

REGIONAL REVIEW NOTIFICATION

Atlanta Regional Commission • 229 Peachtree Street NE | Suite 100 | Atlanta, Georgia 30303 • ph: 404.463.3100 fax: 404.463.3205 • atlantaregional.org

DATE: May 17, 2018 **ARC REVIEW CODE:** R1805171

TO: Mayor Keisha Lance Bottoms, City of Atlanta

ATTN TO: Monique Forte, Urban Planner III, Office of Mobility Planning

FROM: Douglas R. Hooker, Executive Director, ARC RE: Development of Regional Impact Review

Digital signature Original on file

The Atlanta Regional Commission (ARC) has completed a preliminary regional review of the following Development of Regional Impact (DRI). ARC reviewed the DRI with regard to its relationship to regional plans, goals and policies – and impacts it may have on the activities, plans, goals and policies of other local jurisdictions as well as state, federal and other agencies. This preliminary report does not address whether the DRI is or is not in the best interest of the local government.

Name of Proposal: 17th and Spring (DRI 2800)

Review Type:DRISubmitting Local Government:City of AtlantaDate Opened:5/17/2018Deadline for Comments:6/1/2018, 5:00 PMDate to Close:6/6/2018*

*If no significant issues are identified during the comment period, the review will close on June 1, 2018 per the LCI Expedited Review process outlined in ARC's DRI Rules.

<u>Description</u>: This DRI is in the City of Atlanta, bounded by Spring Street, 17th Street, West Peachtree Street and 16th Street, excluding two existing buildings at 1302 and 1316 West Peachtree Street (Artmore Hotel and Bright Horizons). The mixed-use project consists of 604,960 SF of office space, 346 residential units, a 255-room hotel, and 99,453 SF of commercial space (grocery store, food hall and retail). Access is proposed via three site driveways – one each on 17th St., Spring St. and 16th St. – and an east-west private street bisecting the site and aligning with Arts Center Way. The local trigger for this DRI review is a Special Administrative Permit (SAP) application filed with the City of Atlanta. The estimated buildout year is 2021.

<u>PRELIMINARY COMMENTS:</u> According to the ARC Unified Growth Policy Map (UGPM), part of The Atlanta Region's Plan, this DRI is located in the Region Core and a Regional Center. ARC's Regional Development Guide (RDG) details recommended policies for areas on the UGPM. General information and policy recommendations for the Region Core and Regional Centers are listed at the bottom of these comments.

This DRI appears to manifest aspects of regional policy. Specifically, the development plan contemplates the conversion of an underutilized north Midtown site – largely used for surface parking at present – to an infill, mixed–use development with significant housing and employment components and pedestrian–focused retail/restaurant uses and streetscaping/amenities at ground level. The project can support alternative transportation modes given its close proximity to the Arts Center MARTA rail station, stops for MARTA bus routes 37 and 110, and stops for GRTA Xpress and Cobb County Transit service. In addition, the DRI plan proposes better connecting the area with mid–block (between 16th and 17th Streets) crossings of both Spring and West Peachtree Streets, aligning with a new east–west private street/pedestrian amenity area running through the center of the DRI. The mid–block crossing of West Peachtree Street is proposed as a new signalized intersection aligning with Arts Center Way, pending continued coordination with GDOT, the City of Atlanta and Midtown Alliance.

Many of these characteristics will collectively offer the potential for site residents to work and shop on site, and for workers and visitors to park once or arrive via alternative transportation modes and conduct multiple trips on foot. Along those lines, care should be taken to ensure that the development promotes a functional, safe, clearly marked and comfortable pedestrian experience on all streets, paths and parking areas. The development team is also encouraged to ensure that end-of-trip facilities (bicycle racks, etc.) are

provided for residents, workers and visitors at key locations throughout the site. The project can further support The Atlanta Region's Plan in general by incorporating other aspects of regional policy, including green infrastructure and/or low-impact design, e.g., rain gardens, vegetated swales, etc., in parking areas and site driveways, and as part of any improvements to site frontages.

The intensity of this proposed project generally aligns with the RDG's recommended range of densities and building heights in the Region Core.

This proposed development is located in the Midtown Livable Centers Initiative (LCI) study area. ARC's assessment is that this DRI plan supports the goals of the LCI program and is generally consistent with the existing Midtown LCI plan. The development team should therefore collaborate with the City and Midtown Alliance to ensure that the project, as constructed, remains consistent with the LCI plan. Likewise, the City and Midtown Alliance should ultimately incorporate any relevant, key attributes and impacts of this DRI into future updates to the Midtown LCI plan.

Additional preliminary ARC staff comments, related to water resources and transportation, are included in this report.

Further to the above, the Region Core (Downtown, Midtown, Buckhead), together with Regional Employment Corridors, form the densest part of the Atlanta region. Connected with transit, this area of the region is typically the most walkable, and redevelopment is the main driver of its growth. The Region Core and Regional Employment Corridors together contain 26 percent of the 10-county region's jobs and 8 percent of its population on approximately 2.25 percent of the region's land area. General policy recommendations for the Region Core include:

- Continue to invest in the Livable Centers Initiative (LCI) program to assist local governments in center planning and infrastructure.
- Prioritize preservation of existing transit while increasing frequency and availability of transit options.
- Encourage compact infill development, redevelopment and adaptive reuse.
- Create a range of housing options to accommodate all sectors of the workforce.
- Encourage active, ground floor, pedestrian-scale design, and pedestrian amenities, in new development and the redevelopment of existing sites.

Further to the above, Regional Centers are metro Atlanta's centers for employment, shopping and entertainment. These centers should be connected to the regional transportation network with existing or planned high-capacity transit service. In most cases, these centers have a jobs-housing imbalance, so housing options should be expanded within their boundaries, especially around existing or planned transit. General policy recommendations for Regional Centers include:

- Prioritize preservation, expansion and access to existing and planned transit systems and improve the quality and aesthetics of existing facilities.
- Incorporate appropriate end-of-trip facilities, such as bicycle racks and showers/locker rooms, within new and existing development.
- Enhance mobility and accessibility for all by creating Complete Streets that accommodate all modes of transportation.
- Encourage active ground floor, pedestrian-scale design and pedestrian amenities in new development and redevelopment of existing sites.
- Work toward improving the jobs-housing imbalance in Regional Centers and promote housing options to accommodate multiple household sizes and price points in close proximity to jobs.
- Use alternative designs and materials to minimize impervious surfaces to the greatest possible extent.

DEVELOPMENT OF REGIONAL IMPACT REQUEST FOR COMMENTS Instructions: The project described below has been submitted to this Regional Commission for review as a Development of Regional Impact (DRI). A DRI is a development of sufficient scale or importance that it is likely to generate impacts beyond the jurisdiction in which the project is located, for example in adjoining cities or neighboring counties. We would like to consider your comments on this proposed development in our DRI review process. Therefore, please review the information about the project included in this packet and offer your comments in the space provided. The completed form should be returned to ARC on or before the specified return deadline. Preliminary Findings of the RDC: <u>17th and Spring</u> *See the Preliminary Report*. Comments from affected party (attach additional sheets as needed): Individual Completing Form: Local Government: Please return this form to: Andrew Smith Atlanta Regional Commission Department: International Tower 229 Peachtree Street NE, Suite 100 Atlanta, Georgia 30303 Telephone: (Ph. 17TH AND SPRING DRI City of Atlanta Natural Resources Review Comments May 10, 2018

The project property is entirely within the Peachtree Creek watershed, which is part of the Chattahoochee River watershed and enters the river downstream of the Region's water intakes.

The USGS coverage for the project area shows no streams on or near the property. No streams or other waters of the State are shown on the submitted site plan and no evidence of streams or other waters is visible in available aerial photo coverage. Any unmapped streams identified on the property may be subject to the City of Atlanta's stream buffer ordinance. Any unmapped State waters identified on the property will be subject to the State 25-foot Sediment and Erosion Control buffer.

The project is proposed on a site that is currently predominantly impervious surface in an existing, heavily developed urban area and is served by the City of Atlanta stormwater system. During construction, the project should conform to the relevant state and federal erosion and sedimentation control requirements. After construction, if new or upgraded on-site detention is required, the design should include the relevant stormwater management controls (structural and/or nonstructural) in the Georgia Stormwater Management Manual (www.georgiastormwater.com). Where possible, the project should utilize the stormwater better site design concepts included in the Manual.

In addition to standard measures, we suggest the following additional measures to help reduce stormwater runoff and provide for its reuse before returning it to the stream system:

- Using green spaces and tree planting beds as stormwater controls. These can be designed to
 provide maximum aesthetic value while also providing for water quality treatment and run-off
 reduction, potentially reducing the need for larger stormwater facilities and helping to minimize
 the negative effects of stormwater runoff on streams and water quality.
- Using pervious concrete or other pervious materials in parking areas. With the proper substrate, such materials can provide a large storage capacity, which will further help to reduce stormwater runoff.
- Including rainwater capture in the project design to provide for landscape irrigation during dry periods.

TRAFFIC STUDY

Prepared by Kimley Horn

Date May 9, 2018

REGIONAL TRANSPORTATION PLAN PROJECTS

01. Did the traffic analysis incorporate all projects contained in the current version of the fiscally constrained RTP which are within the study area or along major transportation corridors connecting the study area with adjacent jurisdictions?
igigigigiggle YES (provide the regional plan referenced and the page number of the traffic study where relevant projects are identified)
The traffic analysis includes Appendix F of project fact sheets in the network study area and a chart of programmed projects as identified in the Atlanta Region's Plan on Page 29 of the traffic analysis.
NO (provide comments below)
REGIONAL NETWORKS
02. Will the development site be directly served by any roadways identified as Regional Thoroughfares?
A Regional Thoroughfare is a major transportation corridor that serves multiple ways of traveling, including walking, bicycling, driving, and riding transit. It connects people and goods to important places in metropolitan Atlanta. A Regional Thoroughfare's operations should be managed through application of special traffic control strategies and suitable land development guidelines in order to maintain travel efficiency, reliability, and safety for all users. In light of the special function that Regional Thoroughfares serve in supporting cross-regional and interjurisdictional mobility and access, the network receives priority consideration for infrastructure investment in the Metro Atlanta region. Any access points between the development and a Regional Thoroughfare, combined with the development's on-site circulation patterns, must be designed with the goal of preserving the highest possible level of capacity and safety for all users of the roadway.
⊠ NO
YES (identify the roadways and existing/proposed access points)
The development proposes one full movement access point on 16th Street, one right in/right out on 17th Street and one left in/left out on Spring Street. These streets are no identified as regional thoroughfares.

03. Will the development site be directly served by any roadways identified as Regional Truck Routes?

A Regional Truck Route is a freeway, state route or other roadway which serves as a critical link for the movement of goods to, from and within the Region by connecting airports, intermodal/multimodal facilities, distribution and warehousing centers and manufacturing clusters with the rest of the state and nation. These facilities often serve a key mobility and access function for other users as well, including drivers, bicyclists, pedestrians and transit users. A Regional Truck Route's operations should be managed through application of special traffic control strategies and suitable land development guidelines in order to maintain travel efficiency, reliability, and safety for all users. In light of the special function that Regional Truck Routes serve in supporting cross-regional and interjurisdictional mobility and access, the network receives priority consideration for infrastructure investment in the Metro Atlanta region. Any access points between the development and a Regional Truck Route, combined with the development's on-site circulation patterns, must be designed with the goal of preserving the highest possible level of capacity and safety for all users of the roadway.

\boxtimes	NO
	YES (identify the roadways and existing/proposed access points)

04. If the development site is within one mile of an existing rail service, provide information on accessibility conditions.

Access between major developments and transit services provide options for people who cannot or prefer not to drive, expand economic opportunities by better connecting people and jobs, and can help reduce congestion. If a transit service is available nearby, but walking or bicycling between the development site and the nearest station is a challenge, the applicable local government(s) is encouraged to make the route a funding priority for future walking and bicycling infrastructure improvements.

	NOT APPLICABLE (neare	st station more than one mile away)
\boxtimes	RAIL SERVICE WITHIN O	NE MILE (provide additional information below)
	Operator / Rail Line	
	Nearest Station	Arts Center Marta Station
	Distance*	Within or adjacent to the development site (0.10 mile or less)
		0.10 to 0.50 mile
		0.50 to 1.00 mile
	Walking Access*	Sidewalks and crosswalks provide sufficient connectivity
		Sidewalk and crosswalk network is incomplete

	 Not applicable (accessing the site by walking is not consistent with the type of development proposed)
	Click here to provide comments.
Bicycling Access*	Dedicated paths, lanes or cycle tracks provide sufficient connectivity
	☐ Route follows high volume and/or high speed streets
	Not applicable (accessing the site by bicycling is not consistent with the type of development proposed)
Transit Connectivity	Fixed route transit agency bus service available to rail station
	Private shuttle or circulator available to rail station
	No services available to rail station
	Not applicable (accessing the site by transit is not consistent with the type of development proposed)
	MARTA bus routes 26, 50 and 58 connect to rail station

^{*} Following the most direct feasible walking or bicycling route to the nearest point on the development site

05. If there is currently no rail transit service within one mile of the development site, is nearby rail service planned in the fiscally constrained RTP?

Access between major developments and transit services provide options for people who cannot or prefer not to drive, expand economic opportunities by better connecting people and jobs, and can help reduce traffic congestion. If a transit agency operates within the jurisdiction and expansion plans are being considered in the general vicinity of the development site, the agency should give consideration to how the site can be best served during the evaluation of alignments and station locations. Proactive negotiations with the development team and local government(s) are encouraged to determine whether right-of-way within the site should be identified and protected for potential future service. If direct service to the site is not feasible or cost effective, the transit agency and local government(s) are encouraged to ensure good walking and bicycling access accessibility is provided between the development and the future rail line. These improvements should be considered fundamental components of the overall transit expansion project, with improvements completed concurrent with or prior to the transit service being brought online.

\boxtimes	NOT APPLICABLE (rail service already exists)
	NOT APPLICABLE (accessing the site by transit is not consistent with the type of development proposed)
	NO (no plans exist to provide rail service in the general vicinity)
	YES (provide additional information on the timeframe of the expansion project below)
	CST planned within TIP period
	CST planned within first portion of long range period
	CST planned near end of plan horizon
Click	k here to provide comments.

06. If the development site is within one mile of fixed route bus services (including any privately operated shuttles or circulators open to the general public), provide information on walking and bicycling accessibility conditions.

Access between major developments and transit services provide options for people who cannot or prefer not to drive, expand economic opportunities by better connecting people and jobs, and can help reduce congestion. If a transit service is available nearby, but walking or bicycling between the development site and the nearest station is a challenge, the applicable local government(s) is encouraged to make the connection a funding priority for future walking and bicycling infrastructure improvements.

OTHER TRAI	NSPORTATION DESIGN CONSIDERATIONS
	the site plan provide for the construction of publicly accessible local road or drive aisle ections with adjacent parcels?
The arte	
The arte	ability for drivers and bus routes to move between developments without using the adjacent crial or collector roadway networks can save time and reduce congestion. Such opportunities
The arte show	ability for drivers and bus routes to move between developments without using the adjacent erial or collector roadway networks can save time and reduce congestion. Such opportunities auld be considered and proactively incorporated into development site plans whenever possible.
The arte show	ability for drivers and bus routes to move between developments without using the adjacent erial or collector roadway networks can save time and reduce congestion. Such opportunities all de considered and proactively incorporated into development site plans whenever possible. YES (connections to adjacent parcels are planned as part of the development)

The development is bounded by local roadways on all sides therefore access to adjacent parcels are

provided by local roadways.

10.	Does the site plan enable pedestrians and bicyclists to move between destinations within the
	development site safely and conveniently?

The ability for walkers and bicyclists to move within the site safely and conveniently reduces reliance on vehicular trips, which has congestion reduction and health benefits. Development site plans should incorporate well designed and direct sidewalk connections between all key destinations. To the extent practical, bicycle lanes or multiuse paths are encouraged for large acreage sites and where high volumes of bicyclists and pedestrians are possible.

\boxtimes	YES (sidewalks provided on all key walking routes and both sides of roads whenever practical an bicyclists should have no major issues navigating the street network)
	PARTIAL (some walking and bicycling facilities are provided, but connections are not comprehensive and/or direct)
	NO (walking and bicycling facilities within the site are limited or nonexistent)
	NOT APPLICABLE (the nature of the development does not lend itself to internal walking and bicycling trips)
	OTHER (Please explain)
	development proposes pedestrian and bicycle facilities internal to the site. A bike lane project is rammed along West Peachtree.
	the site plan provide the ability to construct publicly accessible bicycling and walking ections with adjacent parcels which may be redeveloped in the future?
Th re

DRI #2800

DEVELOPMENT OF REGIONAL IMPACT Additional DRI Information

This form is to be completed by the city or county government to provide information needed by the RDC for its review of the proposed DRI. Refer to both the Rules for the DRI Process and the DRI Tiers and Thresholds for more information.

Local Government Information

Submitting Local Atlanta Government:

Individual completing form: Monique Forte

Telephone: 404-546-0196

Email: mbforte@atlantaga.gov

Project Information

Name of Proposed Project: 17th and Spring

DRI ID Number: 2800 Developer/Applicant: JLL

Telephone: 404-955-6446

Email(s): john.hillman@am.jll.com

Additional Information Requested

Has the RDC identified any additional information

required in order to proceed with the official regional

(not selected) Yes No

review process? (If no, proceed to Economic

Impacts.)

If ves, has that additional information been provided

(not selected) Yes No to your RDC and, if applicable, GRTA?

If no, the official review process can not start until this additional information is provided.

Economic Development

Estimated Value at Build-Out:

\$360-\$380 million

Estimated annual local tax revenues (i.e., property tax,

\$1.7-\$2 million

sales tax) likely to be generated by the proposed

Is the regional work force sufficient to fill the demand created by the proposed

(not selected) Yes No

Will this development (not selected) Yes No displace any existing uses?

If yes, please describe (including number of units, square feet, etc): surface parking and mostly vacant five-story office

Water Supply

Name of water supply

City of Atlanta

DRI Additional Information Form provider for this site: What is the estimated water supply demand to be generated by the project, measured in Millions of 0.27 MGD Gallons Per Day (MGD)? Is sufficient water supply (not selected) Yes No capacity available to serve the proposed project? If no, describe any plans to expand the existing water supply capacity: Is a water line extension required to serve this (not selected) Yes No project? If yes, how much additional line (in miles) will be required? **Wastewater Disposal** Name of wastewater treatment provider for this City of Atlanta What is the estimated sewage flow to be generated by the project, measured in Millions of 0.22 MGD Gallons Per Day (MGD)? Is sufficient wastewater treatment capacity available (not selected) Yes No to serve this proposed project? If no, describe any plans to expand existing wastewater treatment capacity: Is a sewer line extension required to serve this (not selected) Yes No If yes, how much additional line (in miles) will be required? **Land Transportation** How much traffic volume is expected to be generated by the proposed development, in peak hour Approximately: 9,727 net daily trips, 667 trips AM peak, 698 trips PM peak vehicle trips per day? (If only an alternative measure of volume is available, please provide.) Has a traffic study been performed to determine whether or not transportation or access improvements will be (not selected) Yes No needed to serve this project? Are transportation improvements needed to (not selected) Yes No serve this project? If yes, please describe below:Please refer to the Traffic Study performed by Kimley-Horn Associates. **Solid Waste Disposal** How much solid waste is the project expected to 5,302 tons (not selected) Yes No If no, describe any plans to expand existing landfill capacity: Will any hazardous waste

generate annually (in tons)? Is sufficient landfill capacity available to serve this proposed project?

be generated by the (not selected) Yes No development?

If yes, please explain:

Stormwater Management

What percentage of the site approximately 85% is projected to be impervious surface once the

proposed development has been constructed?				
Describe any measures proposed (such as buffers, detention or retention ponds, pervious parking areas) to mitigate the project's impacts on stormwater management:Stormwater detention will be provided.				
Environmental Quality				
Is the development located within, or likely to affect any of the following:				
Water supply watersheds?	(not selected) Yes No			
Significant groundwater recharge areas?	(not selected) Yes No			
3. Wetlands?	(not selected) Yes No			
4. Protected mountains?	(not selected) Yes No			
5. Protected river corridors?	(not selected) Yes No			
6. Floodplains?	(not selected) Yes No			
7. Historic resources?	(not selected) Yes No			
8. Other environmentally sensitive resources?	(not selected) Yes No			
If you answered yes to any q	If you answered yes to any question above, describe how the identified resource(s) may be affected:
