ARC REVIEW CODE: R1708281

TO: Chairman Dr. Romona Jackson Jones, Douglas Co. Board of Commissioners
ATTN TO: Tracy Rye, Planning & Zoning Director
FROM: Douglas R. Hooker, Executive Director, ARC
RE: Development of Regional Impact (DRI) Review

Digital signature
Original on file

The Atlanta Regional Commission (ARC) has completed a regional review of the following Development of Regional Impact (DRI). ARC reviewed the DRI with regard to its relationship to regional plans, goals and policies – and impacts it may have on the activities, plans, goals and policies of other local jurisdictions as well as state, federal and other agencies. This final report does not address whether the DRI is or is not in the best interest of the host local government.

Name of Proposal: DCT Douglas Hill Distribution Center (DRI 2701)

Submitting Local Government: Douglas County

Review Type: Development of Regional Impact **Date Opened:** Aug. 28, 2017 **Date Closed:** Sept. 14, 2017

Description: This DRI is located in unincorporated Douglas County on the north side of Douglas Hill Road, northwest of its intersection with Factory Shoals Road. The proposed development consists of 1,036,800 SF of warehouse/distribution space in one building on approximately 93 acres. The development plan proposes site access via one driveway onto Douglas Hill Road. The DRI review trigger for this development is a rezoning application. The current zoning is Residential-Agricultural (R-A), and the proposed zoning is Light Industrial (LI-C). The projected build-out year is 2019. The proposed project overlaps with a significant portion of a previously reviewed DRI known as Corporate Ridge Business Park Phase II, reviewed in 2015 as DRI 2477.

Comments: According to the ARC Unified Growth Policy Map (UGPM), part of The Atlanta Region's Plan, this DRI is located in the Developing Suburbs Area of the region. Developing Suburbs are areas that have developed from roughly 1995 to today and are projected to remain suburbs through 2040. ARC's Regional Development Guide (RDG) details recommended policies for areas on the UGPM. RDG information and recommendations for Developing Suburbs are listed at the bottom of these comments.

This DRI appears to manifest some aspects of regional policy in that it is in close proximity to existing warehouse/distribution areas on Thornton Road/SR 6, Riverside Parkway, Six Flags Road and Fulton Industrial Boulevard, offering the potential for efficiencies in freight movement. It also offers clear connectivity for regional freight movement via its access to Thornton Road/SR 6 to the east, which connects to I-20 to the north and Fulton Industrial Boulevard/SR 70 to the south.

The project could further support The Atlanta Region's Plan if it incorporated other aspects of the regional policy detailed at the bottom of this report, including green infrastructure and/or low-impact design (e.g., rain gardens, vegetated swales, etc.) in parking areas and site driveways, and as part of any improvements to site frontages. In addition, ARC encourages the applicant team to ensure that the development promotes a functional, safe, clearly marked and comfortable pedestrian experience on all streets, paths and parking areas on the site. This framework can offer the potential for safe internal site circulation for employees on foot or by another alternative mode.

–CONTINUED ON NEXT PAGE–

The intensity of this DRI generally aligns with the RDG's recommended range of densities and building heights in Developing Suburbs. In terms of land use, as mentioned above, the project is similar to nearby clusters of existing and planned warehouse/distribution space and is located in a part of the region that is experiencing demand for the development of these types of facilities. However, other areas adjacent to or near this site are predominated by low-density and/or residential uses, as well as Sweetwater Creek State Park, a regionally important resource. Some adjacent and nearby areas are also in the City of Douglasville or Cobb County. Douglas County's leadership and staff, along with the applicant team, should therefore collaborate to balance the goal of new development with the need for sensitivity to nearby land uses, natural resources and other local governments.

Additional ARC staff comments, related to natural resources and transportation, are also attached. Transportation comments include the location of this project in the planning area of the adopted Sweetwater Master Plan and that plan's design specifications for Douglas Hill Road (e.g., sidewalks and other improvements), adjacent to the site. Natural Resources comments include the project's location in the Sweetwater Creek watershed and its resulting relationship to County stream buffer regulations in the Douglas County Unified Development Code.

Further to the above, regional policy recommendations for Developing Suburbs include:

- New development should connect to the existing road network and adjacent developments and use of cul-de-sacs or other means resulting in disconnected subdivisions should be discouraged
- Maximize the usefulness of existing recreational facilities in addition to providing new recreational opportunities
- Eliminate vacant or under-utilized parking areas through mechanisms such as out-parceling or conversion to community open space
- Use rain gardens, vegetated swales or other enhanced water filtration design to enhance the quality of stormwater run-off
- Identify other opportunities to foster a sense of community by developing town centers, village centers or other places of centralized location

Subject: RE: ARC DRI Review Notification: DCT Douglas Hill Distribution Center (DRI 2701)
Attachments: Preliminary Report - DCT Douglas Hill Distribution Center DRI 2701.pdf

Andrew,

The proposed development consists of 1,036,800 SF of warehouse/distribution space in one building on approximately 93 acres, is located approximately 4.6 miles from Fulton County Airport – Brown Field (FTY). It is located below but within the footprint of the FAA Part 77 Approach Surface, and outside of any compatible land use area, and does not appear to impact the airport unless construction or construction equipment exceeds 300' in height above ground level.

Since the proposed building falls within the footprint of the FAA Part 77 approach surface, an FAA Form 7460-1 should be submitted to the Federal Aviation Administration along with an additional submission for any associated cranes to be used during construction. That may be done online at <https://oeaaa.faa.gov>. The FAA must be in receipt of the notification, no later than 120 days prior to construction. The FAA will evaluate the potential impact of the project on protected airspace associated with the airport and advise the proponent if any action is necessary.

I have copied Doug Barrett with Fulton County Airport – Brown Field on this email.

Thank you for the opportunity to comment on the proposed development.

Development of Regional Impact (DRI) – Request for Comments

This e-mail serves as notice that the Atlanta Regional Commission (ARC) has begun a Development of Regional Impact (DRI) review for **DCT Douglas Hill Distribution Center (DRI 2701)**.

This DRI is located in unincorporated Douglas County on the north side of Douglas Hill Road, northwest of its intersection with Factory Shoals Road. The proposed development consists of 1,036,800 SF of warehouse/distribution space in one building on approximately 93 acres. The development plan proposes site access via one driveway onto Douglas Hill Road. The DRI review trigger for this development is a rezoning application. The projected build-out year is 2019. The proposed project overlaps with a significant portion of a previously reviewed DRI known as Corporate Ridge Business Park Phase II, reviewed in 2015 as DRI 2477.

As a representative of a nearby local government or potentially affected party, we request that you or your staff review the attached Preliminary Report and provide any comments to ARC on or before **September 12, 2017**.

You may also view the Preliminary Report and other project information by visiting the [ARC Plan Reviews webpage](#) and searching for “DCT Douglas Hill Distribution Center” in the field at the bottom of the page. The report and other information will be archived online as of tomorrow, August 29.

Date Opened: August 28, 2017

Deadline for Comments: September 12, 2017

Date to Close: September 18, 2017

For more information regarding the DRI process or other DRIs reviewed by ARC, please visit the [ARC DRI webpage](#).

Natural Resources Review Comments
August 24, 2017

Watershed Protection and Stream Buffers

The project property is in the Sweetwater Creek Water Supply Watershed, a large (greater than 100 square mile) watershed as defined by the State of Georgia's Part 5 Environmental Planning Criteria for water supply watersheds. As withdrawals are drawn directly from the Sweetwater Creek and not from a reservoir, the only Part 5 Water Supply Watershed criteria that apply in the Sweetwater Creek watershed are restrictions on the handling and storage of hazardous materials within 7 miles upstream of the intake. (East Point's Sparks Reservoir is located in the basin of a tributary to Sweetwater Creek and receives no direct flow from Sweetwater Creek or the rest of the Sweetwater watershed. This project is not in the Sparks Reservoir watershed.).

The property is also in the Chattahoochee River watershed, but is not within the Chattahoochee River Corridor. It is located downstream of the portion of the Chattahoochee that serves as a water supply source in the Atlanta Region.

The USGS coverage for the project area and the submitted site plan both show a perennial (blue line) stream running along the northern edge of the property with a second perennial stream, a tributary to the first stream, running through the northeastern portion of the property. A 25-foot undisturbed buffer and an additional 12.5-foot impervious surface setback are shown for both streams on the site plan. However, the Douglas County Unified Development Code (Section 903(a) (2)) identifies all perennial streams as regulated streams. Further, the County Unified Development Code Section 907(b) (5)) identifies Sweetwater Creek as a watershed protection area. In Table 9.1 under Code Section 908(b), the Watershed Protection Regulations for regulated streams in the Sweetwater Creek Watershed have a required 100-foot undisturbed buffer and an additional 50-foot (150-foot total) setback for regulated activities, which include impervious surfaces. If the wider buffer and setback widths apply to both streams, portions of the proposed driveway, the proposed truck court and the northern detention pond will be within the buffer and setback. Any proposed intrusions into the setback or buffer will be subject to the requirements of the Douglas County stream buffer regulations, which may require a variance for this project. In addition, all streams on the property, as well as all waters of the state, are subject to the requirements of the State Erosion and Sedimentation Act, which includes a 25-foot buffer on all state waters, which is shown along the mapped streams on this property.

Stormwater / Water Quality

The project should adequately address the impacts of the proposed development on stormwater runoff and downstream water quality. During construction, the project should conform to the relevant state and federal erosion and sedimentation control requirements. After construction, as with all development, water quality will be impacted due to polluted stormwater runoff. The amount of pollutants that will be produced after construction of the proposed development are dependent on the type and intensity of the use and the impervious coverage, which will affect the design of stormwater controls for the project.

In order to address post-construction stormwater runoff quality, the project should implement stormwater management controls (structural and/or nonstructural) as found in the Georgia Stormwater Management Manual (www.georgiastormwater.com) and meet the stormwater management quantity and quality criteria outlined in the Manual. Where possible, the project should utilize the stormwater better site design concepts included in the Manual.

TRAFFIC STUDY

Prepared by Kimley Horn
Date August 1, 2017

REGIONAL TRANSPORTATION PLAN PROJECTS

01. Did the traffic analysis incorporate all projects contained in the current version of the fiscally constrained RTP which are within the study area or along major transportation corridors connecting the study area with adjacent jurisdictions?

☒ YES (provide date of RTP project list used below and the page number of the traffic study where relevant projects are identified)

On page 24, Table 10 of the traffic study contains programmed projects identified in the Atlanta Regions Plan.

☐ NO (provide comments below)

[Click here to provide comments.](#)

REGIONAL NETWORKS

02. Will the development site be directly served by any roadways identified as Regional Thoroughfares?

A Regional Thoroughfare is a major transportation corridor that serves multiple ways of traveling, including walking, bicycling, driving, and riding transit. It connects people and goods to important places in metropolitan Atlanta. A Regional Thoroughfare's operations should be managed through application of special traffic control strategies and suitable land development guidelines in order to maintain travel efficiency, reliability, and safety for all users. In light of the special function that Regional Thoroughfares serve in supporting cross-regional and interjurisdictional mobility and access, the network receives priority consideration for infrastructure investment in the Metro Atlanta region. Any access points between the development and a Regional Thoroughfare, combined with the development's on-site circulation patterns, must be designed with the goal of preserving the highest possible level of capacity and safety for all users of the roadway.

☒ NO

☐ YES (identify the roadways and existing/proposed access points)

The site plan and traffic analysis indicates one (1) site access point located off Douglas Hill Roas, identified as a local road.

03. Will the development site be directly served by any roadways identified as Regional Truck Routes?

A Regional Truck Route is a freeway, state route or other roadway which serves as a critical link for the movement of goods to, from and within the Region by connecting airports, intermodal/multimodal facilities, distribution and warehousing centers and manufacturing clusters with the rest of the state and nation. These facilities often serve a key mobility and access function for other users as well, including drivers, bicyclists, pedestrians and transit users. A Regional Truck Route's operations should be managed through application of special traffic control strategies and suitable land development guidelines in order to maintain travel efficiency, reliability, and safety for all users. In light of the special function that Regional Truck Routes serve in supporting cross-regional and interjurisdictional mobility and access, the network receives priority consideration for infrastructure investment in the Metro Atlanta region. Any access points between the development and a Regional Truck Route, combined with the development's on-site circulation patterns, must be designed with the goal of preserving the highest possible level of capacity and safety for all users of the roadway.

☒ NO

☐ YES (*identify the roadways and existing/proposed access points*)

[Click here to provide comments.](#)

04. If the development site is within one mile of an existing rail service, provide information on accessibility conditions.

Access between major developments and transit services provide options for people who cannot or prefer not to drive, expand economic opportunities by better connecting people and jobs, and can help reduce congestion. If a transit service is available nearby, but walking or bicycling between the development site and the nearest station is a challenge, the applicable local government(s) is encouraged to make the route a funding priority for future walking and bicycling infrastructure improvements.

☒ NOT APPLICABLE (*nearest station more than one mile away*)

☐ RAIL SERVICE WITHIN ONE MILE (*provide additional information below*)

Operator / Rail Line Click here to enter name of operator and rail line

Nearest Station Click here to enter name of station.

Distance* ☐ Within or adjacent to the development site (0.10 mile or less)

☐ 0.10 to 0.50 mile

☐ 0.50 to 1.00 mile

Walking Access* ☐ Sidewalks and crosswalks provide sufficient connectivity

☐ Sidewalk and crosswalk network is incomplete

☐ Not applicable (*accessing the site by walking is not consistent with the type of development proposed*)

[Click here to provide comments.](#)

Bicycling Access*

- ☐ Dedicated paths, lanes or cycle tracks provide sufficient connectivity
- ☐ Low volume and/or low speed streets provide connectivity
- ☐ Route follows high volume and/or high speed streets
- ☐ Not applicable (*accessing the site by bicycling is not consistent with the type of development proposed*)

[Click here to provide comments.](#)

Transit Connectivity

- ☐ Fixed route transit agency bus service available to rail station
- ☐ Private shuttle or circulator available to rail station
- ☐ No services available to rail station
- ☐ Not applicable (*accessing the site by transit is not consistent with the type of development proposed*)

[Click here to provide comments.](#)

** Following the most direct feasible walking or bicycling route to the nearest point on the development site*

05. If there is currently no rail transit service within one mile of the development site, is nearby rail service planned in the fiscally constrained RTP?

Access between major developments and transit services provide options for people who cannot or prefer not to drive, expand economic opportunities by better connecting people and jobs, and can help reduce traffic congestion. If a transit agency operates within the jurisdiction and expansion plans are being considered in the general vicinity of the development site, the agency should give consideration to how the site can be best served during the evaluation of alignments and station locations. Proactive negotiations with the development team and local government(s) are encouraged to determine whether right-of-way within the site should be identified and protected for potential future service. If direct service to the site is not feasible or cost effective, the transit agency and local government(s) are encouraged to ensure good walking and bicycling access accessibility is provided between the development and the future rail line. These improvements should be considered fundamental components of the overall transit expansion project, with improvements completed concurrent with or prior to the transit service being brought online.

- ☐ NOT APPLICABLE (rail service already exists)
- ☐ NOT APPLICABLE (accessing the site by transit is not consistent with the type of development proposed)
- ☒ NO (no plans exist to provide rail service in the general vicinity)
- ☐ YES (provide additional information on the timeframe of the expansion project below)
 - ☐ CST planned within TIP period
 - ☐ CST planned within first portion of long range period
 - ☐ CST planned near end of plan horizon

[Click here to provide comments.](#)

06. If the development site is within one mile of fixed route bus services (including any privately operated shuttles or circulators open to the general public), provide information on walking and bicycling accessibility conditions.

Access between major developments and transit services provide options for people who cannot or prefer not to drive, expand economic opportunities by better connecting people and jobs, and can help reduce congestion. If a transit service is available nearby, but walking or bicycling between the development site and the nearest station is a challenge, the applicable local government(s) is encouraged to make the connection a funding priority for future walking and bicycling infrastructure improvements.

☒ NOT APPLICABLE (nearest bus, shuttle or circulator stop more than one mile away)

☐ SERVICE WITHIN ONE MILE (provide additional information below)

Operator(s)

[Click here to enter name of operator\(s\).](#)

Bus Route(s)

Distance*

☐ Within or adjacent to the development site (0.10 mile or less)

☐ 0.10 to 0.50 mile

☐ 0.50 to 1.00 mile

Walking Access*

☐ Sidewalks and crosswalks provide sufficient connectivity

☐ Sidewalk and crosswalk network is incomplete

☐ Not applicable (accessing the site by walking is not consistent with the type of development proposed)

[Click here to provide comments.](#)

Bicycling Access*

☐ Dedicated paths, lanes or cycle tracks provide sufficient connectivity

☐ Low volume and/or low speed streets provide sufficient connectivity

☐ Route uses high volume and/or high speed streets

☐ Not applicable (accessing the site by bicycling is not consistent with the type of development proposed)

MARTA Bus Route 73 along Fulton Industrial Boulevard is close by but is a little more than a one mile distance from the site.

* Following the most direct feasible walking or bicycling route to the nearest point on the development site

07. Does a transit agency which provides rail and/or fixed route bus service operate anywhere within the jurisdiction in which the development site is located?

Access between major developments and transit services provide options for people who cannot or prefer not to drive, expand economic opportunities by better connecting people and jobs, and can help reduce traffic congestion. If a transit agency operates within the jurisdiction and a comprehensive operations plan update is undertaken, the agency should give consideration to serving the site during the evaluation of future routes, bus stops and transfer facilities. If the nature of the development is amenable to access by transit, walking or bicycling, but direct service to the site is not feasible or cost effective, the transit agency and local government(s) should ensure good walking and bicycling access accessibility is provided between the development and any routes within a one mile radius. The applicable local government(s) is encouraged to make these connections a funding priority for future walking and bicycling infrastructure improvements.

☒ NO

☐ YES

Currently there is no transit service in the County, however, Douglas County is in the process of implementing fixed route transit bus service in parts of the County. Service is to start early 2018 with two fixed routes however, no service is proposed for this area.

08. If the development site is within one mile of an existing multi-use path or trail, provide information on accessibility conditions.

Access between major developments and walking/bicycling facilities provide options for people who cannot or prefer not to drive, expand economic opportunities by better connecting people and jobs, and can help reduce traffic congestion. If connectivity with a regionally significant path or trail is available nearby, but walking or bicycling between the development site and those facilities is a challenge, the applicable local government(s) is encouraged to make the route a funding priority for future walking and bicycling infrastructure improvements.

☒ NOT APPLICABLE (nearest path or trail more than one mile away)

☐ YES (provide additional information below)

Name of facility

[Click here to provide name of facility.](#)

Distance

☐ Within or adjacent to development site (0.10 mile or less)

☐ 0.15 to 0.50 mile

☐ 0.50 to 1.00 mile

Walking Access*

☐ Sidewalks and crosswalks provide connectivity

- ☐ Sidewalk and crosswalk network is incomplete
- ☐ Not applicable (*accessing the site by walking is not consistent with the type of development proposed*)

Click here to provide comments.

Bicycling Access*

- ☐ Dedicated lanes or cycle tracks provide connectivity
- ☐ Low volume and/or low speed streets provide connectivity
- ☐ Route uses high volume and/or high speed streets
- ☐ Not applicable (*accessing the site by bicycling is not consistent with the type of development proposed*)

No multiuse trails are in the study area. The site plan depicts a proposed pervious walking trail within the development

* *Following the most direct feasible walking or bicycling route to the nearest point on the development site*

OTHER TRANSPORTATION DESIGN CONSIDERATIONS

09. Does the site plan provide for the construction of publicly accessible roadway connections with adjacent parcels?

The ability for drivers and bus routes to move between developments without using the adjacent roadway network can save time and reduce congestion. Such opportunities should be considered and proactively incorporated into development site plans whenever possible.

- ☐ YES (*connections to adjacent parcels are planned as part of the development*)
- ☐ YES (*stub outs will make future connections possible when adjacent parcels redevelop*)
- ☒ NO (*the site plan precludes future connections with adjacent parcels when they redevelop*)
- ☐ NOT APPLICABLE (*adjacent parcels are not likely to develop or redevelop in the near future*)
- ☐ NOT APPLICABLE (*the nature of the development or adjacent parcels does not lend itself to interparcel roadway connections*)

The development proposes a single high cube warehouse distribution building with one access point on Douglas Hill Road. One looped driveway serves the entire site. The site is bordered on south, east and west by undeveloped parcels zoned for industrial uses. No future roadway connections are planned or proposed.

10. Does the site plan enable pedestrians and bicyclists to move between destinations within the development site safely and conveniently?

The ability for walkers and bicyclists to move within the site safely and conveniently reduces reliance on vehicular trips, which has congestion reduction and health benefits. Development site plans should incorporate well designed and direct sidewalk connections between all key destinations. To the extent practical, bicycle lanes or multiuse paths are encouraged for large acreage sites and where high volumes of bicyclists and pedestrians are possible.

- ☐ YES (sidewalks provided on all key walking routes and both sides of roads whenever practical and bicyclists should have no major issues navigating the street network)
- ☐ PARTIAL (some walking and bicycling facilities are provided, but connections are not comprehensive and/or direct)
- ☒ NO (walking and bicycling facilities within the site are limited or nonexistent)
- ☐ NOT APPLICABLE (the nature of the development does not lend itself to internal walking and bicycling trips)

The site plan and traffic analysis does not indicate bicycle and pedestrian facilities being provided throughout the development site. Sidewalks currently do not exist along Douglas Hill Road. Road improvements adopted under the Sweetwater Creek Master plan requires sidewalks and design specifications for Douglas Hill adjacent to the site. The site plan does not depict sidewalks or bicycle facilities being added to the site.

11. Does the site plan provide the ability to construct publicly accessible bicycling and walking connections with adjacent parcels which may be redeveloped in the future?

The ability for walkers and bicyclists to move between developments safely and conveniently reduces reliance on vehicular trips, which has congestion reduction and health benefits. Such opportunities should be considered and proactively incorporated into development site plans whenever possible.

- ☐ YES (connections to adjacent parcels are planned as part of the development)
- ☐ YES (stub outs will make future connections possible when adjacent parcels redevelop)
- ☐ NO (the development site plan does not enable walking or bicycling to/from adjacent parcels)
- ☐ NO (the site plan precludes future connections with adjacent parcels when they redevelop)
- ☐ NOT APPLICABLE (adjacent parcels are not likely to develop or redevelop in the near future)
- ☒ NOT APPLICABLE (the nature of the development or adjacent parcels does not lend itself to interparcel walking and bicycling trips)

12. Does the site plan effectively manage truck movements and separate them, to the extent possible, from the flow of pedestrians, bicyclists and motorists both within the site and on the surrounding road network?

The ability for delivery and service vehicles to efficiently enter and exit major developments is often key to their economic success. So is the ability of visitors and customers being able to move around safely and pleasantly within the site. To the extent practical, truck movements should be segregated by minimizing the number of conflict points with publicly accessible internal roadways, sidewalks, paths and other facilities.

- ☐ YES (truck routes to serve destinations within the site are clearly delineated, provide ample space for queuing and turning around, and are separated from other users to the extent practical)
- ☐ PARTIAL (while one or more truck routes are also used by motorists and/or interface with primary walking and bicycling routes, the site plan mitigates the potential for conflict adequately)
- ☐ NO (one or more truck routes serving the site conflict directly with routes likely to be used heavily by pedestrians, bicyclists and/or motorists)
- ☒ NOT APPLICABLE (the nature of the development will not generate a wide variety of users and/or very low truck volumes, so the potential for conflict is negligible)

The site is not located near high or intense residential land uses or existing transit or pedestrian facilities. Pedestrian and bicycle traffic should be minimal.

RECOMMENDATIONS

13. Do the transportation network recommendations outlined in the traffic study appear to be feasible from a constructability standpoint?

- ☐ UNKNOWN (additional study is necessary)
- ☒ YES (based on information made available through the review process; does not represent a thorough engineering / financial analysis)
- ☐ NO (see comments below)

Click here to enter text.

14. Is ARC aware of any issues with the development proposal which may result in it being opposed by one or more local governments, agencies or stakeholder groups?

- ☒ NO (based on information shared with ARC staff prior to or during the review process; does not reflect the outcome of an extensive stakeholder engagement process)
- ☐ YES (see comments below)

Click here to enter text.

15. ARC offers the following additional comments for consideration by the development team and/or the applicable local government(s):

None.

DEVELOPMENT OF REGIONAL IMPACT Initial DRI Information

This form is to be completed by the city or county government to provide basic project information that will allow the RDC to determine if the project appears to meet or exceed applicable DRI thresholds. Refer to both the [Rules for the DRI Process](#) and the [DRI Tiers and Thresholds](#) for more information.

Local Government Information

Submitting Local Government: Douglas
Individual completing form: Tracy Rye
Telephone: 678-838-2060
E-mail: trye@co.douglas.ga.us

*Note: The local government representative completing this form is responsible for the accuracy of the information contained herein. If a project is to be located in more than one jurisdiction and, in total, the project meets or exceeds a DRI threshold, the local government in which the largest portion of the project is to be located is responsible for initiating the DRI review process.

If other development type, describe:

Project Size (# of units, floor area, etc.): 1,036,800 sf

Developer: DCT Industrial Trust Operating Partnership, LP

Mailing Address: 3340 Peachtree Road, NE

Address 2: Tower 100, Suite 1950

City: Atlanta State: GA Zip: 30326

Telephone: 404-591-7646

Email: cseward@dctindustrial.com

Is property owner different from developer/applicant? ☐ (not selected) ☒ Yes ☐ No

If yes, property owner: Wallace, Perera, Hand, Florence, Alington, McKenzie

Is the proposed project entirely located within your local government's jurisdiction? ☐ (not selected) ☒ Yes ☐ No

If no, in what additional jurisdictions is the project located?

☐ (not selected) ☐ Yes ☒ No

Is the current proposal a continuation or expansion of a previous DRI?

If yes, provide the following information: Project Name:
Project ID:

The initial action being requested of the local government for this project:

- ☒ Rezoning
- ☐ Variance
- ☐ Sewer
- ☐ Water
- ☐ Permit
- ☐ Other

Is this project a phase or part of a larger overall project? ☐ (not selected) ☐ Yes ☒ No

If yes, what percent of the overall project does this project/phase represent?

Estimated Project Completion Dates: This project/phase: Dec 2018
Overall project: Dec 2018

DRI #2701

DEVELOPMENT OF REGIONAL IMPACT Additional DRI Information

This form is to be completed by the city or county government to provide information needed by the RDC for its review of the proposed DRI. Refer to both the [Rules for the DRI Process](#) and the [DRI Tiers and Thresholds](#) for more information.

Local Government Information

Submitting Local Government: Douglas
Individual completing form: Tracy Rye
Telephone: 678-838-2060
Email: trye@co.douglas.ga.us

Project Information

Name of Proposed Project: DCT Douglas Hill Distribution Center
DRI ID Number: 2701
Developer/Applicant: DCT Industrial Trust Operating Partnership, LP
Telephone: 404-591-7646
Email(s): cseward@dctindustrial.com

Additional Information Requested

Has the RDC identified any additional information required in order to proceed with the official regional review process? (If no, proceed to Economic Impacts.)
☐ (not selected) ☒ Yes ☐ No

If yes, has that additional information been provided to your RDC and, if applicable, GRTA?
☒ (not selected) ☐ Yes ☐ No

If no, the official review process can not start until this additional information is provided.

Economic Development

Estimated Value at Build-Out: \$54,000,000.00

Estimated annual local tax revenues (i.e., property tax, sales tax) likely to be generated by the proposed development: \$500,000

Is the regional work force sufficient to fill the demand created by the proposed project?
☐ (not selected) ☒ Yes ☐ No

Will this development displace any existing uses?
☐ (not selected) ☒ Yes ☐ No

If yes, please describe (including number of units, square feet, etc): 5 residential structures

Water Supply

Name of water supply provider for this site: Douglasville-Douglas County WSA

What is the estimated water supply demand to be generated by the project, measured in Millions of Gallons Per Day (MGD)?

0.023 MGD

Is sufficient water supply capacity available to serve the proposed project? ☐ (not selected) ☒ Yes ☐ No

If no, describe any plans to expand the existing water supply capacity:

Is a water line extension required to serve this project? ☐ (not selected) ☒ Yes ☐ No

If yes, how much additional line (in miles) will be required?
0.16 miles

Wastewater Disposal

Name of wastewater treatment provider for this site: Douglasville-Douglas County WSA

What is the estimated sewage flow to be generated by the project, measured in Millions of Gallons Per Day (MGD)?

0.013 MGD

Is sufficient wastewater treatment capacity available to serve this proposed project? ☐ (not selected) ☒ Yes ☐ No

If no, describe any plans to expand existing wastewater treatment capacity:

Is a sewer line extension required to serve this project? ☐ (not selected) ☐ Yes ☒ No

If yes, how much additional line (in miles) will be required?

Land Transportation

How much traffic volume is expected to be generated by the proposed development, in peak hour vehicle trips per day? (If only an alternative measure of volume is available, please provide.)

Approximately: 1,742 net daily trips; 120 trips AM peak; 131 trips PM peak

Has a traffic study been performed to determine whether or not transportation or access improvements will be needed to serve this project? ☐ (not selected) ☒ Yes ☐ No

Are transportation improvements needed to serve this project? ☐ (not selected) ☒ Yes ☐ No

If yes, please describe below: Please refer to the Traffic Study performed by Kimley-Horn and Associates

Solid Waste Disposal

How much solid waste is the project expected to generate annually (in tons)?

850 tons

Is sufficient landfill capacity available to serve this proposed project? ☐ (not selected) ☒ Yes ☐ No

If no, describe any plans to expand existing landfill capacity:

Will any hazardous waste be generated by the development? ☐ (not selected) ☐ Yes ☒ No

If yes, please explain:

Stormwater Management

What percentage of the site is projected to be impervious surface once the

55% - 60%

proposed development has
been constructed?

Describe any measures proposed (such as buffers, detention or retention ponds, pervious parking areas) to mitigate the
project's impacts on stormwater management:two detention ponds on site

Environmental Quality

Is the development located within, or likely to affect any of the following:

1. Water supply watersheds? ☐ (not selected) ☐ Yes ☒ No
2. Significant groundwater recharge areas? ☐ (not selected) ☐ Yes ☒ No
3. Wetlands? ☐ (not selected) ☐ Yes ☒ No
4. Protected mountains? ☐ (not selected) ☐ Yes ☒ No
5. Protected river corridors? ☐ (not selected) ☐ Yes ☒ No
6. Floodplains? ☐ (not selected) ☐ Yes ☒ No
7. Historic resources? ☐ (not selected) ☐ Yes ☒ No
8. Other environmentally sensitive resources? ☐ (not selected) ☐ Yes ☒ No

If you answered yes to any question above, describe how the identified resource(s) may be affected:
