ARC REVIEW CODE: R1703221

TO: ATTN TO: FROM: RE: Mayor Mario Avery, City of Fairburn Tarika Peeks, City Planner/Zoning Administrator Douglas R. Hooker, Executive Director, ARC Development of Regional Impact Review

rayh R. Hok

Digital signature Original on file

The Atlanta Regional Commission (ARC) has completed a regional review of the following Development of Regional Impact (DRI). ARC reviewed the DRI with regard to its relationship to regional plans, goals and policies – and impacts it may have on the activities, plans, goals and policies of other local jurisdictions as well as state, federal and other agencies. This final report does not address whether the DRI is or is not in the best interest of the local government.

Name of Proposal: Saben Fairburn South Distribution Center (DRI 2665) <u>Submitting Local Government</u>: City of Fairburn <u>Review Type</u>: Development of Regional Impact <u>Date Opened</u>: March 22, 2017 <u>Date Closed</u>: April 11, 2017

Description: This DRI is located in the City of Fairburn, bounded roughly by I-85 on the north, Creekwood Road (which begins at the southern terminus of Oakley Industrial Boulevard) on the east, Cleckler Road on the south and John Seaborn Road on the west. The project consists of four buildings totaling 1,382,000 SF of warehouse/distribution space on approximately 99 acres. Site access is proposed via two driveways on Oakley Industrial Boulevard/Creekwood Road. The DRI review trigger for this development is a concept plan review application. The planned build-out of this DRI is 2019.

<u>Comments</u>: According to the ARC Unified Growth Policy Map (UGPM), part of The Atlanta Region's Plan, this DRI is located in the Developing Suburbs Area of the region. Developing Suburbs are areas that have developed from roughly 1995 to today and are projected to remain suburbs through 2040. Per the UGPM, the majority of this DRI site is also within a Regional Industrial and Logistics Area. These areas represent the major intermodal freight facilities and major logistics centers of the region. ARC's Regional Development Guide (RDG) details recommended policies for areas on the UGPM. General information and recommendations for Developing Suburbs and Regional Industrial and Logistics Areas are listed at the bottom of these comments.

This DRI appears to manifest some aspects of regional policy in that it is in close proximity to other warehouse/distribution facilities on Oakley Industrial Boulevard, offering the potential for efficiencies in freight movement. It also offers clear connectivity for regional freight movement via Oakley Industrial, SR 74 and I-85. It should be noted that trucks are prohibited south of the site on Creekwood Road, meaning truck traffic will be to/from the direction of SR 74.

The project could further support The Atlanta Region's Plan if it incorporated other aspects of the regional policy detailed at the bottom of this report, including green infrastructure and/or low-impact design (e.g., rain gardens, vegetated swales, etc.) in parking areas and site driveways, and as part of any improvements to site frontages. In addition, ARC encourages the applicant team to ensure that the development promotes a functional, safe, clearly marked and comfortable pedestrian experience on all streets, paths and parking areas on the site. This framework can offer the potential for safe internal site circulation for employees on foot or by another alternative mode.

The intensity of this DRI generally aligns with the RDG's recommended range of densities and building heights in Developing Suburbs. In terms of land use, the project generally aligns with the RDG's recommendations for Industrial and Logistics Areas as well. This DRI's land use is also similar to nearby

clusters of warehouse/distribution development, including the facility across Creekwood Road to the east as well as facilities to the north along Oakley Industrial Boulevard and north of I-85. This project is located in a larger area that is experiencing demand for the development of warehouse/distribution and logistics facilities. However, much of the area adjacent to or near this site, especially to the west, south and southeast, is predominated by low-density residential uses, undeveloped land and farmsteads. While all adjacent properties are also in the City of Fairburn, some nearby residential and undeveloped areas are outside the City. Fairburn's leadership and staff, along with the applicant team, should therefore collaborate to balance the goal of new development with the need for sensitivity to nearby local governments, land uses and natural resources, to the greatest extent possible. Buffers and setbacks will be an important consideration as a result.

Additional ARC staff comments related to natural resources and transportation are attached to this report. These include comments regarding the project's location in the Line Creek Small Water Supply Watershed and associated requirements, as well as the blue line stream on the property (a tributary of Line Creek) and related requirements for the City and the applicant to be aware of. Other comments received during the review period are attached to this report as well.

Further to the above, regional policy recommendations for Developing Suburbs include:

- New development should connect to the existing road network and adjacent developments and use of cul-de-sacs or other means resulting in disconnected subdivisions should be discouraged

- Maximize the usefulness of existing recreational facilities in addition to providing new recreational opportunities

- Eliminate vacant or under-utilized parking areas through mechanisms such as out-parceling or conversion to community open space

- Use rain gardens, vegetated swales or other enhanced water filtration design to enhance the quality of stormwater run-off

- Identify other opportunities to foster a sense of community by developing town centers, village centers or other places of centralized location

Further to the above, as a strategic economic sector, the region should strive to protect Regional Industrial and Logistics Areas and ensure they are well served by the regional transportation network. These areas will see increased job growth in the form of industrial and logistics space. Strategies are needed to avoid residential and industrial conflicts while still allowing both uses in proximity to each other, without limiting the operations of industrial land users. Regional policy recommendations in the RDG for Industrial and Logistics Areas include:

- Protect Industrial and Logistics Areas by not allowing conflicting land uses in the vicinity

- Identify key areas to preserve for freight and industrial uses

- Continue to promote Industrial and Logistics Areas as a major resource in recruiting future economic development prospects to the region

- Ensure the continued efficiency of cargo and freight transport with easy connectivity to trucking and shipping routes through the region

Development of Regional Impact (DRI) – Request for Comments

This e-mail serves as notice that the Atlanta Regional Commission (ARC) has begun a Development of Regional Impact (DRI) review for <u>Saben Fairburn South Distribution Center (DRI 2665)</u>.

This DRI is located in the City of Fairburn, bounded roughly by I-85 on the north, Creekwood Road (which begins at the southern terminus of Oakley Industrial Boulevard) on the east, Cleckler Road on the south and John Seaborn Road on the west. The project consists of four buildings totaling 1,382,000 SF of warehouse/distribution space on approximately 99 acres. Site access is proposed via two driveways on Oakley Industrial Boulevard/Creekwood Road. The DRI review trigger for this development is a concept plan review application. The planned build-out of this DRI is 2019.

As a representative of a nearby local government or potentially affected party, we request that you or your staff review the attached Preliminary Report and provide any comments to ARC on or before **April 6, 2017.**

You may also view the Preliminary Report and other project information by visiting the <u>ARC Plan Reviews webpage</u> and searching for "Saben Fairburn South Distribution Center" in the field at the bottom of the page. The report and other information will be permanently available online as of tomorrow, March 23.

Date Opened: March 22, 2017 Deadline for Comments: April 6, 2017 Date to Close: April 11, 2017

For more information regarding the DRI process or other DRIs reviewed by ARC, please visit the ARC DRI webpage.

Andrew,

The proposed project consists of four buildings totaling 1,382,000 SF of warehouse/distribution space on approximately 99 acres, and is not located within 11 miles of any civil airport. It is located outside of any FAA surface, and compatible land use area, and does not appear to impact any airport.

However, if the proposed project's vertical construction, or equipment exceeds 200ft above ground level, an FAA Form 7460-1 must be submitted to the Federal Aviation Administration. That may be done online at <u>https://oeaaa.faa.gov</u>. The FAA must be in receipt of the notification, no later than 90 days prior to construction. The FAA will evaluate the potential impact of the project on protected airspace associated with the airports and advise the proponent if any action is necessary.

Thank you for the opportunity to comment on the proposed development.

Alan Hood | Airport Safety Data Program Manager Georgia Department of Transportation - Aviation Programs 600 West Peachtree Street, N.W. | 2nd Floor | Atlanta, Georgia 30308 M: 404-660-3394 | F: 404-631-1935 | | E: <u>achood@dot.ga.gov</u>

2665 SABEN FAIRBURN SOUTH DISTRIBUTION CENTER DRI City of Fairburn Natural Resources Division Review Comments

March 20, 2017

Water Supply Watershed and Stream Buffer Protection

The proposed project is located within the Line Creek Water Supply watershed, a small (less than 100 square mile) watershed which is a water supply source for both Coweta and Fayette counties, both of which are in the Metropolitan North Georgia Water Planning District. The proposed project property is more than 7 miles upstream of both the County and City intakes. The USGS coverage for the project area show one blue-line stream crossing the project property. The stream is also shown on the submitted site plan.

Under the Georgia Planning Act of 1989, all development in a public water supply watershed is subject to the DNR Part 5 Water Supply Watershed Minimum Criteria (Chapter 391-3-16-.01, Criteria for Water Supply Watersheds) unless alternative criteria are developed and adopted by the jurisdiction according to the requirements of the Part 5 criteria and are then approved by Georgia EPD and DCA. The minimum criteria include: a limit on impervious surface of either 25 percent of the watershed area or the existing amount, whichever is greater; buffer requirements on perennial (blue-line) streams that include a 50-foot undisturbed buffer and 75-foot impervious setback on streams that are more than 7 miles upstream of the closest intake; and other requirements for hazardous materials and hazardous waste. It is our understanding that the City has adopted the Water Supply Watershed Minimum Criteria. The City will still need to determine if the proposal meets the requirements of its water supply watershed ordinance.

As stated above, the USGS coverage for the project area shows a blue line stream on the property running north to southeast from the mid-point of the property line with the I-85 ROW to just northeast of the midpoint of the property line with the Creekwood Road ROW. The submitted site plan shows the stream with no other streams or tributaries indicated. The 25-foot State Sediment and Erosion Control Buffer as well as a 50-foot undisturbed buffer and 75-foot impervious surface buffer are shown around all streams and wetland areas. The 50-foot and 75-foot buffers are consistent with both the Part 5 Water Supply Watershed Minimum Criteria and the City's stream buffer ordinance. However, an access drive parallel to the northern truck court of the 1,100,000 SF building, and a stream crossing accessing that building and the 110,000 SF building, are shown as intruding on the buffers. Any intrusion into the State, City or water supply watershed buffers may require a variances. Any other streams on the property may be subject to the City and water supply watershed buffers as well as the State Sediment and Erosion Control buffer. Any other waters of the state that may be on the property will also be subject to the State Sediment and Erosion Control Buffer.

Storm Water/Water Quality

The site plan shows proposed detention and water quality ponds adjacent to the proposed developed areas of the property. The final design for stormwater controls on the property should adequately address the impacts of the proposed development on stormwater runoff and downstream water quality. Also, during construction, the project should conform to the relevant state and federal erosion and sedimentation control requirements. After construction, as with all development, water quality will be impacted due to polluted stormwater runoff. The amount of pollutants that will be produced after construction of the proposed development are dependent on the type and intensity of the use and the impervious coverage, which will affect the design of stormwater controls for the project.

In order to address post-construction stormwater runoff quality, the project should implement stormwater management controls (structural and/or nonstructural) as found in the Georgia Stormwater Management Manual (<u>www.georgiastormwater.com</u>) and meet the stormwater management quantity and quality criteria outlined in the Manual. Where possible, the project should use the stormwater better site design concepts included in the Manual.

TRAFFIC STUDY

Prepared by	CALYX
Date	March 17, 2017

REGIONAL TRANSPORTATION PLAN PROJECTS

- 01. Did the traffic analysis incorporate all projects contained in the current version of the fiscally constrained RTP which are within the study area or along major transportation corridors connecting the study area with adjacent jurisdictions?
 - YES (provide date of RTP project list used below and the page number of the traffic study where relevant projects are identified)

The RTP does not identify any projects planned or programmed in the project study area. The traffic analysis report includes three planned projects identified in locally adopted plans.

2019 FA-106 Oakley Industrial Full-Depth Reclamation Stalwart Dr to Bohannon Rd \$897,309 TSPLOST funded

2020 FS-AR-182 SR 74 (Senoia Road) at I-85 – Add turn lanes at the ends widening of bridge to include turn lanes \$47,648,961Federal, State & Local funding

2017 FS-284 South Fulton Multi-modal Study \$325,000 Federal & Local funding

NO (provide comments below)

REGIONAL NETWORKS

02. Will the development site be directly served by any roadways identified as Regional Thoroughfares?

A Regional Thoroughfare is a major transportation corridor that serves multiple ways of traveling, including walking, bicycling, driving, and riding transit. It connects people and goods to important places in metropolitan Atlanta. A Regional Thoroughfare's operations should be managed through application of special traffic control strategies and suitable land development guidelines in order to maintain travel efficiency, reliability, and safety for all users. In light of the special function that Regional Thoroughfares serve in supporting cross-regional and interjurisdictional mobility and access, the network receives priority consideration for infrastructure investment in the Metro Atlanta region. Any access points between the development and a Regional Thoroughfare, combined with the development's on-site circulation patterns, must be designed with the goal of preserving the highest possible level of capacity and safety for all users of the roadway.

NO 🛛

YES (identify the roadways and existing/proposed access points)

The site plan and traffic analysis indicates two (2) access points proposed on Creekwood Road. Creekwood Road is a local road and is not designated as a Regional Thoroughfare.

03. Will the development site be directly served by any roadways identified as Regional Truck Routes?

A Regional Truck Route is a freeway, state route or other roadway which serves as a critical link for the movement of goods to, from and within the Region by connecting airports, intermodal/multimodal facilities, distribution and warehousing centers and manufacturing clusters with the rest of the state and nation. These facilities often serve a key mobility and access function for other users as well, including drivers, bicyclists, pedestrians and transit users. A Regional Truck Route's operations should be managed through application of special traffic control strategies and suitable land development guidelines in order to maintain travel efficiency, reliability, and safety for all users. In light of the special function that Regional Truck Routes serve in supporting cross-regional and interjurisdictional mobility and access, the network receives priority consideration for infrastructure investment in the Metro Atlanta region. Any access points between the development and a Regional Truck Route, combined with the development's on-site circulation patterns, must be designed with the goal of preserving the highest possible level of capacity and safety for all users of the roadway.

NO 🛛

YES (identify the roadways and existing/proposed access points)

The site plan and traffic analysis indicates two (2) access points proposed on Creekwood Road. Creekwood Road is a local road and is not designated as a Regional Truck Route.

04. If the development site is within one mile of an existing rail service, provide information on accessibility conditions.

pr he th er	efer not to drive, expand elp reduce congestion. If a e development site and to	elopments and transit services provide options for people who cannot or economic opportunities by better connecting people and jobs, and can a transit service is available nearby, but walking or bicycling between he nearest station is a challenge, the applicable local government(s) is ute a funding priority for future walking and bicycling infrastructure

	Nearest Station	Click here to enter name of station.
	Distance*	Within or adjacent to the development site (0.10 mile or less)
		0.10 to 0.50 mile
		0.50 to 1.00 mile
	Walking Access*	Sidewalks and crosswalks provide sufficient connectivity
		Sidewalk and crosswalk network is incomplete
		Not applicable (accessing the site by walking is not consistent with the type of development proposed)
		Click here to provide comments.
	Bicycling Access*	Dedicated paths, lanes or cycle tracks provide sufficient connectivity
		Low volume and/or low speed streets provide connectivity
		Route follows high volume and/or high speed streets
		Not applicable (accessing the site by bicycling is not consistent with the type of development proposed)
		Click here to provide comments.
	Transit Connectivity	Fixed route transit agency bus service available to rail station
		Private shuttle or circulator available to rail station
		No services available to rail station
		Not applicable (accessing the site by transit is not consistent with the type of development proposed)
		Click here to provide comments.

* Following the most direct feasible walking or bicycling route to the nearest point on the development site

05. If there is currently no rail transit service within one mile of the development site, is nearby rail service planned in the fiscally constrained RTP?

- NOT APPLICABLE (rail service already exists)
- NOT APPLICABLE (accessing the site by transit is not consistent with the type of development proposed)
- NO (no plans exist to provide rail service in the general vicinity)
- YES (provide additional information on the timeframe of the expansion project below)
 - CST planned within TIP period
 - CST planned within first portion of long range period
 - CST planned near end of plan horizon

Click here to provide comments.

06. If the development site is within one mile of fixed route bus services (including any privately operated shuttles or circulators open to the general public), provide information on walking and bicycling accessibility conditions.

ca jo bi lo	nnot or prefer not to driv bs, and can help reduce c cycling between the deve cal government(s) is enco alking and bicycling infras	
		est bus, shuttle or circulator stop more than one mile away) IILE (provide additional information below)
	Operator(s)	Marta Bus Service
	Bus Route(s)	180
	Distance*	Within or adjacent to the development site (0.10 mile or less)
		0.10 to 0.50 mile
		🔀 0.50 to 1.00 mile
	Walking Access*	Sidewalks and crosswalks provide sufficient connectivity
		Sidewalk and crosswalk network is incomplete
		Not applicable (accessing the site by walking is not consistent with the type of development proposed)
		Bus Transit service currently operates in the west side of I-85 south. No bus transit service is provided closer to the site. Pedestrian and bicycle facilities currently do not exist along Creekwood Road. The site plan and traffic study does not propose sidewalk along roadways adjacent to the development.
	Bicycling Access*	Dedicated paths, lanes or cycle tracks provide sufficient connectivity
		Low volume and/or low speed streets provide sufficient connectivity
		Route uses high volume and/or high speed streets
		Not applicable (accessing the site by bicycling is not consistent with the type of development proposed)

* Following the most direct feasible walking or bicycling route to the nearest point on the development site

07. Does a transit agency which provides rail and/or fixed route bus service operate anywhere within the jurisdiction in which the development site is located?

Access between major developments and transit services provide options for people who cannot or prefer not to drive, expand economic opportunities by better connecting people and jobs, and can help reduce traffic congestion. If a transit agency operates within the jurisdiction and a comprehensive operations plan update is undertaken, the agency should give consideration to serving the site during the evaluation of future routes, bus stops and transfer facilities. If the nature of the development is amenable to access by transit, walking or bicycling, but direct service to the site is not feasible or cost effective, the transit agency and local government(s) should ensure good walking and bicycling access accessibility is provided between the development and any routes within a one mile radius. The applicable local government(s) is encouraged to make these connections a funding priority for future walking and bicycling infrastructure improvements.

☐ NO

YES

Yes. See question 6 above.

08. If the development site is within one mile of an existing multi-use path or trail, provide information on accessibility conditions.

Access between major developments and walking/bicycling facilities provide options for people who cannot or prefer not to drive, expand economic opportunities by better connecting people and jobs, and can help reduce traffic congestion. If connectivity with a regionally significant path or trail is available nearby, but walking or bicycling between the development site and those facilities is a challenge, the applicable local government(s) is encouraged to make the route a funding priority for future walking and bicycling infrastructure improvements.

\square	NOT APPLICABLE	(nearest path or trail more than one mile away	/)
		fied out path of than more than one that	/

YES (provide additional information below)

Name of facility	Click here to provide name of facility.
Distance	Within or adjacent to development site (0.10 mile or less)
	0.15 to 0.50 mile
	0.50 to 1.00 mile
Walking Access*	Sidewalks and crosswalks provide connectivity
	Sidewalk and crosswalk network is incomplete
	Not applicable (accessing the site by walking is not consistent with the type of development proposed)
	Click here to provide comments.
Bicycling Access*	Dedicated lanes or cycle tracks provide connectivity
	Low volume and/or low speed streets provide connectivity
	Route uses high volume and/or high speed streets
	Not applicable (accessing the site by bicycling is not consistent with the type of development proposed)
	No multiuse trails are in the study area. The site plan depicts a proposed pervious walking trail within the development

* Following the most direct feasible walking or bicycling route to the nearest point on the development site

OTHER TRANSPORTATION DESIGN CONSIDERATIONS

09. Does the site plan provide for the construction of publicly accessible roadway connections with adjacent parcels?

The ability for drivers and bus routes to move between developments without using the adjacent roadway network can save time and reduce congestion. Such opportunities should be considered and proactively incorporated into development site plans whenever possible.

- YES (connections to adjacent parcels are planned as part of the development)
- YES (stub outs will make future connections possible when adjacent parcels redevelop)
- NO (the site plan precludes future connections with adjacent parcels when they redevelop)
- NOT APPLICABLE (adjacent parcels are not likely to develop or redevelop in the near future)
- NOT APPLICABLE (the nature of the development or adjacent parcels does not lend itself to interparcel roadway connections)

The development proposes industrial uses adjacent to existing residential uses. The site plan and traffic analysis indicate that no opportunities for future internal roadways connectivity with adjacent parcels is being proposed.

10. Does the site plan enable pedestrians and bicyclists to move between destinations within the development site safely and conveniently?

The ability for walkers and bicyclists to move within the site safely and conveniently reduces reliance on vehicular trips, which has congestion reduction and health benefits. Development site plans should incorporate well designed and direct sidewalk connections between all key destinations. To the extent practical, bicycle lanes or multiuse paths are encouraged for large acreage sites and where high volumes of bicyclists and pedestrians are possible.

- YES (sidewalks provided on all key walking routes and both sides of roads whenever practical and bicyclists should have no major issues navigating the street network)
- PARTIAL (some walking and bicycling facilities are provided, but connections are not comprehensive and/or direct)
- NO (walking and bicycling facilities within the site are limited or nonexistent)
- NOT APPLICABLE (the nature of the development does not lend itself to internal walking and bicycling trips)

The site plan and traffic analysis does not indicate bicycle and pedestrian facilities being provided internal to the development or along adjacent roadways. Any pedestrian traffic on site would appear to intermingle with vehicular traffic with no indication of separate facilities for the different modes.

11. Does the site plan provide the ability to construct publicly accessible bicycling and walking connections with adjacent parcels which may be redeveloped in the future?

The ability for walkers and bicyclists to move between developments safely and conveniently reduces reliance on vehicular trips, which has congestion reduction and health benefits. Such opportunities should be considered and proactively incorporated into development site plans whenever possible.

- YES (connections to adjacent parcels are planned as part of the development)
- YES (stub outs will make future connections possible when adjacent parcels redevelop)
- NO (the development site plan does not enable walking or bicycling to/from adjacent parcels)
- NO (the site plan precludes future connections with adjacent parcels when they redevelop)
- NOT APPLICABLE (adjacent parcels are not likely to develop or redevelop in the near future)
- NOT APPLICABLE (the nature of the development or adjacent parcels does not lend itself to interparcel walking and bicycling trips)

The site plan and traffic analysis does not indicate bicycle and pedestrian facilities being provided internal to the development or along adjacent roadways. Any pedestrian traffic on site would appear to intermingle with vehicular traffic with no indication of separate facilities for the different modes

12. Does the site plan effectively manage truck movements and separate them, to the extent possible, from the flow of pedestrians, bicyclists and motorists both within the site and on the surrounding road network?

The ability for delivery and service vehicles to efficiently enter and exit major developments is often key to their economic success. So is the ability of visitors and customers being able to move around safely and pleasantly within the site. To the extent practical, truck movements should be segregated by minimizing the number of conflict points with publicly accessible internal roadways, sidewalks, paths and other facilities.

- YES (truck routes to serve destinations within the site are clearly delineated, provide ample space for queuing and turning around, and are separated from other users to the extent practical)
- PARTIAL (while one or more truck routes are also used by motorists and/or interface with primary walking and bicycling routes, the site plan mitigates the potential for conflict adequately)
- NO (one or more truck routes serving the site conflict directly with routes likely to be used heavily by pedestrians, bicyclists and/or motorists)
- NOT APPLICABLE (the nature of the development will not generate a wide variety of users and/or very low truck volumes, so the potential for conflict is negligible)

The site plan shows two full movement access points on Creekwood Road. One access point (# 1) located northernmost portion of the site, enters a vehicular parking lot providing access to one building. Access point one provides for separation among truck and vehicle traffic. The second access point (#2) provides vehicles and trucks with access throughout the site. The site plan and traffic analysis does not indicate bicycle and pedestrian facilities being provided internal to the development or along adjacent roadways. Any pedestrian traffic on site would appear to intermingle with vehicular

traffic with no indication of separate facilities for the different modes. Movement throughout the site is provided by one driveway that connects freight trucks and vehicles to designated parking areas.

Due to concerns regarding integrity of an existing bridge along Creekwood Road south of the site, trucks are prohibited from making right turn movements out of the development. Signage directing freight traffic from the development are provided internal to the site and along external roadways.

RECOMMENDATIONS

- 13. Do the transportation network recommendations outlined in the traffic study appear to be feasible from a constructability standpoint?
 - UNKNOWN (additional study is necessary)
 - YES (based on information made available through the review process; does not represent a thorough engineering / financial analysis)
 - NO (see comments below)

No transportation improvements were recommended in the transportation analysis.

- 14. Is ARC aware of any issues with the development proposal which may result in it being opposed by one or more local governments, agencies or stakeholder groups?
 - NO (based on information shared with ARC staff prior to or during the review process; does not reflect the outcome of an extensive stakeholder engagement process)
 - YES (see comments below)

Click here to enter text.

15. ARC offers the following additional comments for consideration by the development team and/or the applicable local government(s):

With the goal of safety and alternative mode accessibility in mind, it is the policy of the ARC to encourage sound transportation practices to be incorporated in each development. It is recommended that, where feasible, pedestrian connectivity within the development and along roadways adjacent to the proposed development be incorporated.

If yes, provide the following information:	Project Name: Project ID:
The initial action being requested of the local government for this project:	□ Rezoning □ Variance □ Sewer □ Water □ Permit ▣ Other Concept Plan Review
Is this project a phase or part of a larger overall project?	◯(not selected) ◯ Yes [®] No
If yes, what percent of the overall project does this project/phase represent?	n/a
Estimated Project Completion Dates:	This project/phase: 6/2019 Overall project:

s sufficient water supply capacity available to serve he proposed project?	◯ (not selected) ● Yes ◯ No
If no, describe any plans to e	xpand the existing water supply capacity:
Is a water line extension required to serve this project?	◯(not selected) ◯Yes ® No
If yes, how much additional l	line (in miles) will be required?
	Wastewater Disposal
Name of wastewater treatment provider for this	Fulton County
site: What is the estimated	
sewage flow to be generated by the project, measured in Millions of Gallons Per Day (MGD)?	0.011 MGPD
Is sufficient wastewater treatment capacity available to serve this proposed project?	◯ (not selected) ◎ Yes ◯ No
If no, describe any plans to e	xpand existing wastewater treatment capacity:
Is a sewer line extension required to serve this project?	◯ (not selected) ◯ Yes [®] No
	ne (in miles) will be required?
	Land Transportation
How much traffic volume is	·
expected to be generated by the proposed development, in peak hour vehicle trips per day? (If only an alternative measure of volume is available, please	3,222 daily trips, 116/52 am in/out, 72/159 pm in/out
provide.) Has a traffic study been performed to determine whether or not	
transportation or access improvements will be needed to serve this project?	ິ (not selected) [®] Yes ◯ No
Are transportation improvements needed to serve this project?	◯(not selected) ◎ Yes ◯No
If yes, please describe below	:See CALYX Traffic Impact Study
	Solid Wasta Disposal
How much solid waste is the	Solid Waste Disposal
project expected to generate annually (in tons)?	300 tons
Is sufficient landfill capacity available to serve this proposed project?	(not selected) Yes No
If no, describe any plans to e	xpand existing landfill capacity:
Will any hazardous waste be generated by the development?	◯ (not selected) ◯ Yes [®] No
If yes, please explain:	
	Stormwater Management
What percentage of the site is projected to be impervious surface once the proposed development has been constructed?	55.6%
	osed (such as buffers, detention or retention ponds, pervious parking areas) to mitigate the ter management:Detention and Water Quality Ponds, Buffers
	· · ·
	Environmental Quality

2 of 3

1. Water supply watersheds?	(not selected) Yes No	
2. Significant groundwater recharge areas?	(not selected) Yes No	
3. Wetlands?	O(not selected) Yes No	
4. Protected mountains?	(not selected) Yes No	
5. Protected river corridors?	(not selected) Yes No	
6. Floodplains?	(not selected) Yes No	
7. Historic resources?	(not selected) Yes No	
8. Other environmentally sensitive resources?	◯ (not selected) ◯ Yes ■ No	
	uestion above, describe how the identified resource(s) may be affected: e impact to wetlands and floodplain (zone X), which will be permitted with USACE.
