EXECUTIVE SUMMARY

This report presents the analysis of the anticipated traffic impacts of the *Horizon Pointe 400* development located in the Gwinnett County, Georgia. The approximately 51.0-acre site is located at the north terminus of Horizon Drive, a local road approximately 1/2-mile north of Old Peachtree Road and east of I-85. Horizon Drive, a dead-end roadway that connects to Old Peachtree Road, will provide access to the proposed development. The proposed development will be a single industrial warehouse facility with approximately 687,500 SF of warehousing space.

It should be noted that the proposed Rock Springs Park development just south of the proposed site is currently under construction to develop a 50-acre park and three soccer fields. This construction is scheduled to be completed in November 2017. Additionally, two industrial warehouse facilities with 264,550 SF each of warehousing space (Horizon Pointe DRI #2563) are also currently under construction adjacent to the proposed site. The project trips generated by the proposed Rock Springs Park will be included in the Existing 2017 conditions analysis. The project trips generated by the Horizon Pointe DRI #2563 will be included in the Projected 2019 No-Build conditions analysis.

The project is a Development of Regional Impact (DRI) and is subject to Georgia Regional Transportation Authority (GRTA) and Atlanta Regional Commission (ARC) review due to a rezoning. The DRI for this development was triggered by the filing of the rezoning application on May 4, 2017. DRI Form 1 was filed on May 15, 2017.

According to GRTA's Procedures and Principles for GRTA Development of Regional Impact Review, the proposed DRI complies with the Expedited Review Criteria in **Section 3-102, Part B – Limited Trip Generation**, which states:

> *…the land uses within the proposed DRI are such that the number of trips generated by the development is likely to have minimal impact on the road network.*
>
> 1. *No more than one thousand (1,000) gross daily trips generated by the DRI based on a trip generation memorandum; or,*
> 2. ***More than one thousand (1,000) but no more than three thousand (3,000) gross daily trips will be generated by the DRI, based on a trip generation memorandum and requires the submittal of an Access Analysis****; or,*
> 3. *The proposed DRI is projected to generate no more than one hundred (100) gross PM peak hour weekday trips based on a trip generation memorandum.*

This development is proposed to generate a total of 1,156 gross daily trips based on 687,500 SF of warehousing space. Since this DRI development is expected to generate more than one thousand (1,000) but no more than three thousand (3,000) gross daily trips, it is being submitted for approval under GRTA's Expedited Review process.

The proposed development is expected to be completed by 2019 (approximately 2 years), and this analysis will consider the full build-out of the proposed site in 2019. The proposed site consists of the following land use and density:

- Warehouse Square Footage: 687,500 SF

Capacity analyses were performed throughout the study network for the Existing 2017 conditions, the Projected 2019 No-Build conditions, Projected 2019 Build conditions, and the Projected 2019 Build Alternative conditions:

- Existing 2017 conditions represent existing traffic volumes at three (3) intersections during the AM and PM peak with the addition of the estimated project trips generated by the proposed Rock Springs Park development (currently under construction, to be completed November 2017).

- Projected 2019 No-Build conditions represent the 2017 traffic volumes grown for two (2) years at 0.5 percent per year throughout the study network and the addition of the estimated project trips generated by the Horizon Pointe DRI #2563 (currently under construction).

- Projected 2019 Build conditions represent the Projected 2019 No-Build conditions plus the addition of the project trips that are anticipated to be generated by the *Horizon Pointe 400* development (DRI #2688).

- Projected 2019 Build Alternative conditions represent the Projected 2019 Build conditions with the proposed intersection restriping plan at the intersection of Old Peachtree Road at Horizon Drive, as requested by Gwinnett County.

Based on the **Existing 2017** conditions (*present conditions plus the proposed Rock Springs Park development; i.e. includes estimated project trips from the proposed Rock Springs Park development, but excludes background traffic growth, estimated project trips from Horizon Pointe DRI #2563, and the estimated project trips from the Horizon Pointe 400 DRI*), all but one of the three (3) study intersections operate within the acceptable level-of-service (LOS) standard D during the AM and PM peak hours. One (1) study intersection (Intersection #3: Old Peachtree Road at Collins Hill Road / Proposed Rock Springs Park Driveway) operates at LOS E during the PM peak hour, thus the LOS standard for that peak period is LOS E.

Based on the **Projected 2019 No-Build** conditions (*includes background traffic growth, the estimated project trips from the proposed Rock Springs Park development and Horizon Pointe DRI #2563, but excludes the estimated project trips from the Horizon Pointe 400 DRI*), all three (3) study intersections are projected to operate within the acceptable LOS standard during the AM and PM peak hours.

Based on the **Projected 2019 Build** conditions (*includes background traffic growth, the estimated project trips from DRI #2563 and the proposed Rock Springs Park development, and the estimated project trips from the Horizon Pointe 400 DRI*) all three (3) study intersections are projected to operate at or above their acceptable level-of-service standard during the AM and PM peak hours.

Based on the **Projected 2019 Build Alternative** conditions (*includes background traffic growth, the estimated project trips from the proposed Rock Springs Park development, Horizon Pointe DRI #2563, and Horizon Pointe 400 DRI, plus the proposed Gwinnett County intersection restriping plan at the intersection of Old Peachtree Road at Horizon Drive)* all study intersections are projected to operate at or above their acceptable level-of-service standard during the AM and PM peak hours.

It should be noted that the intersection is projected to operate at a better LOS during the AM peak with less delay with the proposed intersection restriping plan compared to the Projected 2019 Build conditions with the existing laneage. The intersection is projected to operate at similar LOS during the PM peak.

Additionally, the westbound left queue lengths improve with the proposed intersection restriping plan from approximately 1,150 feet of queue with existing laneage under the Projected 2019 Build conditions to approximately 400 feet of queue with the proposed intersection restriping laneage under the Projected 2019 Build Alternative conditions during the AM peak. The westbound left queue lengths improve from approximately 330 feet of queue under the Projected 2019 Build conditions to approximately 225 feet of queue under the Projected 2019 Build Alternative conditions during the PM peak.

The proposed intersection restriping plan consists of the following:

- Intersection #1: Old Peachtree Road at Horizon Drive
    - Restripe the eastbound approach to consist of two (2) left-turn lanes and one (1) shared through/right-turn lane.
    - Restripe the northbound approach to consist of one (1) shared through/left-turn lane and two (2) right-turn lanes.

1.0 PROJECT DESCRIPTION

1.1 Introduction

This report presents the analysis of the anticipated traffic impacts of the *Horizon Pointe 400* development located in the Gwinnett County, Georgia. The approximately 51.0-acre site is located at the north terminus of Horizon Drive, a local road approximately 1/2-mile north of Old Peachtree Road and east of I-85. Horizon Drive, a dead-end roadway that connects to Old Peachtree Road, will provide access to the proposed development. The proposed development will be a single industrial warehouse facility with approximately 687,500 SF of warehousing space.

It should be noted that the proposed Rock Springs Park development just south of the proposed site is currently under construction to develop a 50-acre park and three soccer fields. This construction is scheduled to be completed in November 2017. Additionally, two industrial warehouse facilities with 264,550 SF each of warehousing space (Horizon Pointe DRI #2563) are also currently under construction adjacent to the proposed site. The project trips generated by the proposed Rock Springs Park will be included in the Existing 2017 conditions analysis. The project trips generated by the Horizon Pointe DRI #2563 will be included in the Projected 2019 No-Build conditions analysis.

The project is a Development of Regional Impact (DRI) and is subject to Georgia Regional Transportation Authority (GRTA) and Atlanta Regional Commission (ARC) review due to a rezoning.

According to GRTA's Procedures and Principles for GRTA Development of Regional Impact Review, the proposed DRI complies with the Expedited Review Criteria in **Section 3-102, Part B – Limited Trip Generation**, which states:

> *…the land uses within the proposed DRI are such that the number of trips generated by the development is likely to have minimal impact on the road network.*
>
> 1. *No more than one thousand (1,000) gross daily trips generated by the DRI based on a trip generation memorandum; or,*
> 2. ***More than one thousand (1,000) but no more than three thousand (3,000) gross daily trips will be generated by the DRI, based on a trip generation memorandum and requires the submittal of an Access Analysis**; or,*
> 3. *The proposed DRI is projected to generate no more than one hundred (100) gross PM peak hour weekday trips based on a trip generation memorandum.*

This development is proposed to generate a total of 1,156 gross daily trips based on 687,500 SF of warehousing space. Since this DRI development is expected to generate more than one thousand (1,000) but no more than three thousand (3,000) gross daily trips, it is being submitted for approval under GRTA's Expedited Review process.

Figure 1 provides the site location of the *Horizon Pointe 400* DRI project. **Figure 2** and **Figure 3** provide aerial views of the project site and surrounding area.

The proposed project is expected to be completed by 2019, and this analysis will consider the full build-out of the proposed site in 2019. A summary of the proposed land-use and density can be found below in **Table 1**.

1.2 Site Plan Review

The proposed development is an approximately 51.0-acre site in Gwinnett County. The project site is located at the end of Horizon Drive, a local road approximately 1/2-mile north of Old Peachtree Road and east of I-85. Horizon Drive, a dead-end roadway that connects to Old Peachtree Road, will provide access to the proposed development. The proposed development will be an industrial warehouse facility with approximately 687,500 SF of warehousing space.

The property is currently zoned to the Single-Family Residence Zero Lot Line/Townhouse District (R-ZT) classification according to the Gwinnett County zoning map and is proposed to be zoned M-1.

The Gwinnett County Future Development Map identifies the area as a Preferred Office Mixed-Use Area, and the ARC's *Unified Growth Policy Map* identifies the project site as being in an Established Suburbs place type area. Please refer to the Land Use and Zoning maps in Appendix A.

A reference of the proposed site plan can be found in Appendix B. A full-sized site plan consistent with GRTA's Site Plan Guidelines is also being submitted as part of the review package.

1.3 Site Access

As currently envisioned, the project site is located at the end of Horizon Drive, a local road approximately 1/2-mile north of Old Peachtree Road and east of I-85. Horizon Drive, a dead-end roadway that connects to Old Peachtree Road, will provide access to the proposed development. Old Peachtree Road connects to Buford Drive (SR 20), a principal arterial, on the east and Lawrenceville-Suwanee Road (SR 317), a minor arterial, on the west. Interstate 85 is accessible via Lawrenceville-Suwanee Road (SR 317) approximately ¼-mile north of Old Peachtree Road on Lawrenceville-Suwanee Road (SR 317). Interstate 85 is also accessible via Buford Drive (SR 20) approximately 1.5 miles north of Old Peachtree Road on Buford Drive (SR 20).

1.4 Bicycle and Pedestrian Facilities

Sidewalks currently exist along both sides of Horizon Drive. Bicycle facilities do not currently exist along the project site frontage. According to the DRI site plan, no bicycle or pedestrian facilities are proposed.

1.5 Transit Facilities

There are no direct transit routes located within the vicinity of the project site, and therefore, there were no alternative mode reductions taken.

2.0 TRAFFIC ANALYSES, METHODOLOGY AND ASSUMPTIONS

2.1 Growth Rate

Background traffic is defined as expected traffic on the roadway network in future year(s) absent the construction and opening of the proposed project. Background traffic can include a base growth rate based on historical count data as well as population growth data and estimates as well as trips anticipated from nearby or adjacent other projects. Based on methodology outlined in the GRTA Letter of Understanding (LOU), a 0.5 percent per year background traffic growth rate was used for all roadways.

In addition to the background growth rate, the addition of the following development was incorporated into the background traffic:

- Horizon Pointed DRI #2563 (currently under construction)

2.2 Traffic Data Collection

Weekday peak hour turning movement counts were collected on Tuesday, March 22, 2016, and on Tuesday, May 23, 2017 at three (3) intersections during the AM and PM peak periods. The morning and afternoon peak hours varied some between the intersections. Peak hours for all intersections are shown in **Table 2**.

Table 2: Peak Hour Summary

Intersection	AM Peak Hour	PM Peak Hour
1. Old Peachtree Road at Horizon Drive	7:00 AM - 8:00 AM	5:00 PM - 6:00 PM
2. Lawrenceville-Suwanee Road at Old Peachtree Road	7:30 AM - 8:30 AM	4:30 PM - 5:30 PM
3. Old Peachtree Road at Collins Hill Road	7:00 AM - 8:00 AM	5:00 PM - 6:00 PM

The March 2016 turning movement counts were higher than the May 2017 turning movement counts with the exception of vehicles turning into and out of Horizon Drive at the intersection of Old Peachtree Road at Horizon Drive. The May 2017 turning movement counts were used for the movements turning into and out of Horizon Drive at the intersection of Old Peachtree Road at Horizon Drive only, and the March 2016 turning movement counts were used for all other movements for the analysis.

The collected peak hour turning movement traffic counts are shown in Appendix G.

2.3 Detailed Intersection Analysis

Level-of-service (LOS) is used to describe the operating characteristics of a road segment or intersection in relation to its capacity. LOS is defined as a qualitative measure that describes operational conditions and motorists' perceptions within a traffic stream. The *Highway Capacity Manual* defines six levels-of-service, LOS A through LOS F, with A being the best and F being the worst. Level-of-service analyses were conducted at all intersections within the study network using *Synchro Professional, Version 9.0*.

Levels-of-service for signalized intersections are reported for the intersection as a whole. One or more movements at an intersection may experience a low level-of-service, while the intersection as a whole may operate acceptably.

3.0 STUDY NETWORK

3.1 Gross Trip Generation

Traffic for the proposed land uses and densities were estimated using the *Institute of Transportation Engineers' (ITE) Trip Generation Manual, Ninth Edition, 2012*, using equations where available. Trip generation for this proposed development is calculated based upon Land Use Code 152, High-Cube Warehouse/Distribution Center. Please refer to Appendix C for details. Gross trips generated are displayed below in **Table 3**.

Table 3: Gross Trip Generation

Land Use	Density	ITE Code	Daily Traffic			AM Peak Hour		PM Peak Hour	
			Total	Enter	Exit	Enter	Exit	Enter	Exit
High-Cube Warehouse	687,500 SF	*152*	1,156	578	578	49	22	27	59
Total Gross Trips			**1,156**	**578**	**578**	**49**	**22**	**27**	**59**

3.2 Trip Distribution

The directional distribution and assignment of new project trips and estimated project trips of the currently under construction Rock Springs Park development and industrial warehouse facility were based on the project land uses, a review of the land use densities and road facilities in the area, engineering judgment, existing traffic count data, and methodology discussions with the Georgia Regional Transportation Authority (GRTA), Atlanta Regional Commission (ARC), Georgia Department of Transportation (GDOT), and Gwinnett County. (See Section 5.0 – Trip Distribution and Assignment.)

3.3 Level-of-Service Standards

For the purposes of this traffic analysis, a level-of-service standard of D was assumed for all intersections and segments within the study network. If, however, an intersection or segment currently operates at LOS E or LOS F during an existing peak period, the LOS standard for that peak period becomes LOS E, consistent with the GRTA Letter of Understanding.

3.4 Study Network Determination

A general study area was determined using engineering judgement and the GRTA 7% rule. This rule recommends that all intersections and segments be analyzed which are impacted to the extent that the traffic from the proposed site is 7% or more of the service volume of the facility (at a previously established LOS standard, typically LOS D) be considered for analysis. The study area was agreed upon during methodology discussions with GRTA, ARC, GDOT, and Gwinnett County staff.

The study network includes three (3) signalized intersections as noted in **Table 4**. The site location and study intersections can be found in **Figure 4.**

Table 4: Intersection Control Summary

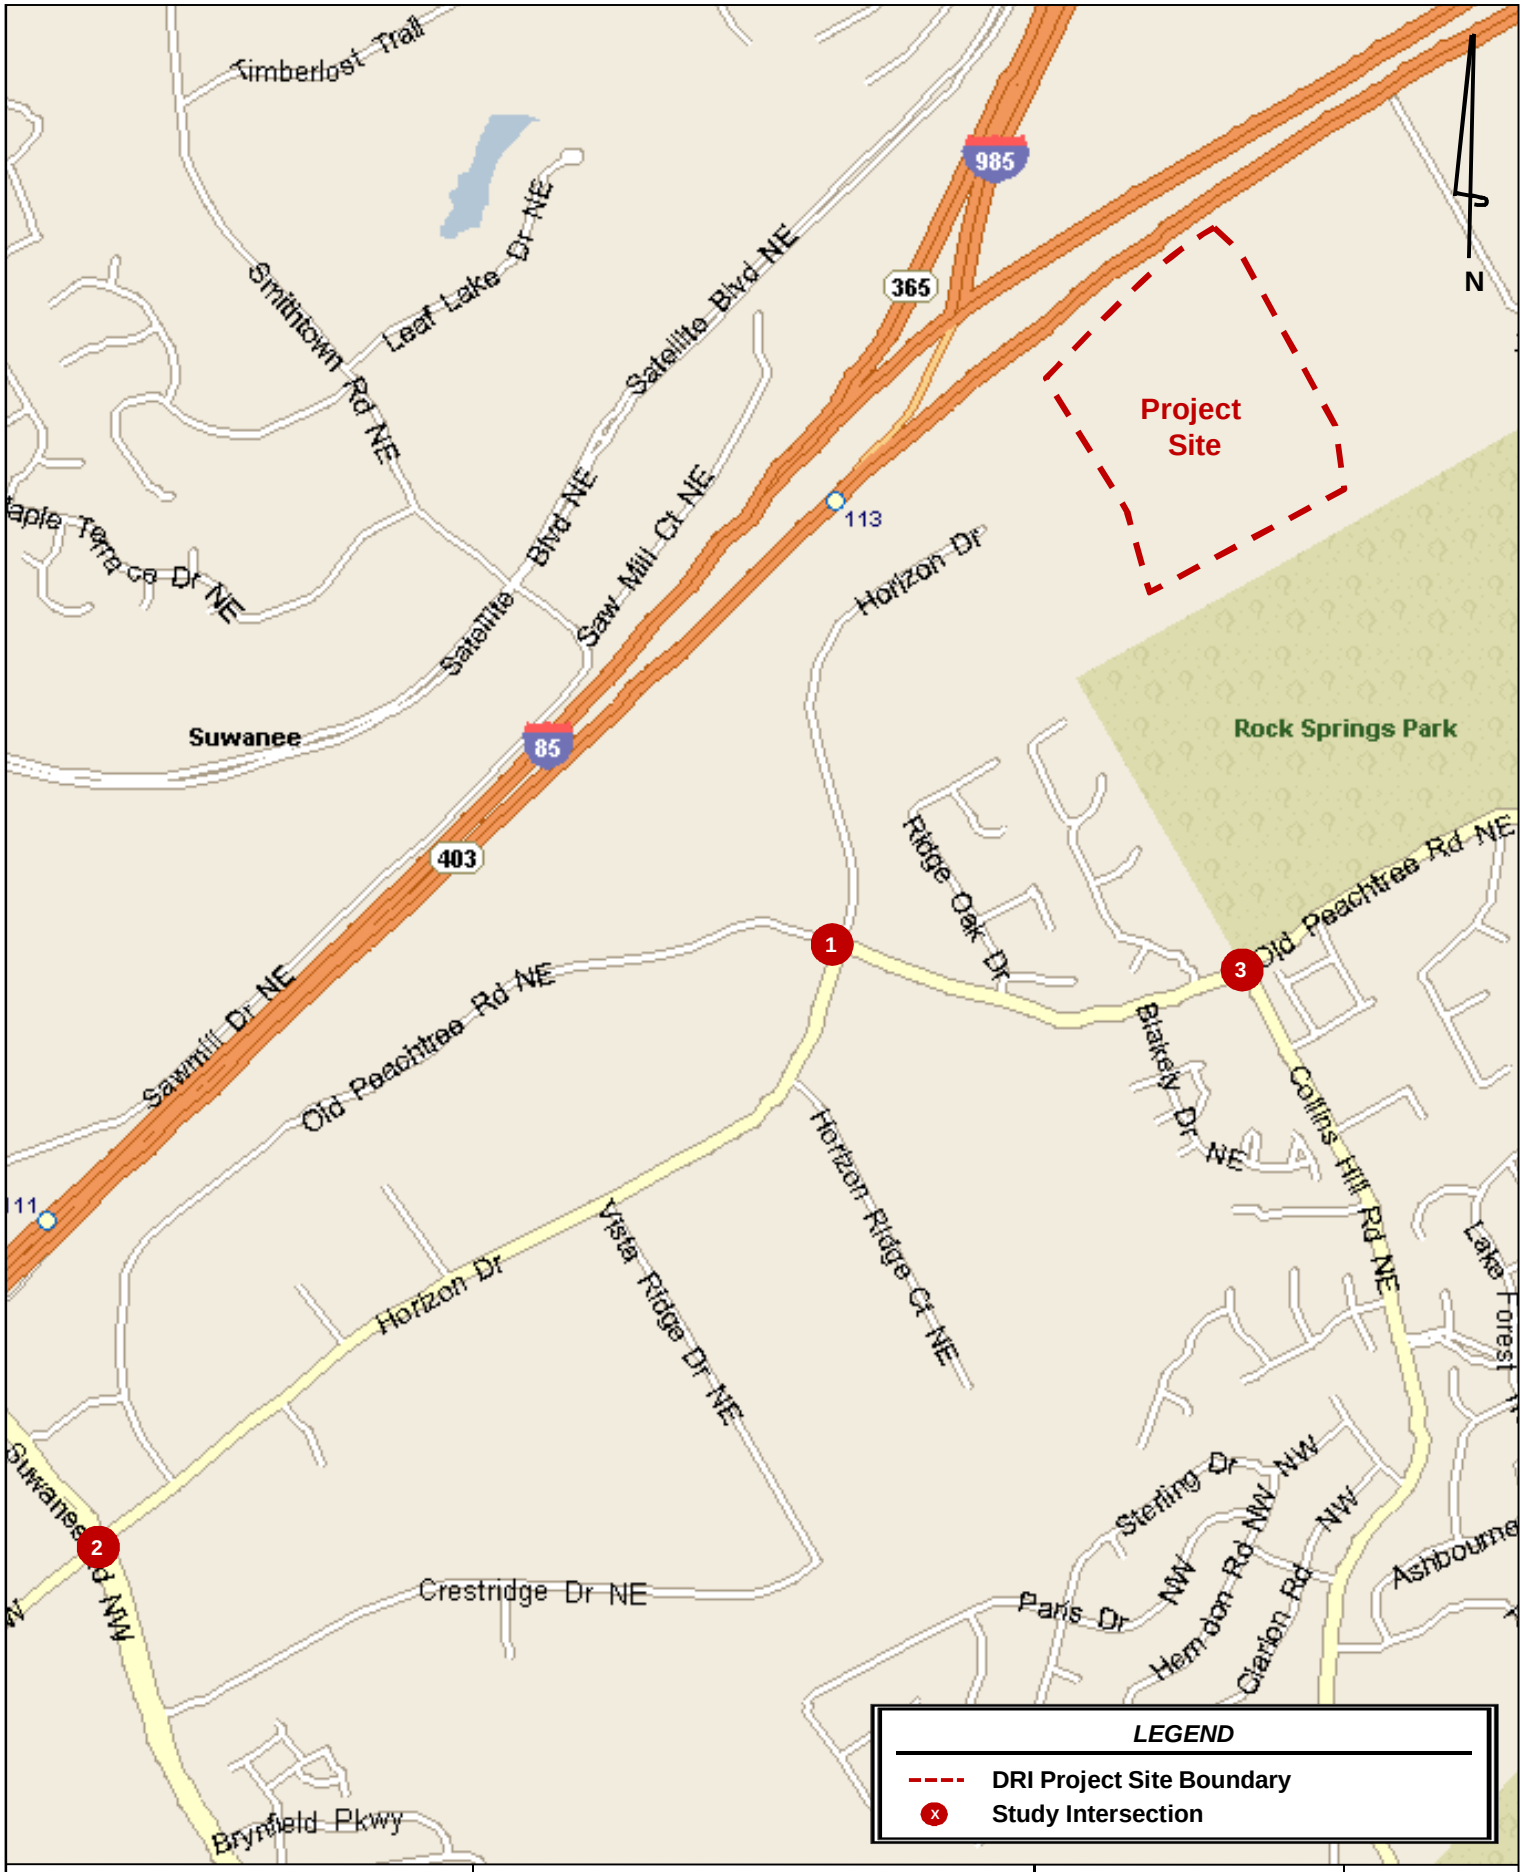
Intersection	Control
1. Old Peachtree Road at Horizon Drive	Signal
2. Lawrenceville-Suwanee Road at Old Peachtree Road	Signal
3. Old Peachtree Road at Collins Hill Road	Signal

Each of the above listed intersections was analyzed for the Existing 2017 conditions, the Projected 2019 No-Build conditions, and the Projected 2019 Build conditions.

The Existing 2017 conditions represent the Existing 2017 traffic volumes and the addition of the estimated project trips associated with proposed Rock Springs Park development.

The Projected 2019 No-Build conditions represent the Existing 2017 traffic volumes grown for two (2) years at 0.5 percent per year throughout the study network and the addition of the estimated project trips associated with the Horizon Pointe DRI #2563.

The Projected 2019 Build conditions add the project trips associated with the proposed 687,500 SF *Horizon Pointe 400* development to the Projected 2019 No-Build conditions.



Kimley»Horn	*Horizon Pointe 400* *DRI #2688* *Transportation Analysis*	**Study Intersections**	**Figure 4**
			Page 13

3.5 Existing Roadway Facilities

Roadway classification descriptions for the entire study area are provided in **Table 5** (bolded roadways run adjacent to the site).

Table 5: Roadway Classifications

Roadway	No. of Lanes	Posted Speed Limit (MPH)	Functional Classification	
			GDOT	Gwinnett County*
Horizon Drive (north of Old Peachtree Road)	**3**	**35**	**Local Road**	**Local Road**
Horizon Drive (south of Old Peachtree Road)	5	45	Major Collector	Local Road
Old Peachtree Road	2	45	Major Collector	Major Arterial
Lawrenceville-Suwanee Road	4	45	Minor Arterial	Major Arterial
Collins Hill Road	2	40	Major Collector	Minor Arterial

**Note: Gwinnett County Classifications are currently being updated as part of the Comprehensive Transportation Plan.*

It should be noted that the Proposed Rock Springs Park Driveway is currently under construction and will serve as the fourth leg to the existing three-leg intersection of Old Peachtree at Collin Hill Road. The driveway will have one (1) exclusive left-turn lane and one (1) shared through/right-turn lane.

4.0 TRIP GENERATION

As stated previously, gross trips associated with the proposed development were estimated using the *Institute of Transportation Engineers' (ITE) Trip Generation Manual, Ninth Edition, 2012*, using equations where available. Trip generation for this proposed development is calculated based upon Land Use Code 152 (High-Cube Warehouse/Distribution Center). Internal capture reductions, alternative transportation mode (walking, bicycle, and transit), and pass-by trip reductions were not applied for this study. Please refer to Appendix C for details.

The total trips generated and analyzed in this report associated with the *Horizon Pointe 400* development are listed in **Table 6**.

Table 6: Trip Generation

	Daily Traffic			AM Peak Hour		PM Peak Hour	
	Total	**Enter**	**Exit**	**Enter**	**Exit**	**Enter**	**Exit**
Heavy Vehicle (Truck) Trips	440	220	220	14	7	28	9
Employee (Car) Trips	716	358	358	35	15	58	18
Total Trips	**1,156**	**578**	**578**	**49**	**22**	**86**	**27**

A more detailed trip generation analysis summary table is provided in Appendix C.

It should be noted that under the Existing 2017 conditions, the estimated project trips associated with the proposed Rock Springs Park development were added to the roadway network. The proposed Rock Springs Park development is also currently under construction and is expected to generate: 328 daily trips, 5 trips during the AM peak, and 95 trips during the PM peak. Please see Appendix F for the traffic memorandum for the proposed Rock Springs Park development.

Additionally, under the Projected 2019 No-Build conditions, the trips associated with the *Horizon Pointe DRI #2563 (currently under construction)* were added to the roadway network. *Horizon Pointe DRI #2563* is expected to generate: 1,490 daily trips, 134 trips during the AM peak, and 120 trips during the PM peak.

5.0 TRIP DISTRIBUTION AND ASSIGNMENT

New trips were distributed onto the roadway network using the percentages agreed to during methodology discussions with GRTA, ARC, GDOT, and Gwinnett County staff. **Figure 5** and **Figure 6** display the projected trip distribution and assignments for heavy vehicles (trucks) and employee trips (cars), respectively.

These percentages were applied to the net new trips expected to be generated by the development, and the volumes were assigned to the roadway network. The expected combined peak hour project trips by turning movement throughout the study network, generated by the proposed *Horizon Pointe 400* development, are shown in **Figure 7**.

Detailed intersection volume worksheets can also be found in Appendix D.

			Page 18

6.0 TRAFFIC ANALYSIS

6.1 Existing 2017 Conditions

The observed existing peak hour traffic volumes were entered into *Synchro 9.0,* and capacity analyses were performed for the AM and PM peak hours. The May 2017 turning movement counts were used for the movements turning into and out of Horizon Drive at the intersection of Old Peachtree Road at Horizon Drive only, and the March 2016 turning movement counts were used for all other movements for the analysis. Additionally, the estimated project trips of the proposed Rock Springs Park development (currently under construction, to be completed November 2017) was included.

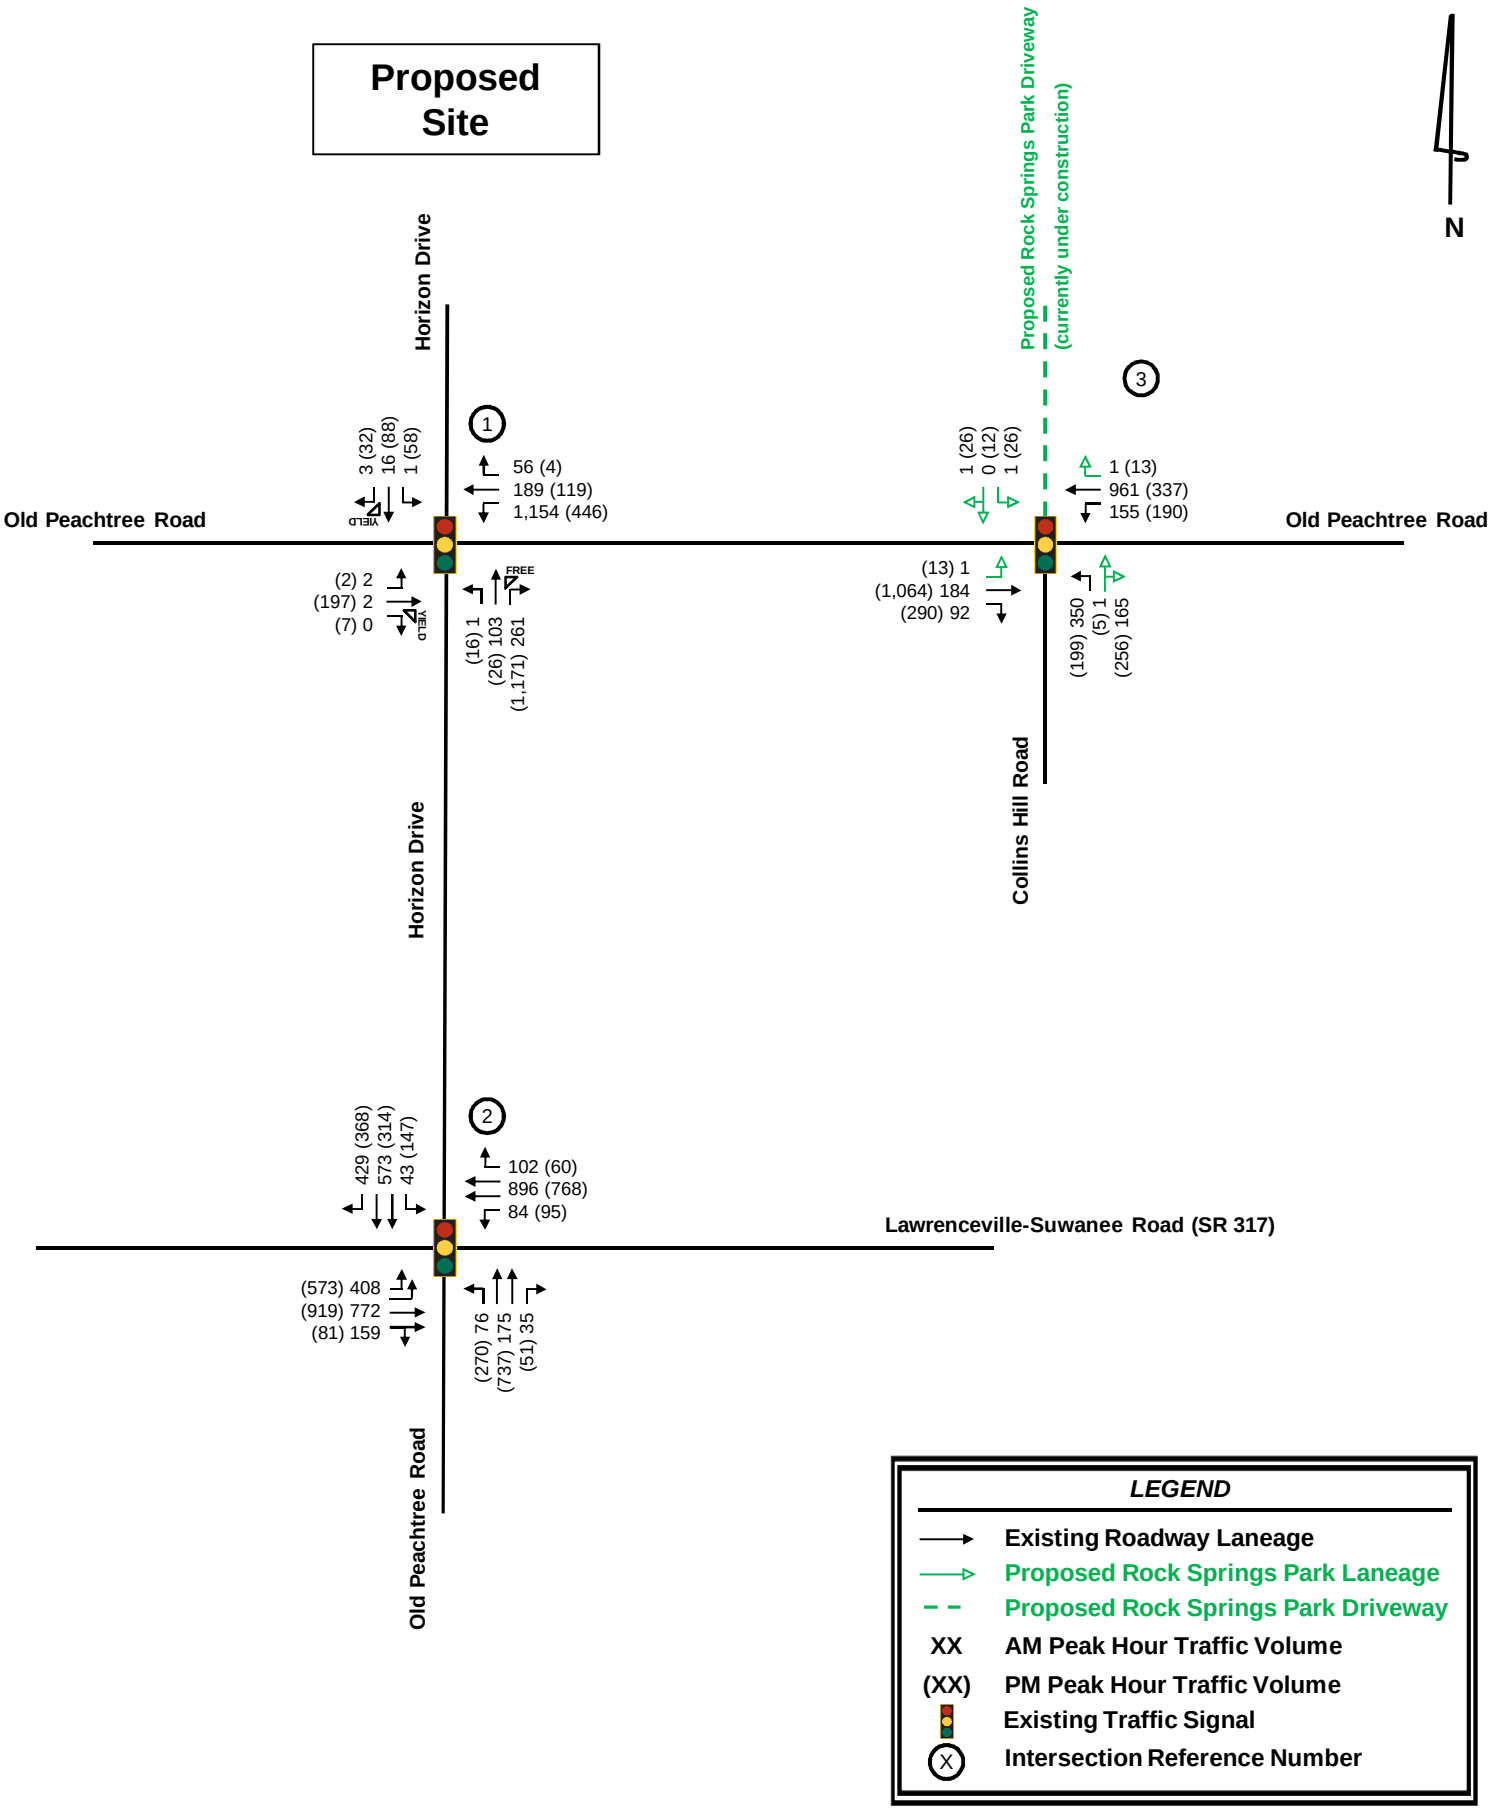
The Existing 2017 conditions were analyzed using existing roadway geometry, plus the proposed Rock Springs Park Driveway at the intersection of Old Peachtree Road at Collins Hill Road, and existing intersection control types.

The intersection laneage and the peak hour traffic volumes for the Existing 2017 conditions are shown in **Figure 8**. The results of the capacity analyses for the Existing 2017 conditions are shown in **Table 7**. Detailed *Synchro* analysis reports are shown in Appendix H.

Table 7: Existing 2017 Levels-of-Service Summary
LOS (delay in seconds)

Intersection	Control	LOS Standard		AM Peak Hour	PM Peak Hour
1. Old Peachtree Road at Horizon Drive	Signal	D		B (16.8)	B (11.1)
2. Lawrenceville-Suwanee Road at Old Peachtree Road	Signal	D		D (40.6)	D (48.6)
3. Old Peachtree Road at Collins Hill Road / Proposed Rock Springs Park Driveway	Signal	AM	PM	D (42.6)	E (60.1)
		D	E		

As shown in **Table 7**, all study intersections currently operate at or above their acceptable level-of-service standard during the AM and PM peak hours for the Existing 2017 conditions. Therefore, there are no recommended improvements for the Existing 2017 conditions scenario.



Kimley»Horn

Transportation Analysis

Existing 2017 Traffic Conditions

Figure 8

6.2 Projected 2019 No-Build Conditions

To account for growth near the proposed development, the existing traffic volumes were increased for two (2) years at 0.5 percent per year throughout the study network. Additionally, the estimated project trips from *Horizon Pointe DRI #2563 (currently under construction)* was included. These volumes were entered into *Synchro 9.0*, and capacity analyses were performed.

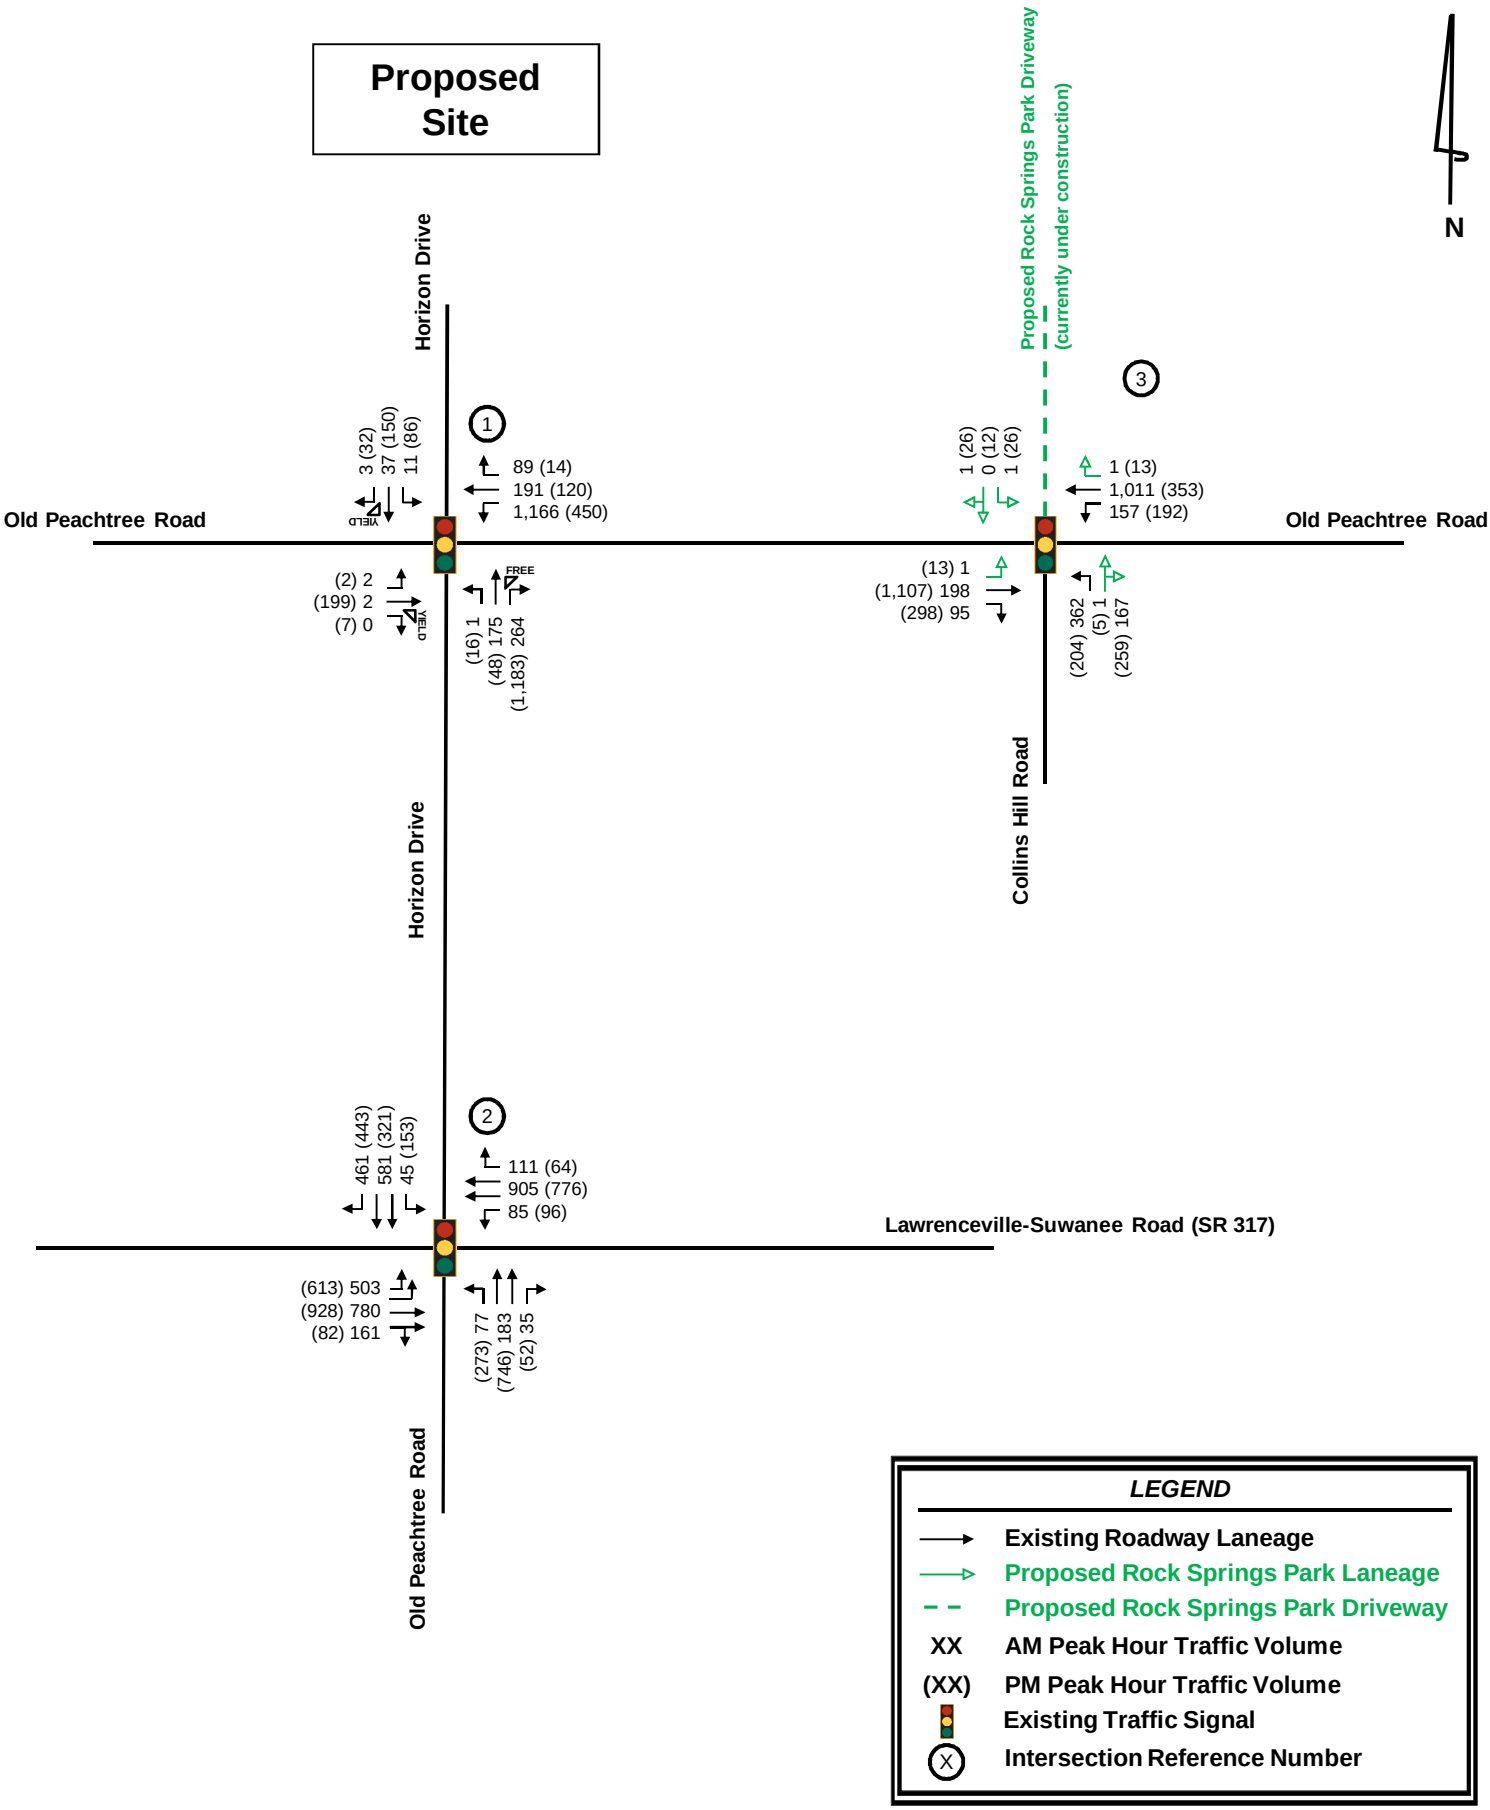
The Projected 2019 No-Build conditions were analyzed using existing roadway geometry, plus the proposed Rock Springs Park Driveway at the intersection of Old Peachtree Road at Collins Hill Road, and existing intersection control types.

The intersection laneage and the peak hour traffic volumes for the Projected 2019 No-Build conditions are shown in **Figure 9**. The results of the capacity analyses for the Projected 2019 No-Build conditions are shown in **Table 8**. Detailed *Synchro* analysis reports are shown in Appendix H.

Table 8: Projected 2019 No-Build Intersection Levels-of-Service
LOS (delay in seconds)

Intersection	Control	LOS Standard		AM Peak Hour	PM Peak Hour
1. Old Peachtree Road at Horizon Drive	Signal	D		C (23.2)	B (14.2)
2. Lawrenceville-Suwanee Road at Old Peachtree Road	Signal	D		D (41.6)	D (51.6)
3. Old Peachtree Road at Collins Hill Road / Proposed Rock Springs Park Driveway	Signal	AM	PM	D (46.5)	E (62.1)
		D	E		

As shown in **Table 8**, all study intersections currently are projected to operate at or above their acceptable level-of-service standard during the AM and PM peak hours for the Projected 2019 No-Build conditions. Therefore, there are no recommended improvements for the Projected 2019 No-Build conditions scenario.



Kimley»Horn	*Horizon Pointe 400* *DRI #2688* Transportation Analysis	Projected 2019 No-Build Traffic Conditions	Figure 9
			Page 22

6.3 Projected 2019 Build Conditions

The traffic associated with the proposed *Horizon Pointe 400* development was added to the Projected 2019 No-Build volumes. These volumes were then entered into *Synchro 9.0*, and capacity analyses were performed.

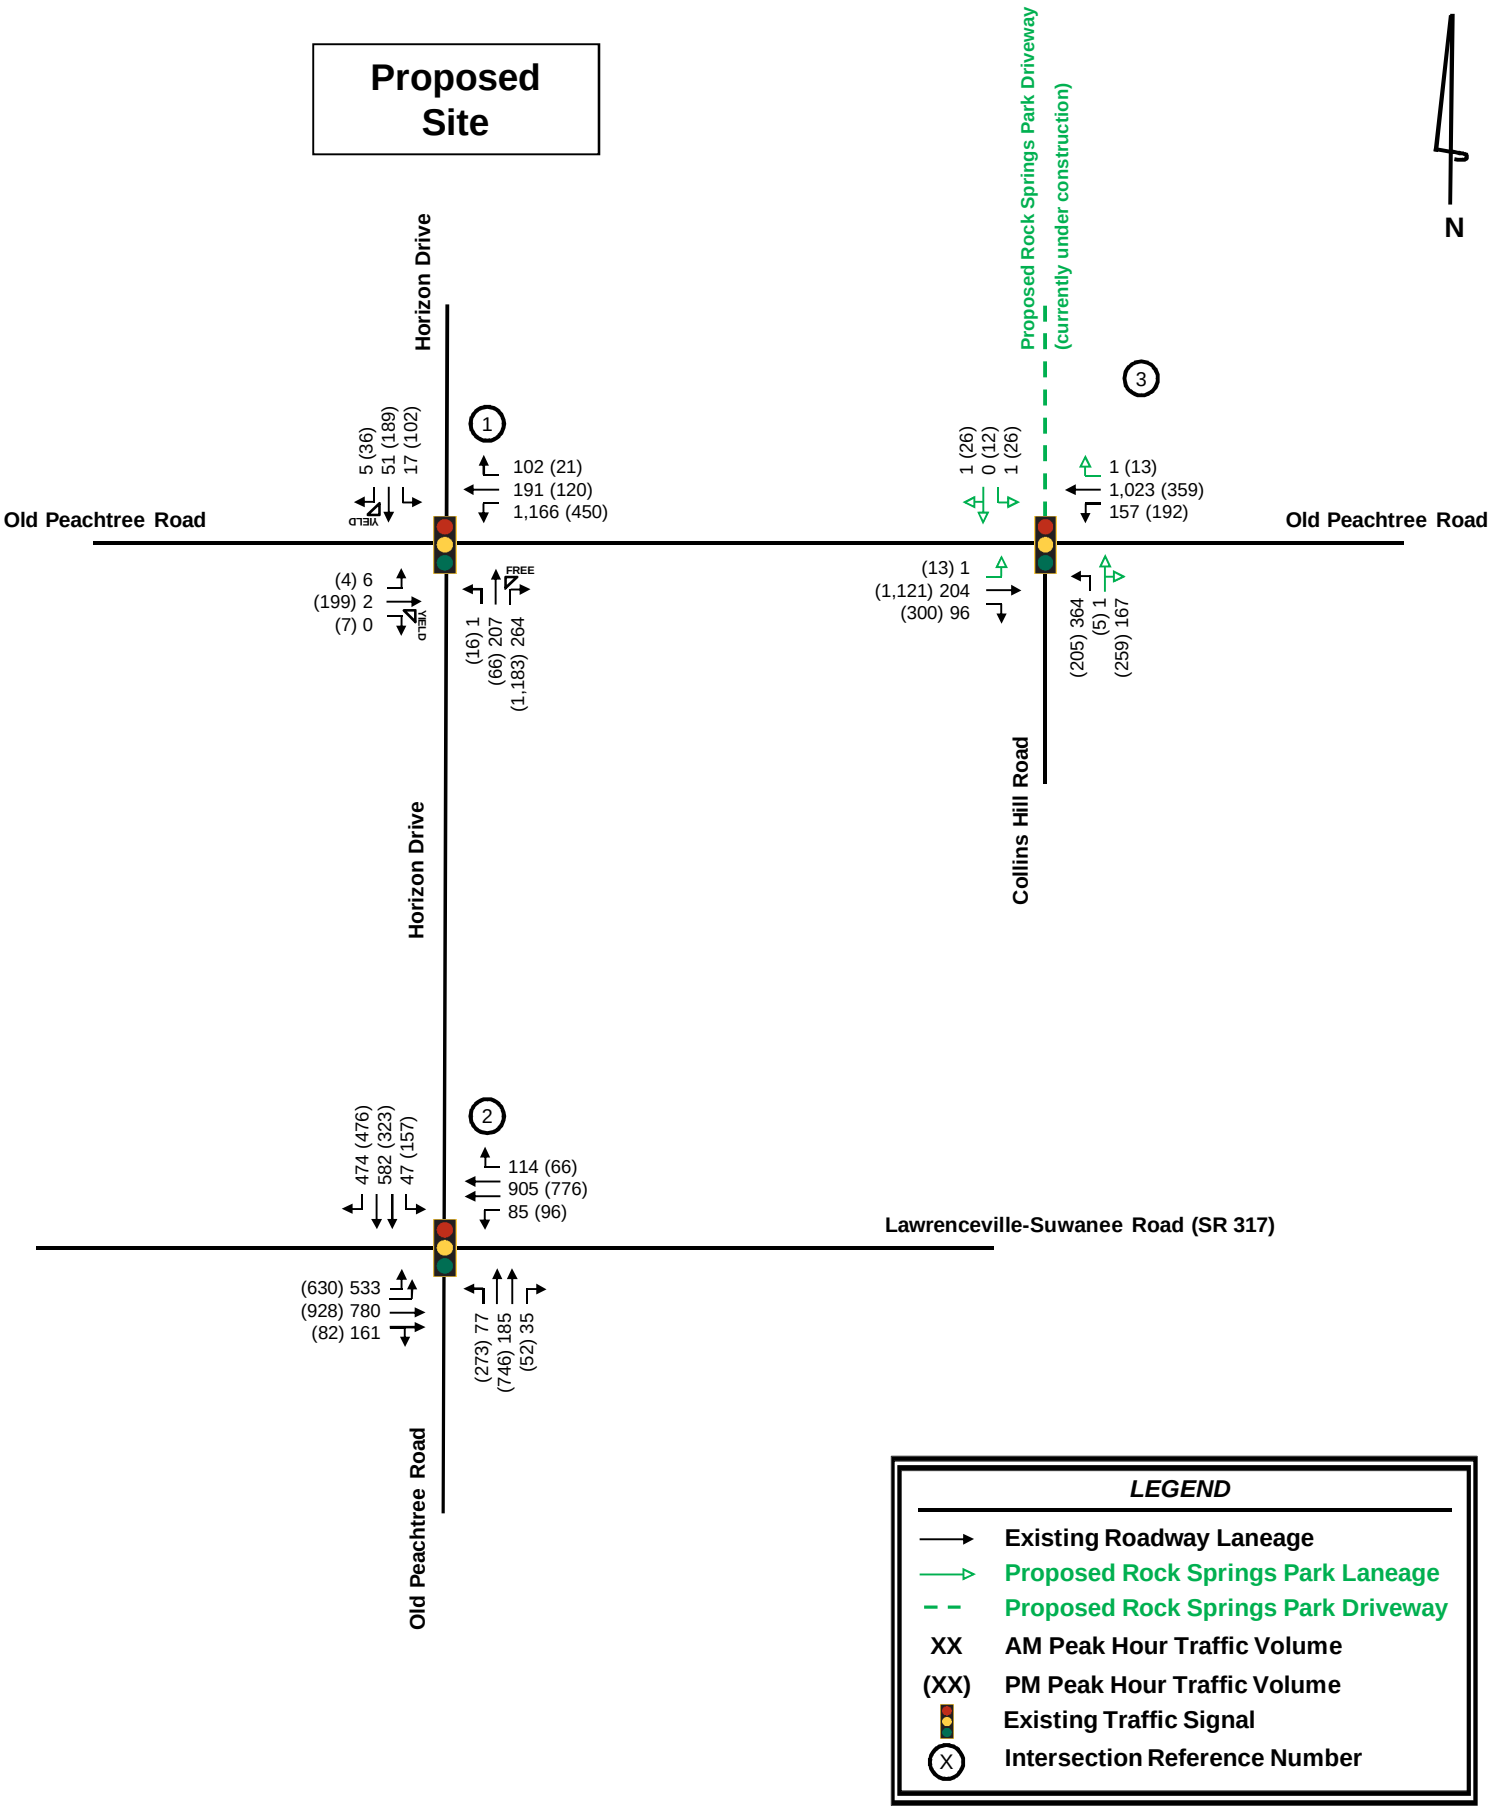
The Projected 2019 Build conditions were analyzed using existing roadway geometry, plus the proposed Rock Springs Park driveway at the intersection of Old Peachtree Road at Collins Hill Road, and existing intersection control types.

The intersection laneage and peak traffic volumes for the Projected 2019 Build conditions are shown in **Figure 10.** The results of the capacity analyses for the Projected 2019 Build conditions are shown in **Table 9**. Detailed *Synchro* analysis reports are shown in Appendix H.

Table 9: Projected 2019 Build Intersection Levels-of-Service
LOS (delay in seconds)

Intersection	Control	LOS Standard		AM Peak Hour	PM Peak Hour
1. Old Peachtree Road at Horizon Drive	Signal	D		C (30.7)	B (16.7)
2. Lawrenceville-Suwanee Road at Old Peachtree Road	Signal	D		D (42.4)	D (52.3)
3. Old Peachtree Road at Collins Hill Road / Proposed Rock Springs Park Driveway	Signal	AM	PM	D (51.9)	E (69.5)
		D	E		

As shown in **Table 9**, all study intersections currently operate at or above their acceptable level-of-service standard during the AM and PM peak hours for the Projected 2019 Build conditions. Therefore, there are no recommended improvements for the Projected 2019 Build conditions scenario.



Kimley»Horn	*Horizon Pointe 400* *DRI #2688* Transportation Analysis	Projected 2019 Build Traffic Conditions	Figure 10
			Page 24

6.4 Projected 2019 Build Alternative - Supplemental Analysis

Per the request of Gwinnett County, a Supplemental Analysis was performed for the Projected 2019 Build Alternative conditions. Gwinnett County is proposing an intersection restriping plan for the intersection of Old Peachtree Road at Horizon Drive. The proposed intersection restriping plan includes the following:

- Intersection #1: Old Peachtree Road at Horizon Drive
  - Restripe the eastbound approach to consist of two (2) left-turn lanes and one (1) shared through/right-turn lane.
  - Restripe the northbound approach to consist of one (1) shared through/left-turn lane and two (2) right-turn lanes.

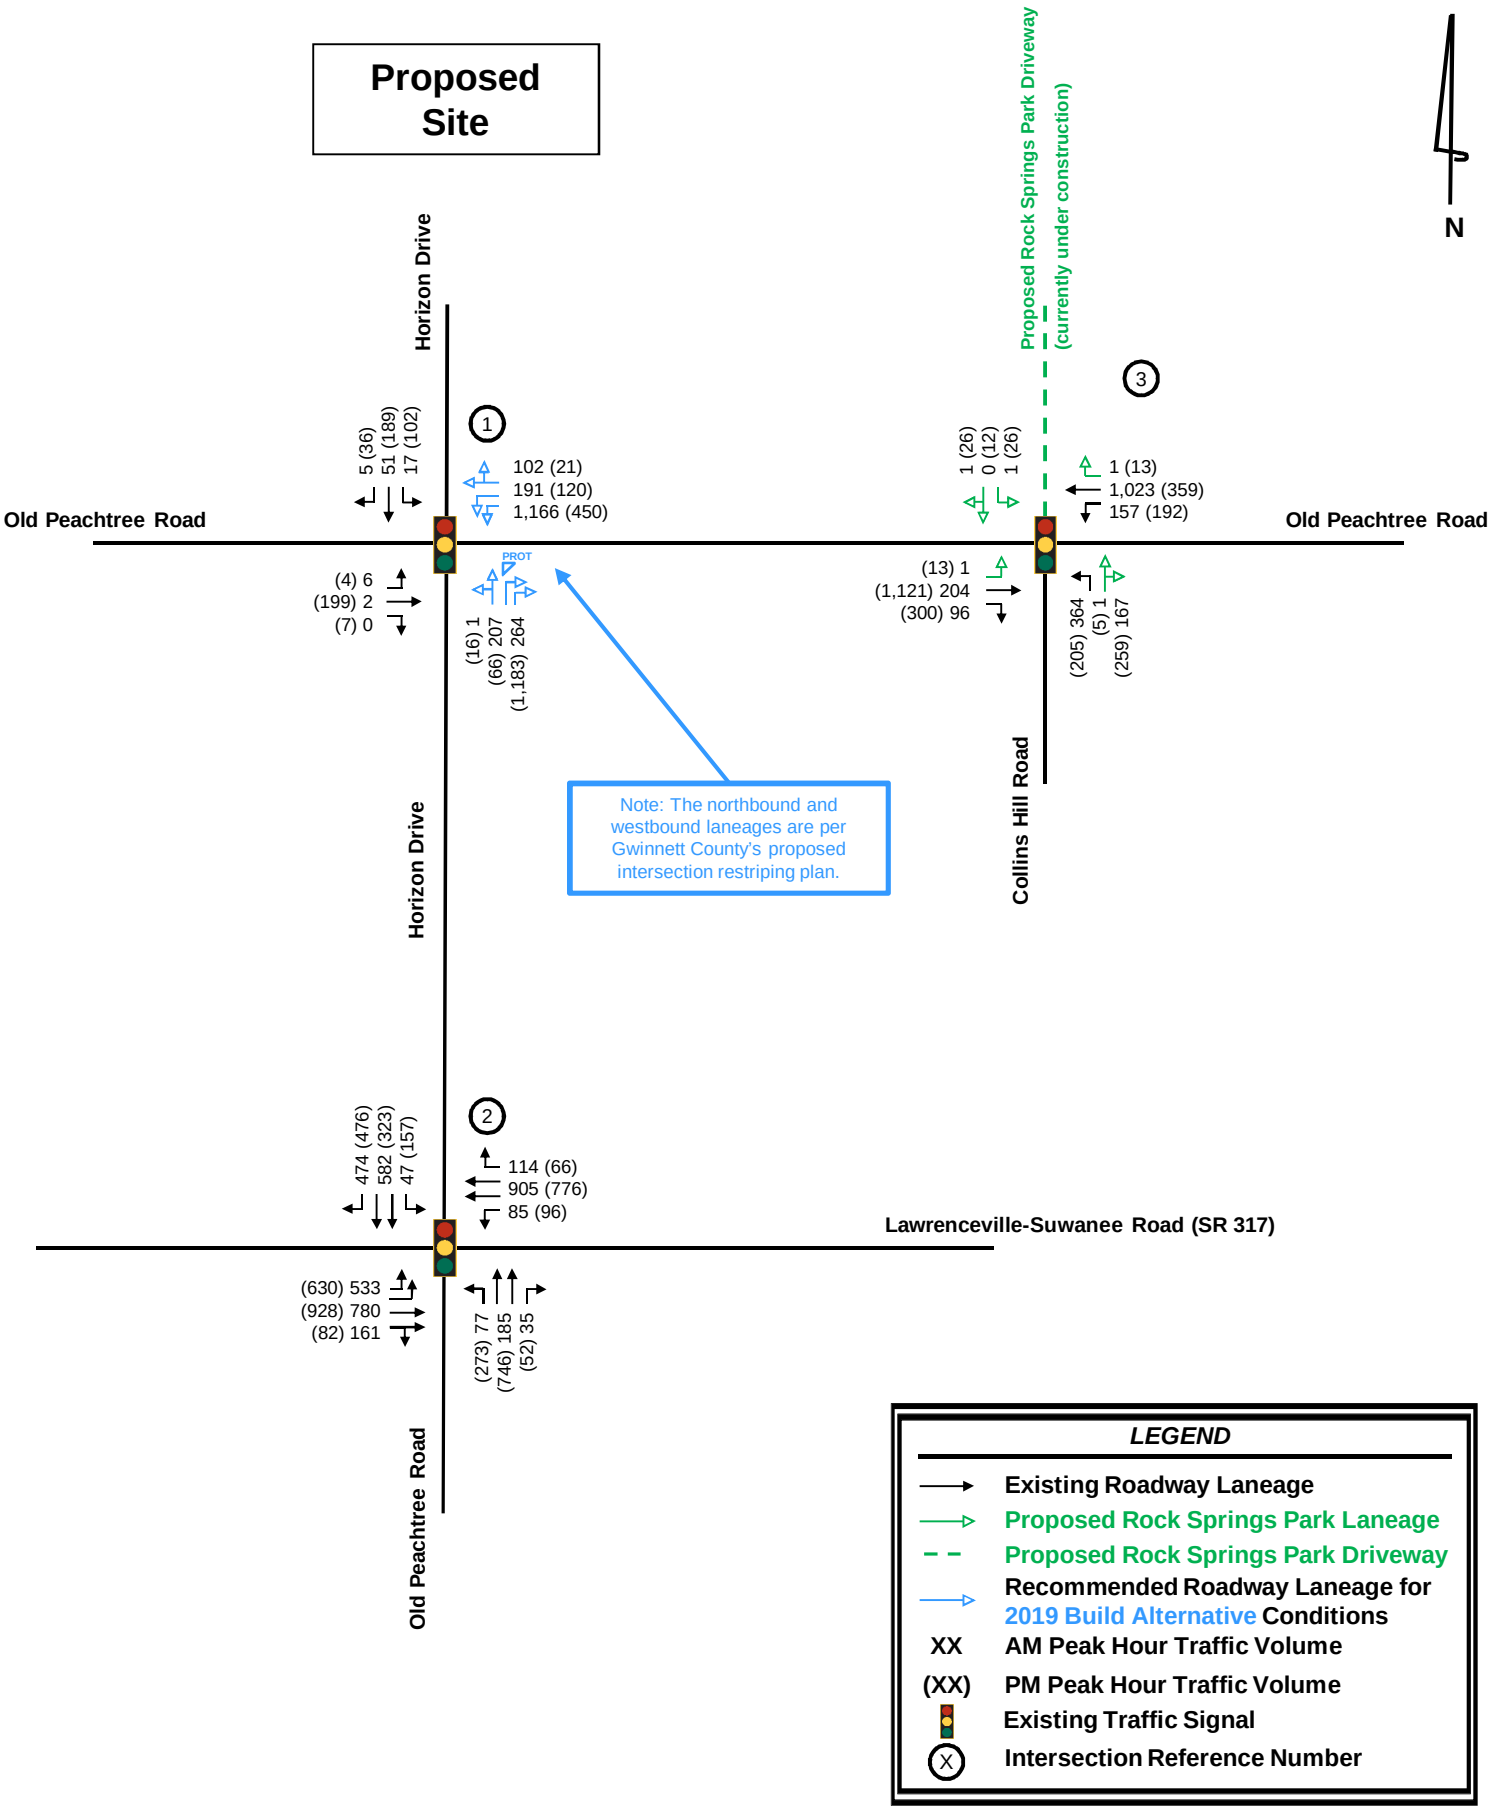
For purposes of this analysis the LOS, control delay, and queue will be compared to that of the 2019 Build conditions. The Projected 2019 Build volumes were applied to the proposed roadway laneage and analyzed at AM and PM peak hours. These volumes were then entered into *Synchro 9.0*, and capacity analyses were performed.

The intersection laneage and peak traffic volumes for the Projected 2019 Build Alternative conditions are shown in **Figure 11**. The results of the capacity analyses and the queuing analyses for the Projected 2019 Build Alternative conditions are shown in **Table 10** and in **Table 11**, respectively. Detailed *Synchro* analysis reports are shown in Appendix H.

Table 10: Level-of-Service Comparison (Projected 2019 Build vs Build Alternative)
LOS (delay in seconds)

Intersection	Control	LOS Standard	AM Peak Hour	PM Peak Hour
Projected 2019 Build Conditions				
1. Old Peachtree Road at Horizon Drive	Signal	D	C (30.7)	B (16.7)
Projected 2019 Build Alternative Conditions				
1. Old Peachtree Road at Horizon Drive	Signal	D	B (14.8)	B (18.7)

As shown in **Table 10**, all study intersections are projected to operate at or above their acceptable level-of-service standard during the AM and PM peak hours for the Projected 2019 Build Alternative conditions. Additionally, the intersection is projected to operate at a better LOS during the AM peak with less delay with the proposed intersection restriping plan compared to the Projected 2019 Build conditions with the existing laneage. The intersection is projected to operate at similar LOS during the PM peak.



Kimley»Horn	*Horizon Pointe 400* *DRI #2688* Transportation Analysis	Projected 2019 Build - Alternative Traffic Conditions	Figure 11
			Page 26

Table 11 : Queuing Analysis (Projected 2019 Build vs Build Alternative) *95th Percentile Queue Lengths, in feet*				
Intersection	**Control**	**Approach**	**AM Peak Queue**	**PM Peak Queue**
Projected 2019 Build Conditions				
1. Old Peachtree Road at Horizon Drive	Signal	WB Left	1,150’	330’
		NB Right	-*	-*
Projected 2019 Build Alternative Conditions				
1. Old Peachtree Road at Horizon Drive	Signal	WB Left	400’	225’
		NB Right	25’	190’

**Note: Due to the northbound right-turn lane being a free-flow lane under existing conditions, Synchro analysis shows no queue for this movement.*

As shown in **Table 11**, the westbound left queue lengths improve with the proposed intersection restriping plan from approximately 1,150 feet of queue with existing laneage under the Projected 2019 Build conditions to approximately 400 feet of queue with the proposed intersection restriping laneage under the Projected 2019 Build Alternative conditions during the AM peak. The westbound left queue lengths improve from approximately 330 feet of queue under the Projected 2019 Build conditions to approximately 225 feet of queue under the Projected 2019 Build Alternative conditions during the PM peak.

7.0 IDENTIFICATION OF PROGRAMMED PROJECTS

According to ARC's Transportation Improvement Program (TIP), GDOT Statewide TIP (STIP), *Plan 2040* Regional Transportation Program (RTP), GDOT's Construction Work Program, and Gwinnett County's Comprehensive Transportation Plan (CTP) the following projects are programmed or planned to be completed by the respective years: within the vicinity of the proposed development. The identified projects are listed in **Table 12** below.

Table 12: Programmed Improvements

#	Year	Project Number	Project Description
1	2017	T105	Rock Springs Park driveway addition at Old Peachtree Road @ Collins Hill Road intersection
2	TBD	F-1118-01	Old Peachtree Road & Rock Springs Pedestrian Sidewalk Improvement
3	2020	AR-ML-410	I-85 managed lanes from Old Peachtree Road to Hamilton Mill Road.
4	2020	GW-406	SR 324 improvements and widening at SR 124.
5	2024	GW-388	I-85 North new interchange at SR 324 (Gravel Springs Road).
6	2030	GW-020D	SR 20 (Buford Drive) widening from four lanes to eight lanes from I-85 North to Rock Springs Road.
8	2040	GW-308B	Sugarloaf Parkway extension from SR 316 east of Lawrenceville to I-85.
9	2040	GW-308C	Sugarloaf Parkway extension from I-85 to Peachtree Industrial Boulevard.
10	TBD	GW-390C	Gwinnett County ATMS/ITS infrastructure expansion along Old Peachtree Road from Sugarloaf Parkway to North Brown Road.
11	TBD	ASP-AR-ML-420	I-85 North Managed Lanes from I-285 to I-985. This project would include increasing the managed lanes from two lanes to four lanes.

The improvements associated with these projects in **Table 12** were not specifically considered for this DRI Transportation Analysis because they are not immediately within the study network or expected to be completed by 2019.

8.0 INGRESS/EGRESS ANALYSIS

Vehicular access to the *Horizon Pointe 400* development during the AM and PM peak periods includes the following signalized intersection:

- Old Peachtree Road at Horizon Drive

Capacity analyses were conducted for the site access intersection identified above for the Existing 2017 conditions, Projected 2019 No-Build conditions, Projected 2019 Build conditions, and the Projected 2019 Build Alternative conditions. The intersection laneage (geometry) and traffic volumes for the study intersection is shown in **Figure 8**, **Figure 9**, **Figure 10,** and **Figure 11**, respectively, for each scenario, including the proposed intersection restriping laneage from Gwinnett County. The levels-of-service determined using existing geometry for the site access intersection can be found in **Table 7**, **Table 8**, **Table 9**, and **Table 10** for the Existing 2017 conditions, Projected 2019 No-Build conditions, Projected 2019 Build conditions, and the Projected 2019 Build Alternative conditions respectively.

Based on the Existing 2017 conditions, Projected 2019 No-Build conditions, Projected 2019 Build conditions, and the Projected 2019 Build Alternative conditions, the studied site access intersection is expected to operate at an acceptable level-of-service for all conditions.

9.0 INTERNAL CIRCULATION ANALYSIS

Internal roadways throughout the site provide vehicular access to all warehousing buildings and parking on the site. A detailed copy of the proposed site plan can be found in Appendix B and a full-sized site plan is attached to the report.

The *Horizon Pointe 400* development is not mixed-use in nature and will have no mixed-use reductions taken.

10.0 COMPLIANCE WITH COMPREHENSIVE PLAN ANALYSIS

The current Gwinnett County zoning is Single Family Residence Zero Lot Line/Townhouse District (R-ZT), which will require rezoning. The Gwinnett County Future Development Map identifies the area as a Preferred Office Mixed-Use Area, and the ARC's *PLAN 2040 Unified Growth Policy Map* identifies the project site as being in an Established Suburbs place type area. Please refer to the Land Use and Zoning maps in Appendix A.

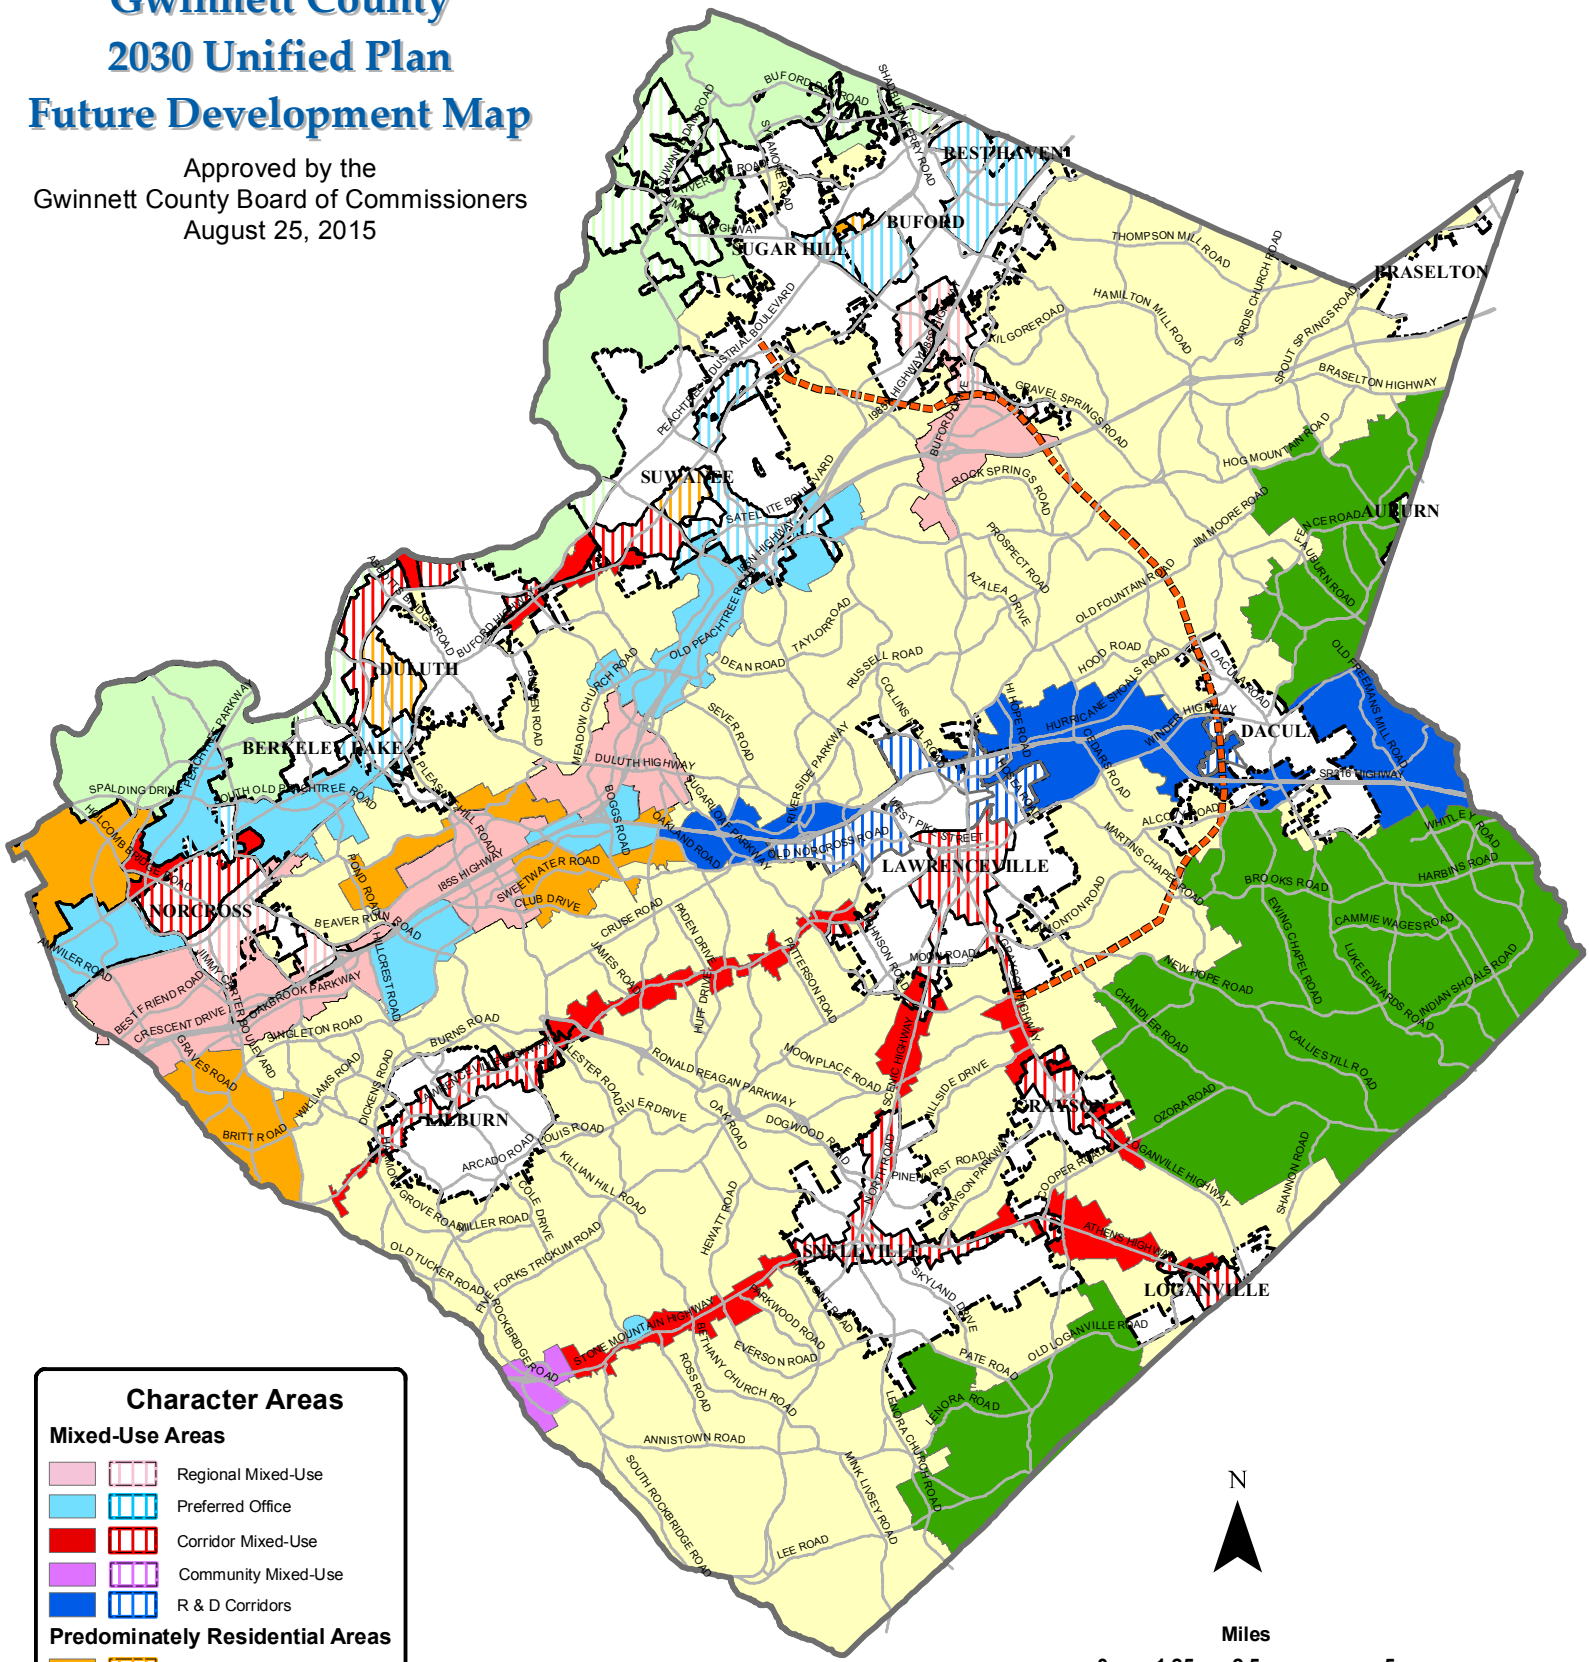
Land Use and Zoning Maps

Gwinnett County
2030 Unified Plan
Future Development Map

Approved by the
Gwinnett County Board of Commissioners
August 25, 2015



Character Areas

Mixed-Use Areas

- Regional Mixed-Use
- Preferred Office
- Corridor Mixed-Use
- Community Mixed-Use
- R & D Corridors

Predominately Residential Areas

- Mixed Housing Types
- Existing/Emerging Suburban
- Chattahoochee River Area
- Rural Estate Areas

Hatched color treatment indentifies where a character area is within corporate limits.

This map shows those areas that will be most subject to major policy interventions to achieve Unified Plan goals.

Programmed Project Fact Sheets

AR-ML-410

Atlanta Region's Plan RTP (2016) PROJECT FACT SHEET

Short Title	I-85 NORTH MANAGED LANES - INCLUDING SOUTHBOUND AUXILIARY LANE FROM SR 20 TO SR 317 AND NORTHBOUND AUXILIARY LANE FROM SR 20 TO SR 324 (GRAVEL SPRINGS ROAD) FROM OLD PEACHTREE ROAD TO HAMILTON MILL ROAD
GDOT Project No.	110600-
Federal ID No.	NHIM0-0085-02(164)
Status	Programmed
Service Type	Roadway / Managed Lanes
Sponsor	GDOT
Jurisdiction	Regional - Northeast
Analysis Level	In the Region's Air Quality Conformity Analysis

Existing Thru Lane	0	**LCI**		**Network Year**	2020
Planned Thru Lane	2	**Flex**		**Corridor Length**	14.0 miles

Detailed Description and Justification

Project involves the construction of a single concurrent managed lane in each direction along I-85 from Old Peachtree Road to Hamilton Mill Road. The project also involves the reconstruction of the I-85/I-985 interchange to allow for a right-hand general purpose lane exit from northbound I-85 to northbound I-985 and the conversion of the existing left-hand exit to a northbound I-85 to northbound I-985 Managed Lane system-level exit. Managed lanes along I-985 would extend north of I-85 a distance sufficient to taper them out - a distance of approximately 1.5 - 2.0 miles. The project would extend concurrent Managed Lanes along I-85 North, which have recently been extended as HOV2+ lanes from SR 316 to Old Peachtree Road as part of the I-85/SR 316 interchange project and which will be converted to HOT3+ lanes as part of the ongoing HOV2HOT conversion initiative. One new southbound general purpose/auxiliary lane will be constructed from SR 20 to SR 317. And one new northbound general purpose/auxiliary lane will be constructed from SR 20 to Gravel Springs Road.

Detailed Description and Justification

This Buford/Dacula/East-Cross County Connector project consists of constructing a new 6.8 miles roadway from SR 316 east of Lawrenceville to I 85. The road will include a 4 lane divided highway with a raised median, bicycle and pedestrian facilities, turn lanes as well as grade separation at I-85, SR 124, Old Fountain Rd., Old Peachtree Rd, Fence Rd, SR 8, and SR 316. The project will add need roadway capacity and address peak period congestion in the northern part of the county experiencing rapid population and employment growth.

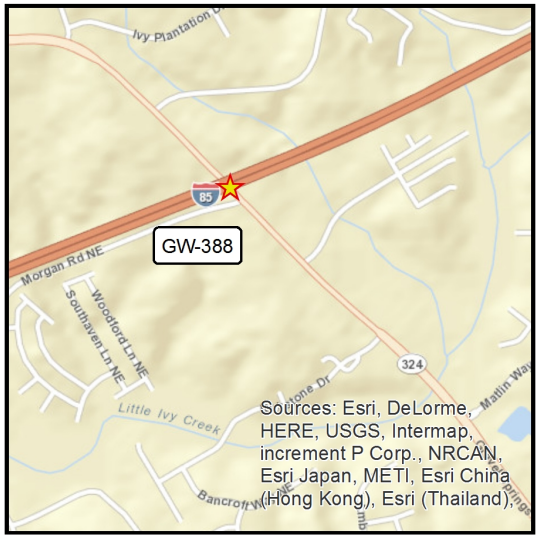
GW-388

Atlanta Region's Plan RTP (2016) PROJECT FACT SHEET

Short Title	I-85 NORTH - NEW INTERCHANGE AT SR 324 (GRAVEL SPRINGS ROAD)
GDOT Project No.	0012698
Federal ID No.	N/A
Status	Programmed
Service Type	Roadway / Interchange Capacity
Sponsor	Gwinnett County
Jurisdiction	Gwinnett County
Analysis Level	In the Region's Air Quality Conformity Analysis



Existing Thru Lane	N/A	**LCI**		**Network Year**	2024
Planned Thru Lane	N/A	**Flex**		**Corridor Length**	N/A miles

Detailed Description and Justification

The project serves trips to/from multiple jurisdictions including Gwinnett, Hall, Barrow and Jackson Counties and also serves freight traffic traveling in the southeastern United States. This new interchange will provide access to existing development within the area and provide a solution to address the anticipated increase in local traffic volume (including trucks) resulting from planned development. The project serves origins or destinations of trips to/from and within major existing and proposed employment and activity centers throughout the region. The project improves one of the most congested regional corridors as determined through ARC's Congestion Management Process. SR 324 (Gravel Springs Road) is a facility on the Regional Strategic Transportation System. ARC regional travel demand model calculations indicate that the completed project will reduce congestion on Hamilton Mill Road north of I?85 by 15% compared to future conditions without the project. I-85 North is included on GDOT's official Freight Corridor Network and therefore designated as a key strategic highway route that handles the flow of freight to and from locations in Georgia.The Interchange Justification Report (IJR) has been approved by both GDOT and FHWA. The selected alternative is full diamond interchange. The recent road widening on SR 324 and new bridge construction over I-85 were designed and constructed to accommodate a future interchange at this location. Also, right-of-way acquisitions for the roadway and bridge projects considered a future interchange at this location.

GW-390C

Atlanta Region's Plan RTP (2016) PROJECT FACT SHEET

Short Title	GWINNETT COUNTY ATMS/ITS INFRASTRUCTURE EXPANSION - OLD PEACHTREE ROAD FROM SUGARLOAF PARKWAY TO NORTH BROWN ROAD/NORTHBROOK PARKWAY
GDOT Project No.	0013324
Federal ID No.	N/A
Status	Programmed
Service Type	Roadway / Operations & Safety
Sponsor	Gwinnett County
Jurisdiction	Gwinnett County
Analysis Level	Exempt from Air Quality Analysis (40 CFR 93)

Existing Thru Lane	N/A	**LCI**		**Network Year**	TBD
Planned Thru Lane	N/A	**Flex**		**Corridor Length**	3.3 miles

Detailed Description and Justification

In addition to the ATMS/ITS infrastructure already in place, the proposed CMAQ-funded ATMS/ITS expansion enables critical monitoring ability of almost every major travel corridor in Gwinnett County, significantly improving travel in the northeast Atlanta region. Traffic signalization and intersection improvement projects are designed to reduce traffic congestion, increase travel speeds, and/or reduce delay thus meeting both goals of the CMAQ program: decreasing congestion and reducing air pollution. Interconnecting traffic signals improves both peak and off peak travel speeds and reduces congestion at intersections. Fiber optic cable installation for traffic signal optimization will occur along four major travel corridors in Gwinnett County: Old Peachtree Road, from North Brown Road to Sugarloaf Parkway; Ronald Reagan Parkway, from SR 124 to US 29; Five Forks Trickum Road, from Sugarloaf Parkway to Rockbridge Road; SR 316, from Hi-Hope Road to Barrow County line.

Appendix F

Traffic Memorandum for the Proposed Rock Springs Park development

GCA

Memorandum

To: David Blackley, ASLA, LEED AP – McFarland Dyer & Associates, Inc.
From: Naveed Jaffar, P.E., PTOE
CC:
Date: October 22, 2014
Re: Left Turn Warrant Analysis for the Intersection of Old Peachtree Road at Collins Hill Road Gwinnett County, Georgia

---

The purpose of this memorandum is to document the analyses performed for the intersection of Old Peachtree Road at Collins Hill Road in Gwinnett County, Georgia in order to determine whether left-turn phases are warranted with the development of the proposed Rock Springs Park. Rock Springs Park is a 50-acre park on the northside of Old Peachtree Road. Access to the park will be via a driveway on Old Peachtree Road. The driveway will form the forth leg of the existing three-leg intersection of Old Peachtree Road at Collins Hill Road. The intersection will be analyzed for left turn phases for the proposed conditions with the proposed park open and access provided via Old Peachtree Road.

Analysis Methodology

Warrant analysis for left turn phases was performed for the intersection of Old Peachtree Road at Collins Hill Road using the criteria outlined in *GDOT Policy 6785-2-Left Turn Phasing.* Based on *GDOT Policy 6785-2*, **protected left-turn phasing** should be **considered** in **the following criteria:**

1. The **cross-product,** one hour left turn **volume** times the **opposing** one **hour through movement volume divided** by the **number** of lanes for **the opposing through movement,** is **greater** than **50,000.**
2. The left-turn **volume exceeds** 125 **vehicles** per **hour.**
3. **Correctable crashes** equal or **exceed** 4 **crashes** in one year or 6 **crashes in** two **years.**
4. **Additional criteria including** but not limited to sight **distance,** speed of **opposing traffic,** number of left turn lanes, number of **opposing through lanes,** delay, the angle of the left turn and **if the** signal is **included** in **a coordinated signal system.**

Existing Conditions and Traffic Volumes

Old Peachtree Road and Collins Hill Road intersect to form a three-leg signalized intersection. Both Old Peachtree Road and Collins Hill Road are two-lane roadways. The eastbound Old Peachtree Road approach has a through lane and a right-turn lane. The westbound Old Peachtree Road approach has a left-turn lane and a through lane. The northbound Collins Hill Road approach has a left-turn lane and a right-turn lane. The westbound approach has a protected/permissive left-turn phase.

Weekday traffic counts were collected at the study intersection on Thursday, October 25, 2014. Table 1 shows the A.M., midday and P.M. peak hour traffic volumes.

Table 1 - 2014 Existing Peak Hour Traffic Volumes

Proposed Rock Springs Park Development

The Rock Spring Park development will consist of: an approximately 50-acre county park and three soccer fields. Rock Springs Park will have access to the external road network via a full movement driveway on Old Peachtree Road directly opposite Collins Hill Road. The park access driveway will form the northern forth-leg at the signalized intersection of Old Peachtree Road at Collins Hill Road.

The estimated trip generation for Rock Springs Park was developed using the *Institute of Transportation Engineers (ITE) Trip Generation*. This is the standard methodology used to calculate new vehicular trips for new developments. The results of the trip generation are shown in Table 1.

Table 1 – Trip Generation

Land Use (ITE Code)	Intensity	Daily			AM Peak Hour Adjacent Street			PM Peak Hour Adjacent Street (Midday)			PM Peak Hour Generator		
		In	Out	Total	In	Out	Total	In	Out	Total	In	Out	Total
County Park (412)	50 acres	57	57	114	1	0	1	1	2	3	10	20	30
Soccer Complex (488)	3 Fields	107	107	214	2	2	4	43	19	62	21	44	65
TOTAL		**164**	**164**	**328**	**3**	**2**	**5**	**44**	**21**	**65**	**31**	**64**	**95**

The trip distribution is the percentage of site traffic that travels on each of the various roadways to and from a site. The trip distribution was based on the existing traffic volume patterns at the study intersection. The trip distribution was applied to the AM, midday and PM peak hour site generated trips in order to develop the AM, midday and PM peak hour site generated volumes at the study intersection. Since the *Trip Generation* manual does not provide rates for the midday period for these land uses, and that the midday trip generation is anticipated to be less the P.M. peak hour, the P.M. peak hour of adjacent street traffic generation was applied to the midday peak hour and the P.M. peak hour of traffic generator was applied to the P.M. peak hour. Also, the A.M. peak hour of adjacent street traffic generation was applied to the A.M. peak hour. The expected trips generated from the proposed development are shown in Table 2.

Table 2 – Rock Springs Park Traffic Volumes

Peak Hour	Collins Hill Rd/Rock Springs Park driveway						Old Peachtree Rd

Proposed Traffic Volumes

The estimated traffic from Rock Springs Park development was added to the existing traffic volumes to represent the traffic expected in the area in the future when the development is fully complete. The proposed traffic volumes are shown in Table 3.

Table 3 – Proposed Peak Hour Traffic Volumes

Left Turn Warrant Analysis

Warrant analysis for left turn phases was performed for the intersection of Old Peachtree Road at Collins Hill Road/Rock Springs Park driveway using the proposed peak hour traffic volumes shown in Table 3. Table 4 shows Criteria 1, the cross product volumes, as defined in *GDOT Policy 6785-2-Left Turn Phasing.*

Table 4 – Left Turn Warrant Analysis – Cross Product Volumes

Time	Street	Direction of Travel	Left Turn Volume	Opposing Conflict Volume	Number of Opposing Lanes	Cross Product	Criteria Met
7:00 AM - 8:00 AM	Old Peachtree Rd	EB	1	913	1	913	**NO**
		WB	183	168	1	30,744	**NO**
	Collins Hill Rd	NB	376	0	1	0	**NO**
	Park entrance drv	SB	1	1	1	1	**NO**
2:00 PM - 3:00 PM	Old Peachtree Rd	EB	18	291	1	5,238	**NO**
		WB	151	687	1	103,737	**YES**
	Collins Hill Rd	NB	185	5	1	925	**NO**
	Park entrance drv	SB	8	8	1	64	**NO**
6:00 PM - 7:00 PM	Old Peachtree Rd	EB	13	374	1	4,862	**NO**
		WB	220	1,051	1	231,220	**YES**
	Collins Hill Rd	NB	203	12	1	2,436	**NO**
	Park entrance drv	SB	26	5	1	130	**NO**

As shown in Table 4, the intersection meets Criteria 1 for left turn phases for the westbound Old Peachtree Road approach.

Criteria 2 of *GDOT Policy 6785-2-Left Turn Phasing* requires left turning volumes of 125 vehicles per hour. A review of the left turn volumes shown in Table 4 shows that the northbound Collins Hill Road approach and the westbound Old Peachtree Road approach meet the requirements of Criteria 2 for left turn phases.

Since the analysis conducted is for proposed conditions at the study intersection, Criteria 3, crash analysis, was not evaluated.

Similarly, Criteria 4, additional criteria was not evaluated as part of this analysis.

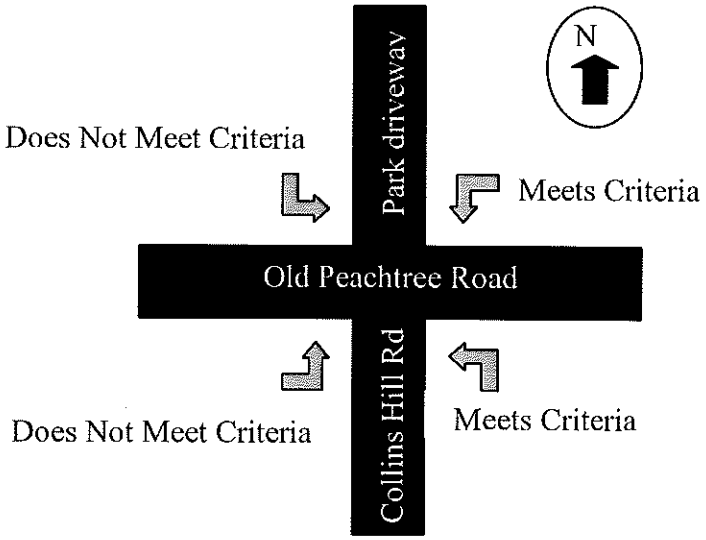
Summary

Based on the findings of this study, the intersection of Old Peachtree Road at Collins Hill Road/Rock Springs Park driveway meets the criteria for installing a protected/permissive left-turn phase for the Old Peachtree Road westbound approach; and the Collins Hill Road

northbound approach for the proposed conditions. Per current Gwinnett County DOT criteria, it is preferred to install a flashing yellow (FYA) left turn signal head where a protected/permissive left-turn operation is warranted.

However, the criteria for installing a protected/permissive left-turn phase is not met for the Old Peachtree Road eastbound approach; and the Rock Springs Park driveway southbound approach. Figure 1 summarizes the findings of the left-turn warrant analysis at the intersection of Old Peachtree Road at Collins Hill Road/Rock Springs Park driveway for the four approaches.

Figure 1: Summary of Left-Turn Warrant Analysis



Recommendations

It is recommended to install a flashing yellow left-turn signal head for the Collins Hill Road northbound approach and to replace the five section signal head for the Old Peachtree Road westbound approach with a flashing yellow left turn signal head.
