ARC REVIEW CODE: R1709251

TO:Mayor Denis Shortal, City of DunwoodyATTN TO:John Olson, Planning ManagerFROM:Douglas R. Hooker, Executive Director, ARCRE:Development of Regional Impact Review

L R. Hok

Digital signature Original on file

The Atlanta Regional Commission (ARC) has completed a preliminary regional review of the following Development of Regional Impact (DRI). ARC reviewed the DRI with regard to its relationship to regional plans, goals and policies – and impacts it may have on the activities, plans, goals and policies of other local jurisdictions as well as state, federal and other agencies. This preliminary report does not address whether the DRI is or is not in the best interest of the local government.

Name of Proposal:The Park at Perimeter Center (DRI 2691)Review Type:DRISubmitting Local Government:Date Opened:Sept. 25, 2017Deadline for Comments:Oct. 10, 2017Date to Close:Oct. 16, 2017**

**If no significant issues are identified during the comment period, the review will close on Oct. 10, 2017 per the LCI Expedited Review process outlined in ARC's DRI Rules.

Description: This DRI is located on an approximately 19.5-acre site in the City of Dunwoody, north of I-285 and east of Ashford Dunwoody Road, bounded by Abercorn Avenue and Perimeter Center East. The proposed development project will consist of approximately 1,200 residential units, 500,000 SF of office space and 12,000 SF of retail space. The DRI review trigger for this development is a rezoning application, and the projected build-out year is 2028.

PRELIMINARY COMMENTS: According to the ARC Unified Growth Policy Map (UGPM), part of The Atlanta Region's Plan, this DRI is located in a Regional Employment Corridor as well as a Regional Center. ARC's Regional Development Guide (RDG) details recommended policies for areas on the UGPM. General information and policy recommendations for Regional Employment Corridors and Regional Centers are listed at the bottom of this report.

This DRI appears to manifest many aspects of regional policy in that it generally supports the existing Perimeter LCI plan; converts an underutilized site to an infill, mixed-use development with a significant housing component; and supports transit use given its proximity to MARTA Bus Route 150, connecting to the Dunwoody MARTA Rail station 0.85 miles west as well as Dunwoody Village to the north. Many of these characteristics collectively offer the potential for site residents to work and shop on site, and for workers and visitors to park once or arrive via alternative transportation modes and conduct multiple trips on foot. Along these lines, care should be taken to ensure that the development promotes a functional, safe, clearly marked and comfortable pedestrian experience on all streets, paths and parking areas. The development team is also encouraged to ensure that end-of-trip facilities (bicycle racks, etc.) are provided for residents, workers and visitors at key locations throughout the site.

The intensity of this proposed project generally aligns with the RDG's recommended range of densities and building heights in Regional Employment Corridors.

-CONTINUED ON NEXT PAGE-

The proposed development is located in the Perimeter LCI study area and is generally consistent with the study's recommendations. The development team should continue to work in close collaboration with the City of Dunwoody and the Perimeter CIDs to ensure that the project, as constructed, is consistent with the recommendations of the LCI plan.

Additional preliminary staff comments are included in this report.

Further to the above, Regional Employment Corridors, along with the Region Core (Downtown, Midtown, Buckhead), form the densest part of the Atlanta region. Connected with transit, this area of the region is typically the most walkable, and redevelopment is the main driver of its growth. The Region Core and Regional Employment Corridors together contain 26 percent of the 10-county region's jobs and eight percent of region's population on approximately 2.25 percent of the region's land area. Regional policy recommendations for Regional Employment Corridors include:

- Continue to invest in the LCI program to assit local governments in center planning and infrastructure.
- Prioritize preservation of existing transit, increase frequency and availability of transit options.
- Encourage compact infill development, redevelopment and adaptive reuse.
- Create a range of housing options to accommodate all sectors of the workforce.

