A & R Project # 18-117

EXECUTIVE SUMMARY

Traffic impacts were evaluated for the added traffic from the proposed McCamy mixed-use development located in the southeast corner of Interstate 575 and Chastain Road in Kennesaw, Georgia. The development will consist of:

- 52,000 square foot supermarket
- 70,000 square feet of retail space
- 68,500 square feet of restaurant space
- 190,000 square feet of office space
- 250 hotel rooms
- 164 townhome units
- 600 multifamily units with first floor retail
- 300 attached senior living units

The development proposes one full-access and one right-in/right-out driveway on Chastain Road as well as one full-access driveway and one right-in/right-out driveway on Chastain Meadows Parkway. Existing and future operations after completion of the project were analyzed at the intersections of:

1. Bells Ferry Road at N. Booth Road
2. Bells Ferry Road at Chastain Road/New Chastain Road
3. Bells Ferry Road at Big Shanty Road
4. Chastain Meadows Parkway at Big Shanty Road
5. Big Shanty Road at George Busbee Parkway
6. Chastain Road at George Busbee Parkway
7. Chastain Road at Town Park Drive/Chastain Center Boulevard
8. Chastain Road at I-575 Southbound Ramps
9. Chastain Road at I-575 Northbound Ramps
10. Chastain Road at Chastain Lakes Drive
11. Chastain Road at Chastain Meadows Parkway
12. Chastain Meadows Parkway at Proposed Site Access

The analysis includes the evaluation of Future operations for “No-Build” and “Build” conditions, which account for increases in annual growth of through traffic and added traffic from the proposed development, respectively. The results of the analysis are listed below:

System Recommendations and Improvements (2022)

A summary of the system improvements, which address deficiencies that are found within the existing road network for the “No-Build” conditions and are recommended for the local municipality to use in planning future transportation projects, is provided in Section 6.1.4.

Site Access Configuration

The following access configuration was utilized when modeling the proposed site driveway intersections:

- Site Driveway 1: Right-in/right-out driveway on Chastain Road, east of I-575
 - This driveway is proposed to consist of one entering and one exiting lane.

- It is recommended that an eastbound right turn lane be installed on Chastain Road for entering traffic.
 - The intersection is proposed to be unsignalized with a STOP sign on the northbound (driveway) approach.
- Site Driveway 2: Full-access driveway on Chastain Road, aligned with Chastain Lakes Drive
 - This driveway is proposed to consist of one entering and two exiting lanes.
 - Entering left turn movements are proposed to be made from the existing westbound turn lane on Chastain Road.
 - It is recommended that an eastbound right turn lane be installed on Chastain Road for entering traffic.
 - A preliminary signal warrant analysis indicates that the intersection will meet MUTCD thresholds for a traffic signal. Therefore, a traffic signal should be installed with construction of the development.
- Site Driveway 3: Right-in/right-out driveway on Chastain Meadows Parkway, south of Chastain Road
 - This driveway is proposed to consist of one entering and one exiting lane.
 - It is recommended that a southbound right turn lane be installed on Chastain Meadows Parkway for entering traffic.
 - At the request of Cobb County DOT, the existing median opening at this driveway location will be closed, prohibiting all left-ins and left-outs at the intersection. It has also been requested that the northbound left turn lane at the intersection of Chastain Road at Chastain Meadows Parkway be extended to this intersection to allow for more storage/queueing space.
- Site Driveway 4: Full-access driveway on Chastain Meadows Parkway, at existing median opening
 - This driveway is proposed to consist of one entering and two exiting lanes.
 - Entering left turn movements are proposed to be made from the existing northbound turn lane on Chastain Meadows Parkway.
 - It is recommended that a southbound right turn lane be installed on Chastain Meadows Parkway for entering traffic.
 - A preliminary signal warrant analysis indicates that the intersection will meet MUTCD thresholds for a traffic signal during the peak hours. Therefore, a traffic signal should be installed with construction of the development.

Site Mitigation Improvements and Recommendations (2022)

Improvements that are identified as mitigation improvements are recommended as directly benefitting proposed site-generated traffic and are summarized in Section 6.2.3.

1.0 INTRODUCTION

The purpose of this study is to determine the added traffic that will result from the proposed McCamy mixed-use development located in the southeast corner of Interstate 575 and Chastain Road in Kennesaw, Georgia. The traffic analysis evaluates the current operations compared to the future conditions with the traffic generated by the development. The proposed development will consist of:

- 52,000 square foot supermarket
- 70,000 square feet of retail space
- 68,500 square feet of restaurant space
- 190,000 square feet of office space
- 250 hotel rooms
- 164 townhome units
- 600 multifamily units with first floor retail
- 300 attached senior living units

The development proposes one full-access and one right-in/right-out driveway on Chastain Road as well as one full-access driveway and one right-in/right-out driveway on Chastain Meadows Parkway.

The AM and PM peak hours have been analyzed in this study. In addition to the site access points, this study includes the evaluation of traffic operations at the intersections of:

1. Bells Ferry Road at N. Booth Road
2. Bells Ferry Road at Chastain Road/New Chastain Road
3. Bells Ferry Road at Big Shanty Road

4. Chastain Meadows Parkway at Big Shanty Road
5. Big Shanty Road at George Busbee Parkway
6. Chastain Road at George Busbee Parkway
7. Chastain Road at Town Park Drive/Chastain Center Boulevard
8. Chastain Road at I-575 Southbound Ramps
9. Chastain Road at I-575 Northbound Ramps
10. Chastain Road at Chastain Lakes Drive
11. Chastain Road at Chastain Meadows Parkway
12. Chastain Meadows Parkway at Proposed Site Access

Recommendations to improve traffic operations have been identified as appropriate and are discussed in detail in the following sections of the report.

2.0 STUDY NETWORK DETERMINATION

The study network was determined by evaluating the amount of traffic that the proposed development will add to each roadway segment in the area. According to GRTA requirements, a roadway segment carries a “significant” amount of traffic if the project contributes 7% or more trips to the two-way daily service volumes of the roadway at the appropriate level of service standard. Upon agreement with GRTA a level of service standard of “D” was used for determining the study area network.

The traffic generated by the proposed project was then assigned to the area roadways using the trip distribution to determine the site-generated traffic on each roadway segment. The boundaries of the study network extend to the most distant intersections where at least 7% of the service volumes on the segment are attributed to project traffic. The following study intersections fell within the 7% rule and/or have been selected as being suitable for evaluation in discussions with ARC, GRTA, GDOT, and Cobb County:

1. Bells Ferry Road at N. Booth Road
2. Bells Ferry Road at Chastain Road/New Chastain Road
3. Bells Ferry Road at Big Shanty Road
4. Chastain Meadows Parkway at Big Shanty Road
5. Big Shanty Road at George Busbee Parkway
6. Chastain Road at George Busbee Parkway
7. Chastain Road at Town Park Drive/Chastain Center Boulevard
8. Chastain Road at I-575 Southbound Ramps
9. Chastain Road at I-575 Northbound Ramps
10. Chastain Road at Chastain Lakes Drive
11. Chastain Road at Chastain Meadows Parkway
12. Chastain Meadows Parkway at Proposed Site Access

The location of the development and the surrounding study network is shown in Figure 1. Other intersections within this corridor, such as unsignalized side streets, right-in/right-out driveways or private driveways have not been included in the study network.

2.1 Existing Roadway Facilities

The following is a brief description of each of the roadway facilities located in proximity to the site:

2.1.1 Chastain Road

Chastain Road is a four-lane, median-divided roadway with a posted speed limit of 45 mph in the vicinity of the site. Cobb County traffic counts indicate that the daily traffic volume on Chastain Road in 2011 was 41,900 vehicles per day east of George Busbee Parkway and 25,000 vehicles per day west of Chastain Meadows Parkway. Cobb County classifies Chastain Road as an Arterial roadway.

2.1.2 George Busbee Parkway

George Busbee Parkway is a four-lane, median-divided roadway with a posted speed limit of 35 mph north of Chastain Road and 45 mph south of Chastain Road. Cobb County traffic counts indicate that the

daily traffic volume on George Busbee Parkway in 2007 was 19,900 vehicles per day south of Busbee Drive (N) and in 2008 was 23,100 vehicles per day north of Big Shanty Road. Cobb County classifies George Busbee Parkway as an Arterial roadway.

2.1.3 Town Park Drive

Town Park Drive is a four-lane, median-divided roadway with a posted speed limit of 35 mph north of Chastain Road. Cobb County traffic counts indicate that the daily traffic volume on Town Park Drive in 2016 was 5,050 vehicle per day east of George Busbee Parkway. Cobb County classifies Town Park Drive as a Major roadway.

2.1.4 Interstate 575

Interstate 575 is a four-lane, median-divided roadway with a posted speed limit of 55 mph in the vicinity of the site. GDOT traffic counts (Station IDs 0670778 & 0670776) indicate that the daily traffic volume on I-575 in 2016 was 95,800 vehicles per day between Chastain Road and Bells Ferry Road and 78,500 vehicles per day between Chastain Road and Barrett Parkway. GDOT classifies I-575 as an Interstate.

2.1.5 Chastain Lakes Drive

Chastain Lakes Drive is a two-lane, undivided residential roadway with a posted speed limit of 25 mph.

2.1.6 Chastain Meadows Parkway

Chastain Meadows Parkway is a four-lane, median-divided roadway with a posted speed limit of 45 mph in the vicinity of the site. Cobb County traffic counts indicate that the daily traffic volume on Chastain Meadows Parkway in 2017 was 16,200 vehicles per day south of Big Shanty Road. Cobb County classifies Chastain Meadows Parkway as an Arterial roadway.

2.1.7 Big Shanty Road

Big Shanty Road is a four-lane, median-divided roadway west of Chastain Meadows Parkway and a two-lane, undivided roadway east of Chastain Meadows Parkway with a posted speed limit of 35 mph in the vicinity of the site. Cobb County traffic counts indicate that the daily traffic volume on Big Shanty Road in 2016 was 4,800 vehicles per day west of Bells Ferry Road and 20,600 vehicles per day west of Hidden Forest Court. Cobb County classifies Big Shanty Road as a Major roadway.

2.1.8 Bells Ferry Road

Bells Ferry Road is a two-lane, undivided roadway with a posted speed limit of 45 mph in the vicinity of the site. Cobb County traffic counts indicate that the daily traffic volume on Bells Ferry Road in 2016 was 15,300 vehicles per day north of Parkwood Drive and 12,600 vehicles per day north of Rock Bridge Road. Cobb County classifies Bells Ferry Road as an Arterial roadway.

2.1.9 N. Booth Road

N. Booth Road is a two-lane, undivided roadway with a posted speed limit of 35 mph in the vicinity of the site. Cobb County traffic counts indicate that the daily traffic volume on N. Booth Road in 2010 was

7,500 vehicles per day east of Southwick Drive. Cobb County classifies N. Booth Road as a Major roadway.

2.1.10 New Chastain Road

New Chastain Road is a four-lane, median-divided roadway with a posted speed limit of 45 mph in the vicinity of the site. Cobb County traffic counts indicate that the daily traffic volume on New Chastain Road in 2010 was 21,500 vehicles per day east of Sumter Drive. Cobb County classifies New Chastain Road as an Arterial roadway.

2.2 Existing Bicycle and Pedestrian Facilities

The following is a brief description of each of the bicycle and pedestrian facilities located in proximity to the site:

2.2.1 *Nearby local or regional trails*

There are trails located in the study area that include the Big Shanty Road Trail and the Noonday Creek Trail that begins at Bells Ferry Road south of Big Shanty Road and follows Noonday Creek west.

2.2.2 *Bicycle paths or sidewalks*

Sidewalks and pedestrian facilities are present along the following roadways in the study network:

- Chastain Road: both sides of the road between Bells Ferry Road and I-75 and beyond.
- George Busbee Parkway: both sides of the road beginning south of Wade Green Road and ending at Barrett Parkway.
- Town Park Drive: both sides of the road between George Busbee Parkway to Chastain Road.
- Chastain Meadows Parkway: both sides of the road between Chastain Road and Barrett Parkway.
- Big Shanty Road: both sides of the road between Chastain Meadows Parkway and George Busbee Parkway and beyond.
- N. Booth Road: south side of the road between Shiloh Road and Bells Ferry Road. Both sides of the road between Palmer Middle School and Maxanne Court.
- Bells Ferry Road: At various points on each side of the road between Barrett Parkway and N. Booth Road.

Bike paths are present along the following roadways in the study network:

- Chastain Road: both sides of the road between I-575 and I-75 and beyond
- There are currently Zagster bike share stations in the vicinity of the development located at the Avonlea apartments and the Bells Ferry Trailhead

2.3 Existing Transit Facilities

CobbLINC Bus Route 40 and 45 currently operates within the study network with bust stops on both Chastain Road and Chastain Meadows Parkway. There is a GRTA Xpress Park-and-Ride lot on Big Shanty Road, that serves routes 480, 482, and 483, and a CobbLINC Park-and-Ride lot on Busbee Drive. The KSU “Big Owl Bus” also operates on Big Shanty Road near George Busbee Parkway for university students.

LOCATION MAP AND STUDY INTERSECTIONS

6

3.0 STUDY METHODOLOGY

In this study, the methodology used for evaluating traffic operations at each of the subject intersections is based on the criteria set forth in the Transportation Research Board's Highway Capacity Manual, 2010 edition (HCM 2010). At specific intersections in which HCM 2010 is unable to report results or where U-Turns are present, HCM 2000 will be used instead. Synchro software, which utilizes the HCM methodology, was used for the analysis. The following is a description of the methodology employed for the analysis of unsignalized and signalized intersections.

3.1 Unsignalized Intersections

For unsignalized intersections at which the side street or minor street is controlled by a stop sign, the criteria for evaluating traffic operations are the level-of-service (LOS) for the turning movements at the intersection and the level-of-service for the overall intersection. Level-of-service is based on the average controlled delay incurred at the intersection. Controlled delay for unsignalized intersections includes initial deceleration delay, queue move-up time, stopped delay, and final acceleration delay. Several factors affect the controlled delay for unsignalized intersections, such as the availability and distribution of gaps in the conflicting traffic stream, critical gaps, and follow-up time for a vehicle in the queue.

Level-of-service is assigned a letter designation from "A" through "F". Level-of-service "A" indicates excellent operations with little delay to motorists, while level-of-service "F" exists when there are insufficient gaps of acceptable size to allow vehicles on the side street to cross safely, resulting in extremely long total delays and long queues. The level-of-service criteria for two-way stop-controlled and all-way stop-controlled (unsignalized) intersections are given in Table 1.

TABLE 1 — LEVEL-OF-SERVICE CRITERIA FOR UNSIGNALIZED INTERSECTIONS

Level-of-service	Average Delay (sec)
A	≤ 10
B	> 10 and ≤ 15
C	> 15 and ≤ 25
D	> 25 and ≤ 35
E	> 35 and ≤ 50
F	> 50

Source: Highway Capacity Manual

3.2 Signalized Intersections

For signalized intersections, it is necessary to evaluate both capacity and level-of-service in order to evaluate the overall operation of the intersection. The capacity analysis of an intersection is performed by comparing the volume of traffic using the various lane groups at the intersection to the capacity of those lane groups. This results in a volume/capacity (v/c) ratio for each lane group. A v/c ratio greater than 1.0 indicates that the volume of traffic has exceeded the capacity available, resulting in a temporary excess of demand. Although the capacity of the entire intersection is not defined, a composite v/c ratio for the sum of the critical lane groups within the intersection is computed. This composite v/c ratio is an indication of the overall intersection sufficiency.

Level-of-service for a signalized intersection is defined in terms of average controlled delay per vehicle, which is composed of initial deceleration delay, queue move-up time, stopped delay, and final acceleration delay. The level-of-service criteria for signalized intersections, based on average controlled delay, are shown in Table 2. Level-of-service "A" indicates operations with very low controlled delay, while level-of-service "F" describes operations with extremely high average-controlled delay. Level-of-service "E" is typically considered to be the limit of acceptable delay, and level-of-service "F" is considered unacceptable by most drivers.

TABLE 2 — LEVEL-OF-SERVICE CRITERIA FOR SIGNALIZED INTERSECTIONS

Level-of-service	Average Control Delay (sec)
A	≤ 10
B	$> 10 \text{ and } \leq 20$
C	$> 20 \text{ and } \leq 35$
D	$> 35 \text{ and } \leq 55$
E	$> 55 \text{ and } \leq 80$
F	> 80

Source: Highway Capacity Manual

4.0 EXISTING TRAFFIC ANALYSIS

Existing traffic counts were obtained at the following study intersections:

1. Bells Ferry Road at N. Booth Road
2. Bells Ferry Road at Chastain Road/New Chastain Road
3. Bells Ferry Road at Big Shanty Road
4. Chastain Meadows Parkway at Big Shanty Road
5. Big Shanty Road at George Busbee Parkway
6. Chastain Road at George Busbee Parkway
7. Chastain Road at Town Park Drive/Chastain Center Boulevard
8. Chastain Road at I-575 Southbound Ramps
9. Chastain Road at I-575 Northbound Ramps
10. Chastain Road at Chastain Lakes Drive
11. Chastain Road at Chastain Meadows Parkway
12. Chastain Meadows Parkway at Proposed Site Access

Turning movement counts were collected in November 2018 during the AM and PM peak hours between 7:00 a.m. to 9:00 a.m. and 4:00 p.m. to 6:00 p.m., respectively. Turning movement counts at intersection 10 were collected between 7:00 a.m. and 7:00 p.m. The four consecutive 15-minute interval volumes that summed to produce the highest volume at the intersections were then determined. These volumes make up the peak hour traffic volumes for the intersections counted and are shown in Figure 2.

4.1 Existing Traffic Operations

Existing traffic operations were analyzed at the study intersections in accordance with the HCM methodology. The results of the analysis are shown in Table 3. The existing traffic control and lane geometry for the intersections are shown in Figure 3.

EXISTING TRAFFIC CONTROL AND LANE GEOMETRY

FIGURE 3

5.0 PROJECT DESCRIPTION

The proposed McCamy mixed-use development will be located in the southeast corner of Interstate 575 and Chastain Road in Kennesaw, Georgia. The development will consist of:

- 52,000 square foot supermarket
- 70,000 square feet of retail space
- 68,500 square feet of restaurant space
- 190,000 square feet of office space
- 250 hotel rooms
- 164 townhome units
- 600 multifamily units with first floor retail
- 300 attached senior living units

The development proposes one full-access and one right-in/right-out driveway on Chastain Road as well as one full-access driveway and one right-in/right-out driveway on Chastain Meadows Parkway.

5.1 Site Plan

A site plan is shown in Figure 4. A larger size drawing and a digital copy of the site plan are also provided with this report.

5.1.1 Planned Bicycle and Pedestrian Facilities

The on and/or off-site provisions for non-motorized travel included in the planned construction of the proposed development are as follows:

- The proposed development will be comprised of residential, retail, and office uses. Pedestrian connections are proposed between the mixed-uses on the site.
- The site benefits from public access to adjacent streets and internal connectivity between some of the parcels.
- There is opportunity for the site to sponsor a future bike share program with the Town Center CID for future tenants.
- Current plans for bicycle and pedestrian facilities by the local municipality and/or Town Center CID include:
 - Construction of wide sidewalks on Big Shanty Road from Chastain Meadows Parkway to Bells Ferry Road – construction beginning in Summer 2019
 - Bells Ferry Road trail from the Bells Ferry Trailhead to Big Shanty Road – construction beginning in Spring 2019
 - Busbee Drive multi-use trail from the Skip Spann roundabout to Chastain Road – construction beginning in 2020
 - Multi-use trail at the proposed Bixby development at the corner of George Busbee Parkway and Busbee Drive.

5.1.2 Planned Transit Facilities

There is no planned public transit service near the site.

5.2 Consistency with Adopted Comprehensive Plan

The following is an explanation as to how the proposed DRI relates to the local government's Comprehensive Plan, particularly the transportation and capital improvements element, and any transportation improvements listed in the Short-Term Work Program(s) within the vicinity of the DRI. The property is located within a "Community Activity Center" according to the Cobb County 2030 Comprehensive Plan Future Land Use Map 2018.

5.3 Project Phasing

A phasing schedule shall be provided for any proposed DRIs involving multiple phases. The phasing schedule shall include the types and amounts of land uses to be developed and should be identified by phase, the site location of each land use by phase, the amenities to be developed with each phase, and all transportation elements. The transportation elements shall focus upon infrastructure in place, access to the development, and internal mobility during each phase analyzed. This project has been evaluated for the complete build-out of the development in 2022.

5.4 Trip Generation

Trip generation estimates for the project were based on the rates and equations published in the 10th edition of the Institute of Transportation Engineers (ITE) Trip Generation report. This reference contains traffic volume count data collected at similar facilities nationwide. The trip generation for the development was based on the following ITE Land Uses: 220 – *Multifamily Housing (Low-Rise)*, 231 – *Mid-Rise Residential with 1st-Floor Commercial*, 252 – *Senior Adult Housing – Attached*, 310 – *Hotel*, 710 – *General Office Building*, 820 – *Shopping Center*, 850 – *Supermarket*, 931 – *Quality Restaurant* and 934 – *Fast-Food Restaurant with Drive-Through Window*. Due to the nature of the development, pass-by and mixed-use reductions have been applied per ITE standards. A table showing how internal captures were calculated is included in the Appendix. Due to the development's direct access to CobbLinc Route 45 on Chastain Road and its proximity to the Kennesaw State University campus, a multimodal transportation reduction of 5% was applied based on ITE standards. The calculated trip generation for the development is shown in Table 4.

TABLE 4 – TRIP GENERATION

Land Use	Size	AM Peak Hour			PM Peak Hour			24-Hour
		Enter	Exit	Total	Enter	Exit	Total	Two-way
220 – Multifamily Housing (Low-Rise)	164 Units	18	58	76	58	34	92	1,199
231 – Mid-Rise Residential with 1st-Floor Commercial	600 Units	50	130	180	151	65	216	2,064
252 – Senior Adult Housing -Attached	300 Units	21	39	60	41	33	74	1,181
310 – Hotel	250 Rooms	71	49	120	82	79	161	2,396
710 – General Office Building	190,000 sf	176	29	205	34	175	209	1,978
820 – Shopping Center	70,000 sf	116	71	187	200	217	417	4,717
850 – Supermarket	52,000 sf	119	80	199	245	235	480	4,899
934 – Fast-Food Restaurant with Drive-Through Window	5,000 sf	102	99	201	85	78	163	2,355
931 – Quality Restaurant	63,500 sf	26	25	51	319	157	476	5,712
Total Trips (Without Reductions)		699	580	1,279	1,215	1,073	2,288	26,501

<i>Internal Capture for Residential/Hotel</i>	-34	-33	-67	-86	-76	-162	-1,789
<i>Internal Capture for Retail/Restaurant</i>	-40	-41	-81	-93	-93	-186	-2,135
<i>Internal Capture for Office</i>	-8	-8	-16	-11	-21	-32	-386

New External Trips (with reductions)	534	423	957	661	600	1,261	15,546

*Daily pass-by reduction estimated to be least of the applied PM peak hour pass-by rate or ten times the PM pass-by volume

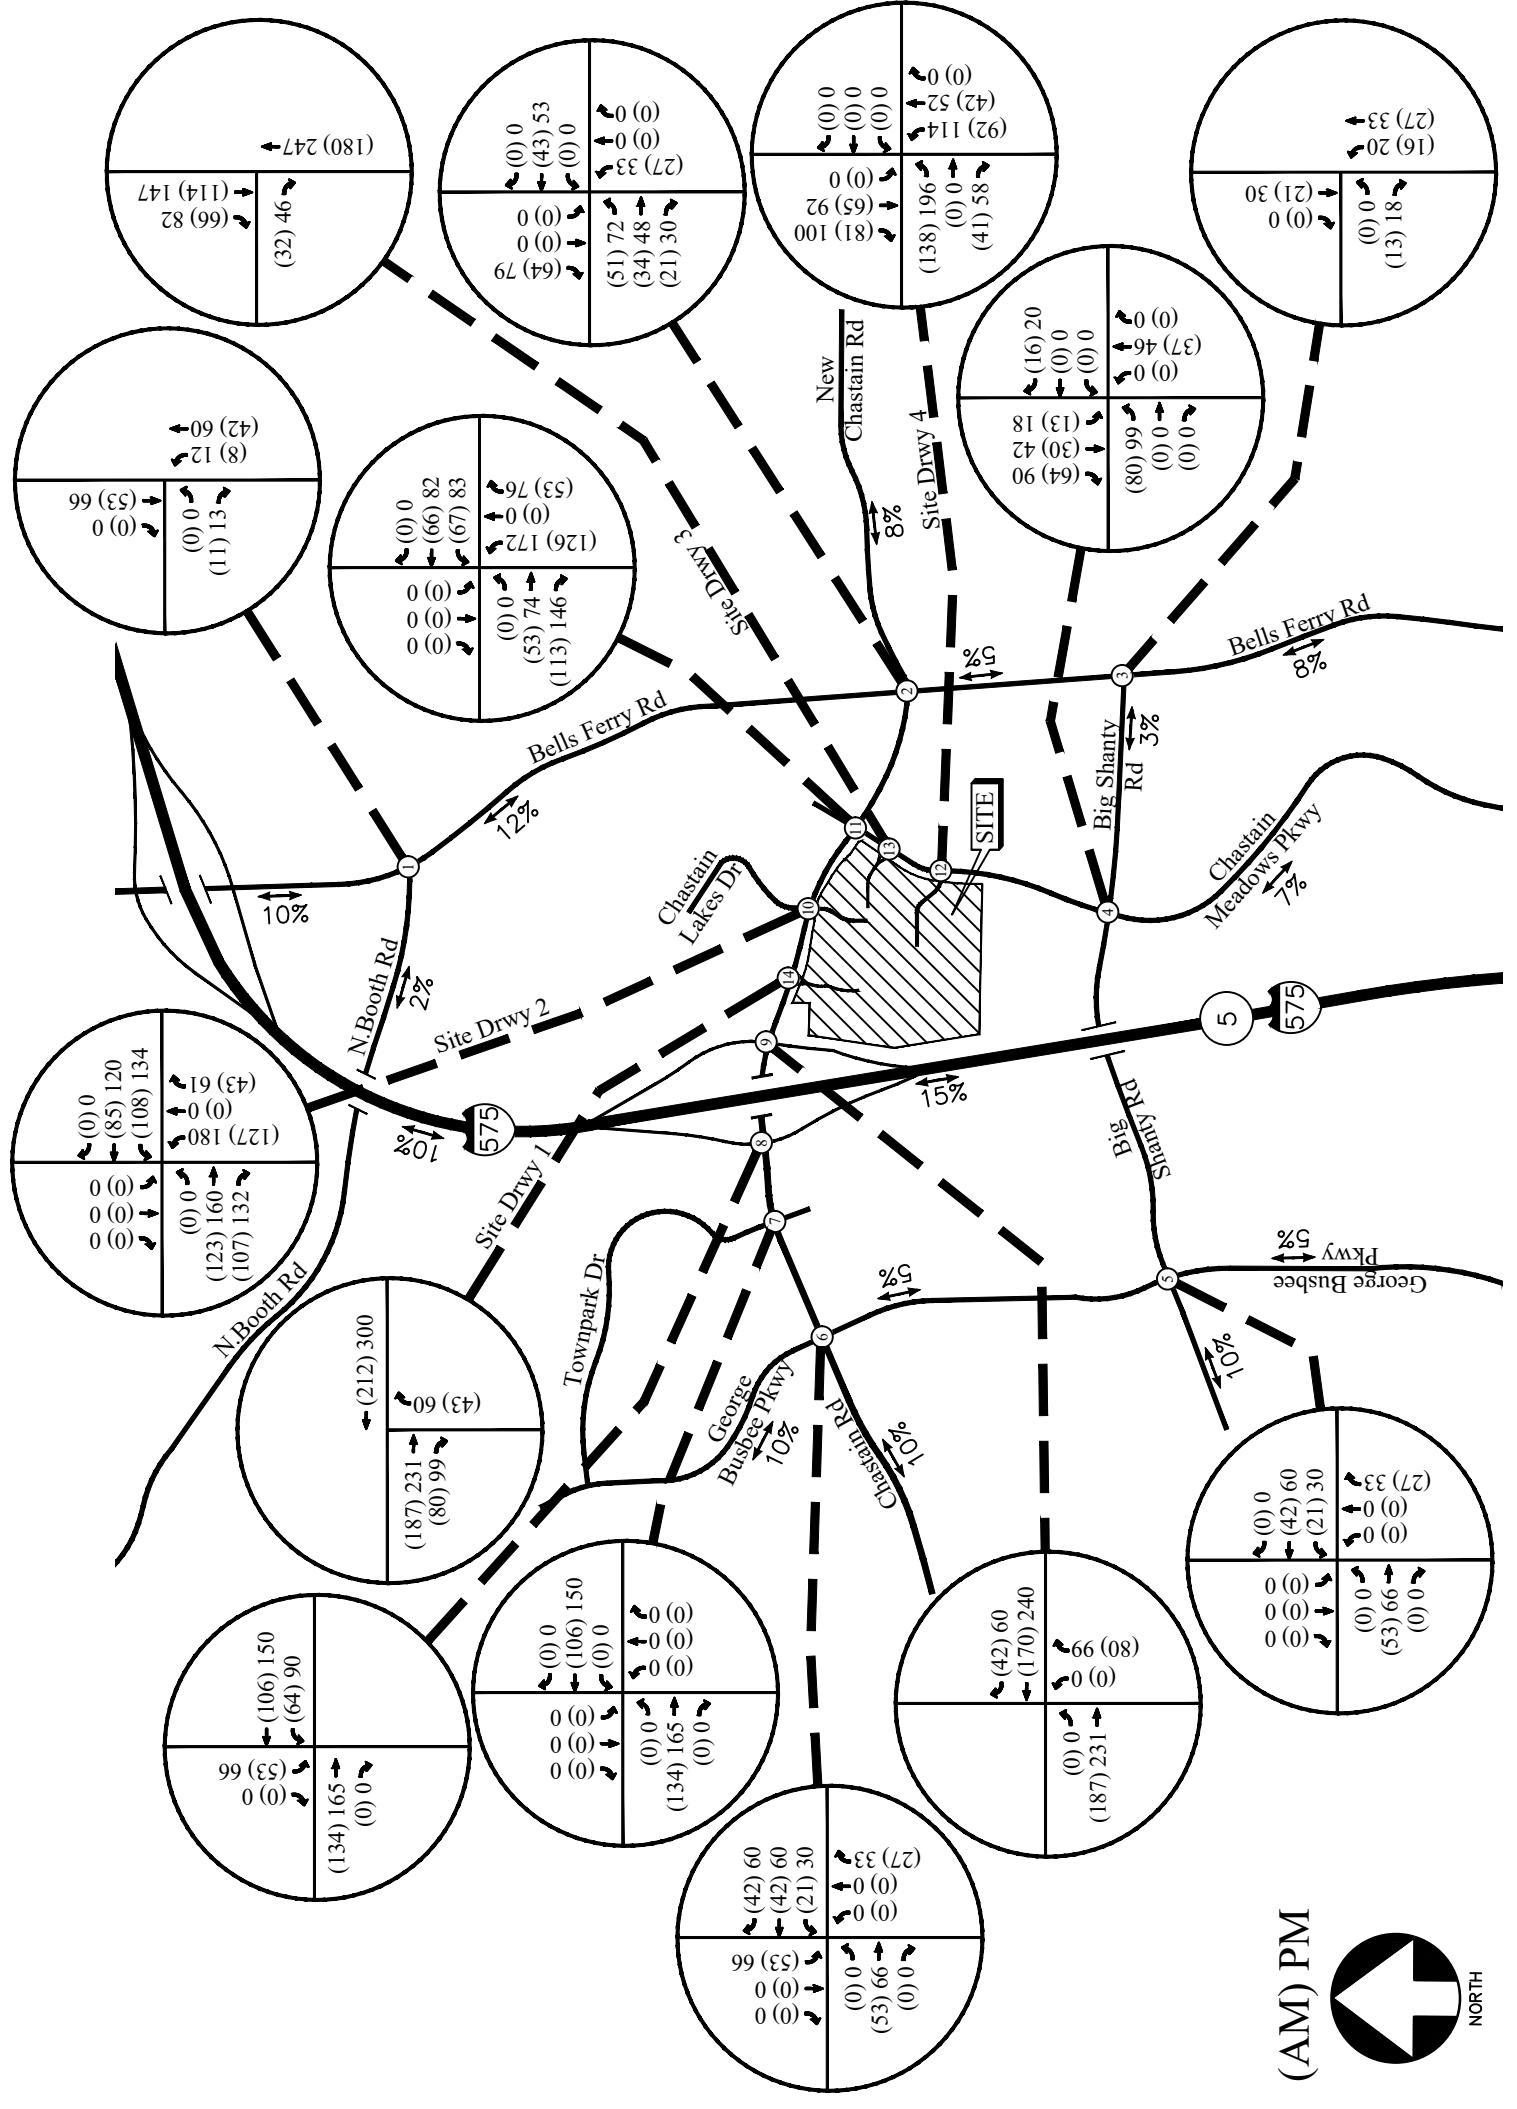

5.5 Trip Distribution

The trip distribution describes how traffic arrives and departs from the site. An overall trip distribution was developed for the site based on a review of the existing travel patterns in the area and the locations of major roadways and highways that will serve the development. The site-generated peak hour traffic volumes, shown in Table 4, were assigned to the study area intersections based on this distribution. The outer-leg distribution and AM and PM peak hour new traffic generated by the site are shown in Figure 5.

OUTER LEG TRIP DISTRIBUTION AND SITE-GENERATED PEAK HOUR VOLUMES

17

FIGURE 5

6.0 FUTURE 2022 TRAFFIC ANALYSIS

The future traffic operations are analyzed for the “No-Build” and “Build” conditions at full build out of the development in the year 2022. This provides a basis of reference for determining both the contribution of the site to overall traffic conditions and the additional improvements needed to provide sufficient site access and capacity for passing traffic.

Improvements that are identified as “System Improvements” are recommended to address deficiencies in the roadway network and can be considered as benefitting traffic that may or may not include site-generated traffic and are recommended for the municipality to use in future planning efforts. “Site Mitigation Improvements” are recommended as directly benefitting proposed site-generated traffic.

6.1 Future “No-Build” Conditions

The “No-Build” (or background) conditions provide an assessment of how traffic will operate in the study horizon year without the study site being developed as proposed, with projected increases in through traffic volumes due to normal annual growth. The Future “No-Build” volumes consist of the existing traffic volumes (Figure 2) plus increases for annual growth of through traffic.

6.1.1 Annual Traffic Growth

In order to evaluate future traffic operations in this area, a projection of normal traffic growth was applied to the existing volumes. The Georgia Department of Transportation recorded average daily traffic volumes at several locations in the vicinity of the site. Reviewing the growth over the last five years revealed growth of approximately 2% in the area. This growth factor was applied to the existing traffic volumes between collector and arterial roadways in order to estimate the future year traffic volumes prior to the addition of site-generated traffic. The resulting Future “No-Build” 2022 volumes on the roadway are shown in Figure 6.

6.1.2 Planned and Programmed Improvements in Study Area

The following improvements have been identified in GDOT TransPi, and/or the local comprehensive transportation plan. These improvements are within the vicinity of the proposed development.

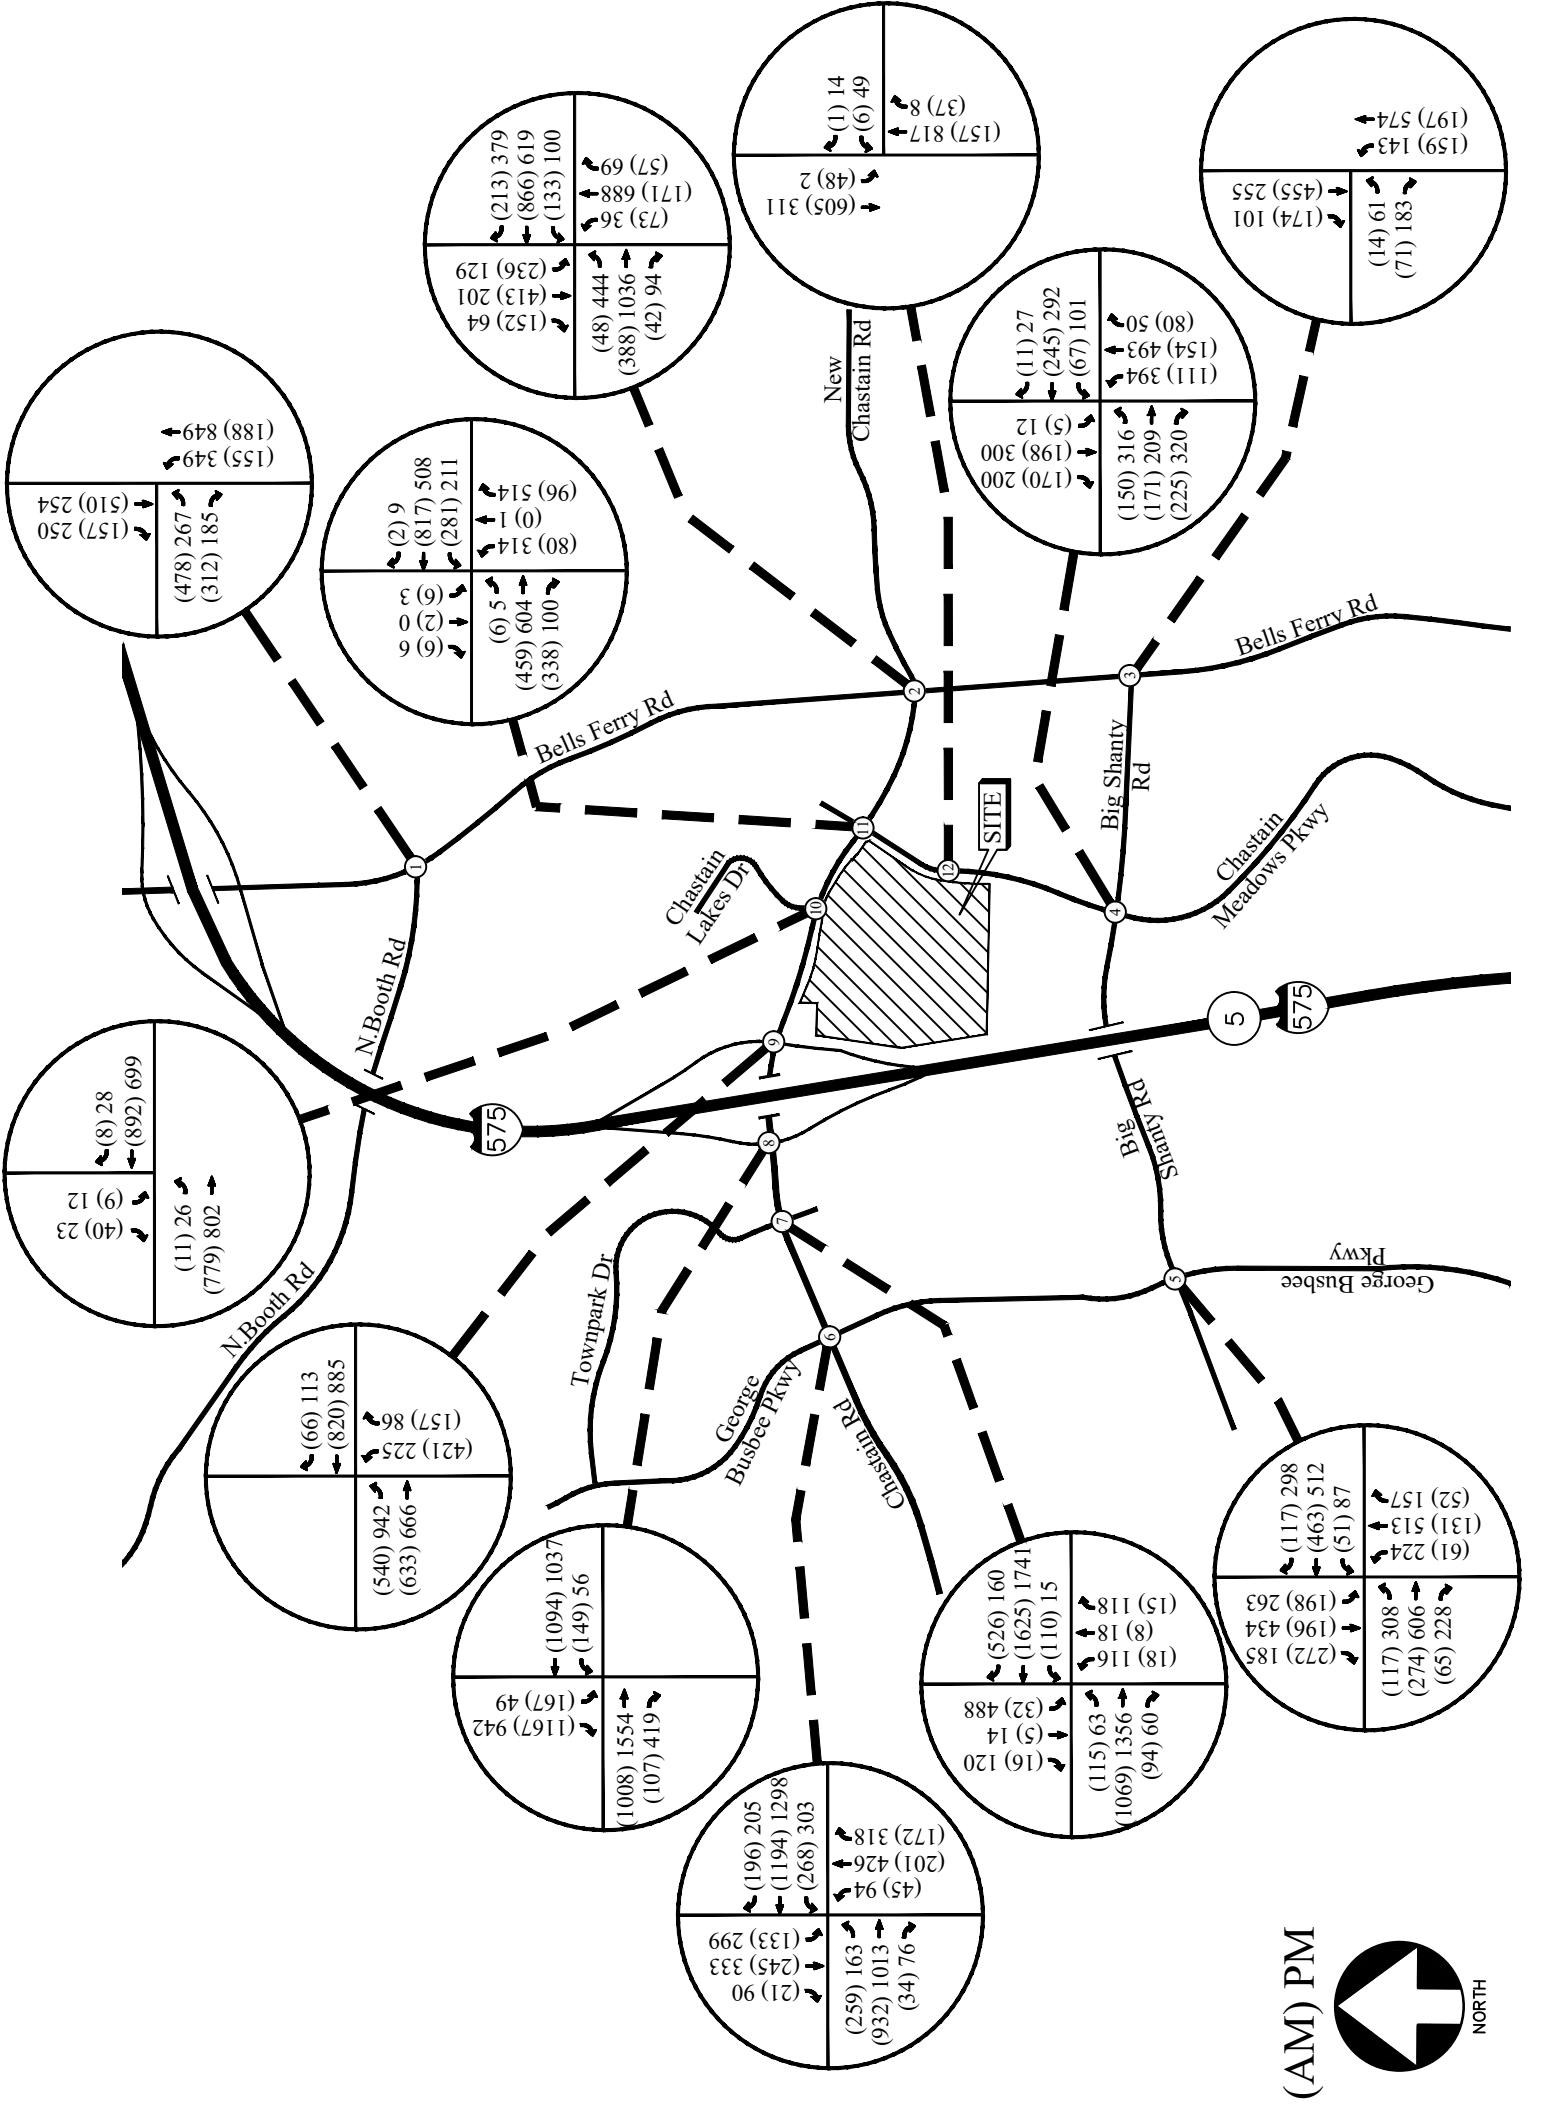

TABLE 5 – PLANNED AND PROGRAMMED IMPROVEMENTS

ARC#/GDOT#/County#	Project	Type of Improvement	Network Year	Source
CO-297B/ 0010706/D7280	Big Shanty Road widening Phase 4 between Chastain Meadows Pkwy to Bells Ferry Rd	Widening	Long Range 2030	ARC/GDOT/ COBB DOT

6.1.4 Recommendations for System Improvements

A summary of the system improvements, which address deficiencies that are found within the existing road network for the “No-Build” conditions, is provided below. These are recommended for the local municipality to use in planning future transportation projects. The following improvements have been recommended in order to bring the level-of-service back to the acceptable standard of “E”:

Chastain Road/New Chastain Road at Bells Ferry Road

- Install a second eastbound left turn lane on Chastain Road with a second northbound receiving lane on Bells Ferry Road.
- Install a second northbound through lane on Bells Ferry Road.

Chastain Road at George Busbee Parkway

- Install a second westbound left turn lane on Chastain Road.

Chastain Road at I-575 Southbound Ramps

- Install a second southbound right turn lane on the interstate ramp with one operating as yield-controlled and one continuing to operate as free-flow.

6.2 Future “Build” Conditions

The “Build” or development conditions include the estimated background traffic from the “No-Build” conditions plus the added traffic from the proposed development. In order to evaluate future traffic operations in this area, the additional traffic volumes from the site (Figure 5) and pass-by volumes were added to base traffic volumes (Figure 6) to calculate the future traffic volumes after the construction of the development. These total future traffic volumes in 2022 are shown in Figure 7.

6.2.1 Site Access Configuration

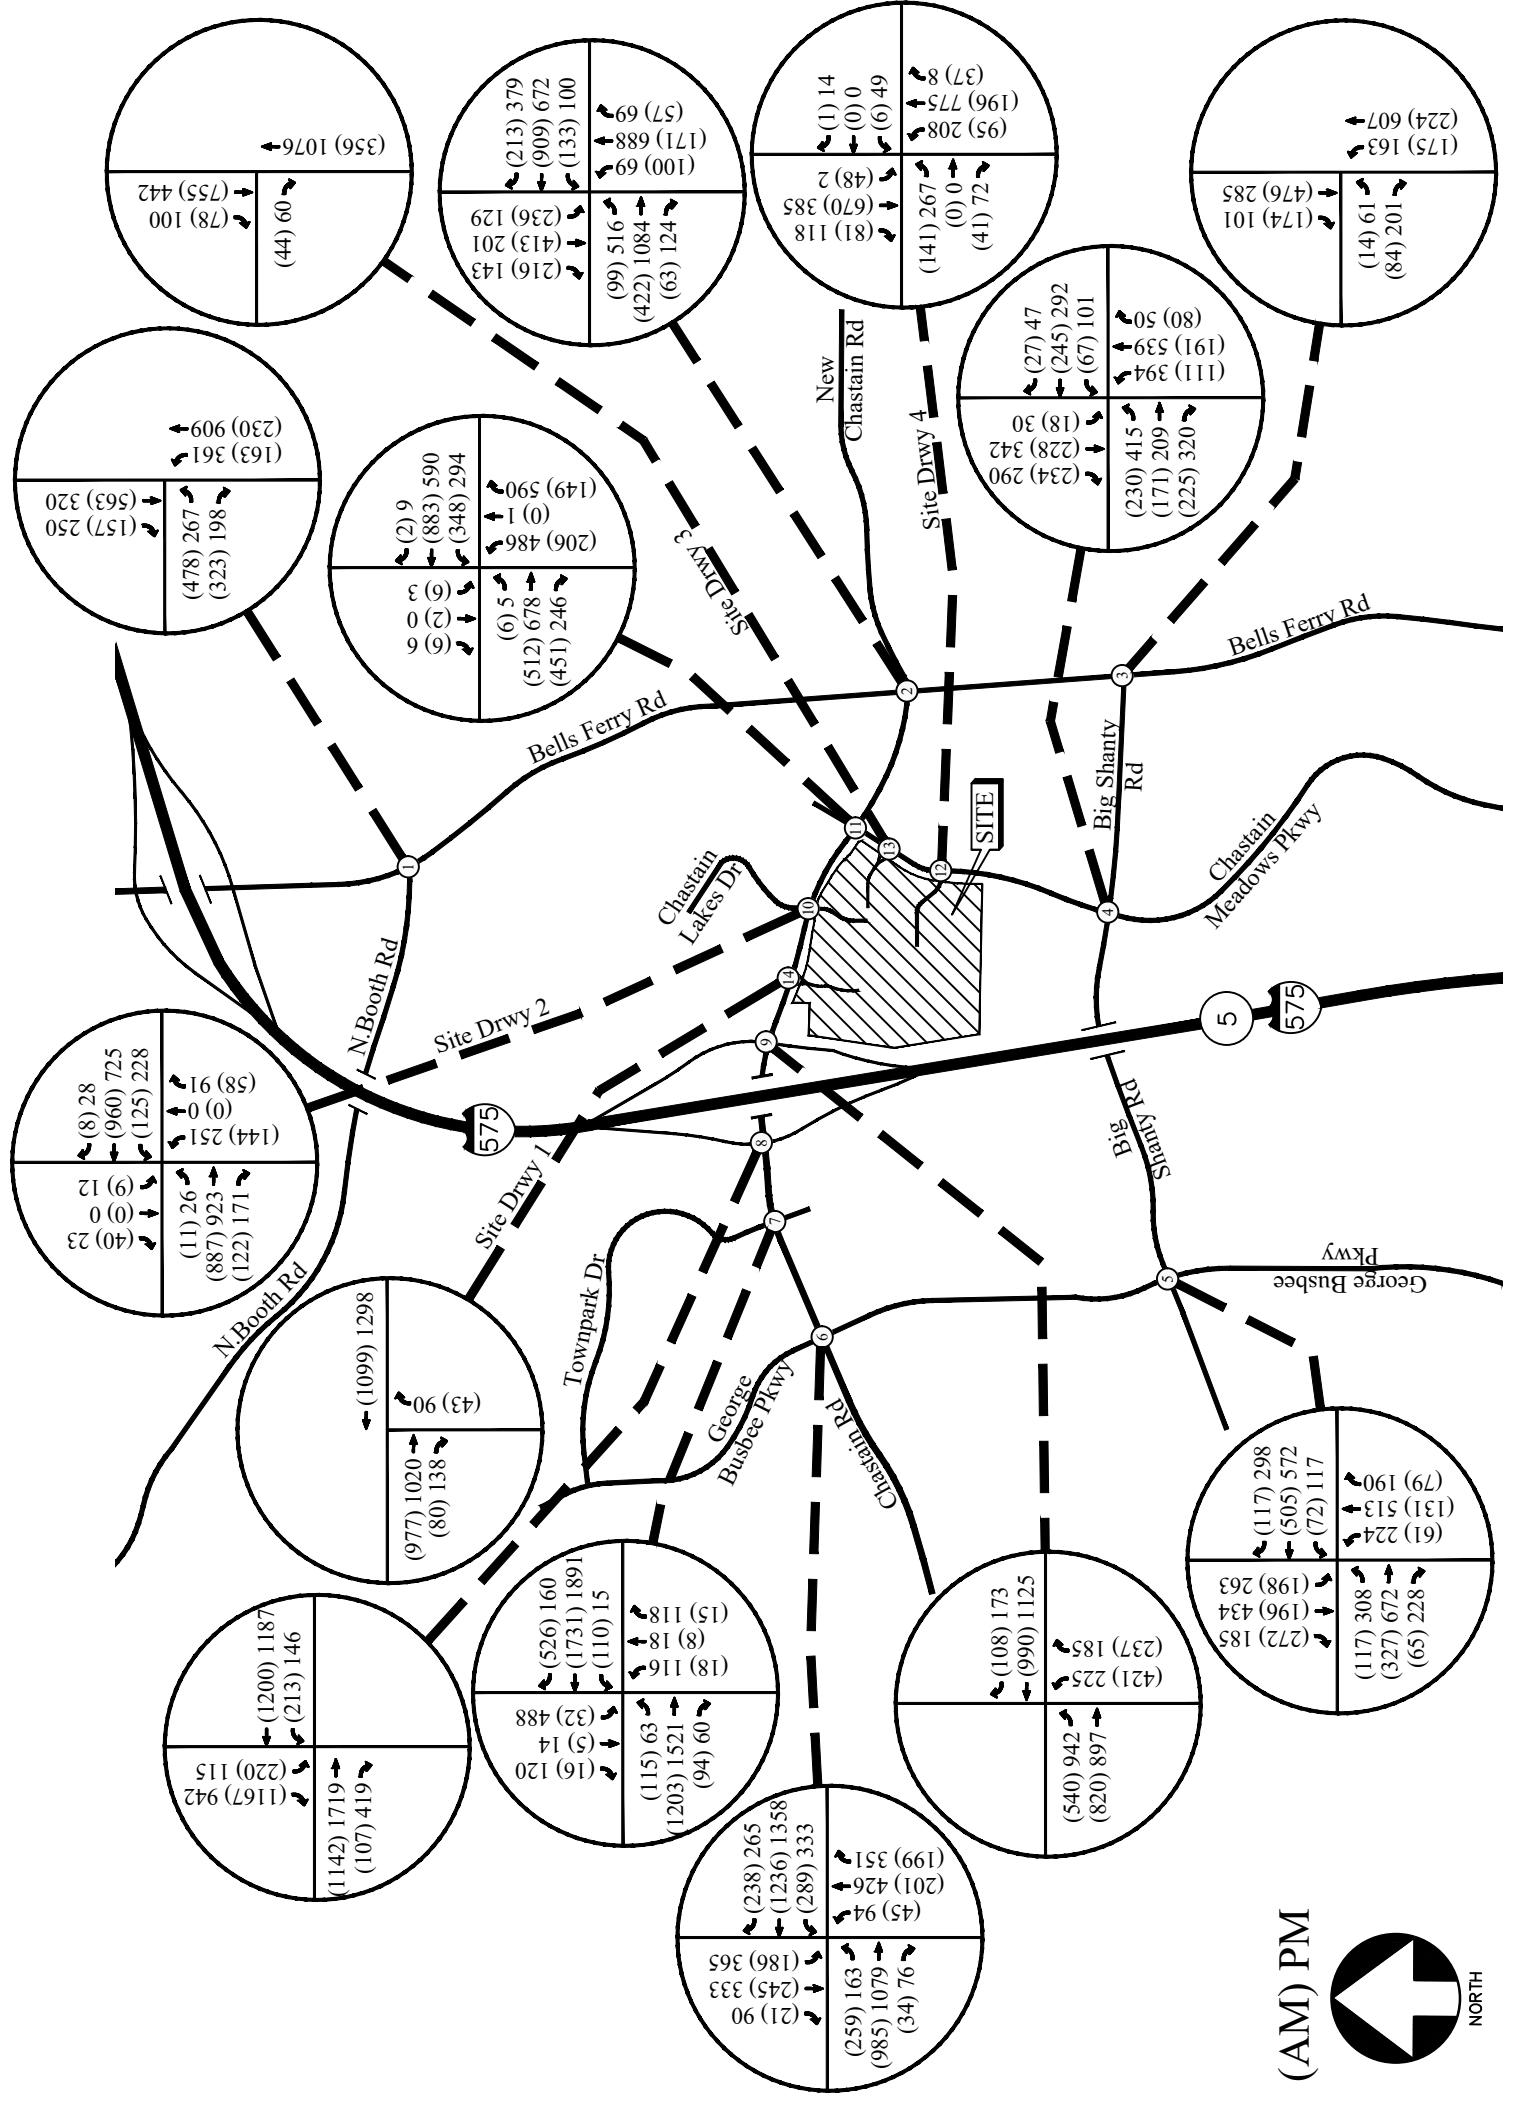

The following access configuration was utilized when modeling the proposed site driveway intersections:

- Site Driveway 1: Right-in/right-out driveway on Chastain Road, east of I-575
 - This driveway is proposed to consist of one entering and one exiting lane.
 - It is recommended that an eastbound right turn lane be installed on Chastain Road for entering traffic.
 - The intersection is proposed to be unsignalized with a STOP sign on the northbound (driveway) approach.
- Site Driveway 2: Full-access driveway on Chastain Road, aligned with Chastain Lakes Drive
 - This driveway is proposed to consist of one entering and two exiting lanes.
 - Entering left turn movements are proposed to be made from the existing westbound turn lane on Chastain Road.
 - It is recommended that an eastbound right turn lane be installed on Chastain Road for entering traffic.
 - A preliminary signal warrant analysis indicates that the intersection will meet MUTCD thresholds for a traffic signal. Therefore, a traffic signal should be installed with construction of the development.
- Site Driveway 3: Right-in/right-out driveway on Chastain Meadows Parkway, south of Chastain Road
 - This driveway is proposed to consist of one entering and one exiting lane.
 - It is recommended that a southbound right turn lane be installed on Chastain Meadows Parkway for entering traffic.
 - At the request of Cobb County DOT, the existing median opening at this driveway location will be closed, prohibiting all left-ins and left-outs at the intersection. It has also been requested that the northbound left turn lane at the intersection of Chastain Road at Chastain Meadows Parkway be extended to this intersection to allow for more storage/queueing space.
- Site Driveway 4: Full-access driveway on Chastain Meadows Parkway, at existing median opening
 - This driveway is proposed to consist of one entering and two exiting lanes.
 - Entering left turn movements are proposed to be made from the existing northbound turn lane on Chastain Meadows Parkway.
 - It is recommended that a southbound right turn lane be installed on Chastain Meadows Parkway for entering traffic.
 - A preliminary signal warrant analysis indicates that the intersection will meet MUTCD thresholds for a traffic signal during the peak hours. Therefore, a traffic signal should be installed with construction of the development.

6.2.3 Recommendations for Site Mitigation Improvements

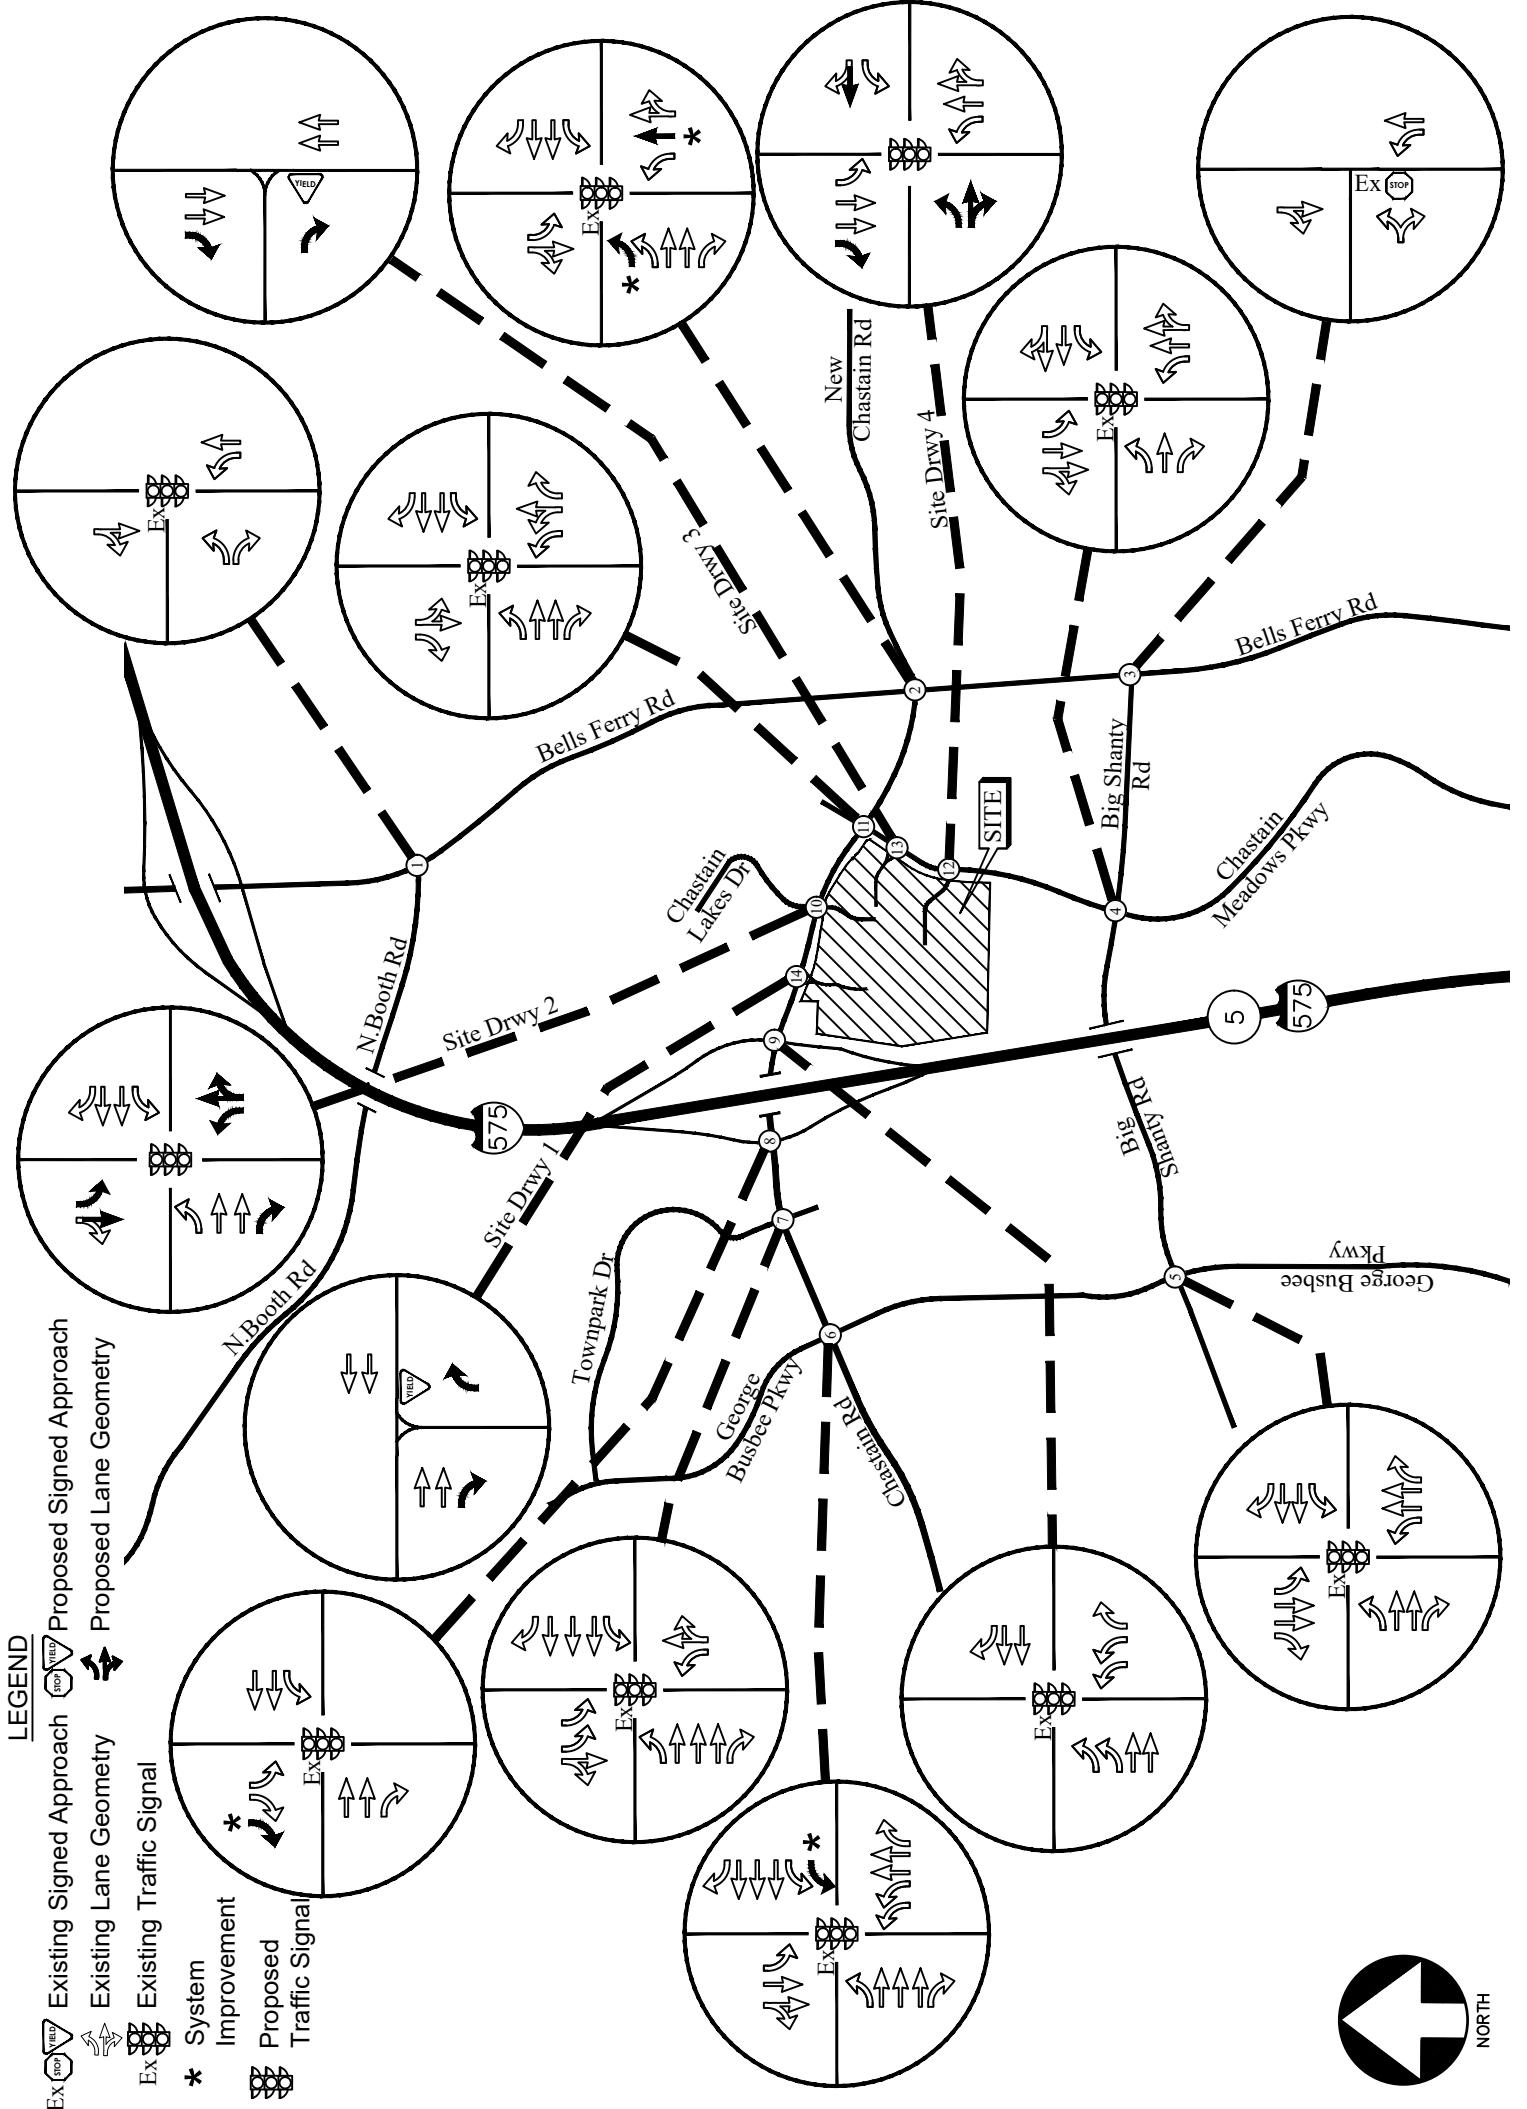

Improvements that are identified as mitigation improvements are recommended as directly benefitting proposed site-generated traffic. Along with the recommended system improvements (Section 6.1.4) and updating the signal timing at several intersections, the following improvements have been recommended in order to bring the level-of-service back to the acceptable standard of "E" after the addition of site traffic:

Chastain Road at Chastain Meadows Parkway

- Install right turn permissive + overlap signal phasing for the northbound right turn movement on Chastain Meadows Parkway.

FUTURE TRAFFIC CONTROL AND LANE GEOMETRY

FIGURE 8

7.0 CONCLUSIONS AND RECOMMENDATIONS

Traffic impacts were evaluated for the added traffic from the proposed McCamy mixed-use development located in the southeast corner of Interstate 575 and Chastain Road in Kennesaw, Georgia. The development will consist of:

- 52,000 square foot supermarket
- 70,000 square feet of retail space
- 68,500 square feet of restaurant space
- 190,000 square feet of office space
- 250 hotel rooms
- 164 townhome units
- 600 multifamily units with first floor retail
- 300 attached senior living units

The development proposes one full-access and one right-in/right-out driveway on Chastain Road as well as one full-access driveway and one right-in/right-out driveway on Chastain Meadows Parkway. Existing and future operations after completion of the project were analyzed at the intersections of:

1. Bells Ferry Road at N. Booth Road
2. Bells Ferry Road at Chastain Road/New Chastain Road
3. Bells Ferry Road at Big Shanty Road
4. Chastain Meadows Parkway at Big Shanty Road
5. Big Shanty Road at George Busbee Parkway
6. Chastain Road at George Busbee Parkway
7. Chastain Road at Town Park Drive/Chastain Center Boulevard
8. Chastain Road at I-575 Southbound Ramps
9. Chastain Road at I-575 Northbound Ramps
10. Chastain Road at Chastain Lakes Drive
11. Chastain Road at Chastain Meadows Parkway
12. Chastain Meadows Parkway at Proposed Site Access

The analysis includes the evaluation of Future operations for “No-Build” and “Build” conditions, which account for increases in annual growth of through traffic and added traffic from the proposed development, respectively. The results of the analysis are listed below:

7.1 System Recommendations and Improvements (2022)

A summary of the system improvements, which address deficiencies that are found within the existing road network for the “No-Build” conditions and are recommended for the local municipality to use in planning future transportation projects, is provided in Section 6.1.4.

7.2 Site Access Configuration

The following access configuration was utilized when modeling the proposed site driveway intersections:

- Site Driveway 1: Right-in/right-out driveway on Chastain Road, east of I-575
 - This driveway is proposed to consist of one entering and one exiting lane.

- It is recommended that an eastbound right turn lane be installed on Chastain Road for entering traffic.
 - The intersection is proposed to be unsignalized with a STOP sign on the northbound (driveway) approach.
- Site Driveway 2: Full-access driveway on Chastain Road, aligned with Chastain Lakes Drive
 - This driveway is proposed to consist of one entering and two exiting lanes.
 - Entering left turn movements are proposed to be made from the existing westbound turn lane on Chastain Road.
 - It is recommended that an eastbound right turn lane be installed on Chastain Road for entering traffic.
 - A preliminary signal warrant analysis indicates that the intersection will meet MUTCD thresholds for a traffic signal. Therefore, a traffic signal should be installed with construction of the development.
- Site Driveway 3: Right-in/right-out driveway on Chastain Meadows Parkway, south of Chastain Road
 - This driveway is proposed to consist of one entering and one exiting lane.
 - It is recommended that a southbound right turn lane be installed on Chastain Meadows Parkway for entering traffic.
 - At the request of Cobb County DOT, the existing median opening at this driveway location will be closed, prohibiting all left-ins and left-outs at the intersection. It has also been requested that the northbound left turn lane at the intersection of Chastain Road at Chastain Meadows Parkway be extended to this intersection to allow for more storage/queueing space.
- Site Driveway 4: Full-access driveway on Chastain Meadows Parkway, at existing median opening
 - This driveway is proposed to consist of one entering and two exiting lanes.
 - Entering left turn movements are proposed to be made from the existing northbound turn lane on Chastain Meadows Parkway.
 - It is recommended that a southbound right turn lane be installed on Chastain Meadows Parkway for entering traffic.
 - A preliminary signal warrant analysis indicates that the intersection will meet MUTCD thresholds for a traffic signal during the peak hours. Therefore, a traffic signal should be installed with construction of the development.

7.3 Site Mitigation Improvements (2022)

Improvements that are identified as mitigation improvements are recommended as directly benefitting proposed site-generated traffic and are summarized in Section 6.2.3.

Appendix

Existing Intersection Traffic Counts

GRTA Letter of Understanding

LETTER OF UNDERSTANDING

October 22, 2018

Mason Zimmerman
Dan Biber
Pope and Land
3330 Cumberland Boulevard SE
Suite 300
Atlanta, GA 30339

RE: Big Shanty Mixed Use Development (DRI #:2860)

Dear Mr. Zimmerman and Mr. Biber:

The purpose of this letter is to inform you of the GRTA staff recommendation regarding your request for expedited review of the **Big Shanty Mixed Use Development (DRI #: 2860)**, Development of Regional Impact (DRI). Based on the information presented during the Pre-Review/Methodology meeting on October 15, 2018, the DRI meets the eligibility criteria for requesting expedited review under the *DRI Procedures and Principles for GRTA Development of Regional Impact Review* Section 3-102.F., Livable Centers Initiative. A Trip Generation and Access Analysis are required as part of the review under these criteria. Some of the following items were discussed in the meeting and should assist you and your team in preparing the DRI Review Package. Additional information may be requested for submittal in conjunction with DRI Review Package. Please see the notes below for this basic information.

Project Overview

- This proposed development is located in Cobb County on the southeast corner of Interstate 575 and Chastain Road.
- The DRI trigger for this development is a rezoning application.
- The proposed mixed-use redevelopment consists of 52,000 SF supermarket, 70,000 SF of retail space, 68,500 SF of restaurant space, 190,000 SF of office space, 250 hotel rooms, and 1,064 residential units.
- The development currently proposes access via four driveways. There will be one full-access driveway on Chastain Meadows Parkway, one right in/right out driveway on Chastain Meadows Parkway, one full access driveway on Chastain Road, and one right in/right out driveway on Chastain Road.
- Trip generation is estimated at 26,501 gross daily trips based on the Institute of transportation Engineers (ITE) Trip Generation Manual, 10th Edition, 2017.
- The project will be built in one phase, to be completed by 2022.
- The applicant is applying for approval under GRTA's expedited review process under Section 3-1-2 F., Livable Centers Initiative (LCI). The site is in the Town Center LCI study area.

Methodology for Analysis

- All intersections identified as within the study network shall be analyzed during the AM and PM peak period for (1) existing conditions, (2) future “no-build” conditions and (3) future “build” conditions. This DRI shall be reviewed in one phase completed by 2022.
- A 2% annual background traffic rate shall be used for all roadways. Trip generation information for any other major developments currently underway in the study area shall be taken into consideration.
- Capacity analysis shall be based on turning movement counts collected not more than 12-months prior to the date of the actual DRI submittal to GRTA. As appropriate, pedestrian counts and heavy vehicle counts shall be collected with vehicle counts and considered within the capacity analysis. Turning movement counts shall be collected while local schools are in session and ordinarily not between the week of Thanksgiving and the second week of January or any week of a major holiday.
- Mixed-use, alternative mode and pass-by reductions are allowed per the ITE Trip Generation Manual. An alternative mode reduction of 5% is allowed due to the project site’s proximity to Kennesaw State University.
- The Level of Service (LOS) standard for all analyses shall be LOS E from the proposed property’s location in a Major activity Center.
- Default values should not be assumed in the traffic modeling. Existing conditions shall be taken into account.
- The applicant shall research TIP, STIP, RTP, and GDOT’s construction work program, as well as any local government plans (SPLOST, CIP, etc.), to determine the open-to-traffic date, sponsor, cost of the project, funding source(s), for future roadway projects in the project vicinity. This information shall be included within the traffic analysis.

STUDY NETWORK

1. Chastain Road at George Busbee Parkway
2. Chastain Road at Townpark Drive
3. Chastain Road at I-575 Southbound Ramps
4. Chastain Road at I-575 Northbound Ramps
5. Chastain Road at Chastain Lakes Drive
6. Chastain Road at Chastain Meadows Parkway
7. Chastain Road at Bells Ferry Road
8. Bells Ferry Road at Big Shanty Road
9. Chastain Meadows Parkway at Big Shanty Road
10. Big Shanty Road at George Busbee Parkway
11. Bells Ferry at North Booth Road
12. All Site Accesses

ADDITIONAL INFORMATION

Every roadway segment and intersection listed above will be analyzed for “required improvements.” If the existing LOS for the segment or intersection is below the applicable level of service for a particular time period (e.g., A.M. peak period, P.M. peak period, etc.), then the measured LOS service for that segment and time periods is the standard by which the “base” and “future” traffic conditions will be designed. For example, if the City’s LOS standard is LOS D, but an intersection or segment currently operates at LOS E for a certain peak period, then the LOS standard for that intersection or segment for “base” and “future” conditions becomes LOS E (only for that intersection and only for that peak period). The “base” is the phase year traffic without the development traffic (also called future “no-build” conditions) and the “future” is the phase year with the development traffic (also called future “build” conditions). As required in the technical guidelines, specific “required improvements” will be identified to bring the “base” LOS and “future” LOS for every roadway segment and intersection up to the applicable LOS standard. If the existing LOS for the segment or intersection is LOS F, then the future “no-build” and future “build” LOS standard will be LOS E. The improvements required to achieve the desired LOS standard will be provided in a table and graphic

within the study. The traffic study should indicate the existing roadway laneage at each studied intersection as well as the laneage required (to meet the LOS standard) for future "no-build" and future "build" conditions. The improvements may include both programmed improvements and improvements identified in the study.

The planned and programmed improvement should indicate the project sponsor, the anticipated funding by source (federal, state, city/county, developer, CID, etc.), the year open-to-traffic, and estimate of the total project cost. All other required improvements identified in the study should, to the extent known, identify the cost, sponsor, funding, and timing. If any of these elements are not known, please state as "unknown."

The future "no-build" and the future "build" analyses should NOT automatically include/assume the additional lanes/capacity associated with planned and programmed improvement projects unless those roadway projects are currently under construction. Instead, the traffic consultant should recommend the additional laneage required to satisfy the level of service standard.

DRI REVIEW PACKAGE CHECKLIST

Please use the DRI Review Package Checklist to help you prepare your GRTA DRI Review Package for expedited review of your application. The Checklist reflects the understandings set forth in this letter, and is incorporated into this letter by reference.

The site plan shall be prepared in accordance with Section 4-104 of the DRI Review Package Technical Guidelines and it shall be dated, and shall be at a scale of 1"= 200' or larger (showing more detail). The site plan shall be consistent with GRTA's Site Plan Information Guidelines, which represents the minimum required information on site plans.

The applicant shall indicate on the site plans all adjacent land uses, current zoning, and future land use as indicated on the future land use map. Additionally, all existing and proposed sidewalks, existing and proposed pedestrian trails, and existing and proposed roadway laneage should be indicated on the site plan.

DRI REVIEW PACKAGE SUBMITTAL

At the time you are ready to submit your DRI Review Package to GRTA, please note the following:

- Provide one (1) paper copy of all materials – of the Transportation analysis and of the Site Plan
- Provide one (1) CD-ROM with electronic versions of all submittal documents:
 - Provide a PDF of each document
 - Provide the native format for each document
 - .dwg is the preferred CAD format (AutoCAD)
 - .doc is the preferred word processing format (Word)
 - .xls is the preferred spreadsheet format (Excel)
 - .sy 9 or .sy 10 is the preferred capacity analysis format (Synchro)

As part of the completeness certification process, please have your consultant forward one copy of the completed GRTA DRI Review Package (traffic analysis, site plan, CD) to the GDOT District Office, Regional Commission and local government Planning & Development and Transportation group (contact information provided below). GRTA shall be copied on each of the transmittal letters

SRTA/GRTA	ATLANTA REGIONAL COMMISSION	COBB COUNTY ZONING	GDOT DISTRICT 7	COBB COUNTY DOT
Emily Estes 245 Peachtree Center Ave. Suite 2200 Atlanta, GA 30303	Andrew Smith International Tower 229 Peachtree St. NE Suite 100 Atlanta, GA 30303	John Pederson Planning and Zoning 1150 Powder Springs Suite 400 Marietta GA 30064	Paul DeNard 5025 New Peachtree Road NE Chamblee, GA 30341	Amy Diaz 1890 County Services Parkway Marietta, GA 30008

Expedited Review Recommendation

Once the DRI Review Package has been submitted and determined complete, and ARC with Cobb County have confirmed the LCI consistency qualification, GRTA staff will make a recommendation regarding your request for expedited review under Section 2-202.B of the *Procedures and Principles for GRTA Development of Regional Impact Review*. If the County and/or ARC do not confirm consistency with the LCI as required, then the study network and other methodology assumptions may need to be revised for a Non-Expedited Review.

If you have any questions, please feel free to contact me (404) 893-6171 or by email at eestes@srtga.gov.

Sincerely,

Emily Estes

PRECONSTRUCTION STATUS REPORT

PROJ ID	COUNTY	DESCRIPTION
0010706	Cobb	CR 171/BIG SHANTY FM CHASTAIN MEADOWS PKWY TO BELLS FERRY RD Mgmt Let Date: 2019-06-21 CR 171/Big Shanty Road from CS 3540/Chastain Meadows Pkwy to CR 2845/Bells Ferry Road: Cobb County, GA. The project begins at Chastain Meadows Pkwy and runs along both sides of Big Shanty Rd and ends at Bells Ferry Rd for a project length of 0.4 miles. The existing lane widths are 12' and the existing shoulder varies from 6' to 10'. There is existing 30' curb and gutter along the entire project, excluding the last 500'. The proposed sidewalk will be 5' wide and approx. 2050' long. Retaining walls are proposed, 5' tall or less and 25' to 30' long.
