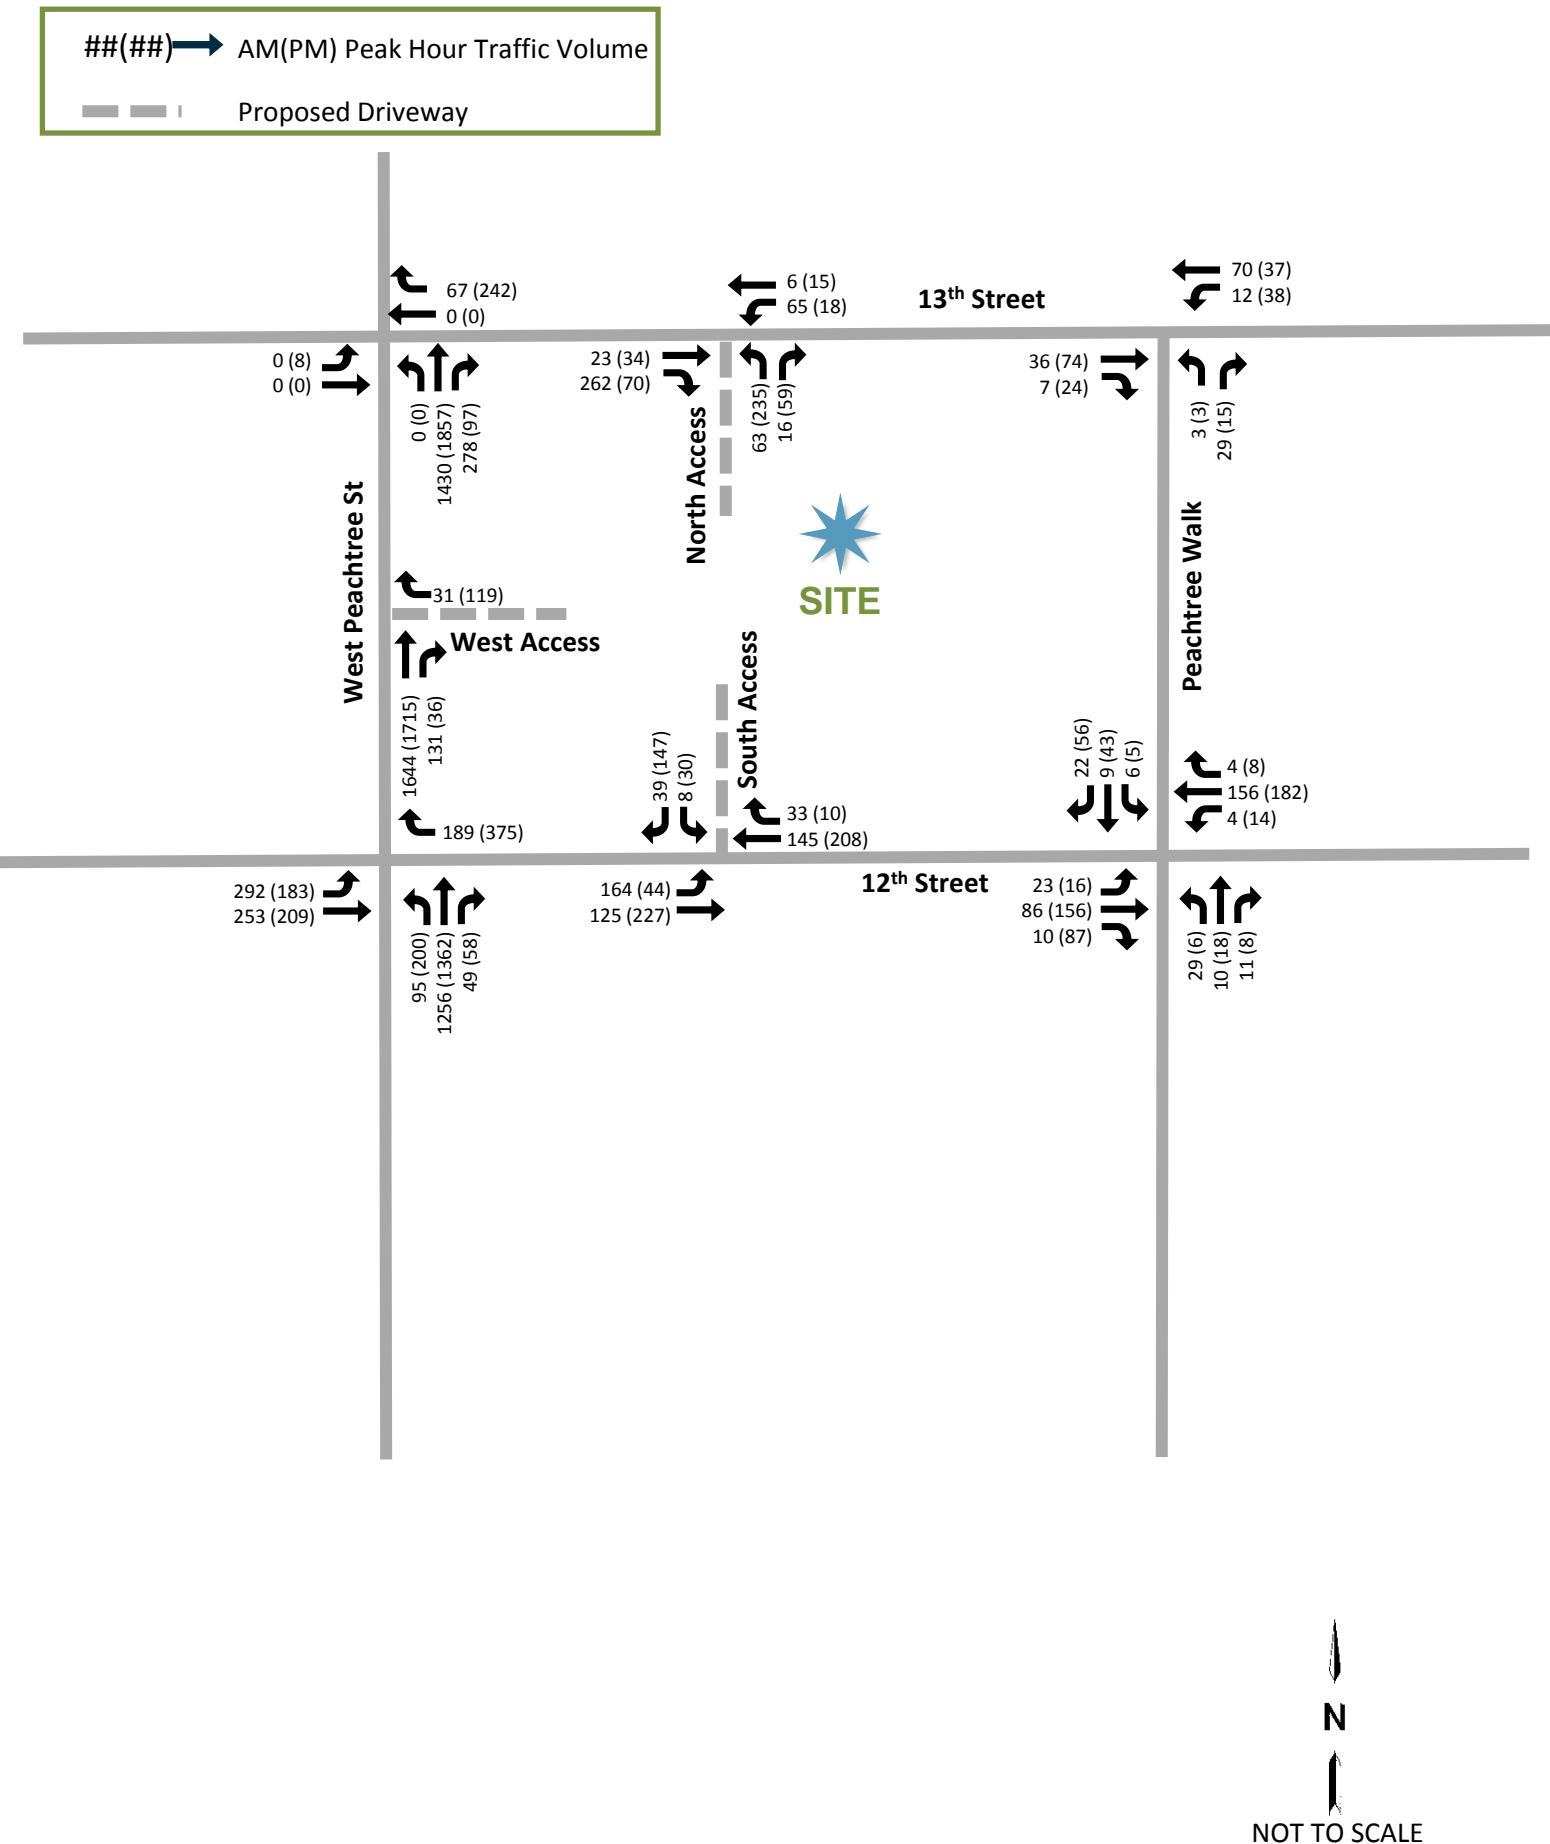

Table 4: Future with Project Trips LOS

Intersection	Control	Approach	Peak Hour LOS (sec delay)	
			AM	PM
West Peachtree St at 12 th Street	Signal	Overall	D	C
West Peachtree St at 13 th Street	Side St Stop Sign	NB	A	A
		EB*	A	B
		WB	A	A
Peachtree Walk at 13 th Street	Side St Stop Sign	NB	A	A
		EB*	A	A
		WB	B	B
Peachtree Walk at 12 th Street	Side Street Stop Sign	NB	B	B
		SB	B	B
		EB*	A	A
		WB	A	A
North Access at 13 th Street	Side Street Stop Sign	NB LT	B	B
		NB RT	A	A
		EB RT	A	A
		WB LT	A	A
South Access at 12 th Street	Side Street Stop Sign	SB LT	C	B
		SB RT	A	B
		EB LT	A	A
		WB RT	A	A
West Access at W Peachtree Street	Stop Sign	NB RT	A	A
		WB RT	A	A

As can be seen in Table 4, all existing study intersections are expected to operate adequately in the weekday peak hours with the project trips in 2019 with existing traffic control and lane configurations (northbound West Peachtree Street was analyzed with only four (4) lanes instead of the existing five (5) to allow for the planned installation of a bike lane.) The site access intersections are also expected to operate adequately with combined turning and through lanes on the adjacent streets and with separate right turn lanes exiting the site controlled by stop signs.

New vehicular, bicycle, and pedestrian counts should be collected and analyzed when the two predominately residential developments on the north side of 13th Street at West Peachtree Street are substantially occupied, as well as this development to determine if installation of a traffic control signal is warranted at this intersection. A substantial of new pedestrian trips crossing the streets of this intersection are expected, however hourly volumes to meet minimum warrant requirements cannot be estimated at this time. Bicycle trips counted may be included in the pedestrian hourly volumes.

Figure 8: Build Traffic Volumes

7. Conclusions and Recommendations

There were no improvements identified in the analyses with the reduction of a northbound through lane on West Peachtree Street to allow for construction of a bike lane as indicated by changes in the Levels of Service (LOS) expected for vehicular traffic volumes including new project trips from in the year 2019 for the new trips generated by the mixed-use development is planned for the city block bounded by West Peachtree Street, 12th Street, Peachtree Walk, and 13th Street.

The 156,837 square foot (sf) site will be occupied by a new building containing 946,759 sf of office, hotel, residential and retail use space with 1,550 parking spaces, to open in 2019. The building will contain approximately 686,230 sf of offices, 156 hotel rooms, 65 apartments, and 16,688 sf of retail space. The parking areas will be accessed on 12th and 13th Streets NW by full-movement intersections mid-block and on West Peachtree Street NW by a right in/out intersection mid-block. These vehicular access points will provide access to all parking spaces within the building. Truck docks on 13th Street and a curb cut on Peachtree Walk will provide access for trash removal. Pedestrians will access the building on all sides of the block.

The only programmed improvements are expected to be completed by 2019 of converting one of the five West Peachtree Street northbound lanes to a bike lane was included in the traffic impact analyses.

The traffic study includes background traffic growth, trip generation, directional distribution, and traffic impacts at intersections within the area. The expected additional background trip volumes were calculate using a one percent (1%) annual growth rate applied for three (3) years to the existing intersection peak hour turning movement counts.

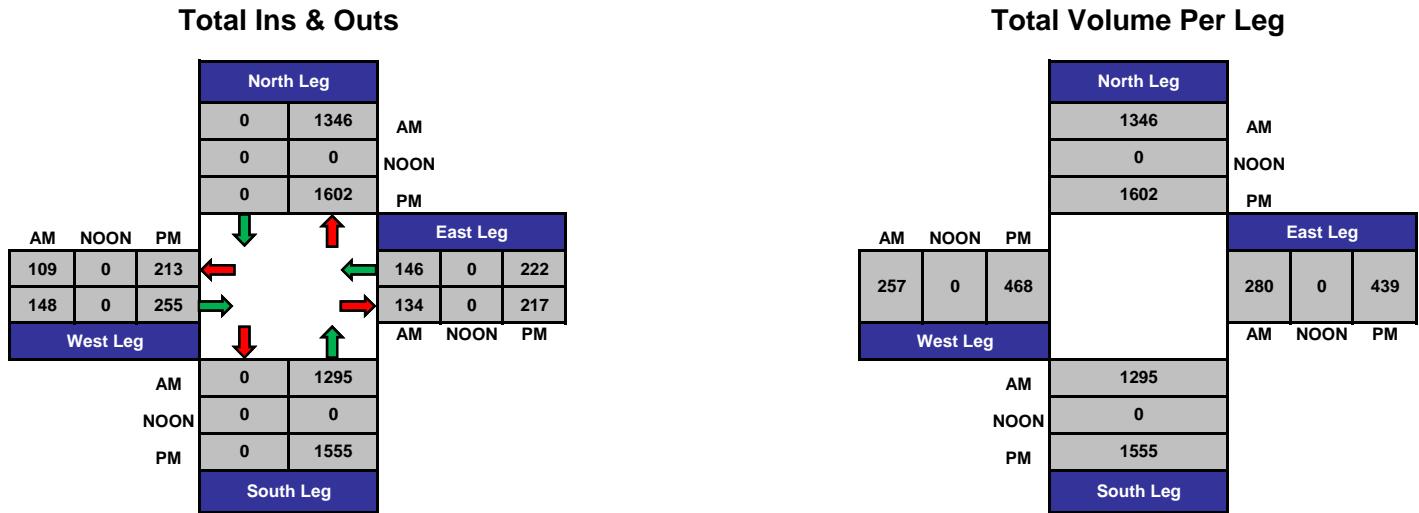

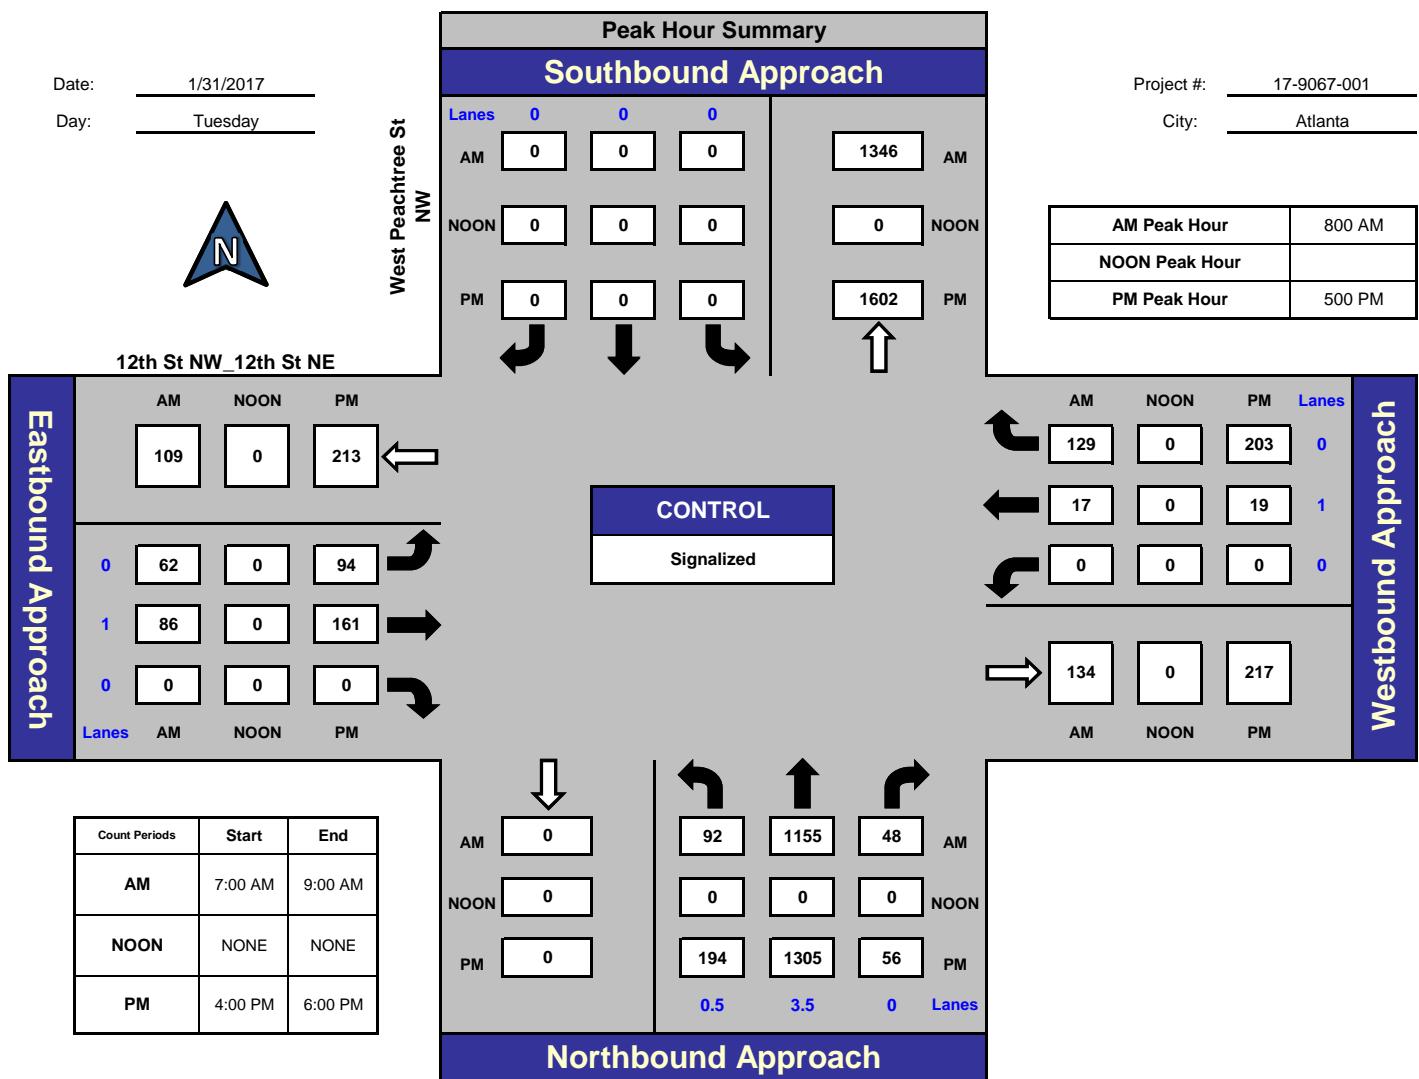

Approximately 5,974 new vehicular trips (entering and exiting) are expected to be generated when the development is complete in 2019. On typical weekdays during the morning and evening peak volume traffic hours, approximately 655 morning entering and 157 exiting vehicles with 178 evening entering and 590 exiting vehicles are expected. Of these, approximately 6 vehicles already passing by the site during the evening peak hour are expected to enter and exit the site. Approximately 126 morning peak hour and 32 evening peak hour trips are expected to originate and terminate within the site as internal captured trips and are not included in the new external vehicular trips totals above. Approximately 25% of new vehicular trips that would be normally be expected to be generated by the project land uses on a site without pedestrian, bicycle, bus and transit availability were removed from the totals above, since the location of this project provides for other modes of transportation. Assignment of the new trips was based on the existing directional traffic patterns in the area.

However, when the predominately residential use buildings on the north side of 13th Street are completed and occupied, installation of a traffic control signal at the intersection of 13th Street and West Peachtree Street primarily to provide safer pedestrian access should be considered. A traffic signal at this intersection would also allow safer vehicular movements across West Peachtree Street (assuming 13th Street is reconfigured as two-way. Collection of pedestrian, bike, and vehicle counts when the three buildings are completed and substantially occupied would be needed for a signal warrant analysis. Realignment of 12th Street westbound at West Peachtree Street to allow westbound crossing vehicles should also be considered to provide better access. Neither improvements were identified as required.

Traffic Impact Study for
DRI 2659 1105 W Peachtree Mixed-Use Development

Short Title

PEACHTREE CORRIDOR COMPLETE STREET RETROFIT - PHASE 3 FROM SHADOLAWN AVENUE TO MAPLE DRIVE

GDOT Project No.

0006684

Federal ID No.

CSMSL-0006-00(684)

Status

Programmed

Service Type

Last Mile Connectivity / Complete Street Retrofit

Sponsor

Buckhead CID,City of Atlanta

Jurisdiction

City of Atlanta

Analysis Level

Exempt from Air Quality Analysis (40 CFR 93)

Existing Thru Lane

6

LCI

Planned Thru Lane

6

Flex

Network Year

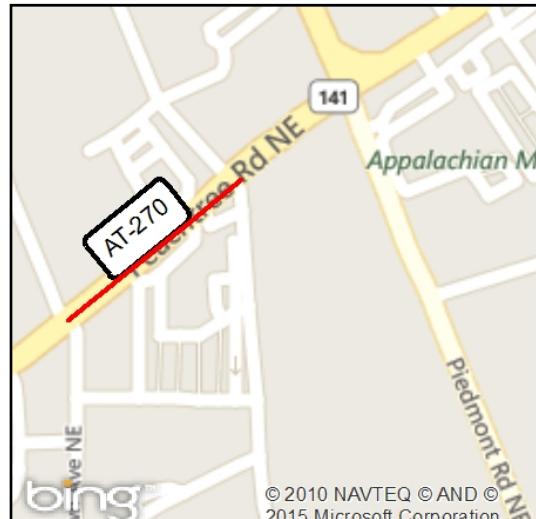

TBD

Corridor Length

0.1 miles

Detailed Description and Justification

This is a last mile connectivity project to be implemented along Peachtree Rd from Shadowlawn Avenue to Maple Drive. The project will improve connectivity to existing bus stops and the Buckhead MARTA station. The project consists of a typical section with three lanes in each direction consisting of 10-ft inside and outside lanes and an 11-ft center lane divided by a 19-ft raised landscape median (including turn lanes).except between Stratford Road to Lenox Drive, which consists of three 11-ft lanes in each direction. The project also proposes 5-ft bike lanes, header curb and a 14 to 17-ft shoulder comprised of a 6-ft landscape strip and 8 to 11-ft wide sidewalks on both sides of the roadway.

Short Title	CYCLE ATLANTA: PHASE 1.0 - BICYCLE MOBILITY IMPROVEMENTS		
GDOT Project No.	0012593		
Federal ID No.	N/A		
Status	Programmed		
Service Type	Last Mile Connectivity / Bicycle Facility		
Sponsor	City of Atlanta		
Jurisdiction	City of Atlanta		
Analysis Level	Exempt from Air Quality Analysis (40 CFR 93)		

Existing Thru Lane	N/A	LCI	<input type="checkbox"/>	Network Year	TBD
Planned Thru Lane	N/A	Flex	<input checked="" type="checkbox"/>	Corridor Length	26.8 miles

Detailed Description and Justification

This project involves installing the bicycle facilities identified by the ARC-funded Cycle Atlanta: Phase 1.0 study. These facilities will support the existing and planned compact development in the central core of the city, as well as within the Atlanta BeltLine Planning Area, by supporting cycling as a mode of transportation between varied land uses. The five Core Bicycle Connection corridors from the Connect Atlanta Plan that will be analyzed under Phase 1.0 connect directly to 13 of the 38 MARTA heavy rail stations, providing enhanced connections between housing, services, employment opportunities and transit stations. The results of the study will identify methods to retrofit existing urban roadways with bicycle facilities in a context sensitive manner that protects the character and integrity of existing neighborhoods while meeting the needs of the community. Many of these study corridors overlap the ARC Bicycle Study Network, including West Marietta Street, Howell Mill Road, Peachtree Street, Lee Street and Martin Luther King, Jr Drive. Examples of the types of projects to be implemented can be found in the NACTO Urban Bikeway Design Guide. The study will be completed and adopted by June 30, 2013. Project components are identified as Core Bicycle Connections and Secondary Bicycle Connections in the Connect Atlanta Plan. Portions of this project are located in defined Equitable Target Areas. The project is being funded under the Last Mile Connectivity Program, a regional program defined in PLAN 2040 to improve pedestrian and bicyclist mobility, accessibility and safety along transit corridors, within employment and commercial centers, and in the vicinity of other major origins and destinations such as schools.

Flex

Network Year

TBD

Corridor Length

4.6 miles

Detailed Description and Justification

This project will install the bicycle facilities identified in the ARC funded Cycle Atlanta: Phase 1.0 study. These facilities will support the existing and planned compact development in the central core of the city, as well as within the Atlanta BeltLine Planning Area by supporting cycling as a mode of transportation between varied land uses. Projects include (1) protected bike lanes on Mangum/Walker/Peters/Lee - part of Corridor A, (2) bike lanes and buffered bike lanes on R. McGill Blvd - part of Corridor C, and (3) the Bicycle Boulevard/Neighborway along Woodward Avenue - part of Corridor D. The projects add 4.6 miles of high quality bicycle facilities to Atlanta's network and make key connections within the 31-mile Phase 1.0 network. Portions of this project are located in Equitable Target Areas.

Planned Thru Lane	N/A	Flex	<input checked="" type="checkbox"/>	Corridor Length	<input type="text" value="N/A"/> miles

Detailed Description and Justification

This project involves installing/constructing pedestrian safety improvements at several intersections adjacent to existing heavy rail stations and regional local and express bus stops. This project includes the addition of new traffic signals at seven intersections as well as rectangular rapid flash beacons (RRFBs) at five intersections. These signals are necessary to provide safe opportunities for pedestrian crossings of the Strategic Regional Throughfare Network and the Regional Strategic Transportation System corridors within Midtown. These locations were identified for improvements in the Blueprint Midtown plan. To increase the visibility of pedestrian crossings in Midtown, approximately 140 intersections will be restriped in the Midtown core. The existing striping is in poor condition and many intersections were never re-striped after resurfacing and construction projects. The project is being funded under the Last Mile Connectivity Program, a regional program defined in PLAN 2040 to improve pedestrian and bicyclist mobility, accessibility and safety along transit corridors, within employment and commercial centers, and in the vicinity of other major origins and destinations such as schools.