- Encourage active ground floor, pedestrian scale design, and pedestrian amenities in new development and the redevelopment of existing sites

Further to the above, Regional Centers are metro Atlanta's centers for employment, shopping and entertainment. These centers should be connected to the regional transportation network with existing or planned high-capacity transit service. In most cases, these centers have a jobs-housing imbalance, so housing options should be expanded within their boundaries, especially around existing or planned transit. Regional policy recommendations for Regional Centers include:

- Prioritize preservation, expansion and access to existing and planned transit systems and improve the quality and aesthetics of existing facilities.

- Incorporate appropriate end-of-trip facilities, such as bicycle racks and showers/locker rooms, within new and existing development.

- Enhance mobility and accessibility for all by creating Complete Streets that accommodate all modes of transportation.

- Encourage active ground floor, pedestrian-scale design and pedestrian amenities in new development and redevelopment of existing sites.

- Work toward improving the jobs-housing imbalance in Regional Centers and promote housing options to accommodate multiple household sizes and price points in close proximity to jobs.

- Use alternative designs and materials to minimize impervious surfaces to the greatest possible extent.

If you have any questions regarding this review, please contact Andrew Smith at (470) 378–1645 or <u>asmith@atlantaregional.org</u>. This finding will be published to the ARC review website located at <u>http://atlantaregional.org/plan-reviews</u>.

DEVELOPMENT OF REGIONAL IMPACT REQUEST FOR COMMENTS

Instructions: The project described below has been submitted to this Regional Commission for review as a Development of Regional Impact (DRI). A DRI is a development of sufficient scale or importance that it is likely to generate impacts beyond the jurisdiction in which the project is located, for example in adjoining cities or neighboring counties. We would like to consider your comments on this proposed development in our DRI review process. Therefore, please review the information about the project included in this packet and offer your comments in the space provided. The completed form should be returned to ARC on or before the specified return deadline.

Preliminary Findings of the RDC: The Park at Perimeter Center See the Preliminary Report.

Comments from affected party (attach additional sheets as needed):

<u>Review Type:</u> Development of Regional Impact

Description: This DRI is located on an approximately 19.5-acre site in the City of Dunwoody, north of I-285 and east of Ashford Dunwoody Road, bounded by Abercorn Avenue and Perimeter Center East. The proposed development project will consist of approximately 1,200 residential units, 500,000 SF of office space and 12,000 SF of retail space. The DRI review trigger for this development is a rezoning application, and the projected build-out year is 2028.

Submitting Local Government: City of Dunwoody

Date Opened: September 25, 2017

Deadline for Comments: October 10, 2017

Date to Close: October 16, 2017**

**If no significant issues are identified during the comment period, the review will close on October 10, 2017 per the LCI Expedited Review process outlined in ARC's DRI Rules.

	Response:
1)	□ Proposal is CONSISTENT with the following regional development guide listed in the comment section.
2)	□ While neither specifically consistent nor inconsistent, the proposal relates to the following regional development guide listed in the comment section.
3)	□ While neither specifically consistent nor inconsistent, the proposal relates to the following regional development guide listed in the comment section.
4)	\square The proposal is INCONSISTENT with the following regional development guide listed in the comment section.
5)	□ The proposal does NOT relate to any development guide for which this division is responsible.
6)	\Box Staff wishes to confer with the applicant for the reasons listed in the comment section.
	COMMENTS:

THE PARK AT PERIMETER CENTER EAST DRI City of Dunwoody Natural Resources Review Comments September 20, 2017

Watershed Protection and Stream Buffers

The proposed project is located on already developed properties in the North Fork Peachtree Creek watershed, which drains into the Chattahoochee River below the water supply intakes in the Atlanta Region. The USGS coverage for the project area shows no blue line streams on or near the project property. Any unmapped streams on the property may be subject to the City of Dunwoody's Stream Buffer Ordinance. Any waters of the state that may be on the property will also be subject to the State 25-foot erosion and sedimentation buffer requirements.

Stormwater / Water Quality

The project should adequately address the impacts of the proposed development on stormwater runoff and downstream water quality. During construction, the project should conform to the relevant state and federal erosion and sedimentation control requirements. After construction, water quality will be impacted due to polluted stormwater runoff. The amount of pollutants that will be produced after construction of the proposed development are dependent on the type and intensity of the use and the impervious coverage, which will affect the design of stormwater controls for the project. The project is being built on an already developed property with existing impervious surfaces, which will affect the actual increases in stormwater and loading amounts.

In order to address post-construction stormwater runoff quality, the project should implement stormwater management controls (structural and/or nonstructural) as found in the Georgia Stormwater Management Manual (<u>www.georgiastormwater.com</u>) and meet the stormwater management quantity and quality criteria outlined in the Manual. Where possible, the project should utilize the stormwater better site design concepts included in the Manual.

We would also suggest the following additional measures to help reduce stormwater reduction and provide for its reuse:

- Consider using green spaces and tree planting beds as stormwater controls. These can be designed to provide maximum aesthetic value while also providing for water quality treatment and run-off reduction, potentially reducing the need for larger stormwater facilities and helping to minimize the negative effects of stormwater runoff on streams and water quality.
- Consider using pervious concrete or other pervious materials in parking areas. With the proper substrate, such materials can provide a large storage capacity, which will further help to reduce stormwater runoff.
- Consider including rainwater capture in the project design to provide for landscape irrigation during dry periods.

regional impact + local relevance

Development of Regional Impact Assessment of Consistency with the Regional Transportation Plan

TRAFFIC STUDY

Prepared by	Kimley Horn
Date	September 1, 2017

REGIONAL TRANSPORTATION PLAN PROJECTS

- 01. Did the traffic analysis incorporate all projects contained in the current version of the fiscally constrained RTP which are within the study area or along major transportation corridors connecting the study area with adjacent jurisdictions?
 - YES (provide date of RTP project list used below and the page number of the traffic study where relevant projects are identified)

The project is a 19.5 acre mixed used development site located just northeast of Ashford Dunwoody Road and I 285 bounded by Perimeter Center East on the ease. West and south sides. Page 25 of the traffic analysis provide a list of programmed projects identified in the RTP in that area.

NO (provide comments below)

REGIONAL NETWORKS

02. Will the development site be directly served by any roadways identified as Regional Thoroughfares?

A Regional Thoroughfare is a major transportation corridor that serves multiple ways of traveling, including walking, bicycling, driving, and riding transit. It connects people and goods to important places in metropolitan Atlanta. A Regional Thoroughfare's operations should be managed through application of special traffic control strategies and suitable land development guidelines in order to maintain travel efficiency, reliability, and safety for all users. In light of the special function that Regional Thoroughfares serve in supporting cross-regional and interjurisdictional mobility and access, the network receives priority consideration for infrastructure investment in the Metro Atlanta region. Any access points between the development and a Regional Thoroughfare, combined with the development's on-site circulation patterns, must be designed with the goal of preserving the highest possible level of capacity and safety for all users of the roadway.

NO NO

YES (identify the roadways and existing/proposed access points)

The project site will be served by seven access points on Perimeter Center East, a local road.

03. Will the development site be directly served by any roadways identified as Regional Truck Routes?

A Regional Truck Route is a freeway, state route or other roadway which serves as a critical link for the movement of goods to, from and within the Region by connecting airports, intermodal/multimodal facilities, distribution and warehousing centers and manufacturing clusters with the rest of the state and nation. These facilities often serve a key mobility and access function for other users as well, including drivers, bicyclists, pedestrians and transit users. A Regional Truck Route's operations should be managed through application of special traffic control strategies and suitable land development guidelines in order to maintain travel efficiency, reliability, and safety for all users. In light of the special function that Regional Truck Routes serve in supporting cross-regional and interjurisdictional mobility and access, the network receives priority consideration for infrastructure investment in the Metro Atlanta region. Any access points between the development and a Regional Truck Route, combined with the development's on-site circulation patterns, must be designed with the goal of preserving the highest possible level of capacity and safety for all users of the roadway.

NO 🛛

YES (identify the roadways and existing/proposed access points)

The project site will be served by seven access points on Perimeter Center East, a local road.

04. If the development site is within one mile of an existing rail service, provide information on accessibility conditions.

Access between major developments and transit services provide options for people who cannot or prefer not to drive, expand economic opportunities by better connecting people and jobs, and can help reduce congestion. If a transit service is available nearby, but walking or bicycling between the development site and the nearest station is a challenge, the applicable local government(s) is encouraged to make the route a funding priority for future walking and bicycling infrastructure improvements.

	•		
	NOT APPLICABLE (neare	st station more than one mile away)	
\square	RAIL SERVICE WITHIN ONE MILE (provide additional information below)		
	Operator / Rail Line	MARTA	
	Nearest Station	Dunwoody Station	
	Distance*	Within or adjacent to the development site (0.10 mile or less)	
		0.10 to 0.50 mile	
		🔀 0.50 to 1.00 mile	
	Walking Access*	Sidewalks and crosswalks provide sufficient connectivity	
		Sidewalk and crosswalk network is incomplete	
		Not applicable (accessing the site by walking is not consistent with the type of development proposed)	
	Bicycling Access*	Dedicated paths, lanes or cycle tracks provide sufficient connectivit	
		Low volume and/or low speed streets provide connectivity	
		Route follows high volume and/or high speed streets	
		Not applicable (accessing the site by bicycling is not consistent with the type of development proposed)	
	Transit Connectivity	Fixed route transit agency bus service available to rail station	
		Private shuttle or circulator available to rail station	
		No services available to rail station	
		Not applicable (accessing the site by transit is not consistent with th type of development proposed)	

* Following the most direct feasible walking or bicycling route to the nearest point on the development site

05. If there is currently no rail transit service within one mile of the development site, is nearby rail service planned in the fiscally constrained RTP?

Access between major developments and transit services provide options for people who cannot or prefer not to drive, expand economic opportunities by better connecting people and jobs, and can help reduce traffic congestion. If a transit agency operates within the jurisdiction and expansion plans are being considered in the general vicinity of the development site, the agency should give consideration to how the site can be best served during the evaluation of alignments and station locations. Proactive negotiations with the development team and local government(s) are encouraged to determine whether right-of-way within the site should be identified and protected for potential future service. If direct service to the site is not feasible or cost effective, the transit agency and local government(s) are encouraged to ensure good walking and bicycling access accessibility is provided between the development and the future rail line. These improvements should be considered fundamental components of the overall transit expansion project, with improvements completed concurrent with or prior to the transit service being brought online.

- NOT APPLICABLE (rail service already exists)
 -] NOT APPLICABLE (accessing the site by transit is not consistent with the type of development proposed)
 - NO (no plans exist to provide rail service in the general vicinity)
 - YES (provide additional information on the timeframe of the expansion project below)
 - CST planned within TIP period
 - CST planned within first portion of long range period
 - CST planned near end of plan horizon

06. If the development site is within one mile of fixed route bus services (including any privately operated shuttles or circulators open to the general public), provide information on walking and bicycling accessibility conditions.

Access between major developments and transit services provide options for people who cannot or prefer not to drive, expand economic opportunities by better connecting people and jobs, and can help reduce congestion. If a transit service is available nearby, but walking or bicycling between the development site and the nearest station is a challenge, the applicable local government(s) is encouraged to make the connnection a funding priority for future walking and bicycling infrastructure improvements.

- NOT APPLICABLE (nearest bus, shuttle or circulator stop more than one mile away)
- SERVICE WITHIN ONE MILE (provide additional information below)

Operator(s)	MARTA
Bus Route(s)	150
Distance*	Within or adjacent to the development site (0.10 mile or less)
	🔀 0.10 to 0.50 mile
	0.50 to 1.00 mile
Walking Access*	Sidewalks and crosswalks provide sufficient connectivity
	Sidewalk and crosswalk network is incomplete
	Not applicable (accessing the site by walking is not consistent with the type of development proposed)
Bicycling Access*	Dedicated paths, lanes or cycle tracks provide sufficient connectivity
	Low volume and/or low speed streets provide sufficient connectivity
	Route uses high volume and/or high speed streets
	Not applicable (accessing the site by bicycling is not consistent with the type of development proposed)
	Dedicated bike lanes currently exist along Perimeter Center East.

* Following the most direct feasible walking or bicycling route to the nearest point on the development site

07. Does a transit agency which provides rail and/or fixed route bus service operate anywhere within the jurisdiction in which the development site is located?

Access between major developments and transit services provide options for people who cannot or prefer not to drive, expand economic opportunities by better connecting people and jobs, and can help reduce traffic congestion. If a transit agency operates within the jurisdiction and a comprehensive operations plan update is undertaken, the agency should give consideration to serving the site during the evaluation of future routes, bus stops and transfer facilities. If the nature of the development is amenable to access by transit, walking or bicycling, but direct service to the site is not feasible or cost effective, the transit agency and local government(s) should ensure good walking and bicycling access accessibility is provided between the development and any routes within a one mile radius. The applicable local government(s) is encouraged to make these connections a funding priority for future walking and bicycling infrastructure improvements.

∃ NO

YES

See above.

08. If the development site is within one mile of an existing multi-use path or trail, provide information on accessibility conditions.

Access between major developments and walking/bicycling facilities provide options for people who cannot or prefer not to drive, expand economic opportunities by better connecting people and jobs, and can help reduce traffic congestion. If connectivity with a regionally significant path or trail is available nearby, but walking or bicycling between the development site and those facilities is a challenge, the applicable local government(s) is encouraged to make the route a funding priority for future walking and bicycling infrastructure improvements.

- NOT APPLICABLE (nearest path or trail more than one mile away)
- YES (provide additional information below)

Name of facility

Distance	Within or adjacent to development site (0.10 mile or less)
	0.15 to 0.50 mile
	0.50 to 1.00 mile
Walking Access*	Sidewalks and crosswalks provide connectivity
	Sidewalk and crosswalk network is incomplete
	Not applicable (accessing the site by walking is not consistent with the type of development proposed)
Bicycling Access*	Dedicated lanes or cycle tracks provide connectivity
	Low volume and/or low speed streets provide connectivity
	Route uses high volume and/or high speed streets
	Not applicable (accessing the site by bicycling is not consistent with the type of development proposed)
	According to the Regional Trails Draft map, there are several planned

* Following the most direct feasible walking or bicycling route to the nearest point on the development site

OTHER TRANSPORTATION DESIGN CONSIDERATIONS

09. Does the site plan provide for the construction of publicly accessible driveway connectivity with adjacent parcels?

The ability for drivers and bus routes to move between developments without using the adjacent roadway network can save time and reduce congestion. Such opportunities should be considered and proactively incorporated into development site plans whenever possible.

- YES (connections to adjacent parcels are planned as part of the development)
- YES (stub outs will make future connections possible when adjacent parcels redevelop)
- NO (the site plan precludes future connections with adjacent parcels when they redevelop)
- NOT APPLICABLE (adjacent parcels are not likely to develop or redevelop in the near future)
- NOT APPLICABLE (the nature of the development or adjacent parcels does not lend itself to interparcel roadway connections)

The project is bounded by roadways on all sides with existing development north west and south of the site. The site plan does not depict adjacent parcels or their driveways to determine if interparcel connectivity is planned or possible.

10. Does the site plan enable pedestrians and bicyclists to move between destinations within the development site safely and conveniently?

The ability for walkers and bicyclists to move within the site safely and conveniently reduces reliance on vehicular trips, which has congestion reduction and health benefits. Development site plans should incorporate well designed and direct sidewalk connections between all key destinations. To the extent practical, bicycle lanes or multiuse paths are encouraged for large acreage sites and where high volumes of bicyclists and pedestrians are possible.

- YES (sidewalks provided on all key walking routes and both sides of roads whenever practical and bicyclists should have no major issues navigating the street network)
- PARTIAL (some walking and bicycling facilities are provided, but connections are not comprehensive and/or direct)
 -] NO (walking and bicycling facilities within the site are limited or nonexistent)
- NOT APPLICABLE (the nature of the development does not lend itself to internal walking and bicycling trips)

The site plan does depict some internal sidewalks however bicycle facilities are not depicted.

11. Does the site plan provide the ability to construct publicly accessible bicycling and walking connections with adjacent parcels which may be redeveloped in the future?

The ability for walkers and bicyclists to move between developments safely and conveniently reduces reliance on vehicular trips, which has congestion reduction and health benefits. Such opportunities should be considered and proactively incorporated into development site plans whenever possible.

- YES (connections to adjacent parcels are planned as part of the development)
- YES (stub outs will make future connections possible when adjacent parcels redevelop)
- NO (the development site plan does not enable walking or bicycling to/from adjacent parcels)
- NO (the site plan precludes future connections with adjacent parcels when they redevelop)
- NOT APPLICABLE (adjacent parcels are not likely to develop or redevelop in the near future)
- NOT APPLICABLE (the nature of the development or adjacent parcels does not lend itself to interparcel walking and bicycling trips)

The site is bounded by public roadway on all sides. Adjacent parcels are developed. The site plan does not indicate pedestrian or bicycle access or connectivity to adjacent parcels are being added.

12. Does the site plan effectively manage truck movements and separate them, to the extent possible, from the flow of pedestrians, bicyclists and motorists both within the site and on the surrounding road network?

The ability for delivery and service vehicles to efficiently enter and exit major developments is often key to their economic success. So is the ability of visitors and customers being able to move around safely and pleasantly within the site. To the extent practical, truck movements should be segregated by minimizing the number of conflict points with publicly accessible internal roadways, sidewalks, paths and other facilities.

YES (truck routes to serve destinations within the site are clearly delineated, provide ample space for queuing and turning around, and are separated from other users to the extent practical)

PARTIAL (while one or more truck routes are also used by motorists and/or interface with primary walking and bicycling routes, the site plan mitigates the potential for conflict adequately)

- NO (one or more truck routes serving the site conflict directly with routes likely to be used heavily by pedestrians, bicyclists and/or motorists)
- NOT APPLICABLE (the nature of the development will not generate a wide variety of users and/or very low truck volumes, so the potential for conflict is negligible)

Due to the nature of the development, minimal heavy truck traffic is expected.

RECOMMENDATIONS

13.	Do the transportation network recommendations outlined in the traffic study appear to be feasible
	from a constructability standpoint?

UNKNOWN (additional study is necessary)

- YES (based on information made available through the review process; does not represent a thorough engineering / financial analysis)
- NO (see comments below)
- 14. Is ARC aware of any issues with the development proposal which may result in it being opposed by one or more local governments, agencies or stakeholder groups?
 - NO (based on information shared with ARC staff prior to or during the review process; does not reflect the outcome of an extensive stakeholder engagement process)
 - YES (see comments below)
- **15.** ARC offers the following additional comments for consideration by the development team and/or the applicable local government(s):

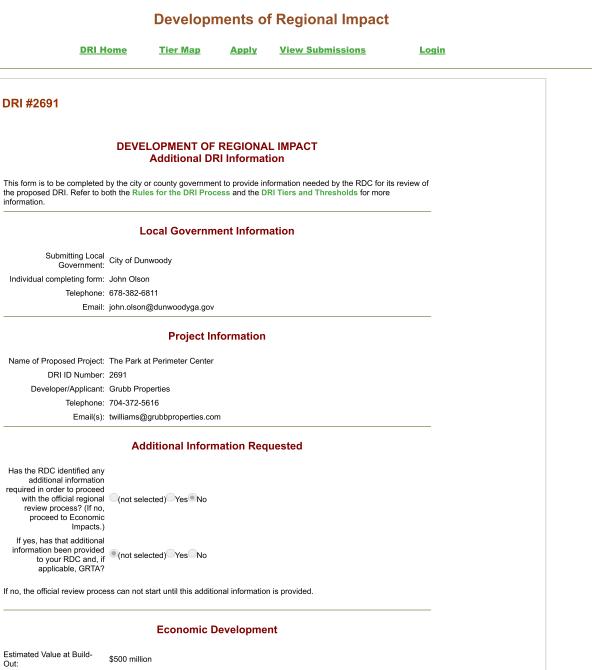

None.

If yes, provide the following	Project Name:
