1 Project Description

The proposed development is a mixed-use site located in northern Henry County, GA, near the City of Stockbridge and the I-75/I-675 interchange. The development will be located to the east of I-75 and I-675 and south of SR 138/Stockbridge Road. A vicinity map is shown in Figure 1 and an aerial map is shown in Figure 2. The proposed site plan is included in APPENDIX A**.**

The proposed development is anticipated to be completed in two phases. Phase 1 is expected to be completed by 2029, and full build-out (Phase 2) in 2035. Both scenarios were analyzed for this report. A northbound-only interchange with I-75 has also been proposed to align with the proposed Reeves Creek Parkway on Walt Stephens Road on the southern end of the site. Both Phase 1 and Phase 2 were analyzed with and without the proposed northbound-only interchange.

Figure 1: Vicinity Map

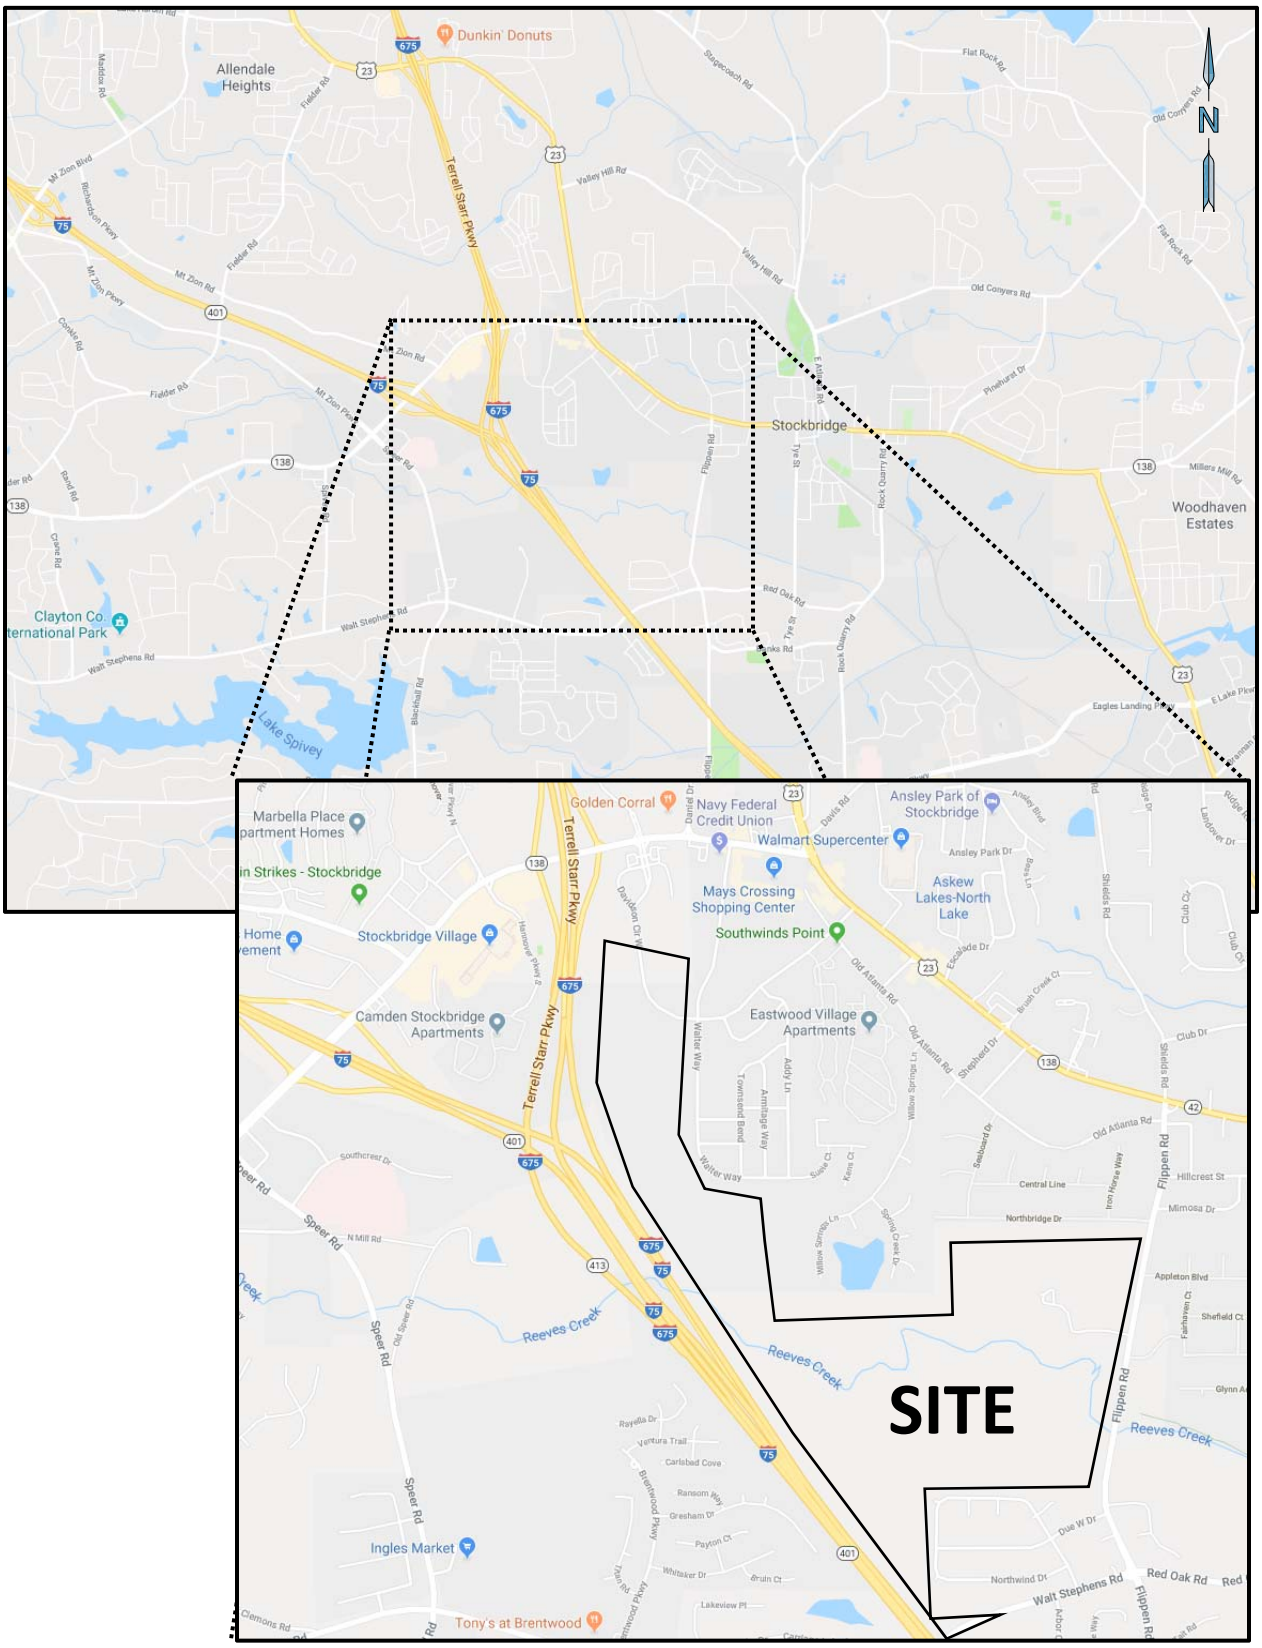

Figure 2: Aerial Map

1.1 Site Plan Summary

Table 1 shows proposed site land-uses summarized directly from the Institute of Transportation Engineers (ITE) Trip Generation Manual, 10th Edition, 2017. The ITE Code and Description "150 – Warehousing" was used but will more closely resemble office showroom space. Medical-Dental Office Building, Home Improvement Superstore, Discount Club, Furniture Store, and Park-and-Ride Lot with Bus or Light Rail Service land uses will not be constructed until Phase 2. A full site plan is included in APPENDIX A.

Table 1: Land Use Summary

ITE Code	ITE Project Land Use Description	Density	Variable	Daily			AM Peak Hour			PM Peak Hour		
				Total	In	Out	Total	In	Out	Total	In	Out
210	Single-Family Detached Housing	282	Dwelling Unit	2,699	1,350	1,349	205	51	154	275	173	102
221	Multifamily Housing (Mid-Rise)	1,003	Dwelling Unit	5,465	2,733	2,732	328	85	243	405	247	158
252	Senior Adult Housing—Attached	429	Dwelling Unit	1,699	850	849	86	30	56	105	58	47
310	Hotel	1,000	Rooms	10,863	5,432	5,431	495	292	203	724	369	355

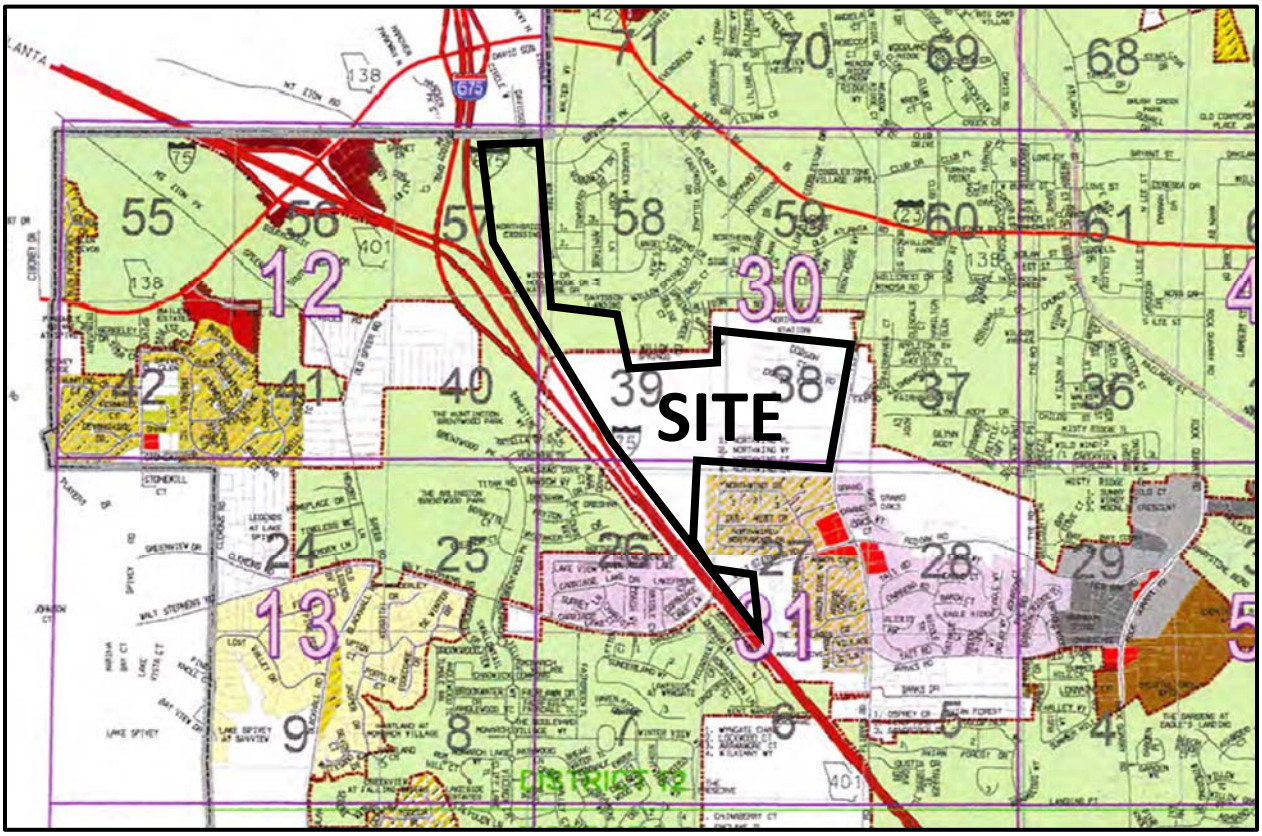
150	Warehousing	150,000	1000 S.F.	283	142	141	43	33	10	46	12	34
	Total Trips			56,377	28,193	28,184	3,023	1,854	1,169	4,873	2,080	2,793
	Reductions for Internal Capture			12,229	6,115	6,114	252	126	126	1,139	569	570
	Reductions for Modal Split			1,051	529	522	70	55	15	88	25	63
	Reductions for Pass-By Trips			5,844	2,958	2,886	152	78	74	664	333	331
	Total Net New Project Trips			**37,253**	**18,591**	**18,662**	**2,549**	**1,595**	**954**	**2,982**	**1,153**	**1,829**

1.2 Site Access



The proposed development will access the external roadway network via five proposed driveway locations. The proposed development will widen and partially relocate the existing Davidson Pkwy south of the intersection with SR 138 and connect it to a proposed Reeves Creek Parkway to the south. There are several proposed land-uses within this area of influence which will have newly proposed driveways. Along Flippen Rd, at least two full-access driveways are proposed which would service the land uses to the east of the site and a third driveway to service a proposed townhome land use. The proposed Reeves Creek Parkway that is proposed to connect with Davidson Parkway to the north is also proposed to intersect with Walt Stephens Road east of the current bridge over I-75. Proposed potential interstate access to I-75 northbound on Walt Stephens Rd would align with the proposed Reeves Creek Parkway.

- Driveway 1 (proposed Reeves Creek Parkway)
  - Connects to Davidson Parkway from the south, south of SR 138
  - Full access, four-leg proposed with commercial driveway to the west
- Driveway 2 (proposed Reeves Creek Parkway)
  - Located on Walt Stephens Road east of I-75 bridge
  - Full access, proposed as fourth leg of proposed I-75 northbound only interchange ramps
- Driveway 3 (proposed Fairhaven Road Extension)
  - Located on Flippen Road across from Fairhaven Road
  - Full access, four-leg proposed with Fairhaven Road
- Driveway 4
  - Located on Flippen Road north of Walt Stephens Road, south of Fairhaven Road
  - Just offset north of Driveway 5
- Driveway 5
  - Located on Flippen Road north of Walt Stephens Road, south of Fairhaven Road
  - Just offset south of Driveway 4

1.3 Zoning and Land Use

The site is currently zoned RA: Residential-agricultural zoning district. This district is intended to preserve the residential character of land while providing a transition between rural land and suburban/urban land. This district will also provide for detached single-family residential dwellings that are site-built or manufactured on lots. Future zoning plans call for commercial land uses in the area. Zoning to the north is controlled by the City of Stockbridge, GA. Land to the south is zoned R-2, C-1, and PD. Zoning for the site and adjacent parcels are shown in Figure 3.

Figure 3: Zoning Map

1.4 Nearby Project and Local Plan

Per Henry County's Future Development Plan, the site lies in a high-density residential zone. The site is surrounded by medium and medium-high residential zones. The DRI trigger for this development is the rezoning of the existing site to primarily commercial to match the proposed land uses.

No other known developments are planned at this time in or near the study area.

According to ARC's Transportation Improvement Program, Henry County Comprehensive Transportation Plan, and GDOT's Construction Work Program, the projects listed below in Table 2 are programmed or planned to be completed by the respective years. Further information on nearby related projects is contained in APPENDIX B.

Table 2: Projects in Study Network

Estimated Construction Date (Status)	Project ID	Sponsor, County	Project Description
2022 (Short-Range)	CL-064 (ARC) 322050 (GDOT)	GDOT, Henry/Clayton	US 23 Widening – From SR 138 To I-675 in Clayton County
2023 (Short-Range)	HE-179 (ARC) 0014482 (GDOT)	GDOT, Henry County	Western Parallel Connector – New Alignment From Jonesboro Rd to Hudson Bridge Rd
2023 (Short-Range)	HE-107 (ARC) 0007855 (GDOT)	GDOT, Henry County	US 23 Widening – From Downtown McDonough to SR 138 (N Henry Blvd)
2024-2035 (Mid-Range)	HE-161A (ARC) 0015090 (GDOT)	Henry County	Rock Quarry Road Widening – From Eagles Landing Pkwy to SR 42/138
2024-2035 (Mid-Range)	CL-063 (ARC)	Clayton County	Mount Zion Road Widening – From Richardson Pkwy to SR 138
2031-2040 (Long-Range)	HE-109 (ARC)	City of Stockbridge, Henry County	Rock Quarry Road Extension – New Alignment From SR 138/US 23 to Intersection of East Atlanta Rd and Valley Hill Rd
2031-2040 (Long-Range)	HE-132C (ARC)	Henry County	Eagles Landing Parkway Widening – From Eagles Pointe Pkwy to US 23
2031-2040 (Long-Range)	HE-138 (ARC)	Henry County	Old Conyers Road Widening – From East Atlanta Rd to Flat Rock Rd
2031-2040 (Long-Range)	HE-165B (ARC)	Henry County	Patrick Henry Parkway: Segment 2 Widening – From Jodeco Rd to Eagles Landing Pkwy
2031-2040 (Long-Range)	AR-ML-610 (ARC) 0013919 (GDOT)	GDOT, Regional/Southeast	I-75 South Express Lanes – From C.W. Grant Pkwy to SR 138
2031-2040 (Long-Range)	R-50 (Local)	Henry County	Walt Stephens Road Widening – From Blackhall Rd to Rock Quarry Rd
2031-2040 (Long-Range)	R-51 (A) (Local)	Henry County	Flippen Road Widening – From SR 138 to Walt Stephens Rd
2040+ (Unconstrained)	R-51 (B) (Local)	Henry County	Flippen Road Widening – Between Walt Stephens Rd and Stratford Cir
2040+ (Unconstrained)	R-51 (C) (Local)	Henry County	Flippen Road Extension – Between Stratford Cir and Jonesboro Rd

2 Existing Conditions

2.1 Bicycle and Pedestrian Facilities Description

Currently, there are no transit systems that service the area where the project site is located. A mass transit facility is proposed for the site; however, due to the lack of rail presence in the area, this facility would most likely begin as a bus rapid transit station. Sidewalks are present on both sides of SR 42/North Henry Boulevard and SR 138/Lake Spivey Parkway, and Henry County is aware of a potential increase in pedestrian activity in the area in the future. Bicycle lanes are not present in any of the surrounding roadways.

2.2 Transportation Facilities Description

Flippen Road is two-lane undivided roadway with a posted speed limit of 45 mph that runs primarily north to south and connects SR 42/138/US 23/North Henry Blvd to the north with Hudson Bridge Rd to the south. The roadway is functionally classified as an Urban Minor Arterial.

SR 42/North Henry Boulevard is a five-lane highway with a center turn lane. The roadway has a posted speed limit of 45 mph. Within the vicinity of the study area, east of Flippen Road, the highway runs primarily east to west. West of Flippen Road, the highway turns to run north to south. The highway is functionally classified as an Urban Principal Arterial and serves as a connection to I-75 and I-675 via SR 138/Lake Spivey Parkway.

SR 138/Lake Spivey Parkway is a five-lane roadway with a center turn lane. The roadway has a posted speed limit of 45 mph. Within the vicinity of the study area, the highway runs primarily east to west at its intersection with SR 42/North Henry Boulevard and then turns to run north to south at the interchange with I-75. The highway is functionally classified as an Urban Principal Arterial and has interchanges with both I-75 and I-675 and provides connection to the City of Jonesboro to the west.

Walter Way is a two-lane undivided local roadway with a posted speed limit of 35 mph that runs north to south within the vicinity of the study area and serves commercial development near its intersection with SR 138/Lake Spivey Parkway. Walter Way intersects Davidson Parkway before traveling south/southeast and then turning east to west and terminating within residential development.

Davidson Parkway is a two-lane undivided local roadway with a posted speed limit of 25 mph. South of SR 138/Lake Spivey Parkway, Davidson Parkway runs in a quarter-circle in the southwest quadrant of SR 42 and SR 138 serving as connection for residential developments, then turns to run south/southeast before turning to an east-west direction and intersecting Walter Way and continuing to run east to west before intersecting with SR 42/North Henry Boulevard to the east. North of SR 138/Lake Spivey Parkway, Davidson Parkway serves commercial and residential development.

Walt Stephens Road/Red Oak Road is a two-lane undivided roadway with a posted speed limit of 45 mph that runs primarily east to west and is named Red Oak Road east of the intersection with Flippen Road. The roadway is functionally classified as an Urban Minor Arterial and primarily serves residential developments.

Banks Road is a two-lane undivided local roadway with a posted speed limit of 35 mph that runs east to west from Flippen Road to Rock Quarry Road just south of Red Oak Road. Banks Road primarily serves residential developments.

Speer Road is a two-lane undivided roadway with a posted speed limit of 45 mph that runs primarily north to south from Walt Stephens Road to SR 138/Lake Spivey Parkway. The roadway is functionally classified as an Urban Minor Arterial and primarily serves residential developments.

Spivey Road is a two-lane undivided local roadway just west of Speer Road with a posted speed limit of 40 mph that runs north to south from Walt Stephens Road to SR 138/Lake Spivey Parkway. The roadway is functionally classified as an Urban Minor Arterial and serves primarily residential developments.

Rock Quarry Road is a two-lane undivided roadway with a posted speed limit of 35 mph that runs primarily north to south from Eagles Landing Parkway to SR 42/138/US 23/North Henry Boulevard. The roadway is functionally classified as an Urban Minor Arterial and serves residential and commercial developments.

I-75 is an interstate freeway which runs north to south along the western side of the proposed development. I-75 splits with I-675 north of the site and continues running north/northwest toward the south end of I-285.

I-675 is an interstate freeway which splits from I-75 north of the site. At the interchange with SR 138/Lake Spivey Parkway, the interstate runs north to south and continues north toward southeast I-285.

2.3 Study Network

The study network was identified primarily by the Georgia Regional Transportation Authority's (GRTA's) 7% rule and was approved during the DRI Pre-Review Meeting on April 18, 2019 for the proposed DRI. The intersections analyzed in this report are listed in Table 3 and study segments are listed in Table 4. The existing lane geometry is shown in Figure 4**.**

2.4 Traffic Data

Traffic counts were performed at the study intersections on Thursday, May 9th, 2019 while school was in session. The AM peak hour was determined to be 7:15 AM-8:15 AM and the PM peak hour was determined to be 5:00 PM-6:00 PM. The peak hour turning movement volumes are shown graphically in Figure 5**.** Additional 24-hour bi-directional vehicle classification counts were collected on Walt Stephens Road east of the I-75 bridge, on Flippen Road just south of Fairhaven Road, and on Spivey Road. The raw traffic counts are included in APPENDIX C.

2.5 Existing Capacity Analysis

The existing traffic volumes were analyzed using a Synchro 10.0 model to determine the capacity of the AM and PM peak hours. The results are shown by lane group movement and total intersection capacity. Average vehicular delays are shown in seconds. Level of service (LOS) is a grading system as defined by the Highway Capacity Manual (HCM) where A is best, and F is worst. The typical Level of Service standard is D in an urban and/or suburban area. However, for this DRI, if in Existing Conditions, the LOS is E or F, the prevailing LOS standard for Background and Build conditions shall be E. The HCM 6th Edition was used for analysis. Table 5 shows the Existing Capacity Analysis. Synchro output files are included in APPENDIX D.

Table 5: Existing Conditions Capacity Analysis

The SR 42-138/US 23/North Henry Boulevard and SR 138/Lake Spivey Parkway corridors are managed corridors; due to the large volume of vehicles traveling in either direction on each corridor, mainline traffic volume is prioritized at the expense of minor road movement delay. Signal timings used in analysis are included in the Synchro output files in APPENDIX D.

Intersections not listed below currently operate with a LOS of D or better. The following intersections currently experience inadequate LOS during one or both peak hours:

SR 138 at SR 42/US 23/N Henry Blvd

- Intersection is LOS E during the PM peak hour
- LOS standard for Background and Build conditions is LOS E during the PM peak hour

SR 42-138/US 23/N Henry Blvd at Flippen Rd/Shields Rd

- Intersection is LOS E during the PM peak hour
- LOS standard for Background and Build conditions is LOS E during the PM peak hour

SR 42-138/US 23/N Henry Blvd at Davidson Pkwy

- Eastbound single-lane shared approach is LOS F during both peak hours
- Westbound single-lane shared approach is LOS F during both peak hours
- Delays in both scenarios is caused by left-turning vehicles experiencing severe delay in attempting to make the left turn movement onto the mainline. This is not uncommon for side street stop-controlled intersections.
- LOS standard for Background and Build conditions is LOS E for both side street approaches during both peak hours.

SR 42-138/US 23/N Henry Blvd at SR 138/Stockbridge Rd & Walmart Dwy

- Intersection is LOS F during the PM peak hour
- LOS standard for Background and Build conditions is LOS E during the PM peak hour

Walt Stephens Rd at Spivey Rd

- Southbound single-lane shared approach is LOS F during the AM peak hour
- Delay in the AM peak hour is caused by left-turning vehicles experiencing severe delay in attempting to make the left turn movement onto the mainline. This is not uncommon for side street stop-controlled intersections.
- LOS standard for Background and Build conditions is LOS E during the AM peak hour for the southbound approach.

Flippen Rd at Walt Stephens Rd/Red Oak Rd

- Intersection is LOS F during the PM peak hour
- LOS standard for Background and Build conditions is LOS E during the PM peak hour.

Rock Quarry Rd at Red Oak Rd

- Eastbound single-lane shared approach is LOS E during the AM peak hour and LOS F during the PM peak hour
- Westbound single-lane shared approach is LOS E during the PM peak hour
- Delay for the eastbound single-lane approach during both peak hours is caused by left-turning vehicles experiencing severe delay in attempting to make the left turn movement onto the mainline. This is not uncommon for side street stop-controlled intersections.
- LOS standard for Background and Build conditions is LOS E during both peak hours for the eastbound approach and LOS E during the PM peak hour for the westbound approach.

2.6 Existing Conditions Required Improvements

Improvements were identified for intersections with inadequate LOS in Existing Conditions. These improvements are independent of Background Conditions and were not specifically considered for Background Conditions Required Improvements or Build Required Improvements. The GRTA Technical Guidelines do not allow for the consideration of simple timing changes to be used as mitigation, but phase changes may be considered. All required improvements are to be geometric in nature; however, it might be possible in some locations to improve the intersection to LOS D or E with simple adjustments to signal timing. The results of the Existing Conditions Required Improvements capacity analysis are shown in Table 6.

The following improvements are needed for Existing Conditions:

SR 42-138/US 23/N Henry Blvd at Davidson Pkwy

- Add 1 EBR lane, 1 WBR lane, 1 SBR lane

SR 42-138/US 23/N Henry Blvd at SR 138/Stockbridge Rd & Walmart Dwy

- Add 1 EBL lane, 1 NBT lane, 1 SBR lane

Walt Stephens Rd at Spivey Rd

- Add 1 SBR lane, 1 EBL lane, 1 WBR lane

Flippen Rd at Walt Stephens Rd/Red Oak Rd

- Make EBR free flow right turn lane (add lane on Flippen Rd south of intersection)

Rock Quarry Rd at Red Oak Rd

- Add 1 EBR lane, 1 NBL lane, 1 NBT lane

Table 6: Existing Conditions Required Improvements Capacity Analysis

Intersection	Control	Lane Group Movement	AM Peak Hour		PM Peak Hour	
			Delay (s)	LOS	Delay (s)	LOS

		EB Approach	**26.4**	**D**	**32.5**	**D**
		WB L+T+R	24.0	C	37.2	**E**
		NB L+T	9.3	A	9.2	A
		SB L+T	8.2	A	8.6	A
		Intersection	2.8	-	4.7	-

SR 42-138/US 23/N Henry Blvd at Davidson Pkwy

While the approach delays are reduced significantly, the addition of right turn lanes on both the eastbound and westbound approaches only improves the LOS on the eastbound approach during the AM peak hour to LOS E. Other improvements would need to be considered at this location to improve the LOS further, such as a traffic signal control or an alternative intersection design, including but not limited to a Restricted Crossing U-Turn (RCUT), Right-In/Right-Out Only (RIRO), or Median U-Turn (MUT).

SR 42-138/US 23/N Henry Blvd at SR 138/Stockbridge Rd & Walmart Dwy

The lane additions described previously help to improve the LOS from F to E in the PM peak hour.

Walt Stephens Rd at Spivey Rd

While the approach delay is reduced significantly, the addition of a right turn lane on the southbound approach does not improve the approach LOS beyond F in the AM peak hour. Other improvements would need to be considered at this location to improve the LOS further, such as a traffic signal control or an alternative intersection design, including but not limited to a Restricted Crossing U-Turn (RCUT), Right-In/Right-Out Only (RIRO), or Median U-Turn (MUT).

Flippen Rd at Walt Stephens Rd/Red Oak Rd
The lane additions described previously help to improve the LOS from F to C in the PM peak hour.

Rock Quarry Rd at Red Oak Rd
The addition of a right turn lane on the eastbound approach improves the approach LOS to D in both peak hours. The LOS is improved further by the addition of northbound left and through lanes, helping to create more desirable gaps in traffic for vehicles on the side streets to accept.

2.7 Existing Segment Analysis

A segment capacity analysis was performed for all study roadway segments using HCS 7. The results of the segment analysis are summarized in Table 7. HCS 7 output files are included in APPENDIX D**.**

Table 7: Existing Segment Capacity Analysis

#	Segment	From	To	AM		PM	
				NB / EB	SB / WB	NB / EB	SB / WB
1	Flippen Rd	Banks Rd	Walt Stephens Rd/Red Oak Rd	C	C	D	**E**
2	Flippen Rd	Walt Stephens Rd/Red Oak Rd	SR 42-138/US 23/N Henry Blvd	C	B	C	D
3	Banks Rd	Flippen Rd	Rock Quarry Rd	C	B	C	B
4	Rock Quarry Rd	Banks Rd	SR 42-138/US 23/N Henry Blvd	C	D	C	C
5	SR 42/US 23/ N Henry Blvd	SR 138/Stockbridge Rd	Valley Hill Rd	D	C	C	D
6	SR 42-138/US 23/N Henry Blvd	SR 138/Stockbridge Rd	Flippen Rd	B	C	D	C

15	SR 138/Lake Spivey Pkwy	I-675 SB	I-675 NB	C	B	D	C
16	SR 138/Lake Spivey Pkwy	Hannover Pkwy	I-675 SB	B	C	C	C
17	SR 138/Lake Spivey Pkwy	Mt Zion Rd	Hannover Pkwy	B	C	C	C
18	SR 138/Lake Spivey Pkwy	I-75 NB	Mt Zion Rd	B	C	C	C
19	SR 138/Lake Spivey Pkwy	I-75 SB	I-75 NB	C	B	D	C
20	SR 138/Lake Spivey Pkwy	Speer Rd/Mt Zion Pkwy	I-75 SB	C	B	C	D
21	SR 138/Lake Spivey Pkwy	Spivey Rd	Speer Rd/Mt Zion Pkwy	B	B	B	B
22	Davidson Pkwy	SR 138/Stockbridge Rd	SR 42-138/US 23/N Henry Blvd	A	B	B	B
23	Speer Rd	Walt Stephens Rd	SR 138/Lake Spivey Pkwy	D	B	C	D
24	Spivey Rd	Walt Stephens Rd	SR 138/Lake Spivey Pkwy	B	A	A	A
25	Red Oak Rd	Flippen Rd	Rock Quarry Rd	A	A	B	A
26	Walt Stephens Rd	Brentwood Pkwy/Monarch Village Way	Flippen Rd	D	D	D	C
27	Walt Stephens Rd	Speer Rd/Blackhall Rd	Brentwood Pkwy/Monarch Village Way	C	D	**E**	C
28	Walt Stephens Rd	Spivey Rd	Speer Rd/Blackhall Rd	B	C	C	B

All existing roadway segments operate at LOS D or better for all peak hours and directions, with the exceptions of the southbound direction on Flippen Road from Banks Road to Walt Stephens Road/Red Oak Road during the PM peak hour and the eastbound direction on Walt Stephens Road from Speer Road/Blackhall Road to Brentwood Parkway/Monarch Village Way during the PM peak hour. However, since the existing LOS is E at these locations, that is the standard LOS for Background and Build conditions.

3 Background Conditions

3.1 Background Traffic Growth

Background traffic growth is the analysis method of analyzing historic trends in traffic volumes, population growth, and future growth projections to determine an annual growth rate which is applied to the existing traffic counts on the study network. A growth rate of 2% was determined and approved for analysis during the DRI Pre-Review Meeting on April 18, 2019.

The following intersection approaches and departures were assumed to be fully built out and therefore were not applied the 2% growth rate:

- SR 42-138/US 23/North Henry Boulevard at Davidson Parkway – east leg (Walmart/commercial driveway)
- SR 42-138/US 23/North Henry Boulevard at SR 138/Stockbridge Road/Walmart driveway – east leg (Walmart primary driveway)
- SR 138/Stockbridge Road at Walter Way – north leg (commercial driveway)
- SR 138/Stockbridge Road at Daniel Drive – south leg (commercial driveway)
- SR 138/Stockbridge Road at Davidson Parkway – north leg (serves commercial and fully built-out residential development)
- SR 138/Lake Spivey Parkway at Hannover Parkway – north leg (serves commercial and no-outlet fully built-out residential development), south leg (serves commercial and no-outlet fully built-out residential development)
- SR 138/Lake Spivey Parkway at Mount Zion Road – south leg (commercial driveway)
- Walt Stephens Road at Brentwood Parkway/Monarch Village Way – north leg (no outlet fully built-out residential development), south leg (fully built-out no-outlet residential development)
- Flippen Road at Banks Road/Village Way – west leg (no outlet fully built-out residential development)
- Rock Quarry Road at Banks Road/Carrington Ridge – east leg (no-outlet fully built-out residential development)
- Rock Quarry Road at Red Oak Road/Red Oak Village – east leg (Red Oak Village driveway)
- Flippen Road at Fairhaven Road – east leg (no outlet fully built-out residential development)

There are no planned projects in the area which are expected to change the traffic patterns from existing conditions. The background turning movement volumes for 2029 are shown in Figure 6. The background turning movement volumes for 2035 are shown in Section 3.4 in Figure 7.

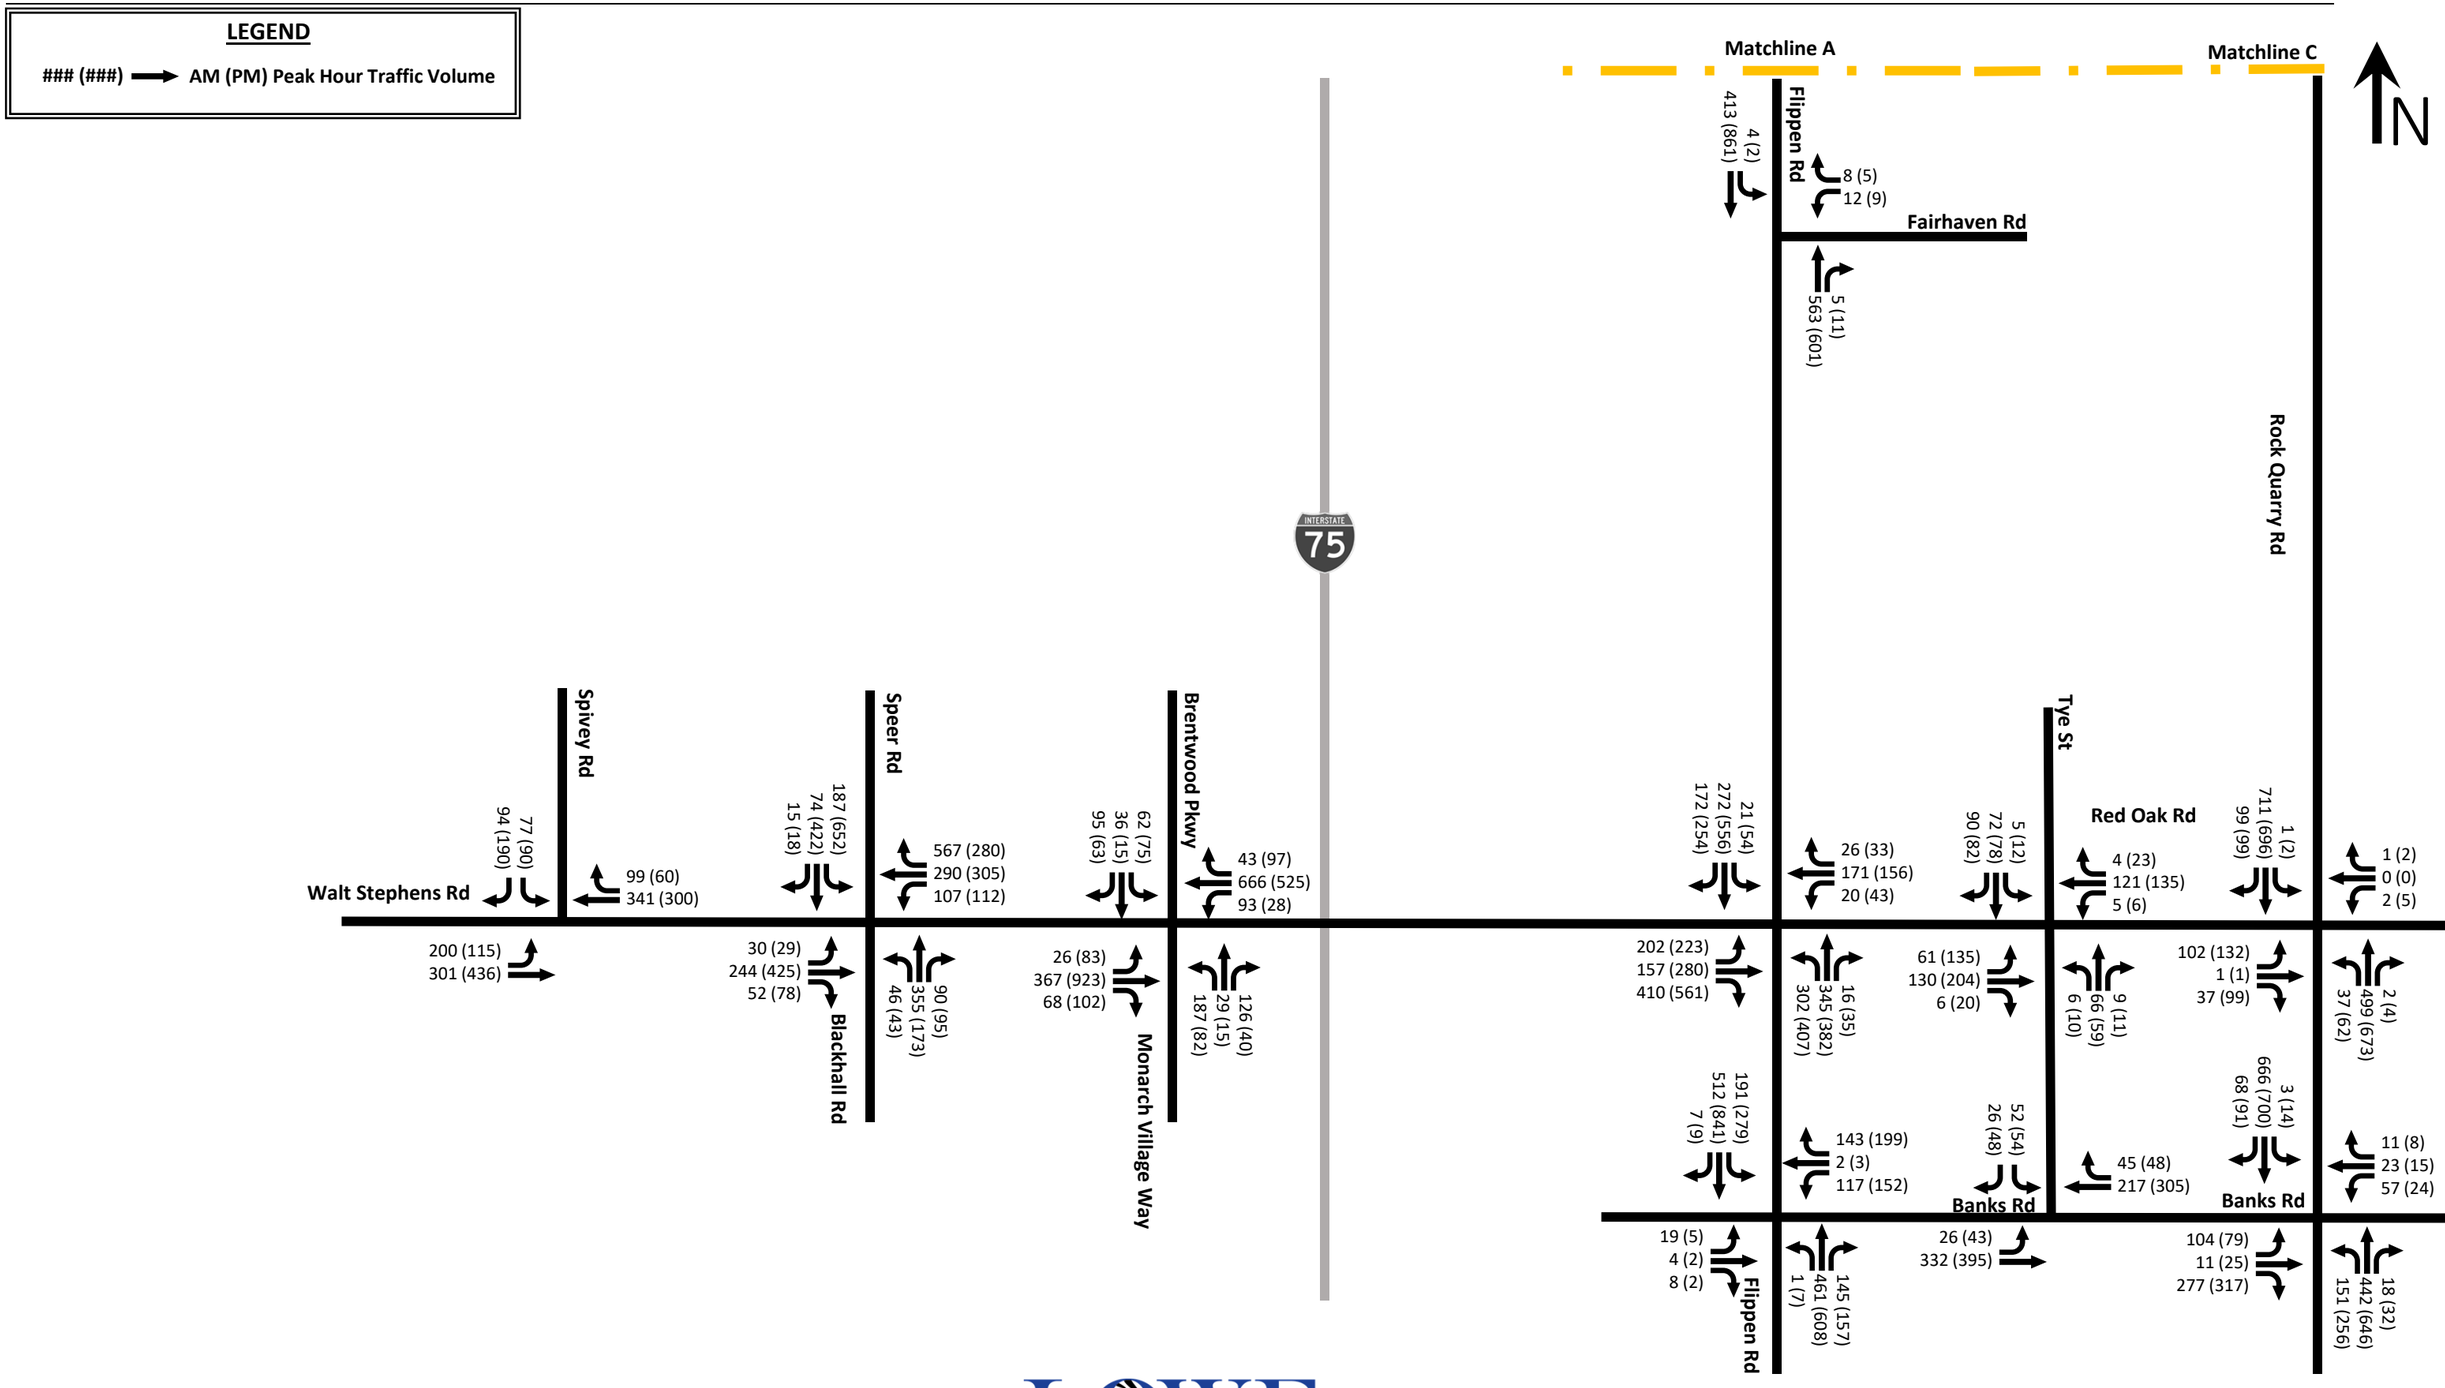
3.2 Background Lane Geometry

Background lane geometry is the same as existing conditions except for the following programmed improvements. Further information on these programmed improvements can be found in APPENDIX B.

- GDOT P.I. No. 322050 – SR 42 from 0.15 miles south of SR 138/Henry to I-675/Clayton. GDOT: "The project begins at the SR 138 intersection, north of Stockbridge, and extends 2.2 miles along SR 42/US 23 in a northwesterly direction to the concrete approach slab of the overpass structure carrying SR 42 over I-675. The project begins at MP 22.26 in Henry County and extends to the Clayton County line at MP 23.61 and then the project continues from MP 0 in Clayton County to I-675 northbound ramps at MP 0.89 in Clayton County."

- Currently, SR 42/US 23 from SR 138/Stockbridge Road to I-675 is a two-lane undivided roadway. The project will widen SR 42/US 23 from SR 138/Stockbridge Road to I-675 from two lanes to a four-lane median divided highway.
- At this time, the project is expected to be completed and open to traffic in the year 2022. Therefore, this project was considered in the lane geometry for Background Conditions in 2029 and 2035.
- The project includes the following improvements at the following two study intersections:
  - SR 42-138/US 23/North Henry Boulevard at SR 138/Stockbridge Road/Walmart
    - One Northbound through lane added
    - One Southbound right turn lane added
    - One Eastbound left turn lane added
  - SR 42/US 23/North Henry Boulevard at Valley Hill Road
    - One Northbound through lane added
    - One Southbound through lane added

- GDOT P.I. No 0015090 – Rock Quarry Road from Eagles Landing Pkwy to SR 42/SR 138. GDOT: "Rock Quarry Road project is a reconstruction project. Rock Quarry Road will be widened beginning at Eagles Landing Parkway north to SR 42/138. The total miles for the widening project is 2.60 in length. This project is located in the 13th Congressional District. Rock Quarry Road in Henry County is classified as an urban minor arterial. It is a two-lane north-south facility that connects motorists from SR 42 to Eagles Landing Parkway. Rock Quarry Road has intermittent turn lanes at various locations and has no continuous linear sidewalks. There are a large number of commercial and industrial businesses along the proposed project segment, as well as residential housing. This project is currently identified in the Atlanta Regional Commission's (ARC) Regional Transportation Plan (RTP), Plan 2040, and is included in the Transportation Improvement Program (TIP). This project is located within the Atlanta MPO boundary and is listed in the TIP as HE-161A."
  - Currently, Rock Quarry Road from Eagles Landing Parkway to SR 42-138 is a two-lane undivided roadway. The project will widen Rock Quarry Road from Eagles Landing Parkway to SR 42-138 from two lanes to a four-lane median divided highway.
  - At this time, the project is expected to be completed and open to traffic in the year 2024. Therefore, this project was considered in the lane geometry for Background Conditions in 2029 and 2035.
  - The project includes the following improvements at the following two study intersections:
    - Rock Quarry Road at Banks Road/Carrington Ridge
      - One Northbound through lane added, at the expense of the existing right turn lane
      - One Southbound through lane added
      - One Southbound right turn lane added
    - Rock Quarry Road at Red Oak Road/Red Oak Village driveway
      - The intersection will be transformed into an unsignalized Restricted Crossing U-Turn (RCUT) as part of the widening. The side street approaches will only be able to turn right and make a U-turn at a designated median opening. However, left turns from Rock Quarry Road will still be physically allowed.
      - One Northbound through lane added
      - One Northbound left turn lane added
      - One Southbound through lane added
      - One Southbound left turn lane added



3.3 Background 2029

3.3.1 Background 2029 Capacity Analysis

The Background 2029 traffic volumes were analyzed using a Synchro 10.0 model to determine the capacity of the AM and PM peak hours. The existing geometry and programmed improvements described in Section 3.2 were employed for the intersection capacity analysis. The results are shown by lane group movement and total intersection capacity. Average vehicular delays are shown in seconds. Level of service (LOS) is a grading system as defined by the Highway Capacity Manual (HCM) where A is best, and F is worst. The HCM 6th Edition was used for analysis. Table 8 shows the Background 2029 Capacity Analysis. Synchro output files are included in APPENDIX D**.**

All traffic signal timings remain the same as in existing conditions.

*actual value too high to calculate

The following intersections are expected to experience inadequate LOS in Background 2029 Conditions during one or both peak hours:

SR 138 at SR 42/US 23/N Henry Blvd

- The intersection LOS worsens from C to E during the AM peak hour and from E to F during the PM peak hour.
- LOS standard for Background and Build conditions is LOS E during the PM peak hour.

SR 42-138/US 23/N Henry Blvd at E Atlanta Rd/Harrel Dr

- The intersection LOS worsens from D to F during the AM peak hour and from C to E during the PM peak hour.

SR 42-138/US 23/N Henry Blvd at Flippen Rd/Shields Rd

- The intersection LOS worsens from E to F during the PM peak hour.
- LOS standard for Background and Build conditions is LOS E during the PM peak hour.

SR 42-138/US 23/N Henry Blvd at Davidson Pkwy

- Both the eastbound and westbound single-lane shared approaches remain LOS F during both peak hours. As can be expected, the delay worsens significantly.
- Delays in both scenarios is caused by left-turning vehicles experiencing severe delay in attempting to make the left turn movement onto the mainline. This is not uncommon for side street stop-controlled intersections.

SR 42-138/US 23/N Henry Blvd at SR 138/Stockbridge Rd & Walmart Dwy

- The intersection LOS remains F during the PM peak hour as in Existing Conditions despite the programmed improvements.
- LOS standard for Background and Build conditions is LOS E during the PM peak hour.

SR 138/Stockbridge Rd at Davidson Pkwy

- The intersection LOS worsens from D to E during the PM peak hour.

SR 138/Lake Spivey Pkwy at I-675 SB

- The intersection LOS worsens from C to F during the PM peak hour.

SR 138/Lake Spivey Pkwy at I-75 NB

- The intersection LOS worsens from C to E during the AM peak hour.

SR 138/Lake Spivey Pkwy at I-75 SB

- The intersection LOS worsens from D to E during the PM peak hour.

SR 138 at Speer Rd/Mt Zion Pkwy

- The intersection LOS worsens from D to F during the AM peak hour and from D to E during the PM peak hour.

Walt Stephens Rd at Spivey Rd

- Southbound single-lane shared approach remains LOS F during the AM peak hour and worsens from C to F during the PM peak hour. As can be expected, the delay worsens significantly during the AM peak hour.
- Delay in the AM peak hour is caused by left-turning vehicles experiencing severe delay in attempting to make the left turn movement onto the mainline. This is not uncommon for side street stop-controlled intersections.

Walt Stephens Rd at Speer Rd/Blackhall Rd

- The intersection LOS worsens from C to E during the AM peak hour; however, the delay is 58.4 seconds, which is only 3.4 seconds beyond LOS D.

Flippen Rd at Walt Stephens Rd/Red Oak Rd

- The intersection LOS remains F during the PM peak hour.
- LOS standard for Background and Build conditions is LOS E during the PM peak hour.

3.3.2 Background 2029 Capacity Analysis Required Improvements

Improvements were identified for intersections with inadequate LOS in Background 2029 Conditions. GRTA Technical Guidelines do not allow for the consideration of simple timing changes to be used as mitigation, but phase changes may be considered. All required improvements are to be geometric in nature; however, it might be possible in some locations to improve the intersection to LOS D or E with simple adjustments to signal timing. The results of the Background 2029 Conditions Required Improvements capacity analysis are shown in Table 9.

All traffic signal timings remain the same as in Background 2029 Conditions, except for the following intersections:

- SR 42-138/US 23/North Henry Boulevard at SR 138/Stockbridge Road and Walmart driveway
  - Changed side street phasing from split phasing to leading protected+permissive left turns.
- SR 138/Stockbridge Road at Davidson Parkway
  - Changed side street phasing from split phasing to permissive phasing due to proposed geometry change on northbound approach from shared left+through+right to shared through+right.
- Any intersection proposed to go from a single lane left turn to two or more left turn lanes received protected only left turn phasing for that approach.

The following improvements are needed for Background 2029 Conditions:

SR 138 at SR 42/US 23/N Henry Blvd

- Add 1 NBL lane, 1 NBR lane

SR 42-138/US 23/N Henry Blvd at E Atlanta Rd/Harrel Dr

- Add 1 WBR lane, 1 SBL lane

SR 42-138/US 23/N Henry Blvd at Flippen Rd/Shields Rd

- Add 1 EBR lane, 1 NBL lane

SR 42-138/US 23/N Henry Blvd at Davidson Pkwy

- Add 1 EBR lane, 1 WBR lane, 1 SBR lane

SR 42-138/US 23/N Henry Blvd at SR 138/Stockbridge Rd & Walmart Dwy

- Changed phasing from split phasing on side streets to protected+permissive left turns followed by permissive left turns and through movements.

SR 138/Stockbridge Rd at Davidson Pkwy

- Change Northbound approach geometry from NBL/NB L+T+R to NBL/NB T+R, add 1 SBR lane.

SR 138/Lake Spivey Pkwy at I-675 SB

- Add 1 EBT lane, 1 EBR lane

SR 138/Lake Spivey Pkwy at I-75 NB

- Add 1 NBL lane

SR 138/Lake Spivey Pkwy at I-75 SB

- Add 1 SBR lane

SR 138/Lake Spivey Pkwy at Speer Rd/Mt Zion Pkwy

- Add 1 NBR lane

Walt Stephens Rd at Spivey Rd

- Add 1 SBR lane, 1 EBL lane, 1 WBR lane

Walt Stephens Rd at Speer Rd/Blackhall Rd

- Add 1 WBR lane

Flippen Rd at Walt Stephens Rd/Red Oak Rd

- Make EBR free flow right turn lane (add lane on Flippen Rd south of intersection)

Flippen Rd @ Walt Stephens Rd/Red Oak Rd	Traffic Signal	Intersection	26.4	C	47.1	D

SR 138 at SR 42/US 23/N Henry Blvd

The required 2029 Background conditions improvements described above help to improve the LOS from F to E in the PM peak hour.

SR 42-138/US 23/N Henry Blvd at E Atlanta Rd/Harrel Dr

The required 2029 Background conditions improvements described above help to improve the LOS from F to D in the AM peak hour and from E to D in the PM peak hour.

SR 42-138/US 23/N Henry Blvd at Flippen Rd/Shields Rd

The required 2029 Background conditions improvements described above help to improve the LOS from F to D in the PM peak hour.

SR 42-138/US 23/N Henry Blvd at Davidson Pkwy
While the approach delays are reduced significantly, the addition of right turn lanes on both the eastbound and westbound approaches do not improve the LOS beyond F on either approach during either peak hour. Other improvements would need to be considered at this location to improve the LOS further, such as a traffic signal control or an alternative intersection design, including but not limited to a Restricted Crossing U-Turn (RCUT), Right-In/Right-Out Only (RIRO), or Median U-Turn (MUT).

SR 42-138/US 23/N Henry Blvd at SR 138/Stockbridge Rd & Walmart Dwy
The required 2029 Background conditions improvements described above help to improve the LOS from F to E in the PM peak hour.

SR 138/Stockbridge Rd at Davidson Pkwy
The required 2029 Background conditions improvements described above help to improve the LOS from E to C in the PM peak hour.

SR 138/Lake Spivey Pkwy at I-675 SB
The required 2029 Background conditions improvements described above help to improve the LOS from F to C in the PM peak hour.

SR 138/Lake Spivey Pkwy at I-75 NB
The required 2029 Background conditions improvements described above help to improve the LOS from E to D in the AM peak hour.

SR 138/Lake Spivey Pkwy at I-75 SB
The required 2029 Background conditions improvements described above help to improve the LOS from E to D in the PM peak hour.

SR 138/Lake Spivey Pkwy at Speer Rd/Mt Zion Pkwy
The required 2029 Background conditions improvements described above help to improve the LOS from F to D in the AM peak hour and from E to D in the PM peak hour.

Walt Stephens Rd at Spivey Rd
While the approach delay is reduced significantly, the addition of a right turn lane on the southbound approach does not improve the approach LOS beyond F in the AM peak hour; however, in the PM peak hour, the southbound left turn movement LOS is E, but the overall southbound approach LOS is C. Other improvements would need to be considered at this location to improve the LOS further, such as a traffic signal control or an alternative intersection design, including but not limited to a Restricted Crossing U-Turn (RCUT), Right-In/Right-Out Only (RIRO), or Median U-Turn (MUT).

Walt Stephens Rd at Speer Rd/Blackhall Rd
The required 2029 Background conditions improvements described above help to improve the LOS from E to C in the AM peak hour.

Flippen Rd at Walt Stephens Rd/Red Oak Rd
The required 2029 Background conditions improvements described above help to improve the LOS from F to D in the PM peak hour.

3.3.3 Background 2029 Segment Analysis

A segment capacity analysis was performed for all study roadway segments using HCS 7 software and HCM 6th Edition methodology. The existing geometry and programmed improvements described in Section 3.2 were employed for the segment analysis. The results of the segment analysis are summarized in Table 10. HCS 7 output files are included in APPENDIX D.

Table 10: Background 2029 Segment Capacity Analysis

28	Walt Stephens Rd	Spivey Rd	Speer Rd/Blackhall Rd	B	C	C	B

The following segments are expected to experience inadequate LOS in Background 2029 Conditions during one or both peak hours:

Flippen Rd from Banks Rd to Walt Stephens Rd/Red Oak Rd

- The segment is expected to operate at LOS E during the PM peak hour in the southbound direction.
- LOS standard for Background and Build conditions is LOS E during the PM peak hour in the southbound direction.

Flippen Rd from Walt Stephens Rd/Red Oak Rd to SR 42-138/US 23/N Henry Blvd

- The segment is expected to operate at LOS E during the PM peak hour in the southbound direction.

SR 42-138/US 23/N Henry Blvd from SR 138/Stockbridge Rd to Flippen Rd

- The segment is expected to operate at LOS E during the PM peak hour in the eastbound direction.

SR 42-138/US 23/N Henry Blvd from E Atlanta Rd/Harrel Dr to S Lee St

- The segment is expected to operate at LOS E during the PM peak hour in the eastbound direction.

SR 138/Lake Spivey Pkwy from I-675 NB to Davidson Pkwy

- The segment is expected to operate at LOS E during the PM peak hour in the eastbound direction.

SR 138/Lake Spivey Pkwy from I-675 SB to I-675 NB

- The segment is expected to operate at LOS E during the PM peak hour in the eastbound direction.

Speer Rd from Walt Stephens Rd to SR 138/Lake Spivey Pkwy

- The segment is expected to operate at LOS E during the AM peak hour in the northbound direction.
- The segment is expected to operate at LOS E during the PM peak hour in the southbound direction.

Walt Stephens Rd from Brentwood Pkwy/Monarch Village Way to Flippen Rd

- The segment is expected to operate at LOS E during the PM peak hour in the eastbound direction.

Walt Stephens Rd from Speer Rd/Blackhall Rd to Brentwood Pkwy/Monarch Village Way

- The segment is expected to operate at LOS E during the AM peak hour in the westbound direction.
- The segment is expected to operate at LOS E during the PM peak hour in the eastbound direction.
- LOS standard for Background and Build conditions is E during the PM peak hour in the eastbound direction.

3.3.4 Background 2029 Segment Analysis Required Improvements

At roadway segments that are expected to experience inadequate LOS in Background 2029 conditions, one lane was added to mitigate the inadequate LOS. The results of the Background 2029 Segment Analysis with Improvements are shown below in Table 11.

Table 11: Background 2029 Segment Analysis with Improvements

				AM		PM	
#	Segment	From	To	NB / EB	SB / WB	NB / EB	SB / WB
2	Flippen Rd	Walt Stephens Rd/Red Oak Rd	SR 42-138/US 23/N Henry Blvd	-	A	-	B

27	Walt Stephens Rd	Speer Rd/Blackhall Rd	Brentwood Pkwy/Monarch Village Way	-	B	-	A

Flippen Rd from Walt Stephens Rd/Red Oak Rd to SR 42-138/US 23/N Henry Blvd

- The LOS in the southbound direction is expected to improve from E to B during the PM peak hour.

SR 42-138/US 23/N Henry Blvd from SR 138/Stockbridge Rd to Flippen Rd

- The LOS in the eastbound direction is expected to improve from E to C during the PM peak hour.

SR 42-138/US 23/N Henry Blvd from E Atlanta Rd/Harrel Dr to S Lee St

- The LOS in the eastbound direction is expected to improve from E to C during the PM peak hour.

SR 138/Lake Spivey Pkwy from I-675 NB to Davidson Pkwy

- The LOS in the eastbound direction is expected to improve from E to C during the PM peak hour.

SR 138/Lake Spivey Pkwy from I-675 SB to I-675 NB

- The LOS in the eastbound direction is expected to improve from E to D during the PM peak hour.

Speer Rd from Walt Stephens Rd to SR 138/Lake Spivey Pkwy

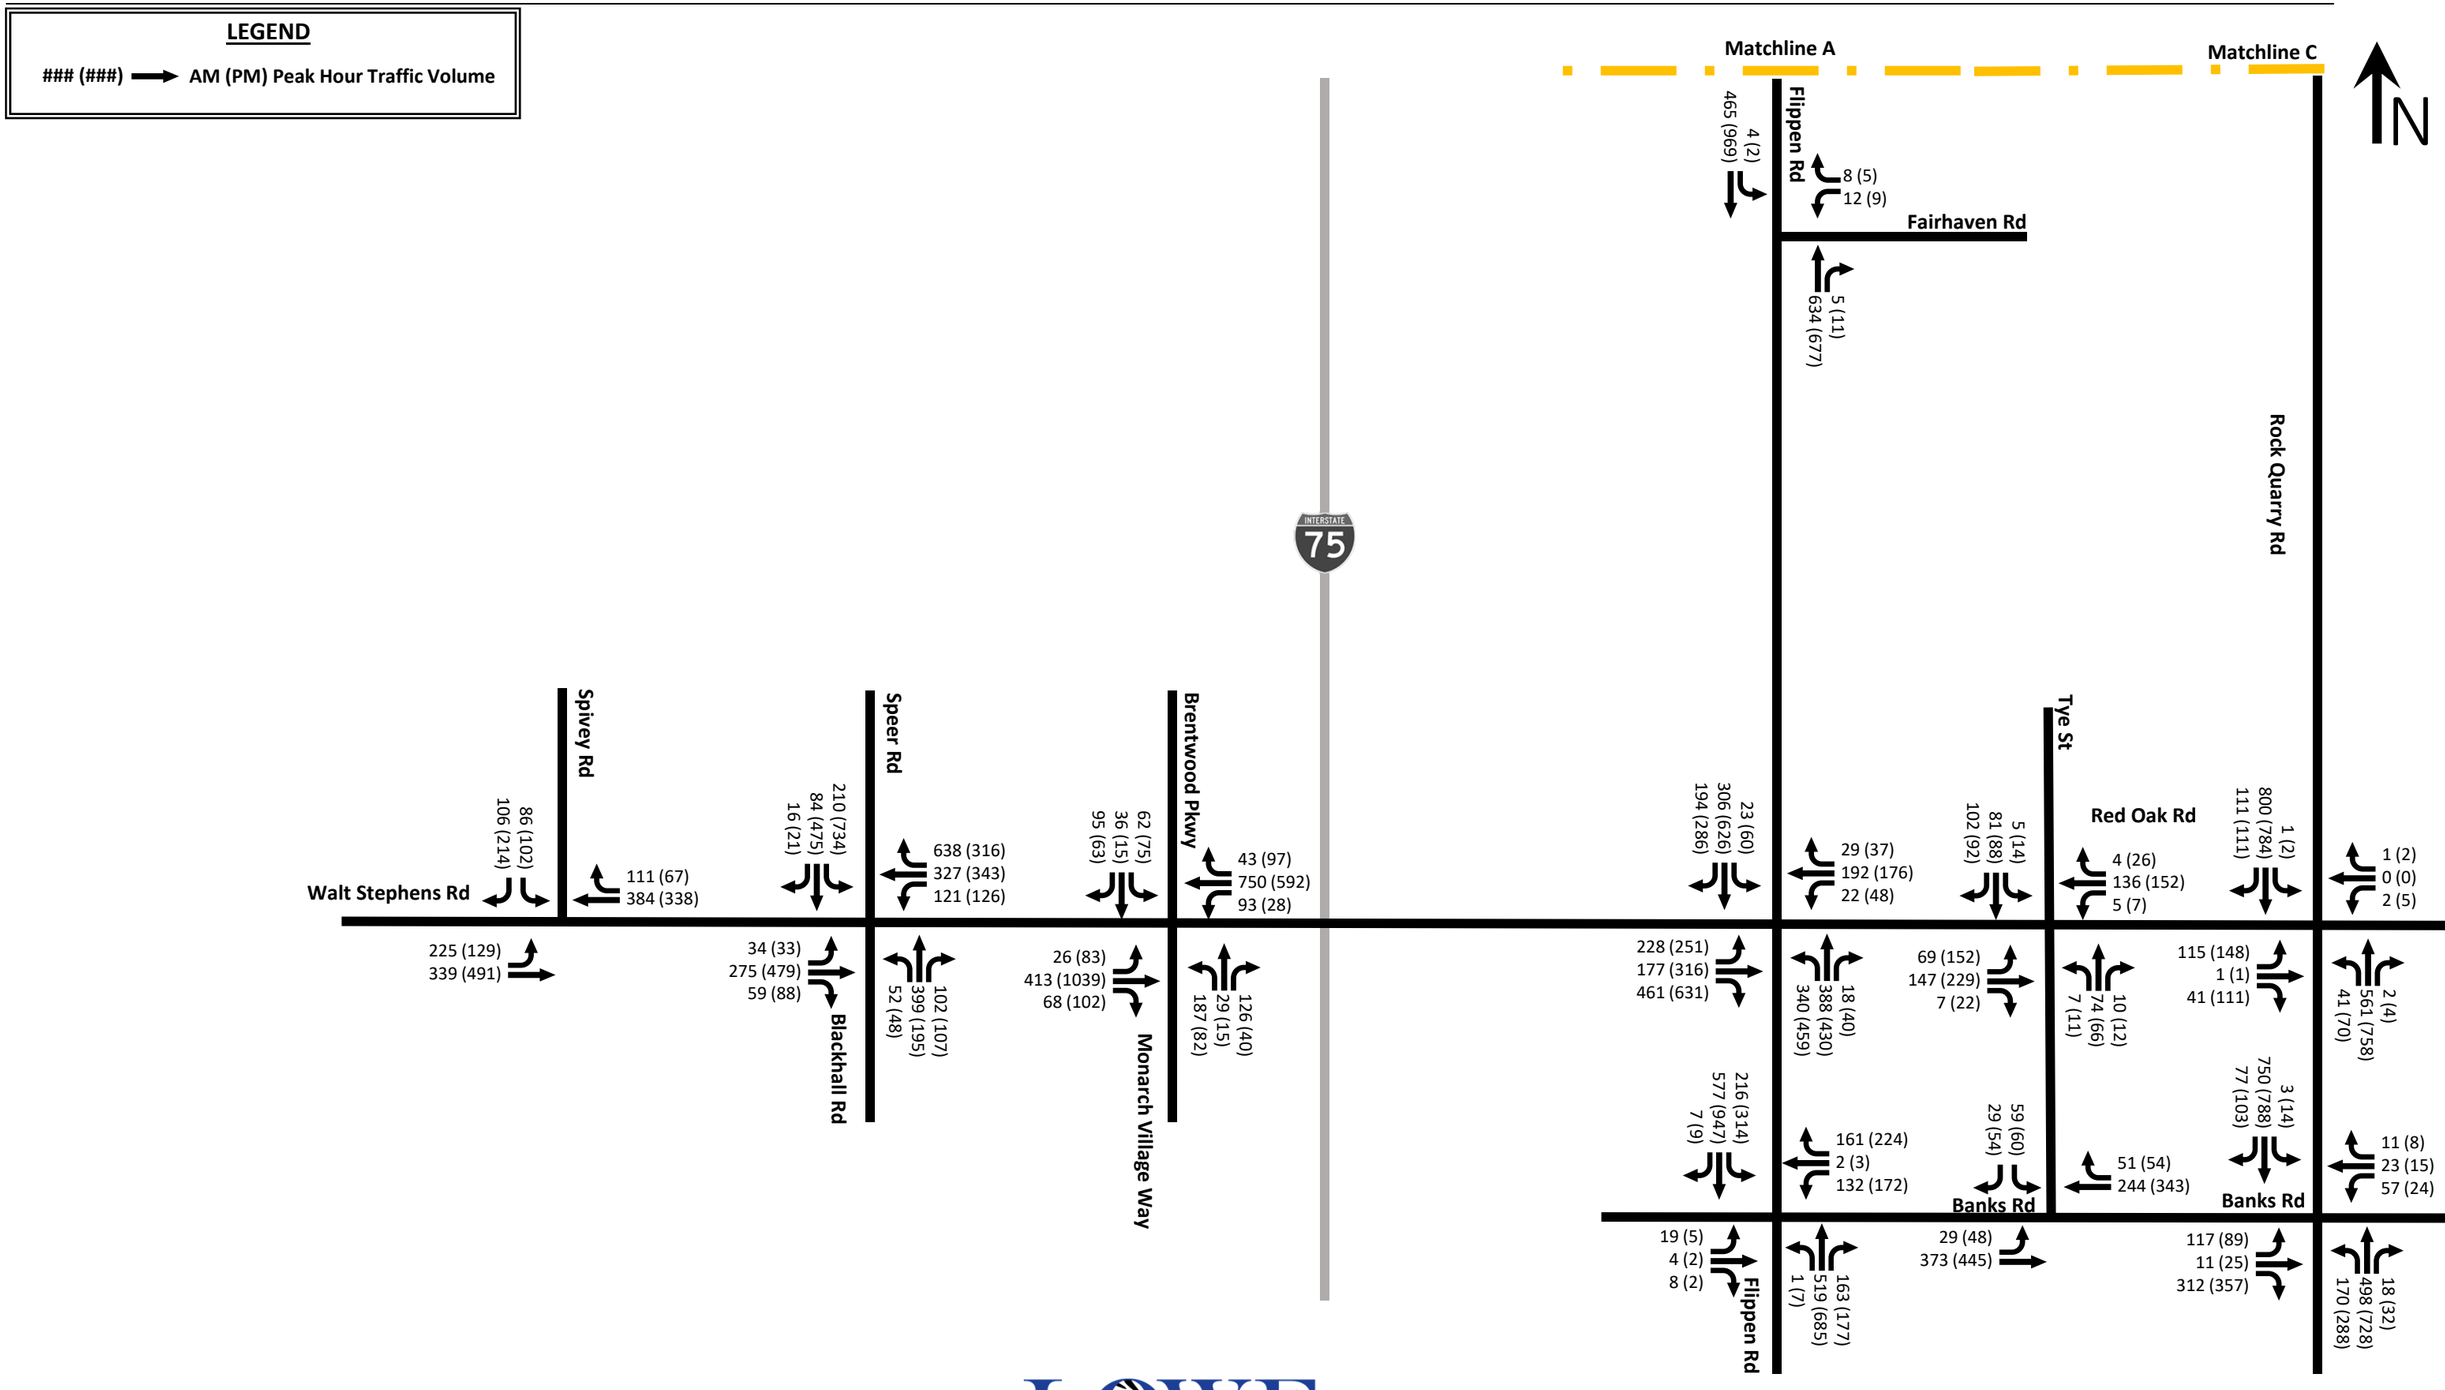
- The LOS in the northbound direction is expected to improve from E to B during the AM peak hour.
- The LOS in the southbound direction is expected to improve from E to B during the PM peak hour.

Walt Stephens Rd from Brentwood Pkwy/Monarch Village Way to Flippen Rd

- The LOS in the eastbound direction is expected to improve from E to B during the PM peak hour.

Walt Stephens Rd from Speer Rd/Blackhall Rd to Brentwood Pkwy/Monarch Village Way

- The LOS in the westbound direction is expected to improve from E to B during the AM peak hour.



3.4 Background 2035

3.4.1 Background 2035 Capacity Analysis

The Background 2035 traffic volumes were analyzed using a Synchro 10.0 model to determine the capacity of the AM and PM peak hours. The existing geometry and programmed improvements described in Section 3.2 were employed for the intersection capacity analysis. The results are shown by lane group movement and total intersection capacity. Average vehicular delays are shown in seconds. Level of service (LOS) is a grading system as defined by the Highway Capacity Manual (HCM) where A is best, and F is worst. The HCM 6th Edition was used for analysis. Table 12 shows the Background 2035 Capacity Analysis. Synchro output files are included in APPENDIX D**.**

All traffic signal timings remain the same as in existing conditions.

*actual value too high to calculate

The following intersections are expected to experience inadequate LOS in Background 2035 Conditions during one or both peak hours:

SR 138 at SR 42/US 23/N Henry Blvd

- The intersection LOS worsens from C to E during the AM peak hour and from E to F during the PM peak hour.
- LOS standard for Background and Build conditions is LOS E during the PM peak hour.

SR 42-138/US 23/N Henry Blvd at Rock Quarry Rd

- The intersection LOS worsens from C to E during the AM peak hour and from C to F during the PM peak hour.

SR 42-138/US 23/N Henry Blvd at E Atlanta Rd/Harrel Dr

- The intersection LOS worsens from D to F during the AM peak hour and from C to F during the PM peak hour.

SR 42-138/US 23/N Henry Blvd at Flippen Rd/Shields Rd

- The intersection LOS worsens from E to F during the PM peak hour.
- LOS standard for Background and Build conditions is LOS E during the PM peak hour.

SR 42-138/US 23/N Henry Blvd at Davidson Pkwy

- Both the eastbound and westbound shared left+through+right movements remain LOS F during both peak hours.
- Northbound left turn movement LOS worsens from C to F.
- Delays in both scenarios is caused by left-turning vehicles experiencing severe delay in attempting to make the left turn movement onto the mainline. This is not uncommon for side street stop-controlled intersections.

SR 42-138/US 23/N Henry Blvd at SR 138/Stockbridge Rd & Walmart Dwy

- The intersection LOS remains F during the PM peak hour.
- LOS standard for Background and Build conditions is LOS E during the PM peak hour.

SR 138/Stockbridge Rd at Davidson Pkwy

- The intersection LOS worsens from D to F during the PM peak hour.

SR 138/Lake Spivey Pkwy at I-675 NB

- The intersection LOS worsens from C to E during the AM peak hour and from B to F during the PM peak hour.

SR 138/Lake Spivey Pkwy at I-675 SB

- The intersection LOS worsens from C to F during the PM peak hour.

SR 138/Lake Spivey Pkwy at I-75 NB

- The intersection LOS worsens from C to F during the AM peak hour.

SR 138/Lake Spivey Pkwy at I-75 SB

- The intersection LOS worsens from D to F during the PM peak hour.

SR 138 at Speer Rd/Mt Zion Pkwy

- The intersection LOS worsens from D to F during the AM peak hour and from D to E during the PM peak hour.

Walt Stephens Rd at Spivey Rd

- Southbound left+right movement LOS remains LOS F during the AM peak hour and worsens from C to F during the PM peak hour.
- Delay in both scenarios is caused by left-turning vehicles experiencing severe delay in attempting to make the left turn movement onto the mainline. This is not uncommon for side street stop-controlled intersections.

Walt Stephens Rd at Speer Rd/Blackhall Rd

- The intersection LOS worsens from C to F during the AM peak hour.

Flippen Rd at Walt Stephens Rd/Red Oak Rd

- The intersection LOS remains F during the PM peak hour.
- LOS standard for Background and Build conditions is LOS E during the PM peak hour.

Flippen Rd at Fairhaven Rd

- The westbound shared left+right approach LOS worsens from C to E during the PM peak hour; however, the delay is 40.8 seconds, which is only 5.8 seconds beyond LOS D.

3.4.2 Background 2035 Capacity Analysis Required Improvements

Improvements were identified for intersections with inadequate LOS in Background 2035 Conditions. GRTA Technical Guidelines do not allow for the consideration of simple timing changes to be used as mitigation, but phase changes may be considered. All required improvements are to be geometric in nature; however, it might be possible in some locations to improve the intersection to LOS D or E with simple adjustments to signal timing. The results of the Background 2035 Conditions Required Improvements capacity analysis are shown in Table 13.

All traffic signal timings remain the same as in Background 2035 Conditions, except for the following:

- SR 42-138/US 23/North Henry Boulevard at SR 138/Stockbridge Road and Walmart driveway
  - Changed side street phasing from split phasing to leading protected+permissive left turns
- SR 138/Stockbridge Road at Davidson Parkway
  - Changed side street phasing from split phasing to permissive phasing due to proposed geometry change on northbound approach from shared left+through+right to shared through+right.
- Any intersection proposed to go from a single lane left turn to two or more left turn lanes received protected only left turn phasing for that approach.

The following improvements are needed for Background 2035 Conditions:

SR 138 at SR 42/US 23/N Henry Blvd

- Add 1 EBR lane, 1 WBL lane, 1 NBL lane, 1 NBR lane

SR 42-138/US 23/N Henry Blvd at Rock Quarry Rd

- Add 1 NBL lane, 1 NBR lane

SR 42-138/US 23/N Henry Blvd at E Atlanta Rd/Harrel Dr

- Add 1 EBL lane, 1 WBR lane, 1 NBL lane, 2 SBL lanes

SR 42-138/US 23/N Henry Blvd at Flippen Rd/Shields Rd

- Add 1 EBR lane, 1 NBL lane

SR 42-138/US 23/N Henry Blvd at Davidson Pkwy

- Add 1 EBR lane, 1 WBR lane, 1 SBR lane

SR 42-138/US 23/N Henry Blvd at SR 138/Stockbridge Rd & Walmart Dwy

- Add 1 EBT lane, 1 SBT lane

SR 138/Stockbridge Rd at Davidson Pkwy

- Add 1 EBT lane, 1 SBL lane

SR 138/Lake Spivey Pkwy at I-675 NB

- Add 1 EBT lane, 1 EBL lane, 1 NBR lane

SR 138/Lake Spivey Pkwy at I-675 SB

- Add 1 EBT, 1 EBR

SR 138/Lake Spivey Pkwy at I-75 NB

- Add 1 EBL lane, 1 WBR lane, 1 NBL lane

SR 138/Lake Spivey Pkwy at I-75 SB

- Add 1 SBR lane

SR 138/Lake Spivey Pkwy at Speer Rd/Mt Zion Pkwy

- Add 1 EBT lane, 1 WBT lane, 1 NBR lane

Walt Stephens Rd at Spivey Rd

- Add 1 EBL lane, 1 WBR lane, 1 SBR lane

Walt Stephens Rd at Speer Rd/Blackhall Rd

- Add 1 WBR lane

Flippen Rd at Walt Stephens Rd/Red Oak Rd

- Make EBR free flow right turn lane (add lane on Flippen Rd south of intersection)

Flippen Rd at Fairhaven Rd

- Add 1 WBR lane

Table 13: Background 2035 Capacity Analysis with Improvements

SR 138 at SR 42/US 23/N Henry Blvd
The required 2035 Background conditions improvements described above help to improve the LOS from E to C in the AM peak hour and from F to D in the PM peak hour.

SR 42-138/US 23/N Henry Blvd at Rock Quarry Rd
The required 2035 Background conditions improvements described above help to improve the LOS from E to D in the AM peak hour and from F to D in the PM peak hour.

SR 42-138/US 23/N Henry Blvd at E Atlanta Rd/Harrel Dr
The required 2035 Background conditions improvements described above help to improve the LOS from F to D in the AM peak hour and from F to D in the PM peak hour.

SR 42-138/US 23/N Henry Blvd at Davidson Pkwy
While the approach delays are reduced significantly, the addition of right turn lanes on both the eastbound and westbound approaches do not improve the LOS beyond F on either approach during either peak hour. Other improvements would need to be considered at this location to improve the LOS further, such as a traffic signal control or an alternative intersection design, including but not limited to a Restricted Crossing U-Turn (RCUT), Right-In/Right-Out Only (RIRO), or Median U-Turn (MUT).

SR 42-138/US 23/N Henry Blvd at SR 138/Stockbridge Rd & Walmart Dwy
The required 2035 Background conditions improvements described above help to improve the LOS from F to E in the PM peak hour.

SR 138/Stockbridge Rd at Davidson Pkwy
The required 2035 Background conditions improvements described above help to improve the LOS from F to C in the PM peak hour.

SR 138/Lake Spivey Pkwy at I-675 NB
The required 2035 Background conditions improvements described above help to improve the LOS from E to C in the AM peak hour and from F to C in the PM peak hour.

SR 138/Lake Spivey Pkwy at I-675 SB
The required 2035 Background conditions improvements described above help to improve the LOS from F to C in the PM peak hour.

SR 138/Lake Spivey Pkwy at I-75 NB
The required 2035 Background conditions improvements described above help to improve the LOS from F to C in the AM peak hour.

SR 138/Lake Spivey Pkwy at I-75 SB
The required 2035 Background conditions improvements described above help to improve the LOS from F to D in the PM peak hour.

SR 138/Lake Spivey Pkwy at Speer Rd/Mt Zion Pkwy
The required 2035 Background conditions improvements described above help to improve the LOS from F to D in the AM peak hour and from E to D in the PM peak hour.

Walt Stephens Rd at Spivey Rd
While the approach delay is reduced significantly, the addition of a right turn lane on the southbound approach does not improve the approach LOS beyond F in the AM peak hour; however, in the PM peak hour, the southbound left turn movement LOS is F, but the overall southbound approach LOS is D. Other improvements would need to be considered at this location to improve the LOS further, such as a traffic signal control or an alternative intersection design, including but not limited to a Restricted Crossing U-Turn (RCUT), Right-In/Right-Out Only (RIRO), or Median U-Turn (MUT).

Walt Stephens Rd at Speer Rd/Blackhall Rd
The required 2035 Background conditions improvements described above help to improve the LOS from F to C in the AM peak hour.

Flippen Rd at Walt Stephens Rd/Red Oak Rd
The required 2035 Background conditions improvements described above help to improve the LOS from F to E in the PM peak hour.

Flippen Rd at Fairhaven Rd
The lane additions described previously help to improve the westbound approach LOS from F to E in the PM peak hour. The addition of a right turn lane on the westbound approach does not improve the approach LOS beyond E in the PM peak hour. Other improvements would need to be considered at this location to improve the LOS further, such as a traffic signal control or an alternative intersection design, including but not limited to a Restricted Crossing U-Turn (RCUT), Right-In/Right-Out Only (RIRO), or Median U-Turn (MUT).

3.4.3 Background 2035 Segment Analysis
A segment capacity analysis was performed for all study roadway segments using HCS 7 software and HCM 6th Edition methodology. The existing geometry and programmed improvements described in Section 3.2 were employed for the segment analysis. The results of the segment analysis are summarized in Table 14. HCS 7 output files are included in APPENDIX D**.**

The following segments are expected to experience inadequate LOS in Background 2035 Conditions during one or both peak hours:

Flippen Rd from Banks Rd to Walt Stephens Rd/Red Oak Rd

- The segment is expected to operate at LOS E during the PM peak hour in both directions.
- LOS standard for Background and Build conditions is LOS E during the PM peak hour in the southbound direction.

Flippen Rd from Walt Stephens Rd/Red Oak Rd to SR 42-138/US 23/N Henry Blvd

- The segment is expected to operate at LOS E during the PM peak hour in the southbound direction.

SR 42-138/N Henry Blvd from SR 138/Stockbridge Rd to Flippen Rd

- The segment is expected to operate at LOS E during the PM peak hour in the eastbound direction.

SR 42-138/N Henry Blvd from Harrel Dr/E Atlanta Rd to S Lee St

- The segment is expected to operate at LOS E during the PM peak hour in the eastbound direction.

SR 42-138/US 23/N Henry Blvd from S Lee St to Rock Quarry Rd

- The segment is expected to operate at LOS E during the PM peak hour in the eastbound direction.

SR 42-138/US 23/N Henry Blvd from Rock Quarry Rd to SR 42/US 23/N Henry Blvd

- The segment is expected to operate at LOS E during the PM peak hour in the eastbound direction.

SR 138/Stockbridge Rd from Daniel Dr to Walter Way

- The segment is expected to operate at LOS E during the PM peak hour in the eastbound direction.

SR 138/Lake Spivey Pkwy from I-675 NB to Davidson Pkwy

- The segment is expected to operate at LOS E during the PM peak hour in the eastbound direction.

SR 138/Lake Spivey Pkwy from I-675 SB to I-675 NB

- The segment is expected to operate at LOS F during the PM peak hour in the eastbound direction.

SR 138/Lake Spivey Pkwy from I-75 SB to I-75 NB

- The segment is expected to operate at LOS E during the PM peak hour in the eastbound direction.

SR 138/Lake Spivey Pkwy from Speer Rd/Mt Zion Pkwy to I-75 SB

- The segment is expected to operate at LOS E during the PM peak hour in the westbound direction.

Speer Rd from Walt Stephens Rd to SR 138/Lake Spivey Pkwy

- The segment is expected to operate at LOS E during the AM peak hour in the northbound direction and at LOS E during the PM peak hour in the southbound direction.

Walt Stephens Rd from Brentwood Pkwy/Monarch Village Way to Flippen Rd

- The segment is expected to operate at LOS E during both peak hours in the eastbound direction and at LOS E during the AM peak hour in the westbound direction.

Walt Stephens Rd from Speer Rd/Blackhall Rd to Brentwood Pkwy/Monarch Village Way

- The segment is expected to operate at LOS E during the AM peak hour in the westbound direction and at LOS E during the PM peak hour in the eastbound direction.

3.4.4 Background 2035 Segment Analysis Required Improvements

At roadway segments that are expected to experience inadequate LOS in Background 2035 conditions, one lane was added to mitigate the inadequate LOS. The results of the Background 2035 Segment Analysis with Improvements are shown below in Table 15.

Table 15: Background 2035 Segment Analysis with Improvements

				AM		PM

27	Walt Stephens Rd	Speer Rd/Blackhall Rd	Brentwood Pkwy/Monarch Village Way	-	B	-	A

Flippen Rd from Banks Rd to Walt Stephens Rd/Red Oak Rd

- The LOS in the northbound direction is expected to improve from E to B during the PM peak hour.

Flippen Rd from Walt Stephens Rd/Red Oak Rd to SR 42-138/US 23/N Henry Blvd

- The LOS in the westbound direction is expected to improve from E to B during the PM peak hour.

SR 42-138/US 23/N Henry Blvd from SR 138/Stockbridge Rd to Flippen Rd

- The LOS in the eastbound direction is expected to improve from E to D during the PM peak hour.

SR 42-138/US 23/N Henry Blvd from Harrel Dr/E Atlanta Rd to S Lee St

- The LOS in the eastbound direction is expected to improve from E to D during the PM peak hour.

SR 42-138/US 23/N Henry Blvd from S Lee St to Rock Quarry Rd

- The LOS in the eastbound direction is expected to improve from E to C during the PM peak hour.

SR 42-138/US 23/N Henry Blvd from Rock Quarry Rd to SR 42/US 23/N Henry Blvd

- The LOS in the eastbound direction is expected to improve from E to C during the PM peak hour.

SR 138/Lake Spivey Pkwy from Daniel Dr to Walter Way

- The LOS in the eastbound direction is expected to improve from E to C during the PM peak hour.

SR 138/Lake Spivey Pkwy from I-675 NB to Davidson Pkwy

- The LOS in the eastbound direction is expected to improve from E to D during the PM peak hour.

SR 138/Lake Spivey Pkwy from I-675 SB to I-675 NB

- The LOS in the eastbound direction is expected to improve from F to D during the PM peak hour.

SR 138/Lake Spivey Pkwy from I-75 SB to I-75 NB

- The LOS in the eastbound direction is expected to improve from E to C during the PM peak hour.

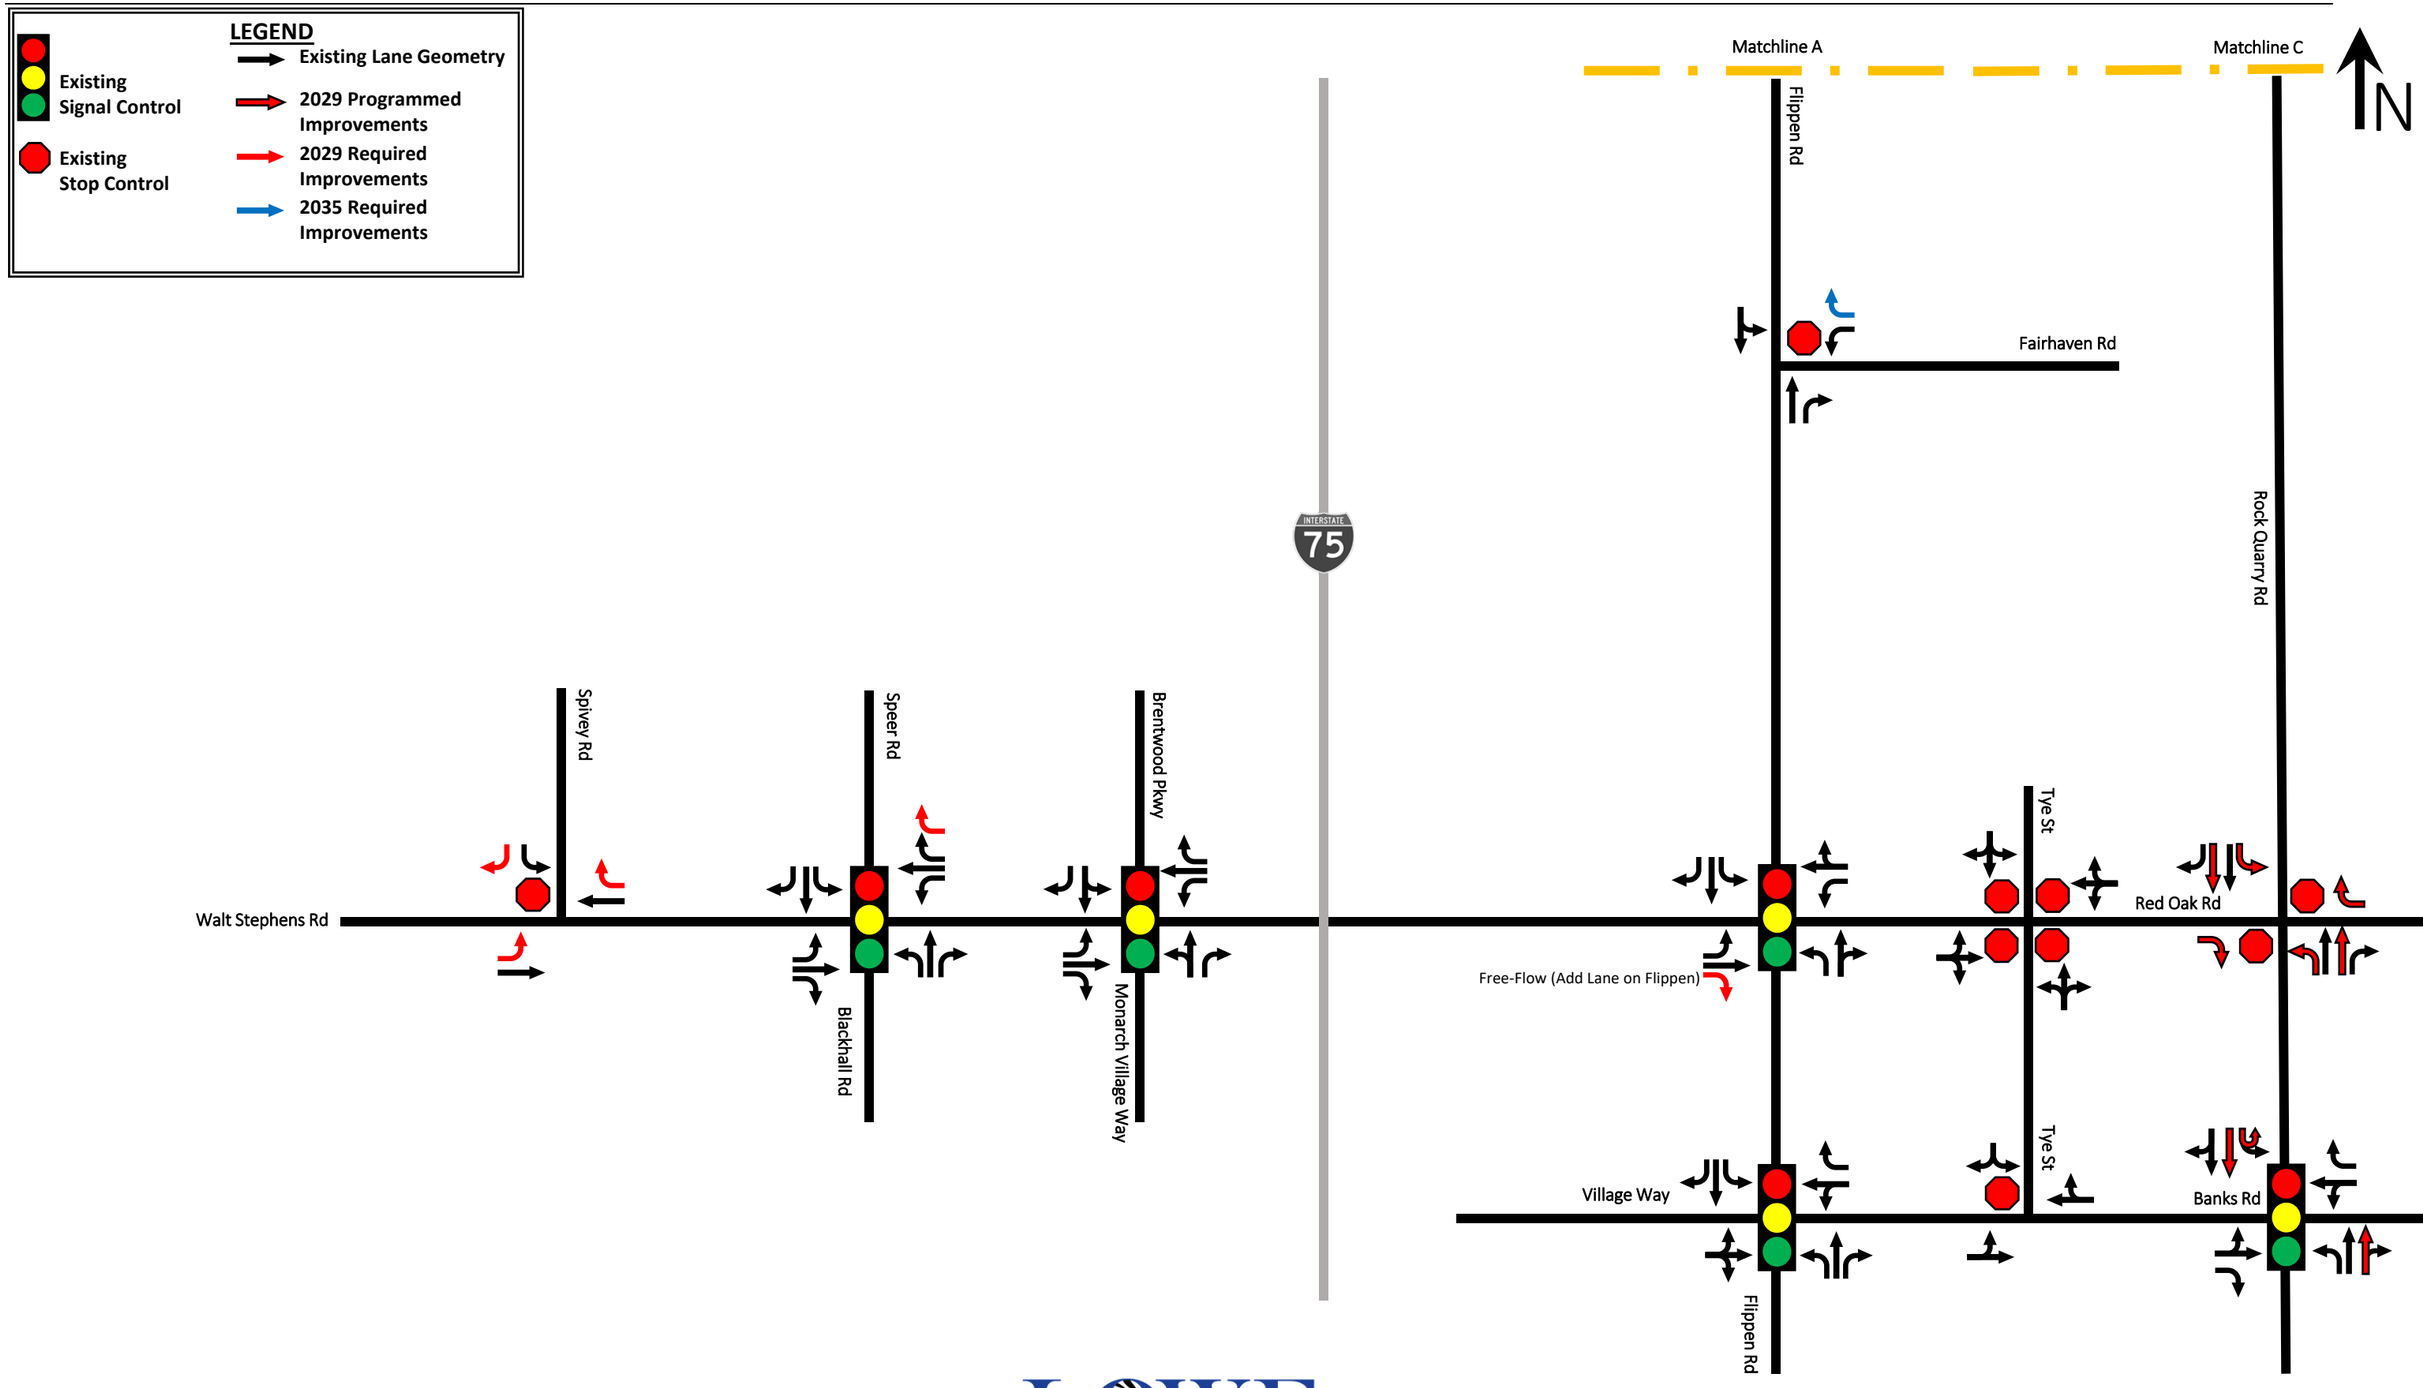
SR 138/Lake Spivey Pkwy from Speer Rd/Mt Zion Pkwy to I-75 SB

- The LOS in the westbound direction is expected to improve from E to C during the PM peak hour.

Speer Rd from Walt Stephens Rd to SR 138/Lake Spivey Pkwy

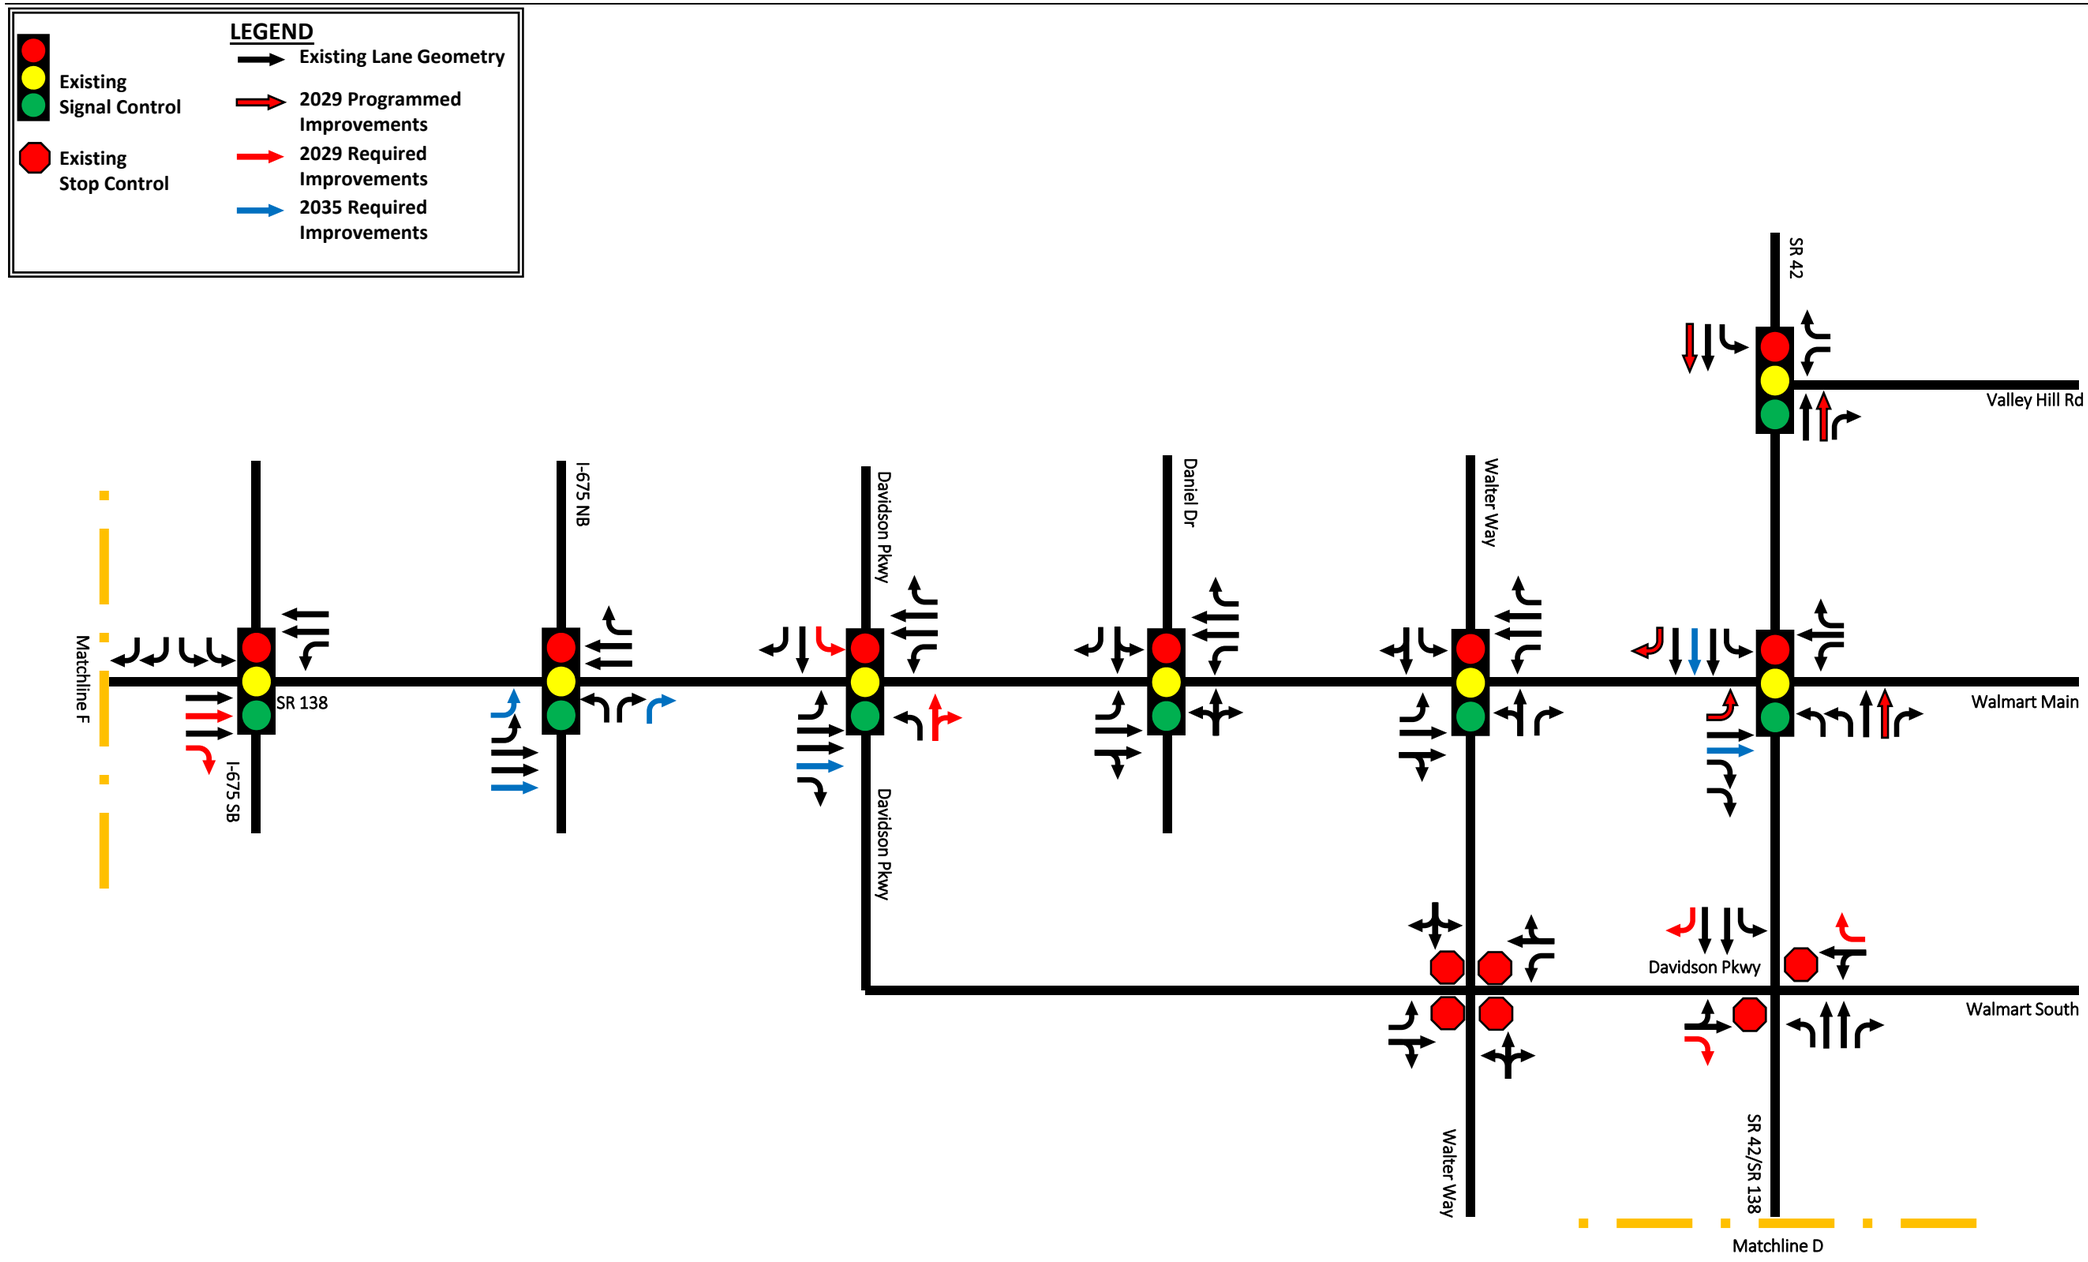
- The LOS in the northbound direction is expected to improve from E to B during the AM peak hour.
- The LOS in the southbound direction is expected to improve from E to B during the PM peak hour.

Walt Stephens Rd from Brentwood Pkwy/Monarch Village Way to Flippen Rd



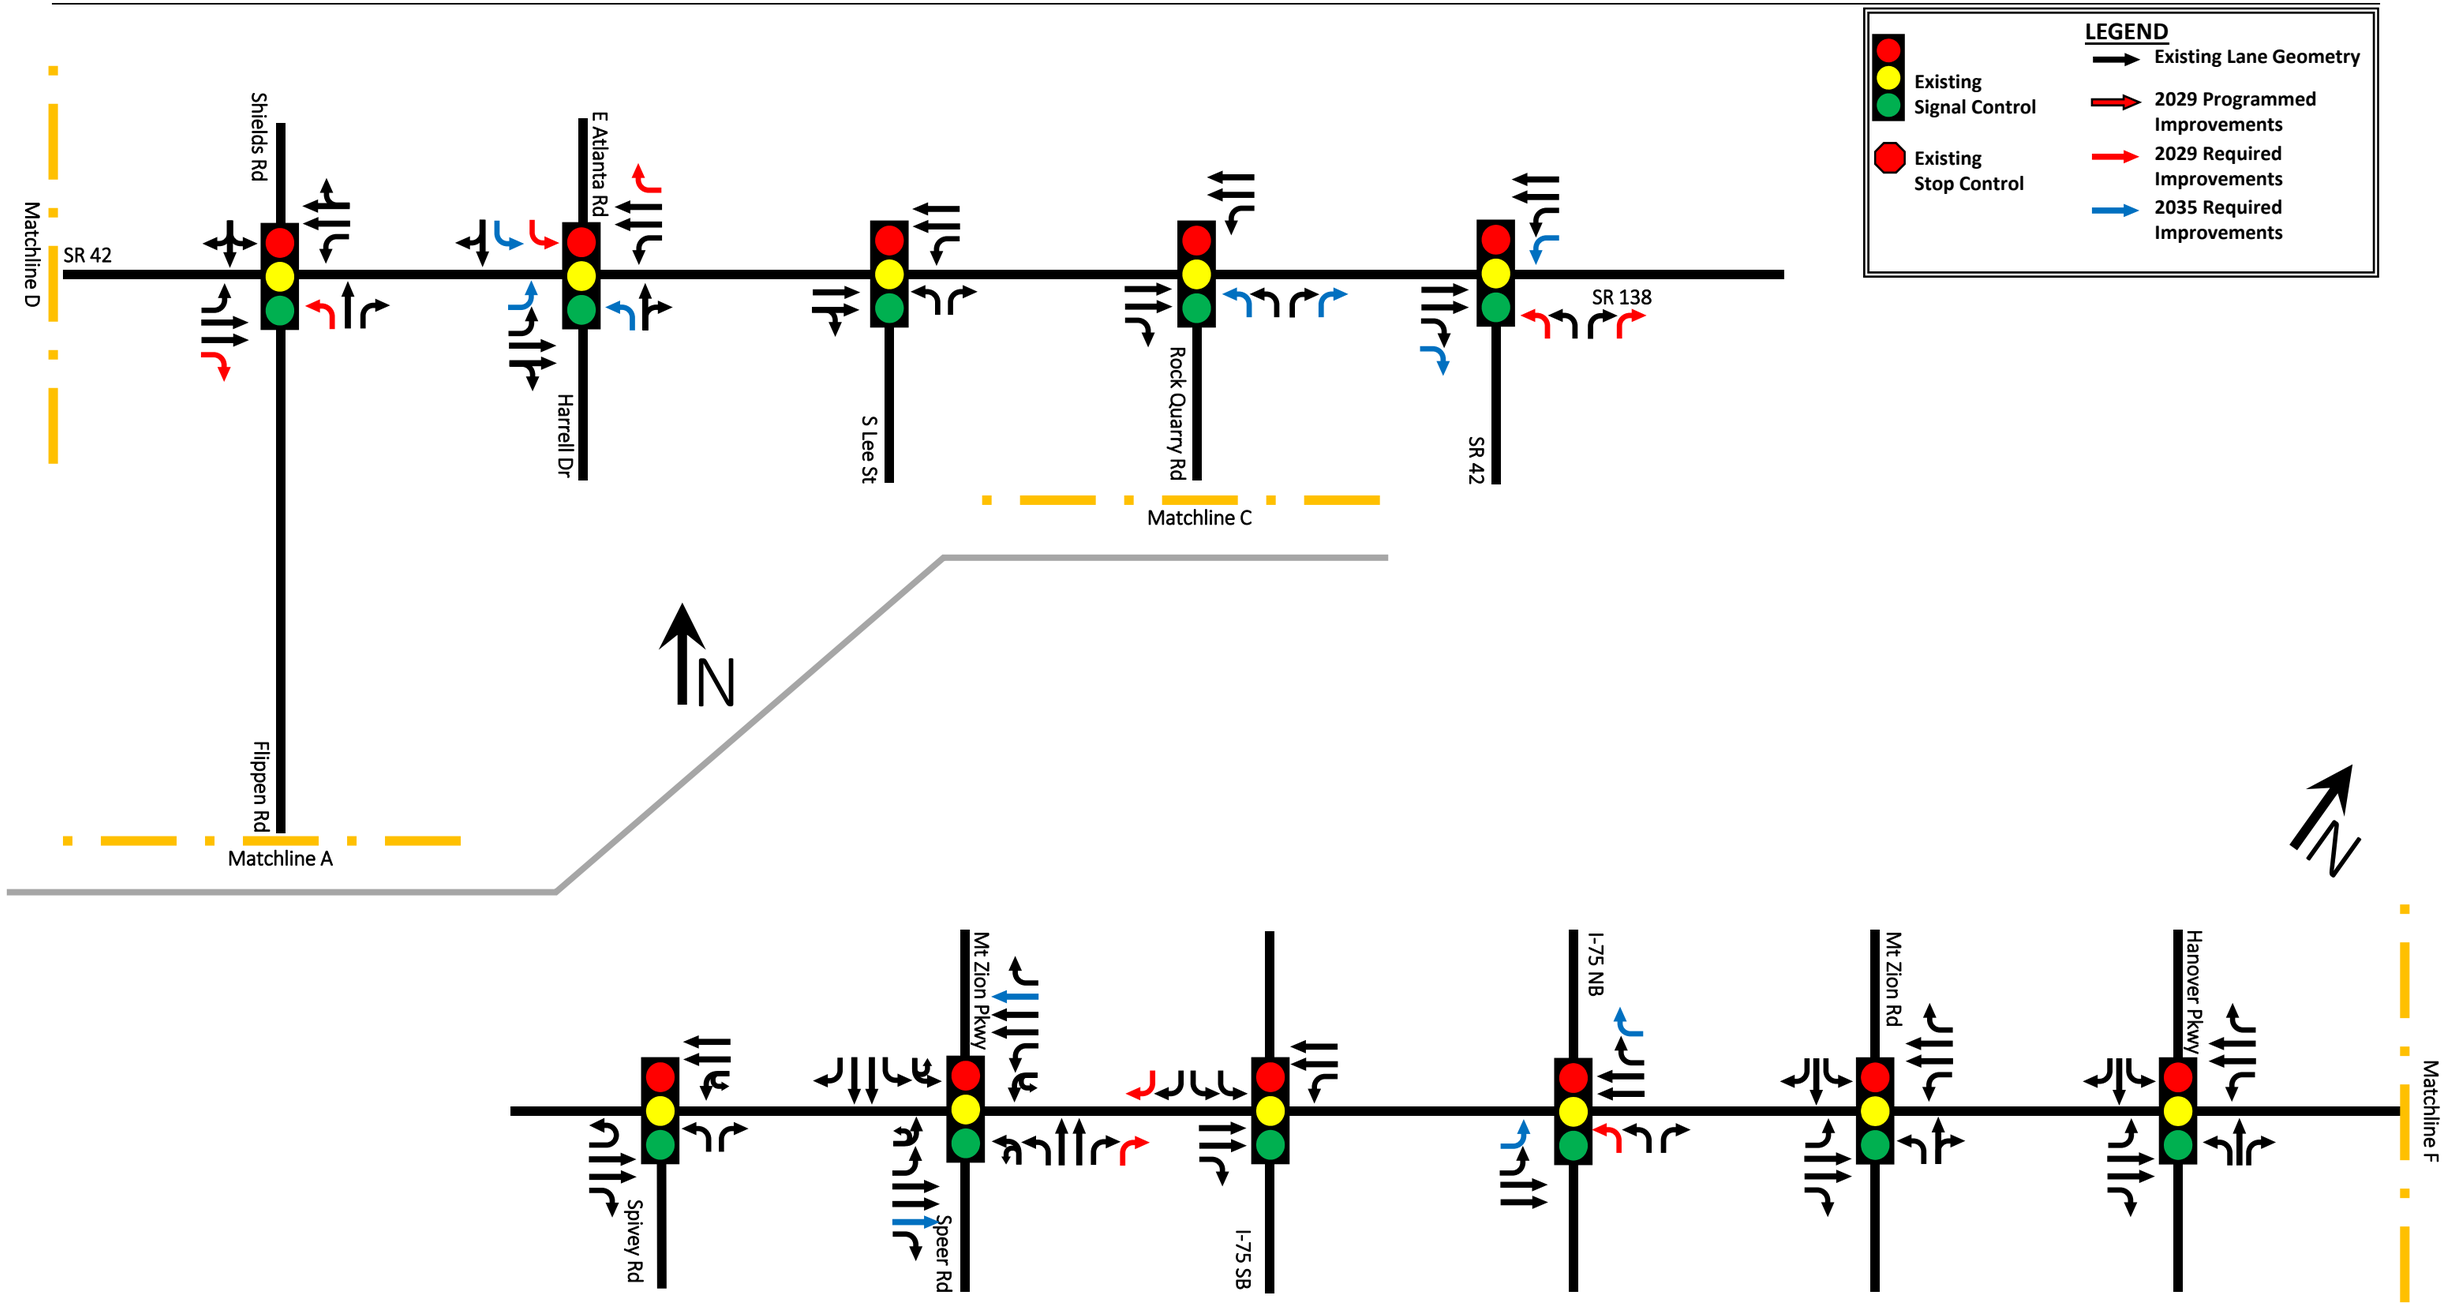
- The LOS in the eastbound direction is expected to improve from E to B during both peak hours.
- The LOS in the westbound direction is expected to improve from E to B during the AM peak hour.

Walt Stephens Rd from Speer Rd/Blackhall Rd to Brentwood Pkwy/Monarch Village Way



- The LOS in the westbound direction is expected to improve from E to B during the AM peak hour.

The proposed Background Lane Geometry for the years 2029 and 2035, including programmed and required improvements, is shown in Figure 8.



Reeves Creek DRI Background Lane Geometry – Figure 8A

Reeves Creek DRI Background Lane Geometry – Figure 8B

Reeves Creek DRI Background Lane Geometry – Figure 8C

4 Future Conditions

4.1 Trip Generation

A trip generation for the proposed development was created using the ITE Trip Generation Manual 10th Edition, 2017. The trip generation land use codes and descriptions are summarized directly from ITE; for example, the ITE Code and Description "150 – Warehousing" will more closely resemble office showroom space. Phase 1 (2029) is shown in Table 16 and the summarized trip generation for Phase 2 (2035, includes trip generation from Phase 1) is shown in Table 17. The data use for analysis is included in APPENDIX E.

Table 16: Trip Generation Summary – Phase 1 (2029)

ITE Code	ITE Project Land Use Description	Density	Variable	Daily			AM Peak Hour			PM Peak Hour		
				Total	In	Out	Total	In	Out	Total	In	Out
210	Single-Family Detached Housing	282	Dwelling Unit	2,699	1,350	1,349	205	51	154	275	173	102
221	Multifamily Housing (Mid-Rise)	1,003	Dwelling Unit	5,465	2,733	2,732	328	85	243	405	247	158

For Phase 1 in the year 2029, the proposed development is anticipated to generate a total of 42,296 daily vehicle trips (21,151 inbound, 21,145 outbound) with 2,427 AM peak hour vehicle trips (1,437 inbound, 990 outbound), and 3,481 PM peak hour trips (1,512 inbound, 1,969 outbound). After vehicle trip reductions the net anticipated new daily vehicle volume impacting the external roadway network is 28,732 daily vehicle trips (14,369 inbound, 14,363 outbound) with 2,026 AM peak hour vehicle trips (1,218 inbound, 808 outbound), and 2,278 PM peak hour trips (928 inbound, 1,350 outbound).

Table 17: Trip Generation Summary – Phase 2 (2035)

			Total Trips	56,377	28,193	28,184	3,023	1,854	1,169	4,873	2,080	2,793
			Reductions for Internal Capture	12,229	6,115	6,114	252	126	126	1,139	569	570
			Reductions for Modal Split	1,051	529	522	70	55	15	88	25	63
			Reductions for Pass-By Trips	5,844	2,958	2,886	152	78	74	664	333	331
			Total Net New Project Trips	**37,253**	**18,591**	**18,662**	**2,549**	**1,595**	**954**	**2,982**	**1,153**	**1,829**

For Phase 2 in the year 2035, the proposed development is anticipated to generate a total of 56,377 daily vehicle trips (28,193 inbound, 28,184 outbound) with 3,023 AM peak hour vehicle trips (1,854 inbound, 1,169 outbound), and 4,873 PM peak hour trips (2,080 inbound, 2,793 outbound). After vehicle trip reductions the net anticipated new daily vehicle volume impacting the external roadway network is 37,253 vehicle trips (18,591 inbound, 18,662 outbound) with an AM peak hour vehicle volume of 2,549 vehicles (1,595 inbound, 954 outbound), and a PM peak hour vehicle volume of 2,982 vehicles (1,153 inbound, 1,829 outbound).

4.2 Trip Distribution

4.2.1 Trip Distribution – New Trips

The trip distribution for the proposed development was based on field observations, existing traffic counts and patterns, a review of land use densities in the area, and potential origination and destination points. Additionally, discussions with the local jurisdictions during the DRI Pre-Review Meeting on April 18, 2019 helped to determine the distribution of project trips on the study network. The development was distributed as a whole, and individual driveway volumes were determined based on the site layout and access. The proposed project trip distribution was approved during the DRI Pre-Review Meeting on April 18, 2019.

The Trip Distribution for Phase 1 and Phase 2 is shown graphically in Figure 9.

4.2.2 Internal Capture Reduction

Mixed-use developments that contain residential, retail, entertainment, office, and hotel land uses will generate trips that satisfy the total development's trip generation but will not access the site via the external roadway network. Internal trip capture is calculated using the guidance set forth in the ITE Trip Generation Handbook 3rd Edition, 2017 which utilizes the NCHRP 8-51 Internal Trip Capture Estimation tool. AM and PM peak hour trips utilize their respective tools; however, to estimate the daily internal capture, the PM worksheets were used with the daily traffic volumes. For Phase 1 in the year 2029, the total internal capture reduction is expected to be approximately 8% of the AM volumes, 21% of the PM volumes, and 20% of the daily volumes. For Phase 2 in the year 2035, the total internal capture reduction is expected to be approximately 8% of the AM volumes, 23% of the PM volumes, and 22% of the daily volumes.

For Phase 1 in the year 2029, the internal capture reduction is 8,267 daily vehicle trips (4,134 inbound, 4,133 outbound), 190 AM peak hour trips (95 inbound, 95 outbound), and 718 PM peak hour trips (359 inbound, 359 outbound). NCHRP worksheets are included in APPENDIX E.

For Phase 2 in the year 2035, the internal capture reduction is 12,229 daily vehicle trips (6,115 inbound, 6,114 outbound), 252 AM peak hour trips (126 inbound, 126 outbound), and 1,139 PM peak hour trips (569 inbound, 570 outbound). NCHRP worksheets are included in APPENDIX E.

4.2.3 Reductions for Modal Split

Due to the addition of bicycle and pedestrian facilities and a potential mass transit station/center by the development during Phase 2 (2035), some trips are anticipated to utilize these facilities and will not have an impact on the external roadway network. A 2% reduction for modal split was discussed and agreed upon at the DRI Pre-Review Meeting on April 18, 2019.

For Phase 1 in the year 2029, the modal split reduction is 896 daily vehicle trips (447 inbound, 449 outbound), 59 AM peak hour trips (46 inbound, 13 outbound), and 71 PM peak hour trips (22 inbound, 49 outbound.

For Phase 2 in the year 2035, the modal split reduction is 1,051 daily vehicle trips (529 inbound, 522 outbound), 70 AM peak hour trips (55 inbound, 15 outbound), and 88 PM peak hour trips (25 inbound, 63 outbound.

4.2.4 Pass-by Trip Reduction

Several of the proposed land uses are expected to attract trips as intermediate stops on the way from an origin to a primary trip destination without a route diversion. The pass-by trip generation rate is based on the ITE Trip Generation Handbook 3rd Edition, 2017. The handbook does not always provide rates for AM and daily pass-by trip generation. Where applicable, the rates not provided were estimated based on the PM peak hour rate.

For Phase 1 in the year 2029, the pass-by trip reduction is 4,401 daily vehicle trips (2,201 inbound, 2,200 outbound), 152 AM peak hour trips (78 inbound, 74 outbound), and 414 PM peak hour trips (203 inbound, 211 outbound).

For Phase 2 in the year 2035, the pass-by trip reduction is 5,844 daily vehicle trips (2,958 inbound, 2,886 outbound), 152 AM peak hour trips (78 inbound, 74 outbound), and 664 PM peak hour trips (333 inbound, 331 outbound).

Pass-by trip distribution for Phase 1 and Phase 2 is shown in Figure 10.

4.3 Build Traffic Volumes

Build traffic volumes include both the background volumes and the project trips that will be generated by the proposed development.

Total project trips for Phase 1 (2029) are shown in Figure 11. Total project trips for Phase 2 (2035) are shown in Figure 13.

Total build year traffic volumes for Phase 1 (2029) are shown graphically in Figure 12. Total build year traffic volumes for Phase 2 (2035) are shown graphically in Figure 14.

4.4 Turn Lane Analysis

4.4.1 Turn Lane Warrant Analysis

A turn lane warrant analysis for the proposed driveways accessing the external roadway network was performed per the NCHRP 457: Evaluating Intersection Improvement Recommendations. The NCHRP turn-lane warrants analyze the need for a turn lane by comparing the amount of turning vehicles with opposing and advancing traffic volumes. Full NCHRP worksheets are included in APPENDIX F.

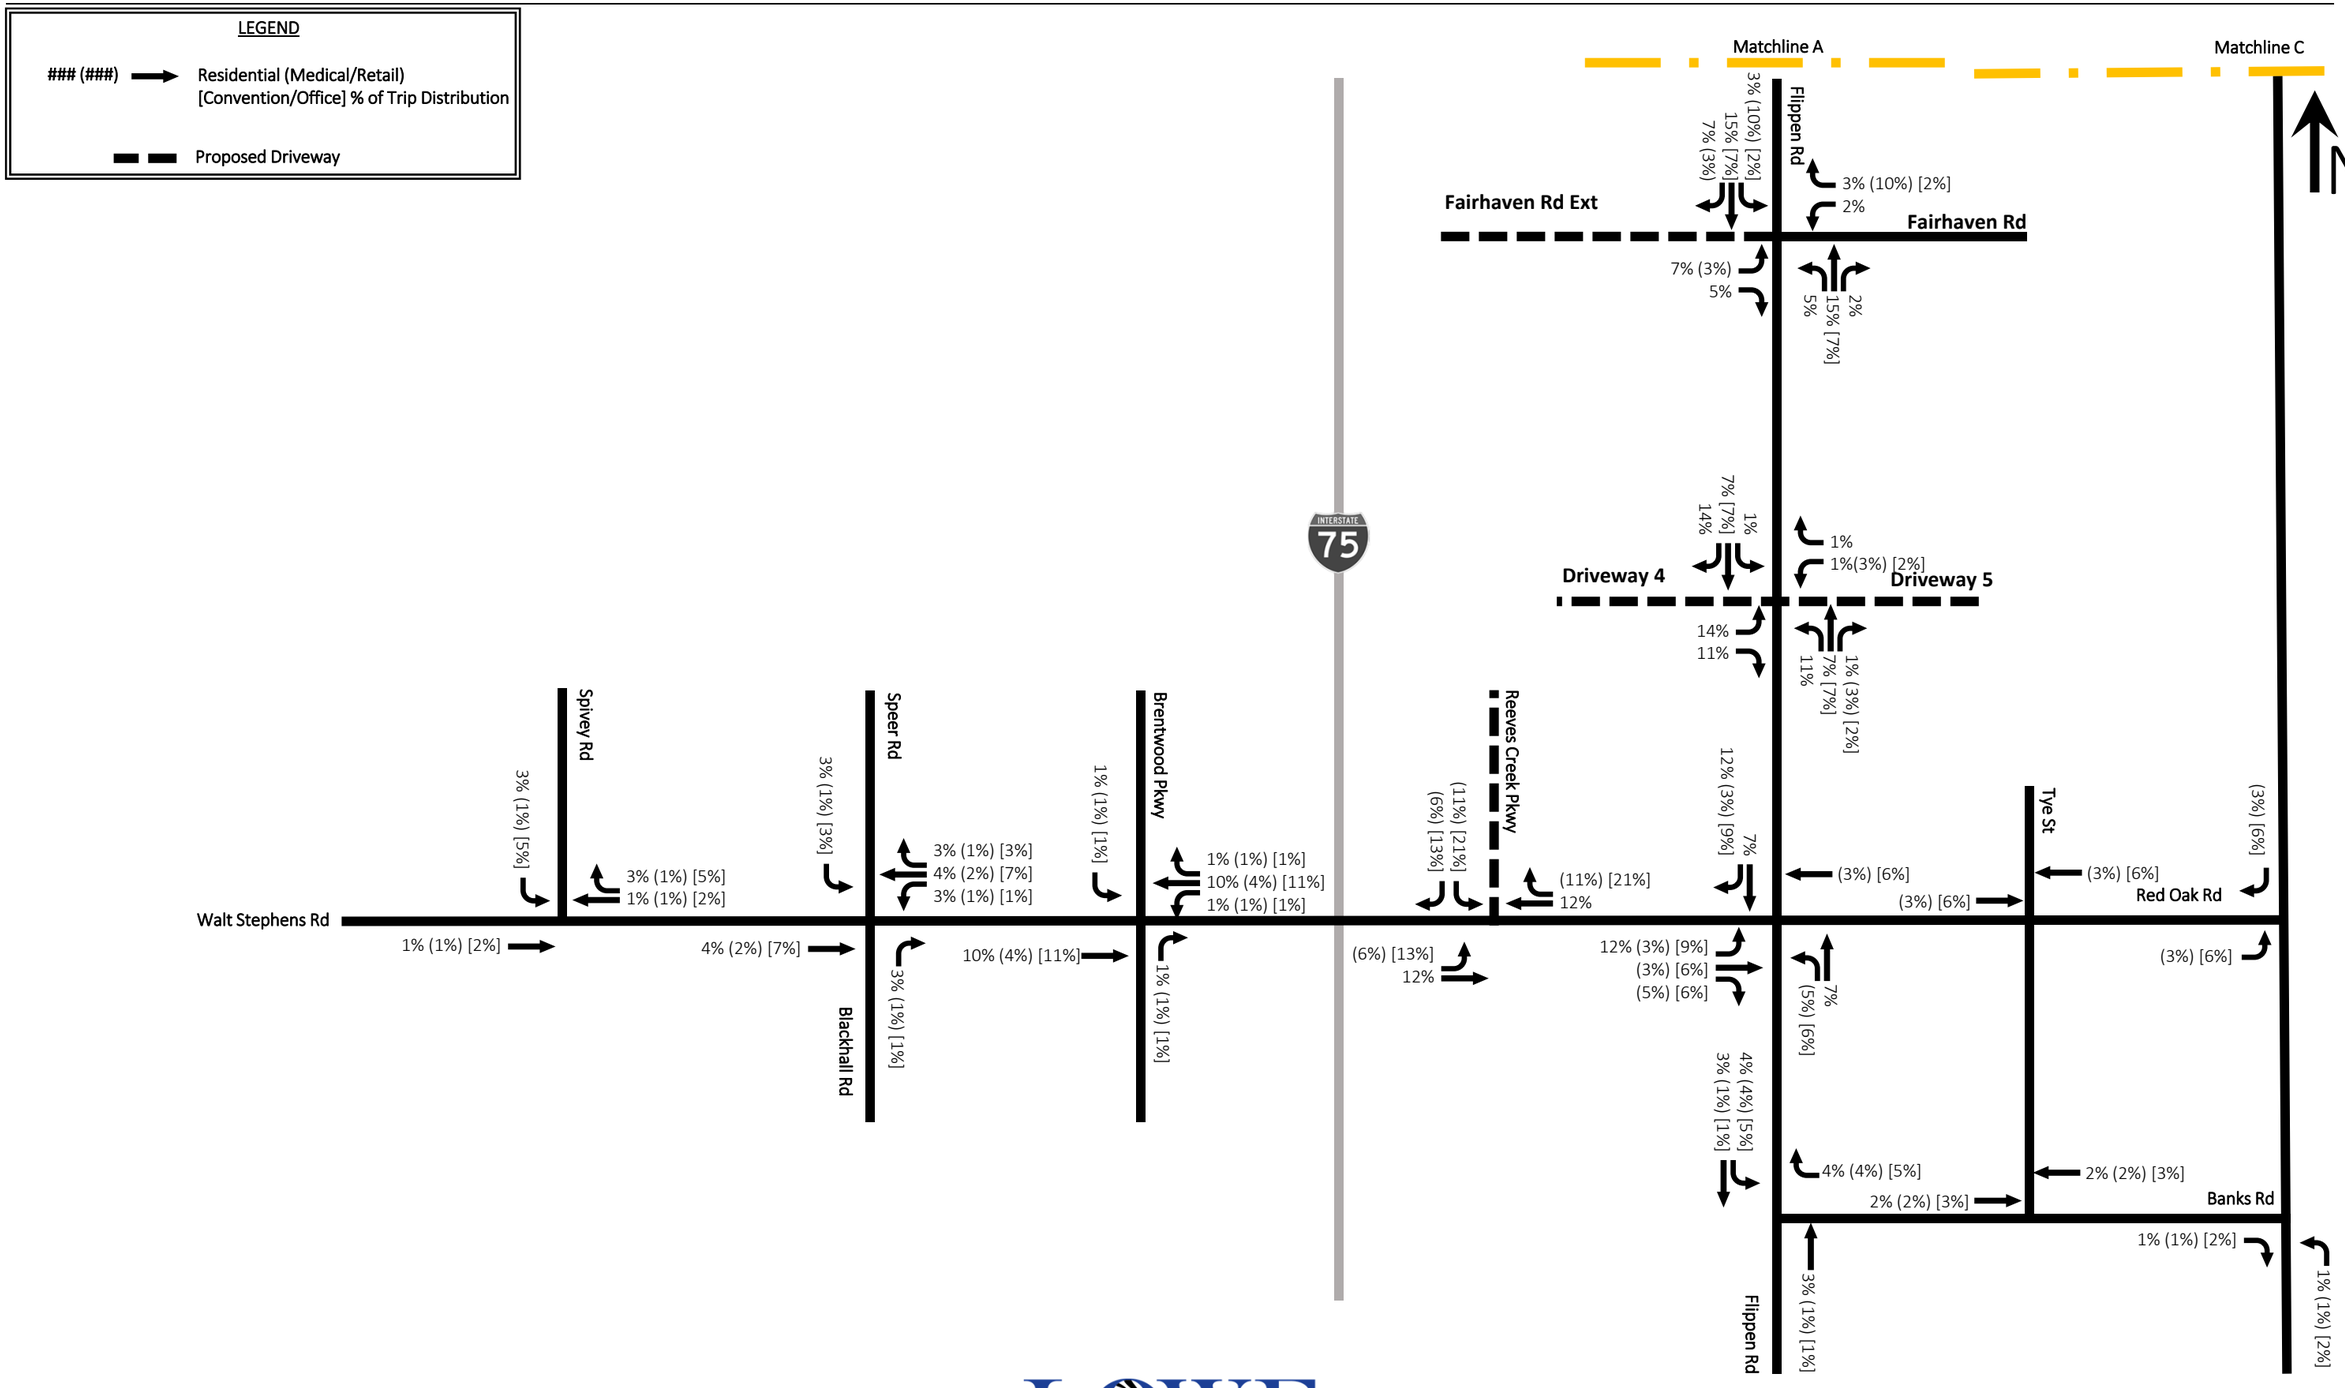
All turn lanes at all driveways are warranted by Phase 1 (2029) based on peak hour traffic volumes, except for a southbound left turn lane on Flippen Road at Driveway 4/Driveway 5 in neither Phase 1 nor Phase 2. For the side street approaches where the initial turn lane warrant analysis indicates a single lane approach, improvements may be attempted in the Build Improved scenario(s) if one or more of the single lane approaches indicates an expected inadequate LOS.

- Flippen Rd at Fairhaven Road
    - 1 NBL lane, 1 NBR lane, 1 SBL lane, 1 SBR lane – **Warranted**
    - Eastbound approach and Westbound approach – **One** approach lane
- Flippen Rd at Driveway 2/Driveway 3
    - 1 NBL lane, 1 NBR lane, 1 SBR lane – **Warranted**
    - Eastbound approach and Westbound approach – **One** approach lane
- Davidson Pkwy at proposed Reeves Creek Pkwy/commercial Dwy
    - 1 NBL lane, 1 NBR lane, 1 SBL lane, 1 SBR lane – **Warranted**
    - Eastbound approach and Westbound approach – **Two** approach lanes
- Walt Stephens Rd at proposed* Reeves Creek Pkwy
    - 1 EBL lane, 1 WBR lane – **Warranted**
    - Southbound approach – **Two** approach lanes

4.4.2 Turn Lane Required Lengths

Turn lanes shall be designed per Henry County DOT's design specifications.

4.5 Signal Warrant Analysis



Traffic signal warrant analysis was performed at the intersection of Walt Stephens Road and the proposed Reeves Creek Parkway and at the intersection of Davidson Parkway and the proposed Reeves Creek Parkway per the Manual on Uniform Traffic Control Devices (MUTCD) traffic signal warrant guidelines. A 24-hour count was performed on Walt Stephens Road. A 13-hour turning movement count was performed at the intersection of Davidson Parkway and Walter Way, which is adjacent to the east of the proposed Davidson Parkway at Reeves Creek Parkway intersection. Traffic volumes were grown to Build Phase 1 (2029) based on the methodology previously stated. The project trip generated traffic volumes were distributed to the intersection based on the ITE Trip Generation Manual 10th Edition daily distribution for ITE Code 820 – Shopping Center.

Traffic signal warrants were analyzed using 100% traffic volume and a right-turn reduction.

At the intersection of Walt Stephens Road and the proposed Reeves Creek Parkway, based on the analysis, a traffic signal is **Warranted** by Warrants 1 (meets 10 hours in Condition A), 2 (meets 8 hours), and 3 (meets 2 hours) without the proposed I-75 northbound only interchange, which is the scenario that is expected to produce the lesser amount of traffic at this intersection. Full traffic signal warrant analysis, including the daily distribution of project trips at the study intersection, is provided in APPENDIX G.

At the intersection of Davidson Parkway and the proposed Reeves Creek Parkway, based on the analysis, a traffic signal is **Warranted** by Warrants 1 (meets 9 hours in Condition B), 2 (meets 7 hours), and 3 (meets 2 hours) with the proposed I-75 northbound only interchange, which is the scenario that is expected to produce the lesser amount of traffic at this intersection. Full traffic signal warrant analysis, including the daily distribution of project trips at the study intersection, is provided in APPENDIX G.

4.6 Build Phase 1 (2029)

4.6.1 Build Phase 1 (2029) Capacity Analysis

The Build Phase 1 (2029) traffic volumes were analyzed using a Synchro 10.0 model to determine the capacity of the AM and PM peak hours. The existing geometry and programmed improvements described in Section 3.2 were employed for the intersection capacity analysis. The results are shown by lane group movement and total intersection capacity. Average vehicular delays are shown in seconds. Level of service (LOS) is a grading system as defined by the Highway Capacity Manual (HCM) where A is best, and F is worst. The HCM 6th Edition was used for analysis. Table 18 shows the Build Phase 1 (2029) Capacity Analysis. Synchro output files are included in APPENDIX D.

All traffic signal timings remain the same as in existing conditions. Traffic signal timings used in analysis are shown in APPENDIX D.

Table 18: Build Phase 1 (2029) Capacity Analysis

Intersection	Control	Lane Group Movement	Build Phase 1 - 2029

*actual value too high to calculate

The following intersections are expected to experience inadequate LOS in Build Phase 1 (2029) Conditions during one or both peak hours:

SR 138 at SR 42/US 23/N Henry Blvd

- The intersection is expected to operate at LOS F during both peak hours.
- LOS standard for Background and Build conditions is LOS E during the PM peak hour.

SR 42-138/US 23/N Henry Blvd at Rock Quarry Rd

- The intersection is expected to operate at LOS E during the PM peak hour.

SR 42-138/US 23/N Henry Blvd at E Atlanta Rd/Harrel Dr

- The intersection is expected to operate at LOS F during both peak hours.

SR 42-138/US 23/N Henry Blvd at Flippen Rd/Shields Rd

- The intersection is expected to operate at LOS E during the AM peak hour and at LOS F during the PM peak hour.
- LOS standard for Background and Build conditions is LOS E during the PM peak hour.

SR 42-138/US 23/N Henry Blvd at Davidson Pkwy

- Eastbound and westbound left turn movements are expected to remain LOS F during both peak hours.
- The eastbound right turn movement and the northbound left turn movement also are expected to experience LOS F during the PM peak hour.
- Delays in both scenarios is caused by left-turning vehicles experiencing severe delay in attempting to make the left turn movement onto the mainline. This is not uncommon for side street stop-controlled intersections.

SR 42-138/US 23/N Henry Blvd at SR 138/Stockbridge Rd & Walmart Dwy

- The intersection is expected to operate at LOS F during the PM peak hour.
- LOS standard for Background and Build conditions is LOS E during the PM peak hour.

SR 138/Stockbridge Rd at Davidson Pkwy

- The intersection is expected to operate at LOS F during both peak hours.

SR 138/Lake Spivey Pkwy at I-675 NB

- The intersection is expected to operate at LOS F during both peak hours.

SR 138/Lake Spivey Pkwy at I-675 SB

- The intersection is expected to operate at LOS E during the AM peak hour and at LOS F during the PM peak hour.

SR 138/Lake Spivey Pkwy at Mt Zion Rd

- The intersection is expected to operate at LOS E during the PM peak hour.

SR 138/Lake Spivey Pkwy at I-75 NB

- The intersection is expected to operate at LOS E during the AM peak hour.

SR 138/Lake Spivey Pkwy at I-75 SB

- The intersection is expected to operate at LOS F during the PM peak hour.

Walt Stephens Rd at Spivey Rd

- Southbound left turn movement and overall approach are expected to operate at LOS F during both peak hours.
- Delay in the AM peak hour is caused by left-turning vehicles experiencing severe delay in attempting to make the left turn movement onto the mainline. This is not uncommon for side street stop-controlled intersections.

Walt Stephens Rd at Speer Rd/Blackhall Rd

- The intersection is expected to operate at LOS E during the AM peak hour.

Flippen Rd at Walt Stephens Rd/Red Oak Rd

- The intersection is expected to operate at LOS E during the AM peak hour and LOS F during the PM peak hour.
- LOS standard for Background and Build conditions is LOS E during the PM peak hour.

Flippen Rd at Fairhaven Rd

- Eastbound single-lane shared approach is expected to operate at LOS E during the AM peak hour and LOS F during the PM peak hour.
- Westbound single-lane shared approach is expected to operate at LOS F during the PM peak hour.
- Delays in both scenarios is caused by left-turning vehicles experiencing severe delay in attempting to make the left turn movement onto the mainline. This is not uncommon for side street stop-controlled intersections.

Davidson Pkwy at proposed Reeves Creek Pkwy

- The intersection LOS is expected to operate at LOS E during the PM peak hour.

Flippen Rd at Site Driveways 4 and 5

- Eastbound single-lane shared approach is expected to operate at LOS E during the AM peak hour and LOS F during the PM peak hour.
- Westbound single-lane shared approach is expected to operate at LOS E during the AM peak hour and LOS F during the PM peak hour.
- Delays in both scenarios is caused by left-turning vehicles experiencing severe delay in attempting to make the left turn movement onto the mainline. This is not uncommon for side street stop-controlled intersections.

4.6.2 Build Phase 1 (2029) Capacity Analysis Required Improvements

Improvements were identified for intersections with inadequate LOS in Build Phase 1 (2029) Conditions. GRTA Technical Guidelines do not allow for the consideration of simple timing changes to be used as mitigation, but phase changes may be considered. All required improvements are to be geometric in nature; however, it might be possible in some locations to improve the intersection to LOS D or E with simple adjustments to signal timing. The results of the Build Phase 1 (2029) Conditions Required Improvements capacity analysis is shown in Table 19.

All traffic signal timings remain the same as in Background 2029 Conditions, except for the following intersections:

- SR 42-138/US 23/North Henry Boulevard at SR 138/Stockbridge Road and Walmart driveway
  - Changed side street phasing from split phasing to leading protected+permissive left turns
- SR 138/Stockbridge Road at Davidson Parkway
  - Changed phasing from split phasing on side streets to one protected only northbound left turn and one protected+permissive southbound left turn phase on side streets due to proposed geometry change on northbound approach from a single northbound left turn lane to a quadruple left turn lane.
- Any intersection proposed to go from a single lane left turn to two or more left turn lanes received protected only left turn phasing for that approach.

The following improvements are needed for Build Phase 1 (2029) Conditions:

SR 138 at SR 42/US 23/N Henry Blvd
- Add 1 WBL lane, 1 NBL lane, 1 NBR lane

SR 42-138/US 23/N Henry Blvd at Rock Quarry Rd
- Add 1 NBR lane

SR 42-138/US 23/N Henry Blvd at E Atlanta Rd/Harrel Dr
- Add 1 EBL lane, 1 WBR lane, 2 SBL lanes, 1 SBR lane

SR 42-138/US 23/N Henry Blvd at Flippen Rd/Shields Rd
- Add 1 EBR lane, 1 NBL lane

SR 42-138/US 23/N Henry Blvd at Davidson Pkwy
- Add 1 EBR lane, 1 WBR lane, 1 SBR lane

SR 42-138/US 23/N Henry Blvd at SR 138/Stockbridge Rd & Walmart Dwy
- No geometric changes, just phasing changes

SR 138/Stockbridge Rd at Davidson Pkwy
- Add 4 NBL lanes, 1 NBR lane, 1 SBL lane, 2 EBT lanes, 2 WBT lanes

SR 138/Lake Spivey Pkwy at I-675 NB
- Add 1 NBR lane, 1 EBL lane, 1 EBT lane

SR 138/Lake Spivey Pkwy at I-675 SB
- Add 1 EBT lane, 1 EBR lane

SR 138/Lake Spivey Pkwy at Mt Zion Rd
- Add 1 SBL lane

SR 138/Lake Spivey Pkwy at I-75 NB
- Add 1 NBL lane

SR 138/Lake Spivey Pkwy at I-75 SB
- Add 1 SBR lane

SR 138/Lake Spivey Pkwy at Speer Rd/Mt Zion Pkwy
- Add 1 NBR lane

Walt Stephens Rd at Spivey Rd
- Add 1 EBL lane, 1 WBR lane, 1 SBR lane

Walt Stephens Rd at Speer Rd/Blackhall Rd
- Add 1 WBR lane

Flippen Rd at Walt Stephens Rd/Red Oak Rd
- Make EBR free flow right turn lane (add lane on Flippen Rd south of intersection), add 1 NBL lane

Flippen Rd at Fairhaven Rd
- Add 1 EBR lane, 1 WBR lane

Davidson Pkwy at proposed Reeves Creek Pkwy
- Add 1 SBL lane

Flippen Rd at Site Driveways 4 and 5
- Add 1 EBR lane, 1 WBR lane

*actual value too high to calculate

SR 138 at SR 42/US 23/N Henry Blvd
The required Build Phase 1 (2029) conditions improvements described above help to improve the LOS from F to C in the AM peak hour and from F to E in the PM peak hour.

SR 42-138/US 23/N Henry Blvd at Rock Quarry Rd
The required Build Phase 1 (2029) conditions improvements described above help to improve the LOS from E to D in the PM peak hour.

SR 42-138/US 23/N Henry Blvd at E Atlanta Rd/Harrel Dr
The required Build Phase 1 (2029) conditions improvements described above help to improve the LOS from F to D in the AM peak hour and from F to C in the PM peak hour.

SR 42-138/US 23/N Henry Blvd at Flippen Rd/Shields Rd
The required Build Phase 1 (2029) conditions improvements described above help to improve the LOS from E to C in the AM peak hour and from F to E in the PM peak hour.

SR 42-138/US 23/N Henry Blvd at Davidson Pkwy
While the approach delays are reduced significantly, the addition of right turn lanes on both the eastbound and westbound approaches do not improve the LOS beyond F on either approach during either peak hour. Other improvements would need to be considered at this location to improve the LOS further, such as a traffic signal control or an alternative intersection design, including but not limited to a Restricted Crossing U-Turn (RCUT), Right-In/Right-Out Only (RIRO), or Median U-Turn (MUT).

SR 42-138/US 23/N Henry Blvd at SR 138/Stockbridge Rd & Walmart Dwy
The required Build Phase 1 (2029) conditions improvements described above help to improve the LOS from F to E in the PM peak hour.

SR 138/Stockbridge Rd at Davidson Pkwy
The required Build Phase 1 (2029) conditions improvements described above help to improve the LOS from F to B in the AM peak hour and from F to D in the PM peak hour.

SR 138/Lake Spivey Pkwy at I-675 NB
The required Build Phase 1 (2029) conditions improvements described above help to improve the LOS from F to D in the AM peak hour and from F to D in the PM peak hour.

SR 138/Lake Spivey Pkwy at I-675 SB
The required Build Phase 1 (2029) conditions improvements described above help to improve the LOS from E to B in the AM peak hour and from F to D in the PM peak hour.

SR 138/Lake Spivey Pkwy at Mt Zion Rd
The required Build Phase 1 (2029) conditions improvements described above help to improve the LOS from E to D in the PM peak hour.

SR 138/Lake Spivey Pkwy at I-75 NB
The required Build Phase 1 (2029) conditions improvements described above help to improve the LOS from E to D in the AM peak hour.

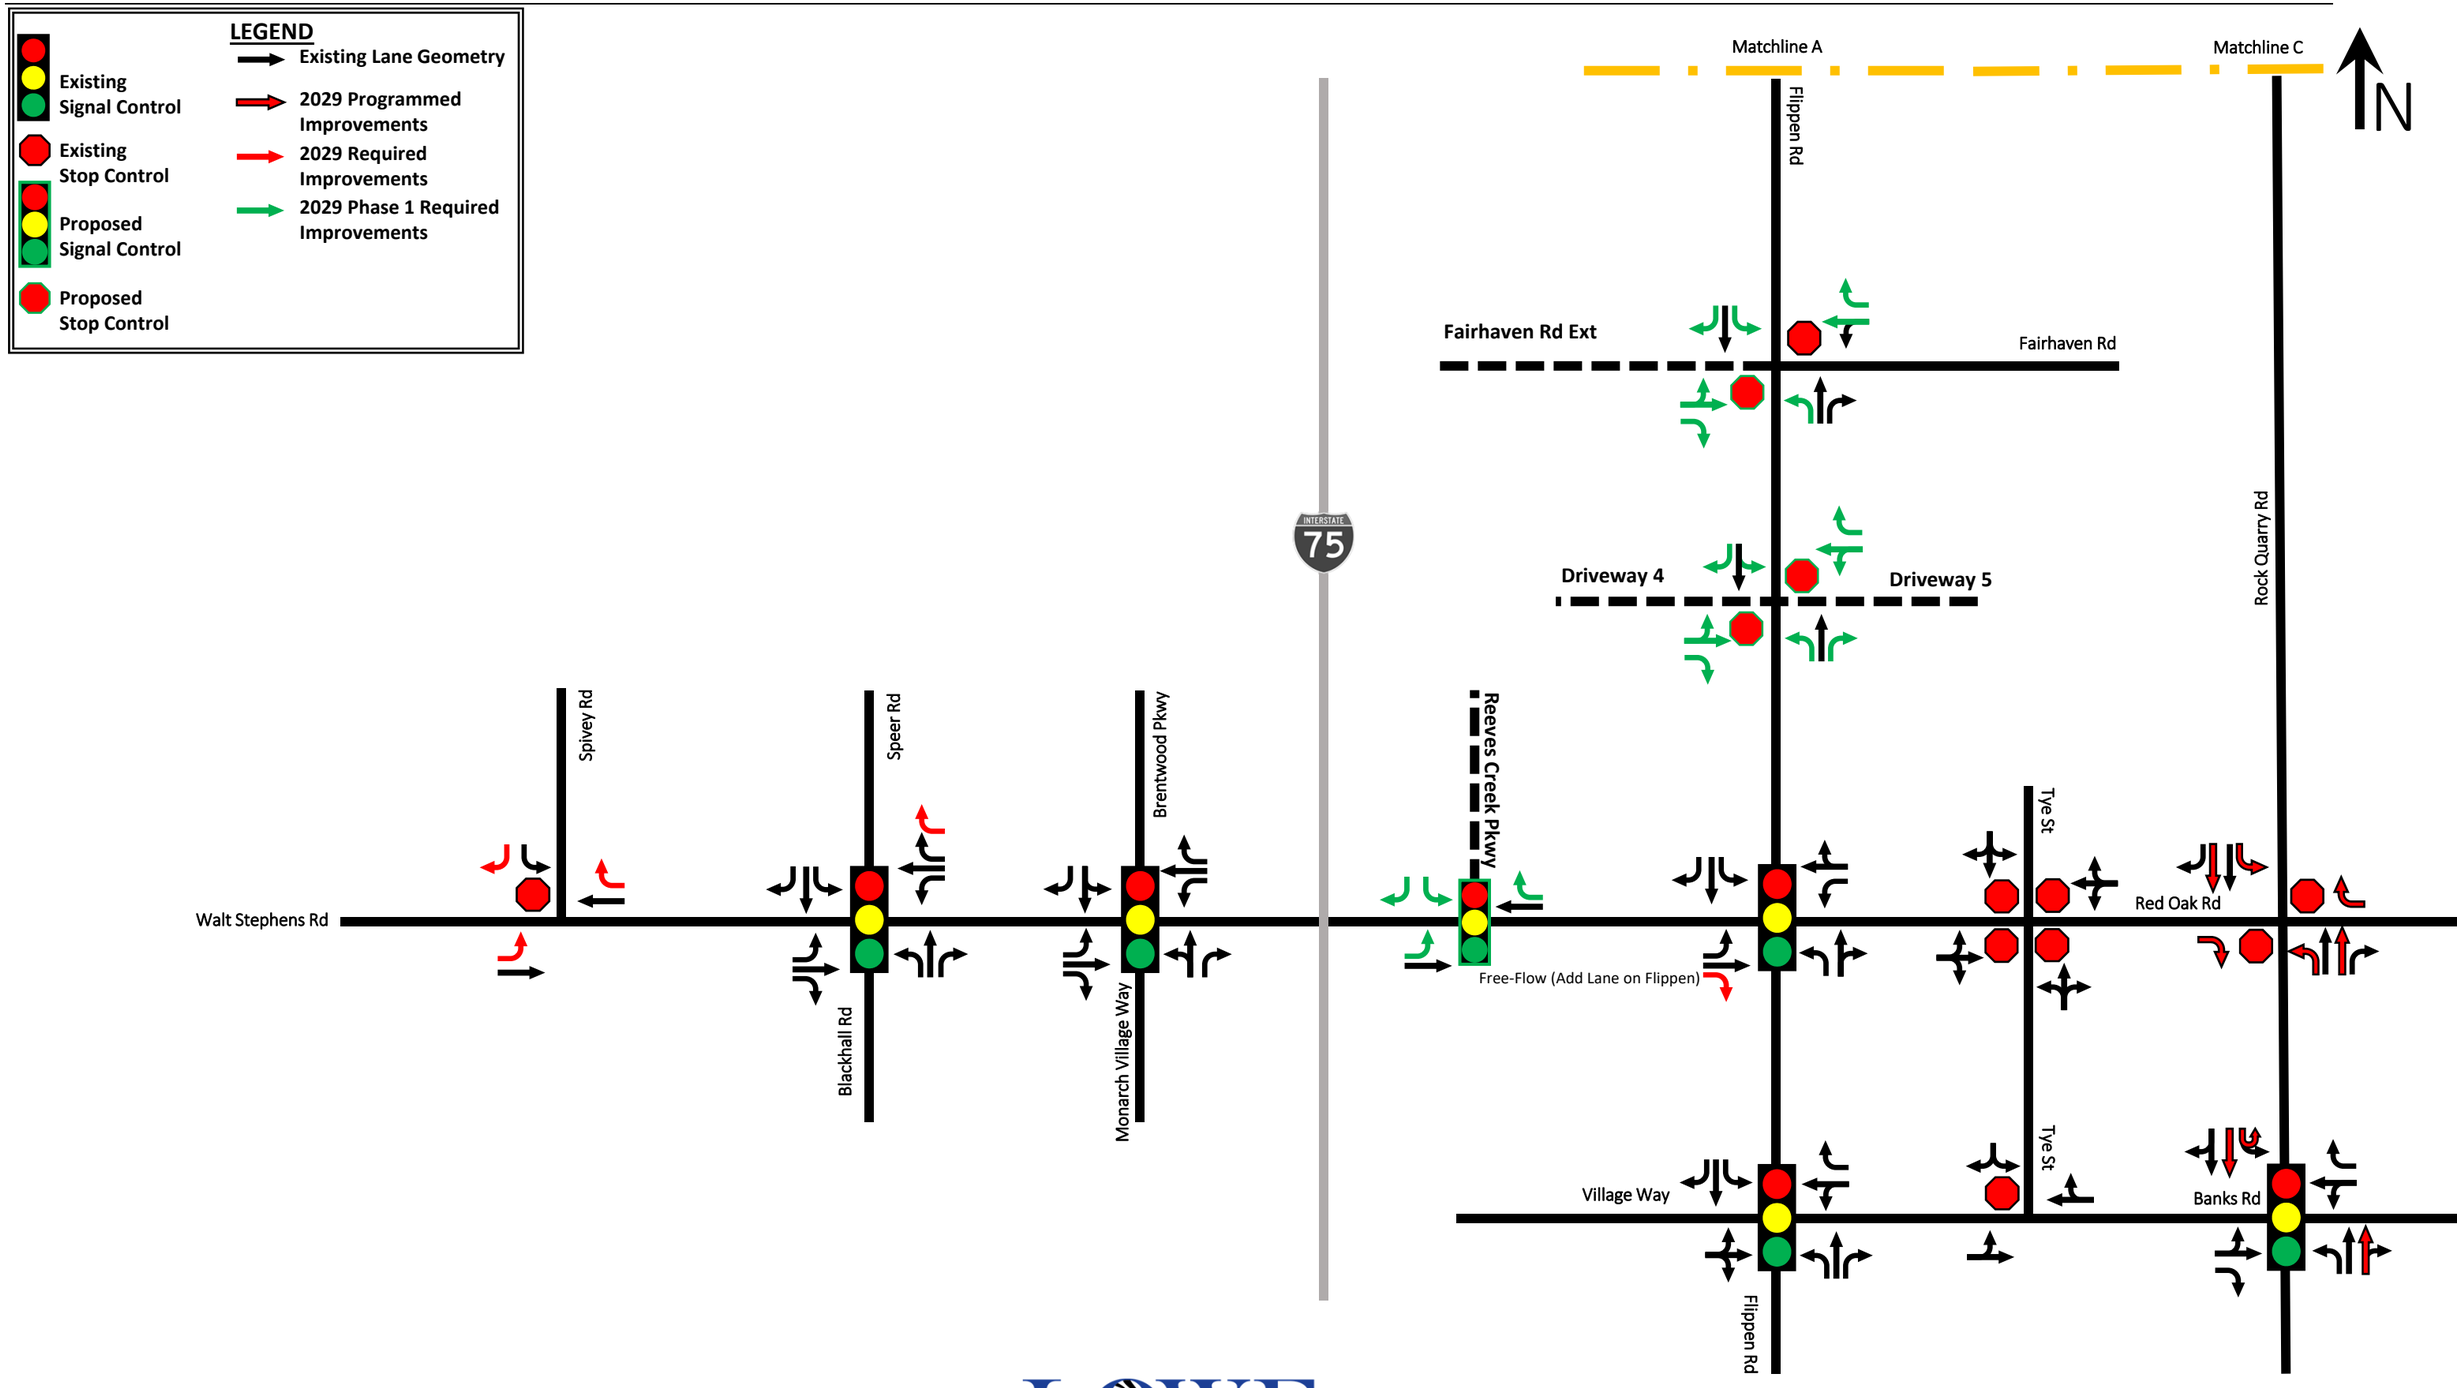
SR 138/Lake Spivey Pkwy at I-75 SB
The required Build Phase 1 (2029) conditions improvements described above help to improve the LOS from F to D in the PM peak hour.

SR 138/Lake Spivey Pkwy at Speer Rd/Mt Zion Pkwy
The required Build Phase 1 (2029) conditions improvements described above help to improve the LOS from F to D in the AM peak hour and from E to D in the PM peak hour.

Walt Stephens Rd at Spivey Rd
While the approach delay is reduced significantly, the addition of a right turn lane on the southbound approach does not improve the approach LOS beyond F in the AM peak hour; however, in the PM peak hour, the southbound left turn movement LOS is F, but the overall southbound approach LOS is D. Other improvements would need to be considered at this location to improve the LOS further, such as a traffic signal control or an alternative intersection design, including but not limited to a Restricted Crossing U-Turn (RCUT), Right-In/Right-Out Only (RIRO), or Median U-Turn (MUT).

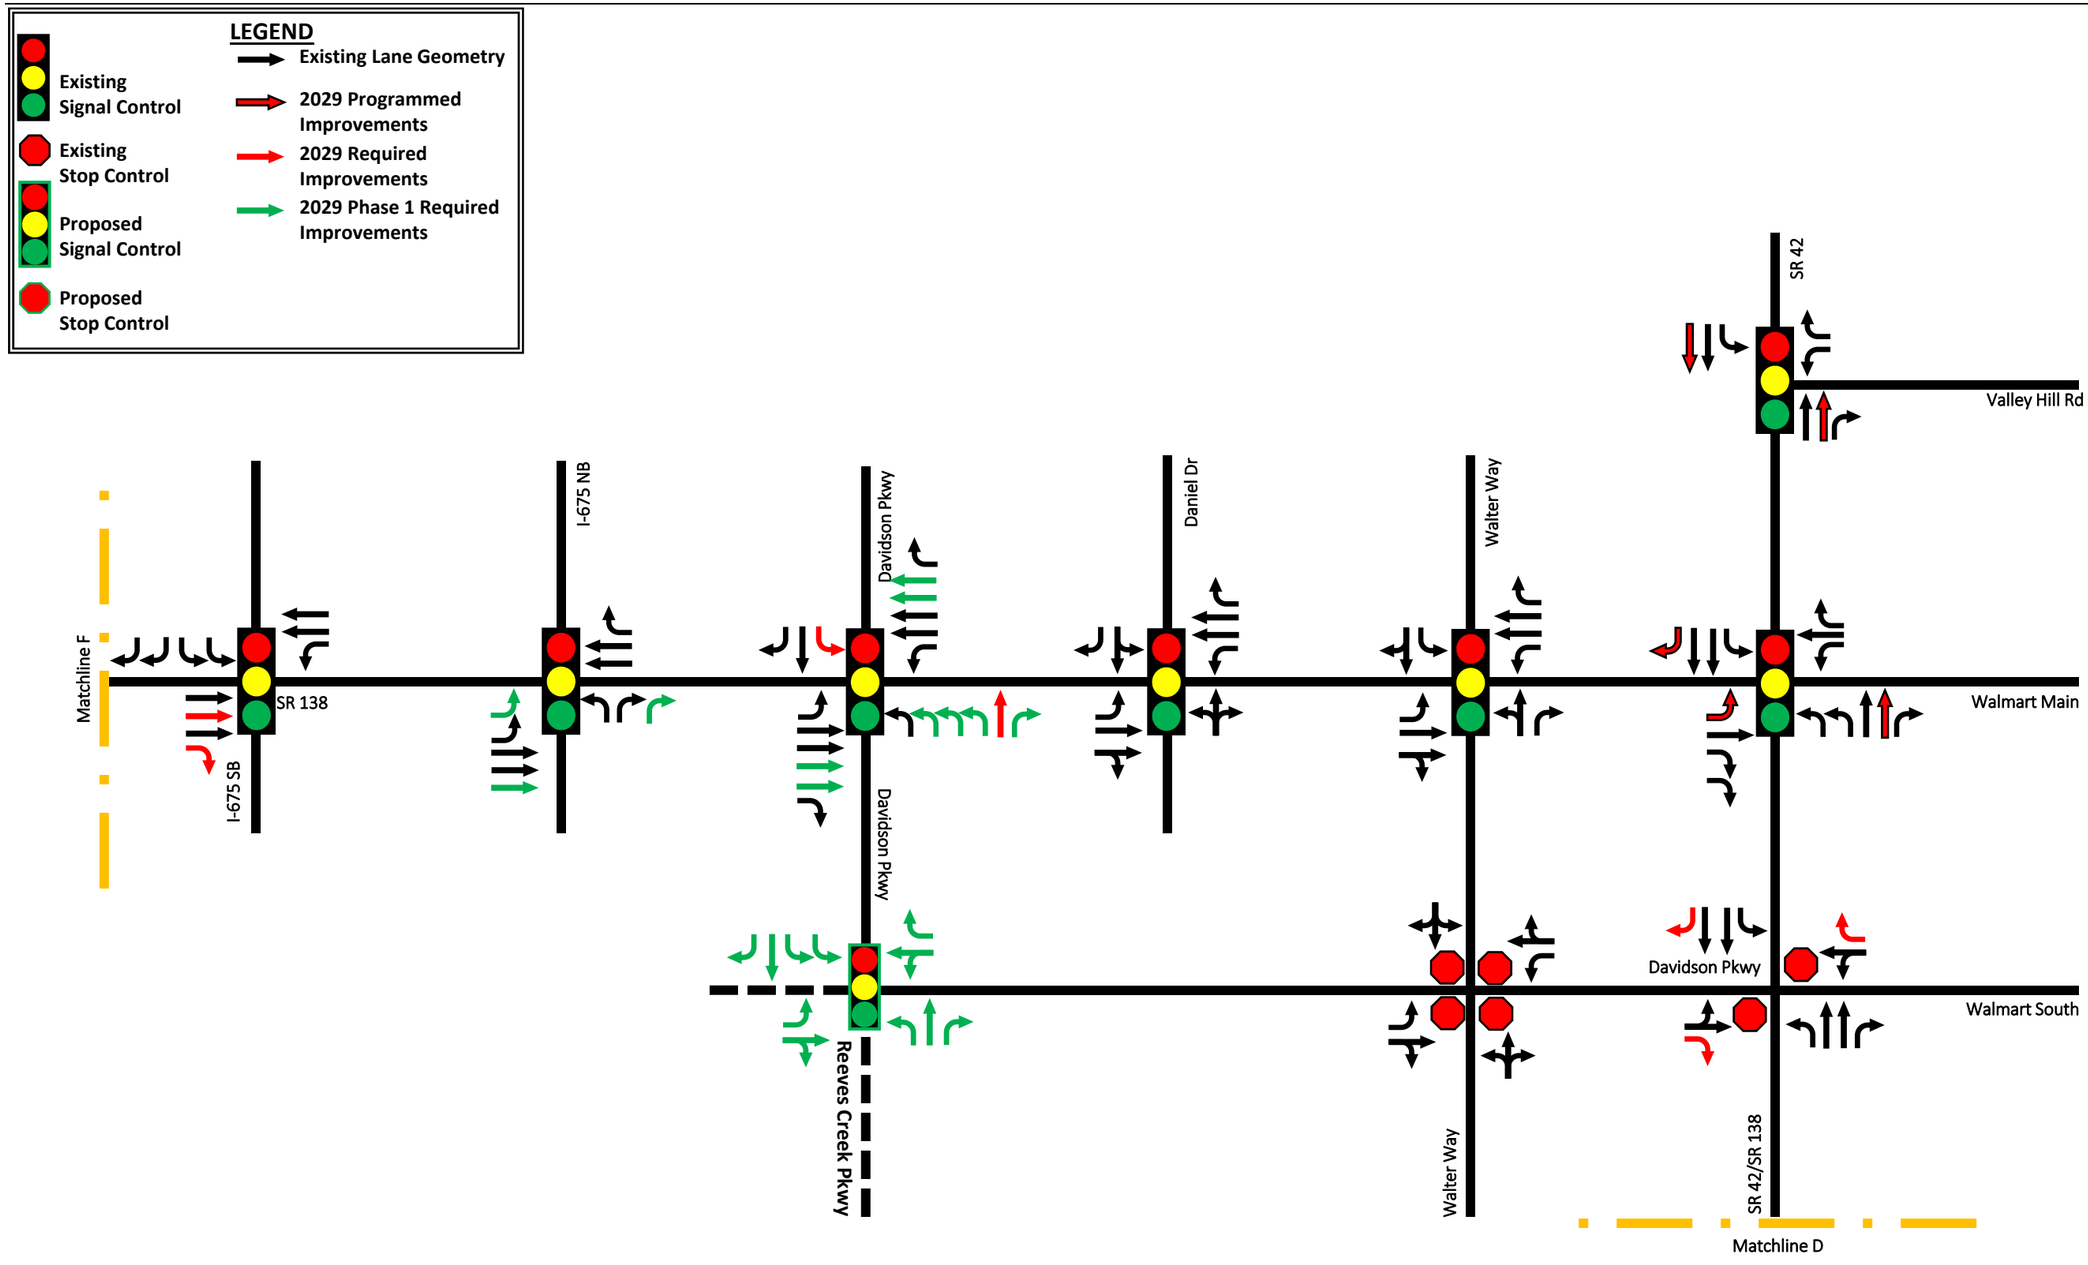
Walt Stephens Rd at Speer Rd/Blackhall Rd
The required Build Phase 1 (2029) conditions improvements described above help to improve the LOS from E to C in the AM peak hour.

Flippen Rd at Walt Stephens Rd/Red Oak Rd
The required Build Phase 1 (2029) conditions improvements described above help to improve the LOS from E to D in the AM peak hour and from F to E in the PM peak hour.



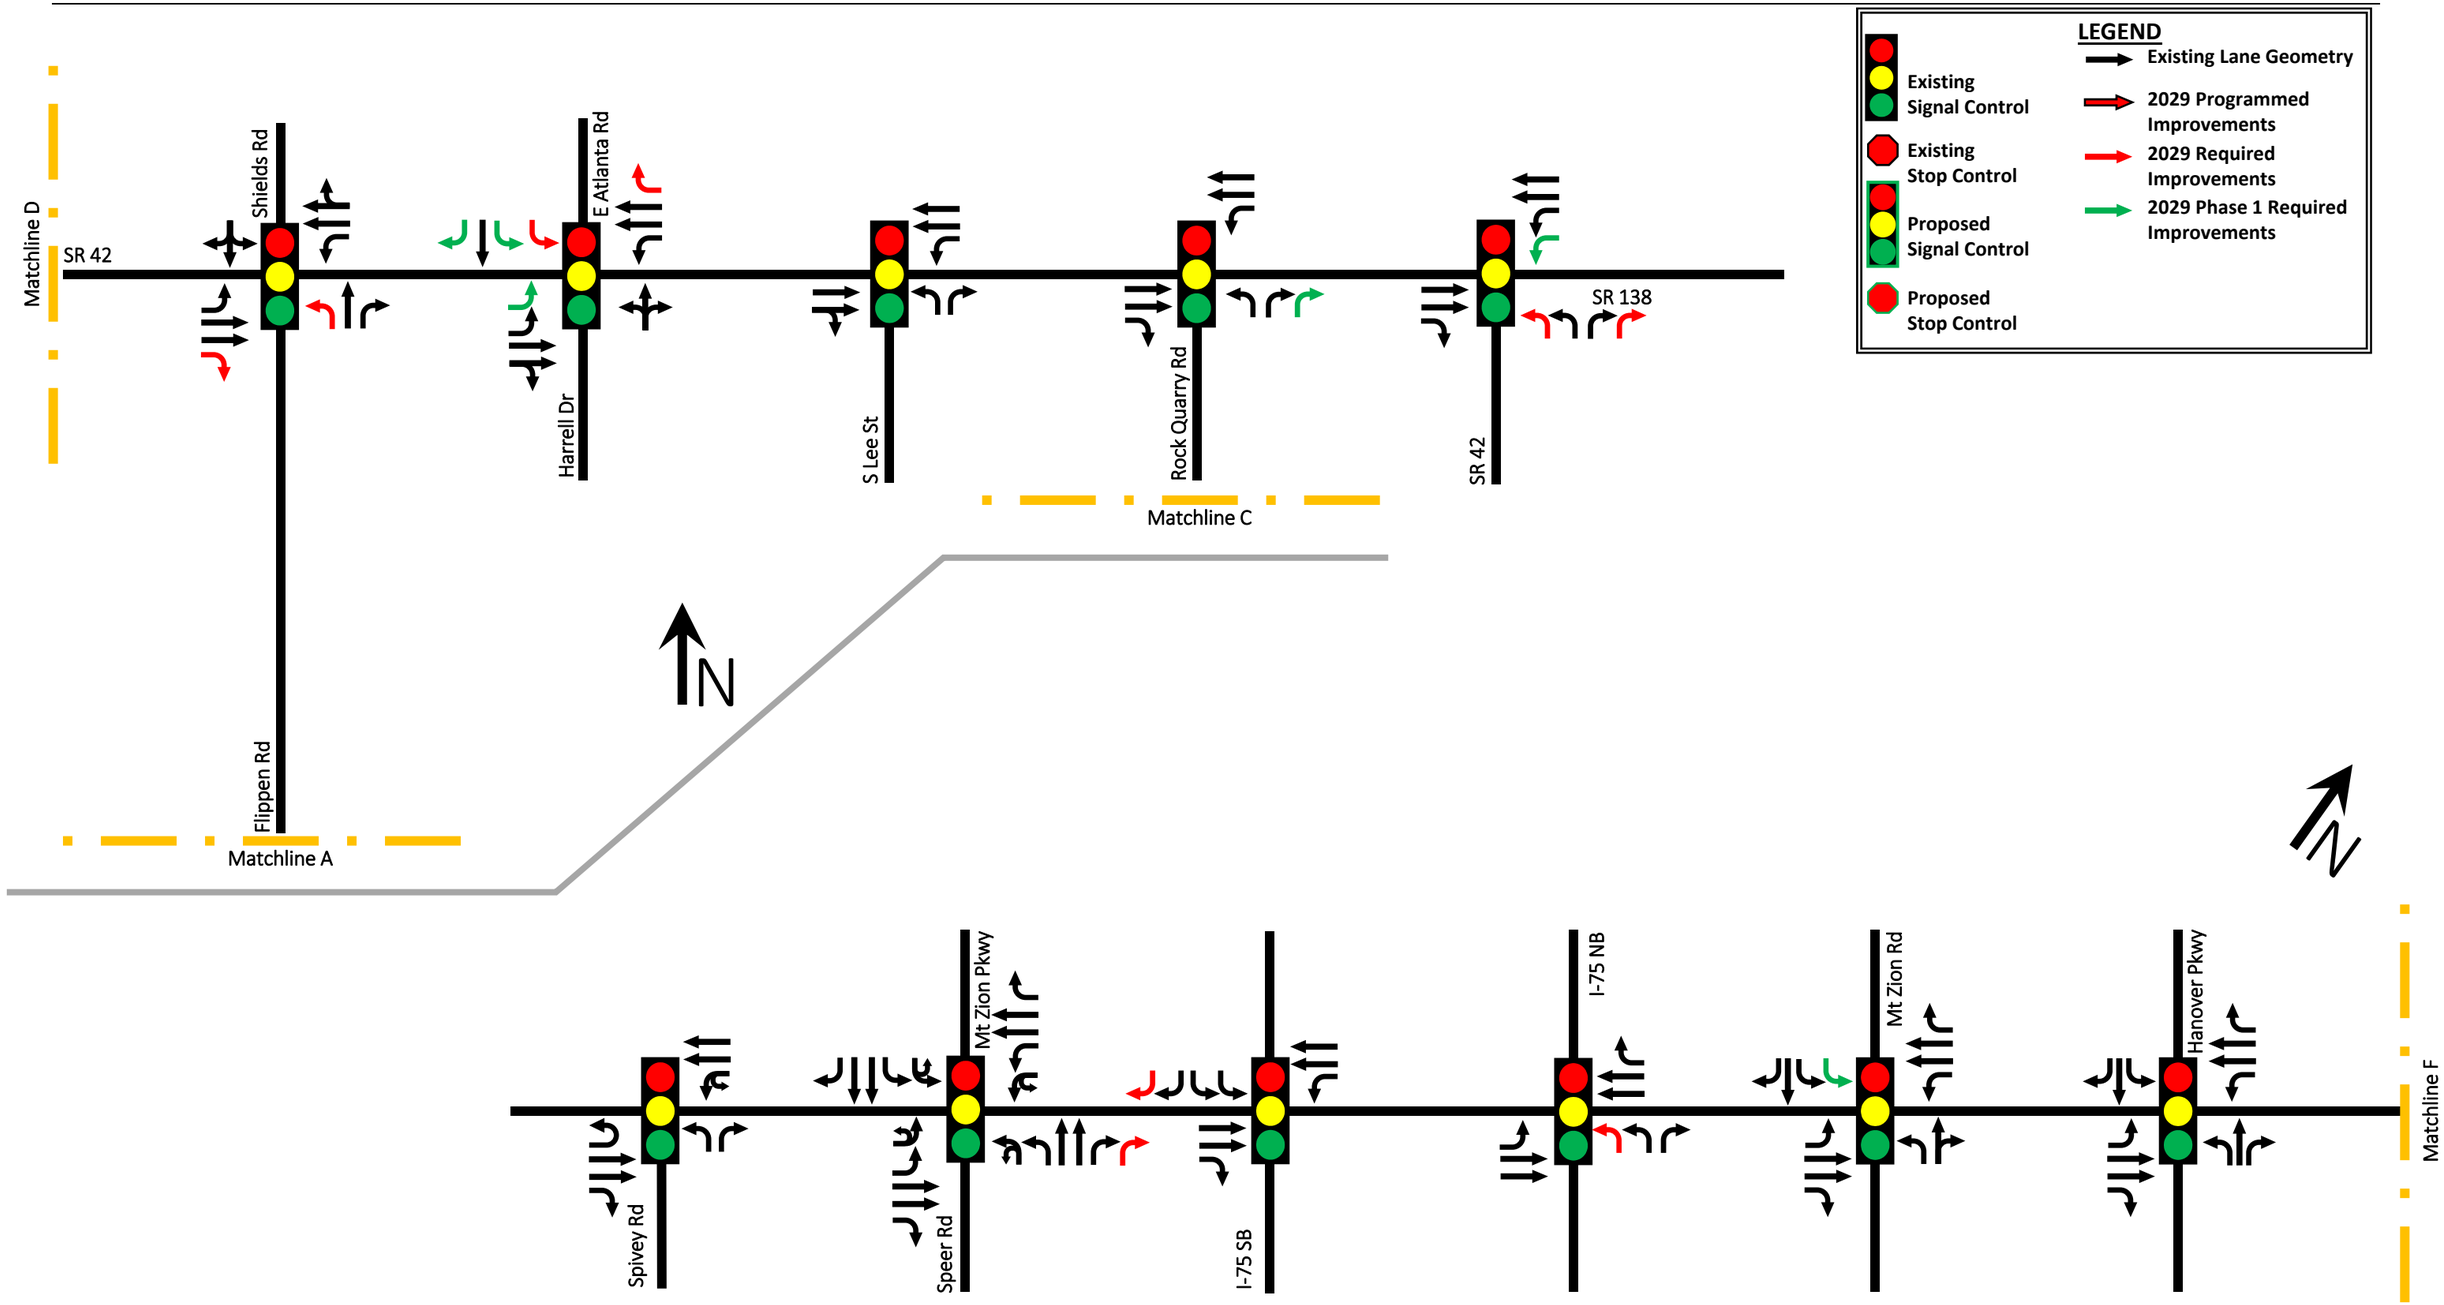
Flippen Rd at Fairhaven Rd
The required Build Phase 1 (2029) conditions improvements described above help to reduce the delays of both the eastbound and westbound approaches; however, only the westbound approach sees a significant change in LOS, improving from F to E. Other improvements would need to be considered at this location to improve the LOS further, such as a traffic signal control or an alternative intersection design, including but not limited to a Restricted Crossing U-Turn (RCUT), Right-In/Right-Out Only (RIRO), or Median U-Turn (MUT).

Davidson Pkwy at proposed Reeves Creek Pkwy
The required Build Phase 1 (2029) conditions improvements described above help to improve the LOS from E to D in the PM peak hour.



Flippen Rd at Site Driveways 4 and 5
The required Build Phase 1 (2029) conditions improvements described above help to reduce the delays of both the eastbound and westbound approaches; however, not beyond LOS E for either approach in either peak hour. Other improvements would need to be considered at this location to improve the LOS further, such as a traffic signal control or an alternative intersection design, including but not limited to a Restricted Crossing U-Turn (RCUT), Right-In/Right-Out Only (RIRO), or Median U-Turn (MUT).

The proposed Build Phase 1 (2029) Lane Geometry is shown in Figure 15.



Reeves Creek DRI Build Phase 1 2029 Lane Geometry – Figure 15A

Reeves Creek DRI Build Phase 1 2029 Lane Geometry – Figure 15B

Reeves Creek DRI Build Phase 1 2029 Lane Geometry – Figure 15C

4.6.3 Build Phase 1 (2029) Segment Analysis

A segment capacity analysis was performed for all study roadway segments using HCS 7 software and HCM 6th Edition methodology. The existing geometry and programmed improvements described in Section 3.2 were employed for the segment analysis. The results of the segment analysis are summarized in Table 20. HCS 7 output files are included in APPENDIX D**.**

Table 20: Build Phase 1 (2029) Segment Analysis

The following segments are expected to experience inadequate LOS in Build Phase 1 (2029) Conditions during one or both peak hours:

Flippen Rd from Banks Rd to Walt Stephens Rd/Red Oak Rd

- The segment is expected to operate at LOS E during the PM peak hour in the southbound direction.
- LOS standard for Background and Build conditions is LOS E during the PM peak hour in the southbound direction.

Flippen Rd from Walt Stephens Rd/Red Oak Rd to SR 42-138/US 23/N Henry Blvd

- The segment is expected to operate at LOS E during the PM peak hour in the southbound direction.

SR 42-138/US 23/N Henry Blvd from SR 138/Stockbridge Rd to Flippen Rd

- The segment is expected to operate at LOS E during the PM peak hour in the eastbound direction.

SR 42-138/US 23/N Henry Blvd from Harrel Dr/E Atlanta Rd to S Lee St

- The segment is expected to operate at LOS E during the PM peak hour in the eastbound direction.

SR 138/Lake Spivey Pkwy from I-675 NB to Davidson Pkwy

- The segment is expected to operate at LOS F during the PM peak hour in the eastbound direction and at LOS E during the PM peak hour in the westbound direction.

SR 138/Lake Spivey Pkwy from I-675 SB to I-675 NB

- The segment is expected to operate at LOS F during the PM peak hour in the eastbound direction.

SR 138/Lake Spivey Pkwy from I-75 NB to Mt Zion Rd

- The segment is expected to operate at LOS E during the PM peak hour in the westbound direction.

SR 138/Lake Spivey Pkwy from I-75 SB to I-75 NB

- The segment is expected to operate at LOS E during the PM peak hour in the eastbound direction.

Davidson Pkwy from SR 138/Lake Spivey Pkwy to proposed Reeves Creek Pkwy

- The segment is expected to operate at LOS E during both peak hours in both directions.

Speer Rd from Walt Stephens Rd to SR 138/Lake Spivey Pkwy

- The segment is expected to operate at LOS E during the AM peak hour in the northbound direction and at LOS E during the PM peak hour in the southbound direction.

Walt Stephens Rd from Flippen Rd to proposed Reeves Creek Pkwy

- The segment is expected to operate at LOS E in the westbound direction during both peak hours.

Walt Stephens Rd from proposed Reeves Creek Pkwy to Brentwood Pkwy/Monarch Village Way

- The segment is expected to operate at LOS E in the westbound direction during the AM peak hour and at LOS E in the eastbound direction during the PM peak hour.

Walt Stephens Rd from Speer Rd/Blackhall Rd to Brentwood Pkwy/Monarch Village Way

- The segment is expected to operate at LOS E in the westbound direction during the AM peak hour and at LOS E in the eastbound direction during the PM peak hour.
- LOS standard for Background and Build conditions is LOS E during the PM peak hour in the eastbound direction.

4.6.4 Build Phase 1 (2029) Segment Analysis Required Improvements

At roadway segments that are expected to experience inadequate LOS in Build Phase 1 (2029) conditions, one lane was added to mitigate the inadequate LOS. The results of the Build Phase 1 (2029) Segment Analysis with Improvements are shown below in Table 21.

Table 21: Build Phase 1 (2029) Segment Analysis with Improvements

				AM		PM	
#	Segment	From	To	NB / EB	SB / WB	NB / EB	SB / WB
2	Flippen Rd	Walt Stephens Rd/Red Oak Rd	SR 42-138/US 23/N Henry Blvd	-	A	-	B

27	Walt Stephens Rd	Speer Rd/Blackhall Rd	Brentwood Pkwy/Monarch Village Way	A	B	B	A

Flippen Rd from Walt Stephens Rd/Red Oak Rd to SR 42-138/US 23/N Henry Blvd

- The LOS in the southbound direction is expected to improve from E to B during the PM peak hour.

SR 42-138/US 23/N Henry Blvd from SR 138/Stockbridge Rd to Flippen Rd

- The LOS in the eastbound direction is expected to improve from E to C during the PM peak hour.

SR 42-138/US 23/N Henry Blvd from Harrel Dr/E Atlanta Rd to S Lee St

- The LOS in the eastbound direction is expected to improve from E to C during the PM peak hour.

SR 138/Lake Spivey Pkwy from I-675 NB to Davidson Pkwy

- The LOS in the eastbound direction is expected to improve from F to D during the PM peak hour.
- The LOS in the westbound direction is expected to improve from E to C during the PM peak hour.

SR 138/Lake Spivey Pkwy from I-675 SB to I-675 NB

- The LOS in the eastbound direction is expected to improve from F to D during the PM peak hour.

SR 138/Lake Spivey Pkwy from I-75 NB to Mt Zion Rd

- The LOS in the westbound direction is expected to improve from E to C during the PM peak hour.

SR 138/Lake Spivey Pkwy from I-75 SB to I-75 NB

- The LOS in the eastbound direction is expected to improve from E to C during the PM peak hour.

Davidson Pkwy from SR 138/Lake Spivey Pkwy to proposed Reeves Creek Pkwy

- The LOS in the northbound direction is expected to improve from E to A during the AM peak hour.
- The LOS in the southbound direction is expected to improve from E to B during the AM peak hour.
- The LOS in the northbound direction is expected to improve from E to B during the PM peak hour.
- The LOS in the southbound direction is expected to improve from E to B during the PM peak hour.

Speer Rd from Walt Stephens Rd to SR 138/Lake Spivey Pkwy

- The LOS in the northbound direction is expected to improve from E to B during the AM peak hour.
- The LOS in the southbound direction is expected to improve from E to B during the PM peak hour.

Walt Stephens Rd from Flippen Rd to proposed Reeves Creek Pkwy

- The LOS in both directions is expected to improve from E to B during both peak hours.

Walt Stephens Rd from proposed Reeves Creek Pkwy to Brentwood Pkwy/Monarch Village Way

- The LOS in the westbound direction is expected to improve from E to B during the AM peak hour.
- The LOS in the eastbound direction is expected to improve from E to B during the PM peak hour.

Walt Stephens Rd from Speer Rd/Blackhall Rd to Brentwood Pkwy/Monarch Village Way

- The LOS in the westbound direction is expected to improve from E to B during the AM peak hour.

4.7 Build Phase 2 (2035)

4.7.1 Build Phase 2 (2035) Capacity Analysis

The Build Phase 2 (2035) traffic volumes were analyzed using a Synchro 10.0 model to determine the capacity of the AM and PM peak hours. The existing geometry and programmed improvements described in Section 3.2 were employed for the intersection capacity analysis. The results are shown by lane group movement and total intersection capacity. Average vehicular delays are shown in seconds. Level of service (LOS) is a grading system as defined by the Highway Capacity Manual (HCM) where A is best, and F is worst. The HCM 6th Edition was used for analysis. The Build Phase 2 (2035) Capacity Analysis was performed independent of Build Phase 1 (2029) capacity analysis. Table 22 shows the Build Phase 2 (2035) Capacity Analysis. Synchro output files are included in APPENDIX D.

All traffic signal timings remain the same as in existing conditions. Traffic signal timings used in analysis are shown in APPENDIX D.

Table 22: Build Phase 2 (2035) Capacity Analysis

Intersection	Control	Lane Group Movement	Build Phase 2 - 2035			
			AM Peak Hour		PM Peak Hour	
			Delay (s)	LOS	Delay (s)	LOS
SR 138 @ SR 42/US 23/N Henry Blvd	Traffic Signal	Intersection	129.8	F	212.5	F

*actual value too high to calculate

The following intersections are expected to experience inadequate LOS in Build Phase 2 (2035) Conditions during one or both peak hours:

SR 138 at SR 42/US 23/N Henry Blvd

- The intersection is expected to operate at LOS F during both peak hours.
- LOS standard for Background and Build conditions is LOS E during the PM peak hour.

SR 42-138/US 23/N Henry Blvd at Rock Quarry Rd

- The intersection is expected to operate at LOS E during the AM peak hour and LOS F during the PM peak hour.

SR 42-138/US 23/N Henry Blvd at E Atlanta Rd/Harrel Dr

- The intersection is expected to operate at LOS F during both peak hours.

SR 42-138/US 23/N Henry Blvd at Flippen Rd/Shields Rd

- The intersection is expected to operate at LOS F during both peak hours.
- LOS standard for Background and Build conditions is LOS E during the PM peak hour.

SR 42-138/US 23/N Henry Blvd at Davidson Pkwy

- Eastbound and westbound left turn movements are expected to remain LOS F during both peak hours.
- The eastbound right turn movement and the northbound left turn movement also are expected to experience LOS F during the PM peak hour.
- Delays in both scenarios is caused by left-turning vehicles experiencing severe delay in attempting to make the left turn movement onto the mainline. This is not uncommon for side street stop-controlled intersections.

SR 42-138/US 23/N Henry Blvd at SR 138/Stockbridge Rd & Walmart Dwy

- The intersection is expected to operate at LOS E during the AM peak hour and LOS F during the PM peak hour.
- LOS standard for Background and Build conditions is LOS E during the PM peak hour.

SR 138/Stockbridge Rd at Walter Way

- The intersection is expected to operate at LOS E during the PM peak hour.

SR 138/Stockbridge Rd at Davidson Pkwy

- The intersection is expected to operate at LOS F during both peak hours.

SR 138/Lake Spivey Pkwy at I-675 NB

- The intersection is expected to operate at LOS F during both peak hours.

SR 138/Lake Spivey Pkwy at I-675 SB

- The intersection is expected to operate at LOS F during both peak hours.

SR 138/Lake Spivey Pkwy at Mt Zion Rd

- The intersection is expected to operate at LOS E during the AM peak hour and LOS F during the PM peak hour.

SR 138/Lake Spivey Pkwy at I-75 NB

- The intersection is expected to operate at LOS F during the AM peak hour.

SR 138/Lake Spivey Pkwy at I-75 SB

- The intersection is expected to operate at LOS F during the PM peak hour.

Walt Stephens Rd at Spivey Rd

- Southbound left turn movement and overall approach are expected to operate at LOS F during both peak hours.
- Delay in the AM peak hour is caused by left-turning vehicles experiencing severe delay in attempting to make the left turn movement onto the mainline. This is not uncommon for side street stop-controlled intersections.

Walt Stephens Rd at Speer Rd/Blackhall Rd

- The intersection is expected to operate at LOS F during the AM peak hour and LOS E during the PM peak hour.

Walt Stephens Rd at Monarch Village Way/Brentwood Pkwy

- The intersection is expected to operate at LOS E during the AM peak hour. However, the delay is 57.5 seconds, which is only 2.5 seconds from LOS D. No Improvements are recommended.

Flippen Rd at Walt Stephens Rd/Red Oak Rd

- The intersection is expected to operate at LOS F during both peak hours.
- LOS standard for Background and Build conditions is LOS E during the PM peak hour.

Davidson Pkwy at Walter Way

- The intersection is expected to operate at LOS F during the PM peak hour.

Flippen Rd at Fairhaven Rd

- Eastbound single-lane shared approach is expected to operate at LOS F during both peak hours.
- Westbound single-lane shared approach is expected to operate at LOS E during the AM peak hour and at LOS F during the PM peak hour.
- Delays in both scenarios is caused by left-turning vehicles experiencing severe delay in attempting to make the left turn movement onto the mainline. This is not uncommon for side street stop-controlled intersections.

Davidson Pkwy at proposed Reeves Creek Pkwy

- The intersection LOS is expected to operate at LOS F during the PM peak hour.

Flippen Rd at Site Driveways 4 and 5

- Eastbound single-lane shared approach is expected to operate at LOS F during both peak hours.
- Westbound single-lane shared approach is expected to operate at LOS E during both peak hours.
- Delays in both scenarios is caused by left-turning vehicles experiencing severe delay in attempting to make the left turn movement onto the mainline. This is not uncommon for side street stop-controlled intersections.

4.7.2 Build Phase 2 (2035) Capacity Analysis Required Improvements

Improvements were identified for intersections with inadequate LOS in Build Phase 2 (2035) Conditions. GRTA Technical Guidelines do not allow for the consideration of simple timing changes to be used as mitigation, but phase changes may be considered. All required improvements are to be geometric in nature; however, it might be possible in some locations to improve the intersection to LOS D or E with simple adjustments to signal timing. The results of the Build Phase 2 (2035) Conditions Required Improvements capacity analysis is shown in Table 23.

All traffic signal timings remain the same as in Background 2029 Conditions, except for the following:

- SR 42-138/US 23/North Henry Boulevard at SR 138/Stockbridge Road and Walmart driveway
  - Changed side street phasing from split phasing to leading protected+permissive left turns
- SR 138/Stockbridge Road at Davidson Parkway
  - Changed phasing from split phasing on side streets to one protected only northbound left turn and one protected+permissive southbound left turn phase on side streets due to proposed geometry change on northbound approach from a single northbound left turn lane to a six-lane left turn.
- Any intersection proposed to go from a single lane left turn to two or more left turn lanes received protected only left turn phasing for that approach.

The following improvements are needed for Build Phase 2 (2035) Conditions:

SR 138 at SR 42/US 23/N Henry Blvd

- Add 1 EBR lane, 1 WBL lane, 1 NBL lane, 1 NBR lane

SR 42-138/US 23/N Henry Blvd at Rock Quarry Rd

- Add 1 EBT lane, 1 WBL lane, 1 NBL lane, 1 NBR lane

SR 42-138/US 23/N Henry Blvd at E Atlanta Rd/Harrel Dr

- Add 1 EBL lane, 1 EBR lane, 1 WBT lane, 1 WBR lane, 2 SBL lanes, 1 SBR lane

SR 42-138/US 23/N Henry Blvd at Flippen Rd/Shields Rd

- Add 1 EBT lane, 1 WBL lane, 1 WBT lane, 1 NBL lane, 1 NBR lane

SR 42-138/US 23/N Henry Blvd at Davidson Pkwy

- Add 1 EBR lane, 1 WBR lane, 1 SBR lane

SR 42-138/US 23/N Henry Blvd at SR 138/Stockbridge Rd & Walmart Dwy

- Add 1 EBT lane, 1 SBT lane

SR 138/Stockbridge Rd at Walter Way

- Add 1 EBR lane

SR 138/Stockbridge Rd at Davidson Pkwy

- Add 5 NBL lanes, 1 NBR lane, 1 SBL lane, 3 EBT lanes, 3 WBT lanes

SR 138/Lake Spivey Pkwy at I-675 NB

- Add 1 EBL lane, 1 EBT lane, 1 WBT lane, 1 NBR lane

SR 138/Lake Spivey Pkwy at I-675 SB

- Add 1 EBT lane, 1 EBR lane, 1 WBT lane, 1 WBL lane, 1 SBL lane

SR 138/Lake Spivey Pkwy at Hannover Pkwy

- Add 1 EBT lane

SR 138/Lake Spivey Pkwy at Mt Zion Rd

- Add 1 EBT lane, 1 WBT lane, 1 SBL lane

SR 138/Lake Spivey Pkwy at I-75 NB

- Add 1 EBL lane, 1 WBR lane, 1 NBL lane

SR 138/Lake Spivey Pkwy at I-75 SB

- Add 1 SBL lane, 1 SBR lane

SR 138/Lake Spivey Pkwy at Speer Rd/Mt Zion Pkwy

- Add 1 EBT lane, 1 WBT lane, 1 NBR lane

Walt Stephens Rd at Spivey Rd

- Add 1 EBL lane, 1 WBR lane, 1 SBR lane

Walt Stephens Rd at Speer Rd/Blackhall Rd

- Add 1 WBR lane, 1 SBL lane

Flippen Rd at Walt Stephens Rd/Red Oak Rd

- 1 free-flow EBR lane onto Flippen Rd SB, 1 EBL lane, 1 NBT lane, 1 NBL lane, 1 SBT lane, 1 SBR lane

Davidson Pkwy at Walter Way

- Add 1 EBT lane, 1 WBT lane, 1 SBR lane

Flippen Rd at Fairhaven Rd

- Add 1 EBR lane, 1 WBR lane

Davidson Pkwy at proposed Reeves Creek Pkwy

- Add 1 NBT lane, 1 SBT lane, 1 SBL lane, 1 EBR lane, 1 WBL lane

Walt Stephens Rd at proposed Reeves Creek Pkwy

- Add protected+permissive eastbound left turn phase

Flippen Rd at Site Driveways 4 and 5

- Add 1 EBR lane, 1 WBR lane

*actual value too high to calculate

SR 138 at SR 42/US 23/N Henry Blvd
The required Build Phase 2 (2035) conditions improvements described above help to improve the LOS from F to C in the AM peak hour and from F to E in the PM peak hour.

SR 42-138/US 23/N Henry Blvd at Rock Quarry Rd
The required Build Phase 2 (2035) conditions improvements described above help to improve the LOS from E to C in the AM peak hour and from F to C in the PM peak hour.

SR 42-138/US 23/N Henry Blvd at E Atlanta Rd/Harrel Dr
The required Build Phase 2 (2035) conditions improvements described above help to improve the LOS from F to D in both peak hours.

SR 42-138/US 23/N Henry Blvd at Flippen Rd/Shields Rd
The required Build Phase 2 (2035) conditions improvements described above help to improve the LOS from F to C in the AM peak hour and from F to D in the PM peak hour.

SR 42-138/US 23/N Henry Blvd at Davidson Pkwy
While the approach delays are reduced significantly, the addition of right turn lanes on both the eastbound and westbound approaches do not improve the LOS beyond F on either approach during either peak hour. Other improvements would need to be considered at this location to improve the LOS further, such as a traffic signal control or an alternative intersection design, including but not limited to a Restricted Crossing U-Turn (RCUT), Right-In/Right-Out Only (RIRO), or Median U-Turn (MUT).

SR 42-138/US 23/N Henry Blvd at SR 138/Stockbridge Rd & Walmart Dwy
The required Build Phase 2 (2035) conditions improvements described above help to improve the LOS from E to D in the AM peak hour and from F to E in the PM peak hour.

SR 138/Stockbridge Rd at Walter Way
The required Build Phase 2 (2035) conditions improvements described above help to improve the LOS from E to D in the PM peak hour.

SR 138/Stockbridge Rd at Davidson Pkwy
The required Build Phase 2 (2035) conditions improvements described above help to improve the LOS from F to C in the AM peak hour and from F to E in the PM peak hour. The LOS standard for this intersection for the PM peak hour is D. However, the delay (57.2 seconds) is only 2.2 seconds away from LOS D. No further changes were pursued at this intersection.

SR 138/Lake Spivey Pkwy at I-675 NB
The required Build Phase 2 (2035) conditions improvements described above help to improve the LOS from F to D in the AM peak hour and from F to C in the PM peak hour.

SR 138/Lake Spivey Pkwy at I-675 SB
The required Build Phase 2 (2035) conditions improvements described above help to improve the LOS from F to D in both peak hours.

SR 138/Lake Spivey Pkwy at Hannover Pkwy
The required Build Phase 2 (2035) conditions improvements described above help to improve the LOS from E to C in the PM peak hour.

SR 138/Lake Spivey Pkwy at Mt Zion Rd
The required Build Phase 2 (2035) conditions improvements described above help to improve the LOS from E to C in the AM peak hour and from F to B in the PM peak hour.

SR 138/Lake Spivey Pkwy at I-75 NB
The required Build Phase 2 (2035) conditions improvements described above help to improve the LOS from F to C in the AM peak hour.

SR 138/Lake Spivey Pkwy at I-75 SB
The required Build Phase 2 (2035) conditions improvements described above help to improve the LOS from F to D in the PM peak hour.

SR 138/Lake Spivey Pkwy at Speer Rd/Mt Zion Pkwy
The required Build Phase 2 (2035) conditions improvements described above help to improve the LOS from F to D in the AM peak hour and from E to D in the PM peak hour.

Walt Stephens Rd at Spivey Rd
While the approach delay is reduced significantly, the addition of a right turn lane on the southbound approach does not improve the approach LOS beyond F in either peak hour. Other improvements would need to be considered at this location to improve the LOS further, such as a traffic signal control or an alternative intersection design, including but not limited to a Restricted Crossing U-Turn (RCUT), Right-In/Right-Out Only (RIRO), or Median U-Turn (MUT).

Walt Stephens Rd at Speer Rd/Blackhall Rd
The required Build Phase 2 (2035) conditions improvements described above help to improve the LOS from F to C in the AM peak hour and from E to D in the PM peak hour.

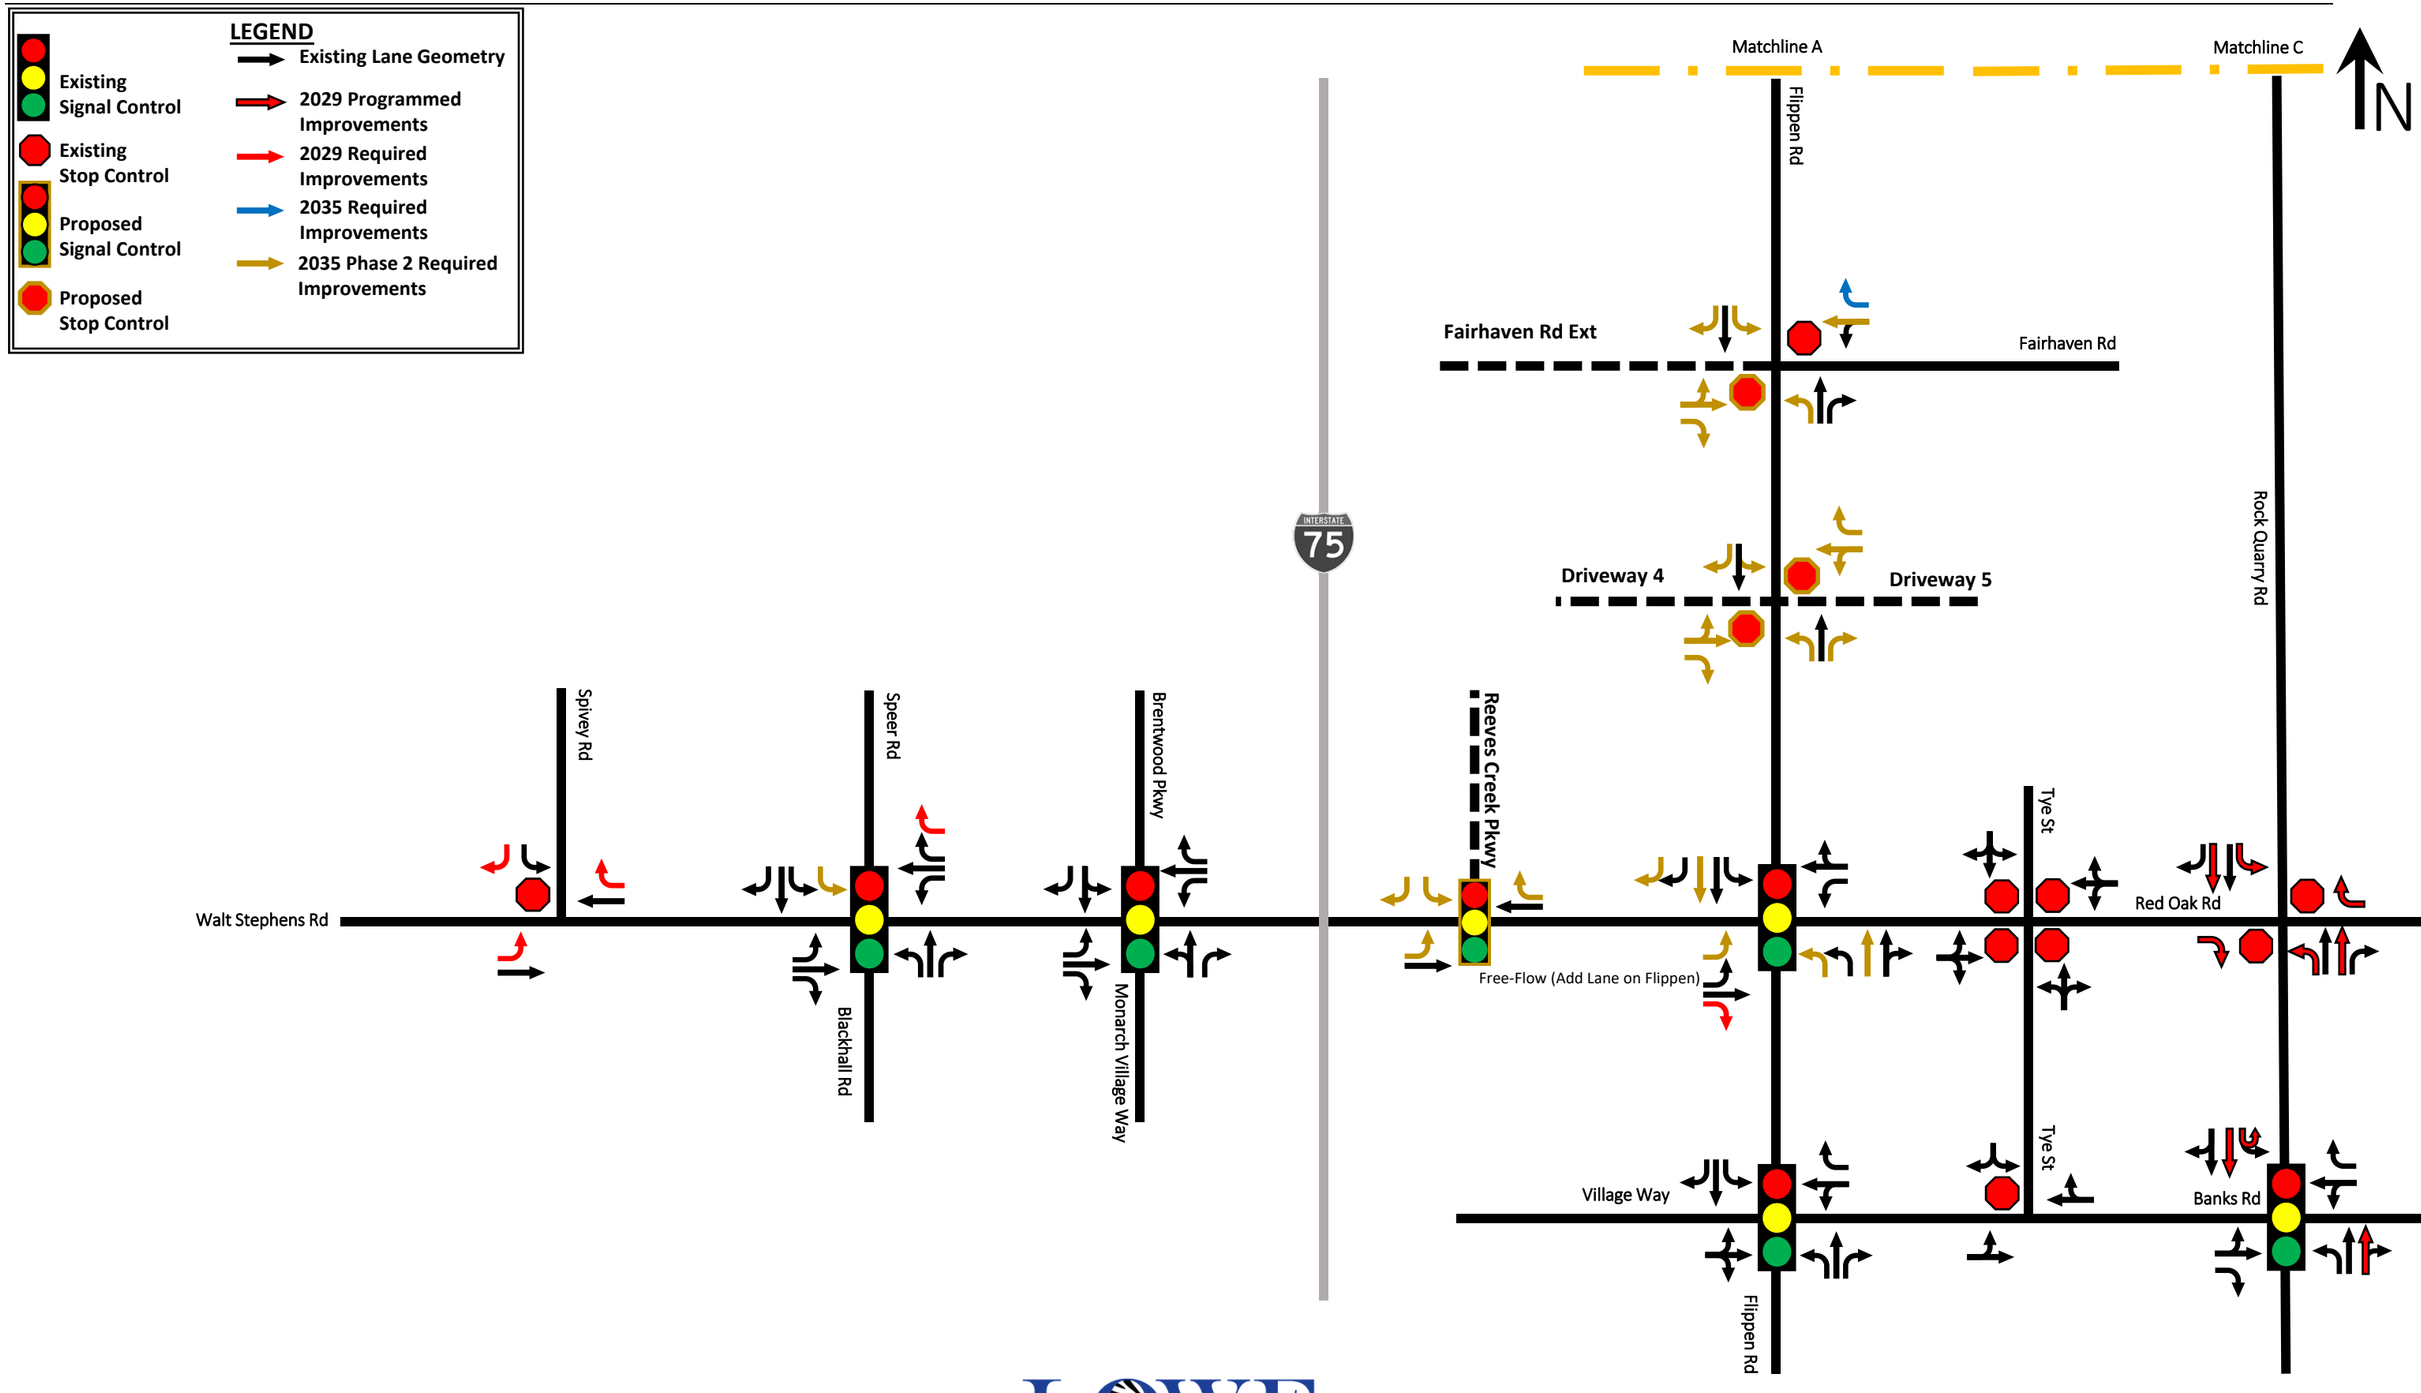
Walt Stephens Rd at Brentwood Pkwy/Monarch Village Way
No lane additions were proposed at this intersection since the delay (57.5 seconds) only 2.5 seconds away from LOS D.

Flippen Rd at Walt Stephens Rd/Red Oak Rd
The required Build Phase 2 (2035) conditions improvements described above help to improve the LOS from F to D in the AM peak hour and from F to E in the PM peak hour.

Davidson Pkwy at Walter Way
The required Build Phase 2 (2035) conditions improvements described above help to improve the LOS from F to D in the PM peak hour. However, this is an all-way stop-controlled intersection. Should the traffic volume continue to grow, either a traffic signal or an alternative intersection design, including but not limited to a Restricted Crossing U-Turn (RCUT), Right-In/Right-Out Only (RIRO), or Median U-Turn (MUT), should be investigated.

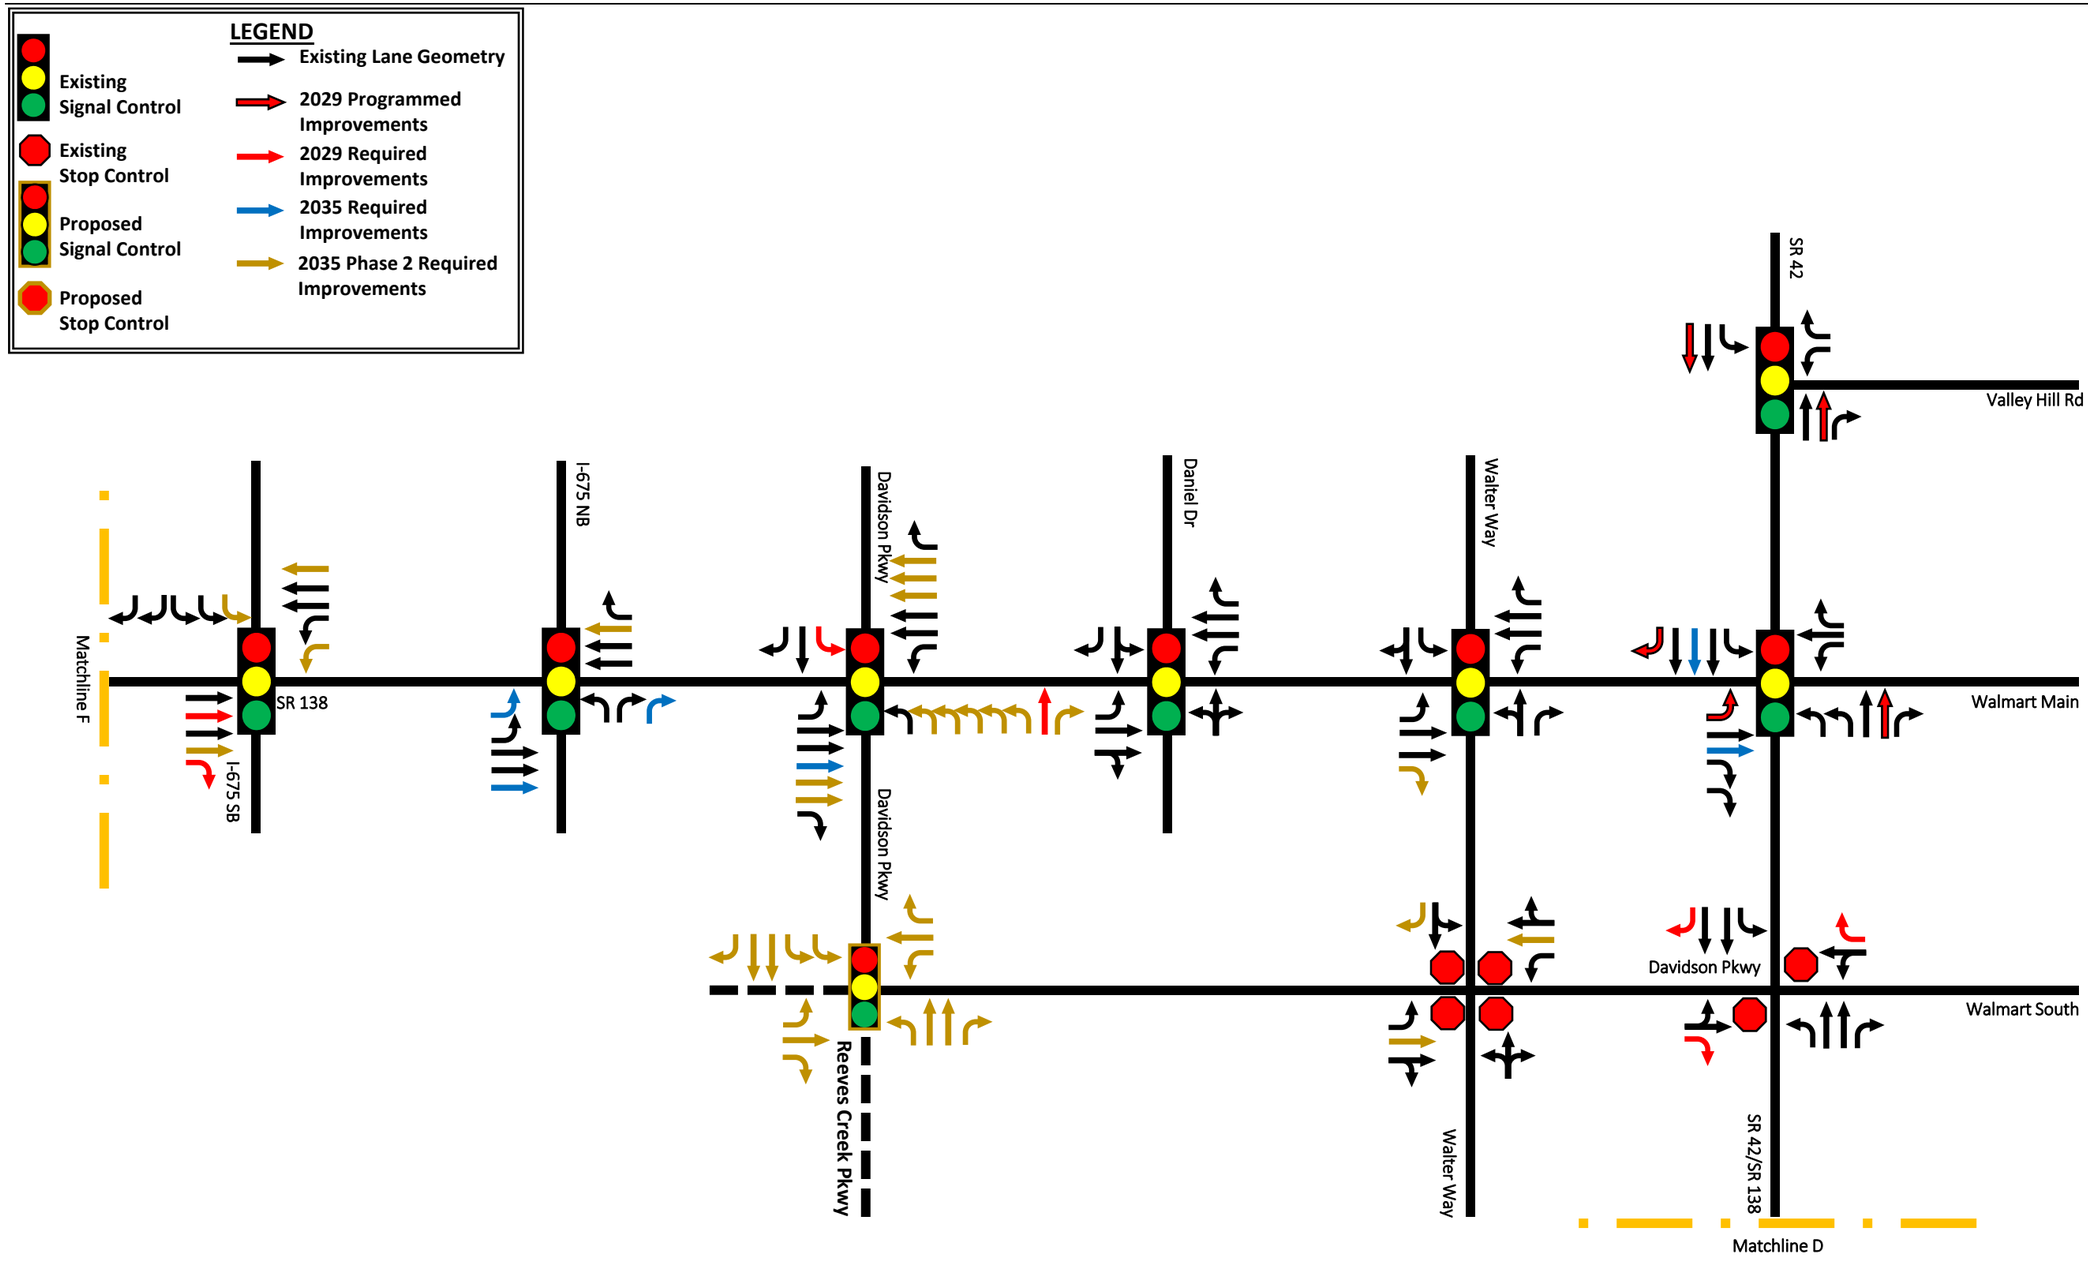
Flippen Rd at Fairhaven Rd
The required Build Phase 2 (2035) conditions improvements described above help to reduce the delays of both the eastbound and westbound approaches; however, only the westbound approach sees a significant change in LOS, improving from E to D. Other improvements would need to be considered at this location to improve the LOS further, such as a traffic signal control or alternative intersection design,

including but not limited to a Restricted Crossing U-Turn (RCUT), Right-In/Right-Out Only (RIRO), or Median U-Turn (MUT).



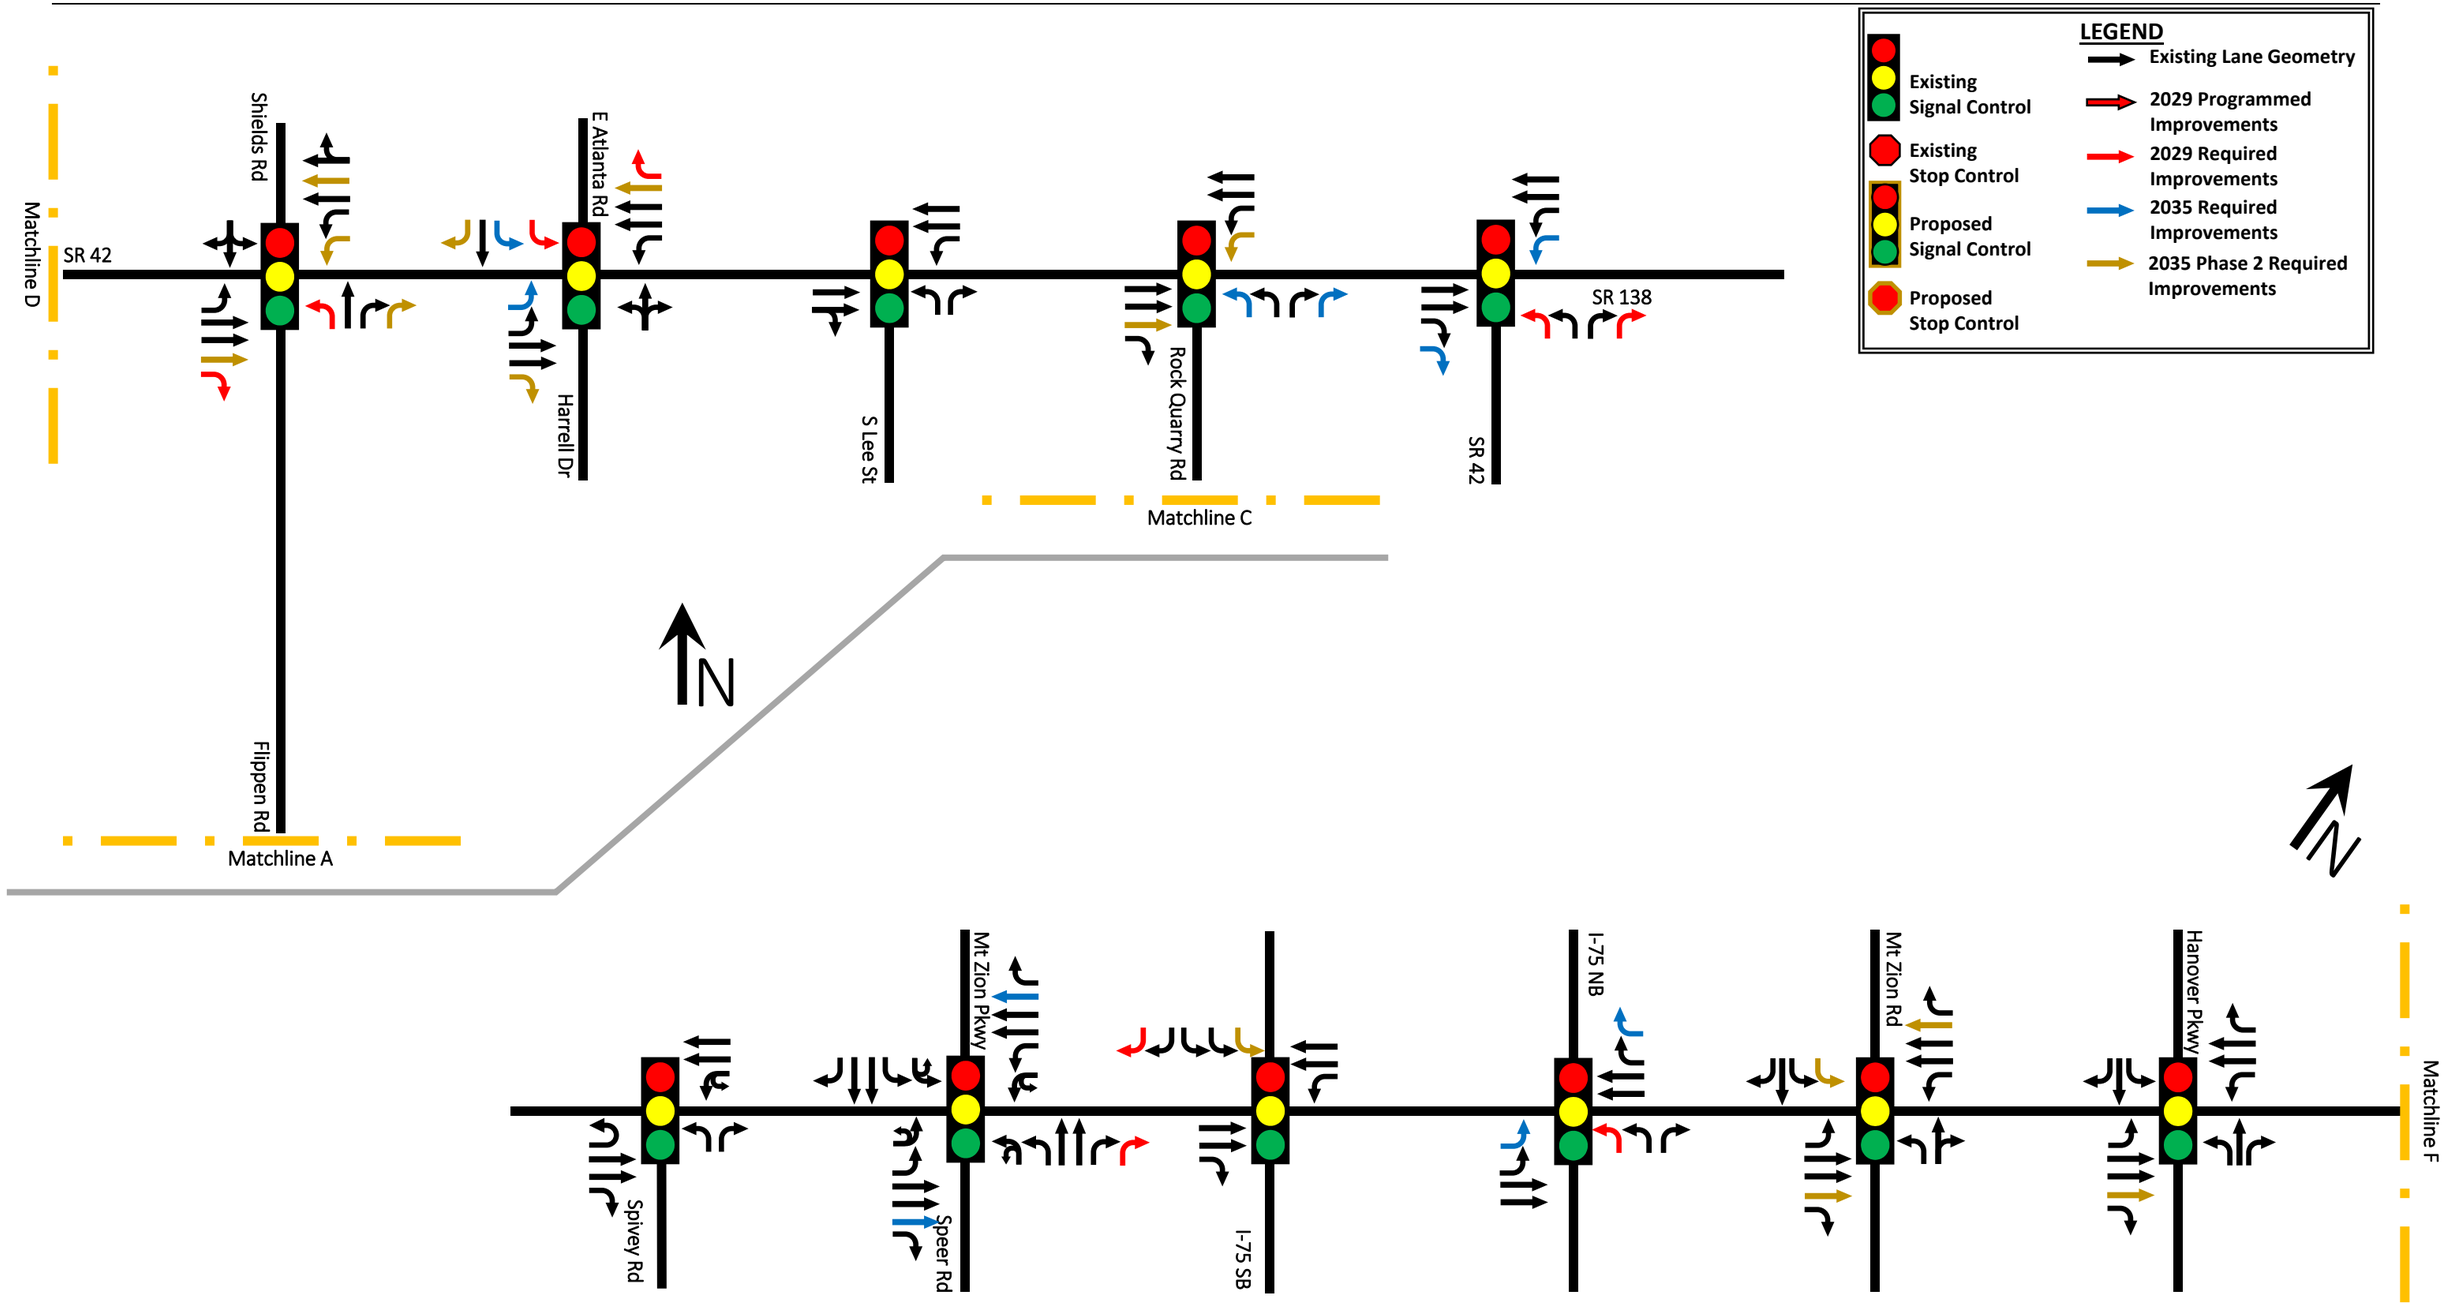
Davidson Pkwy at proposed Reeves Creek Pkwy
The required Build Phase 2 (2035) conditions improvements described above help to improve the LOS from F to D in the PM peak hour.

Walt Stephens Rd at proposed Reeves Creek Pkwy
The required Build Phase 2 (2035) conditions improvements described above helps to improve the LOS from F to D in the PM peak hour.



Flippen Rd at Site Driveways 4 and 5
The required Build Phase 2 (2035) conditions improvements described above help to reduce the delays of both the eastbound and westbound approaches; however, not beyond LOS F for either approach in either peak hour. Other improvements would need to be considered at this location to improve the LOS further, such as a traffic signal control or alternative intersection design, including but not limited to a Restricted Crossing U-Turn (RCUT), Right-In/Right-Out Only (RIRO), or Median U-Turn (MUT).

The Build Phase 2 (2035) Lane Geometry is shown in Figure 16.



Reeves Creek DRI Build Phase 2 2035 Lane Geometry – Figure 16A

Reeves Creek DRI Build Phase 2 2035 Lane Geometry – Figure 16B

Reeves Creek DRI Build Phase 2 2035 Lane Geometry – Figure 16C

4.7.3 Build Phase 2 (2035) Segment Analysis

A segment capacity analysis was performed for all study roadway segments using HCS 7 software and HCM 6th Edition methodology. The existing geometry and programmed improvements described in Section 3.2 were employed for the segment analysis. The results of the segment analysis are summarized in Table 24. HCS 7 output files are included in APPENDIX D**.**

The following segments are expected to experience inadequate LOS in Build Phase 2 (2035) Conditions during one or both peak hours:

Flippen Rd from Banks Rd to Walt Stephens Rd/Red Oak Rd

- The segment is expected to operate at LOS E during the AM peak hour in the southbound direction.
- The segment is expected to operate at LOS E during the PM peak hour in both directions
- LOS standard for Background and Build conditions is LOS E during the PM peak hour in the southbound direction.

Flippen Rd from Walt Stephens Rd/Red Oak Rd to SR 42-138/US 23/N Henry Blvd

- The segment is expected to operate at LOS E during the PM peak hour in both directions.

SR 42-138/US 23/N Henry Blvd from SR 138/Stockbridge Rd to Flippen Rd

- The segment is expected to operate at LOS E during the AM peak hour in the westbound direction.
- The segment is expected to operate at LOS E during the PM peak hour in the eastbound direction.

SR 42-138/US 23/N Henry Blvd from Flippen Rd to Harrel Dr/E Atlanta Rd

- The segment is expected to operate at LOS E during the PM peak hour in the eastbound direction.

SR 42-138/US 23/N Henry Blvd from Harrel Dr/E Atlanta Rd to S Lee St

- The segment is expected to operate at LOS E during the PM peak hour in the eastbound direction.

SR 42-138/US 23/N Henry Blvd from S Lee St to Rock Quarry Rd

- The segment is expected to operate at LOS E during the PM peak hour in the eastbound direction.

SR 42-138/US 23/N Henry Blvd from Rock Quarry Rd to SR 42/US 23/N Henry Blvd

- The segment is expected to operate at LOS E during the PM peak hour in the eastbound direction.

SR 138/Stockbridge Rd from Daniel Dr to Walter Way

- The segment is expected to operate at LOS E during the PM peak hour in the eastbound direction.

SR 138/Lake Spivey Pkwy from I-675 NB to Davidson Pkwy

- The segment is expected to operate at LOS E during the AM peak hour in the westbound direction.
- The segment is expected to operate at LOS F during the PM peak hour in both directions.

SR 138/Lake Spivey Pkwy from I-675 SB to I-675 NB

- The segment is expected to operate at LOS E during the AM peak hour in the eastbound direction.
- The segment is expected to operate at LOS F during the PM peak hour in the eastbound direction.
- The segment is expected to operate at LOS E during the PM peak hour in the westbound direction.

SR 138/Lake Spivey Pkwy from Hannover Pkwy to I-675 SB

- The segment is expected to operate at LOS E during the PM peak hour in both directions.

SR 138/Lake Spivey Pkwy from Mt Zion Rd to Hannover Pkwy

- The segment is expected to operate at LOS E during the PM peak hour in both directions.

SR 138/Lake Spivey Pkwy from I-75 NB to Mt Zion Rd

- The segment is expected to operate at LOS E during the AM peak hour in the westbound direction.
- The segment is expected to operate at LOS E during the PM peak hour in both directions.

SR 138/Lake Spivey Pkwy from I-75 SB to I-75 NB

- The segment is expected to operate at LOS E during both peak hours in the eastbound direction.

SR 138/Lake Spivey Pkwy from Speer Rd/Mt Zion Pkwy to I-75 SB

- The segment is expected to operate at LOS E during the AM peak hour in the eastbound direction.
- The segment is expected to operate at LOS E during the PM peak hour in the westbound direction.

Davidson Pkwy from SR 138/Lake Spivey Pkwy to proposed Reeves Creek Pkwy

- The segment is expected to operate at LOS E during the AM peak hour in both directions.
- The segment is expected to operate at LOS F during the PM peak hour in the northbound direction.
- The segment is expected to operate at LOS E during the PM peak hour in the southbound direction.

Davidson Pkwy from proposed Reeves Creek Pkwy to SR 42-138/US 23/N Henry Blvd

- The segment is expected to operate at LOS E during the PM peak hour in the eastbound direction.

Speer Rd from Walt Stephens Rd to SR 138/Lake Spivey Pkwy

- The segment is expected to operate at LOS E during the AM peak hour in the northbound direction.
- The segment is expected to operate at LOS E during the PM peak hour in the southbound direction.

Walt Stephens Rd from Flippen Rd to proposed Reeves Creek Pkwy

- The segment is expected to operate at LOS E in both directions during both peak hours.

Walt Stephens Rd from proposed Reeves Creek Pkwy to Brentwood Pkwy/Monarch Village Way

- The segment is expected to operate at LOS E in both directions during both peak hours.

Walt Stephens Rd from Speer Rd/Blackhall Rd to Brentwood Pkwy/Monarch Village Way

- The segment is expected to operate at LOS E in the westbound direction during both peak hours.
- The segment is expected to operate at LOS E in the eastbound direction during the PM peak hour.
- LOS standard for Background and Build conditions is LOS E during the PM peak hour in the eastbound direction.

4.7.4 Build Phase 2 (2035) Segment Analysis Required Improvements

At roadway segments that are expected to experience inadequate LOS in Build Phase 2 (2035) conditions, one lane was added to mitigate the inadequate LOS. The results of the Build Phase 2 (2035) Segment Analysis with Improvements are shown below in Table 25.

Table 25: Build Phase 2 (2035) Segment Analysis with Improvements

				AM		PM

Flippen Rd from Banks Rd to Walt Stephens Rd/Red Oak Rd

- The LOS in both directions is expected to improve from E to B during both peak hours.

Flippen Rd from Walt Stephens Rd/Red Oak Rd to SR 42-138/US 23/N Henry Blvd

- The LOS in both directions is expected to improve from E to B during the PM peak hour.

SR 42-138/US 23/N Henry Blvd from SR 138/Stockbridge Rd to Flippen Rd

- The LOS in the westbound direction is expected to improve from E to C during the AM peak hour
- The LOS in the eastbound direction is expected to improve from E to D during the PM peak hour.

SR 42-138/US 23/N Henry Blvd from Flippen Rd to Harrel Dr/E Atlanta Rd

- The LOS in the eastbound direction is expected to improve from E to C during the PM peak hour.

SR 42-138/US 23/N Henry Blvd from Harrel Dr/E Atlanta Rd to S Lee St

- The LOS in the eastbound direction is expected to improve from E to D during the PM peak hour.

SR 42-138/US 23/N Henry Blvd from S Lee St to Rock Quarry Rd

- The LOS in the eastbound direction is expected to improve from E to D during the PM peak hour.

SR 42-138/US 23/N Henry Blvd from Rock Quarry Rd to SR 42/US 23/N Henry Blvd

- The LOS in the eastbound direction is expected to improve from E to C during the PM peak hour.

SR 138/Stockbridge Rd from Daniel Dr to Walter Way

- The LOS in the eastbound direction is expected to improve from E to C during the PM peak hour.

SR 138/Lake Spivey Pkwy from I-675 NB to Davidson Pkwy

- The LOS in the eastbound direction is expected to improve from E to C during the AM peak hour.
- The LOS in both directions is expected to improve from F to D during the PM peak hour.

SR 138/Lake Spivey Pkwy from I-675 SB to I-675 NB

- The LOS in the eastbound direction is expected to improve from F to D during the PM peak hour.
- The LOS in the westbound direction is expected to improve from E to C during the PM peak hour.

SR 138/Lake Spivey Pkwy from Hannover Pkwy to I-675 SB

- The LOS in both directions is expected to improve from E to C during the PM peak hour.

SR 138/Lake Spivey Pkwy from Mt Zion Rd to Hannover Pkwy

- The LOS in both directions is expected to improve from E to C during the PM peak hour.

SR 138/Lake Spivey Pkwy from I-75 NB to Mt Zion Rd

- The LOS in the westbound direction is expected to improve from E to C during the AM peak hour.
- The LOS in the eastbound direction is expected to improve from E to C during the PM peak hour.
- The LOS in the westbound direction is expected to improve from E to D during the PM peak hour.

SR 138/Lake Spivey Pkwy from I-75 SB to I-75 NB

- The LOS in the eastbound direction is expected to improve from E to C during the AM peak hour.
- The LOS in the eastbound direction is expected to improve from E to D during the PM peak hour.

SR 138/Lake Spivey Pkwy from Speer Rd/Mt Zion Pkwy to I-75 SB

- The LOS in the eastbound direction is expected to improve from E to C during the AM peak hour.
- The LOS in the westbound direction is expected to improve from E to C during the PM peak hour.

Davidson Pkwy from SR 138/Lake Spivey Pkwy to proposed Reeves Creek Pkwy

- The LOS in the northbound direction is expected to improve from E to B during the AM peak hour.
- The LOS in the southbound direction is expected to improve from E to B during the AM peak hour.
- The LOS in the northbound direction is expected to improve from F to C during the PM peak hour.
- The LOS in the southbound direction is expected to improve from E to B during the PM peak hour.

Davidson Pkwy from proposed Reeves Creek Pkwy to SR 42-138/US 23/N Henry Blvd

- The LOS in the eastbound direction is expected to improve from E to B during the PM peak hour.

Speer Rd from Walt Stephens Rd to SR 138/Lake Spivey Pkwy

- The LOS in the northbound direction is expected to improve from E to B during the AM peak hour.
- The LOS in the southbound direction is expected to improve from E to B during the PM peak hour.

Walt Stephens Rd from Flippen Rd to proposed Reeves Creek Pkwy

- The LOS in both directions is expected to improve from E to B during the AM peak hour.
- The LOS in the eastbound direction is expected to improve from E to C during the PM peak hour.
- The LOS in the westbound direction is expected to improve from E to B during the PM peak hour.

Walt Stephens Rd from proposed Reeves Creek Pkwy to Brentwood Pkwy/Monarch Village Way

- The LOS in both directions is expected to improve from E to B during both peak hours.

Walt Stephens Rd from Speer Rd/Blackhall Rd to Brentwood Pkwy/Monarch Village Way

- The LOS in the westbound direction is expected to improve from E to B during both peak hours.

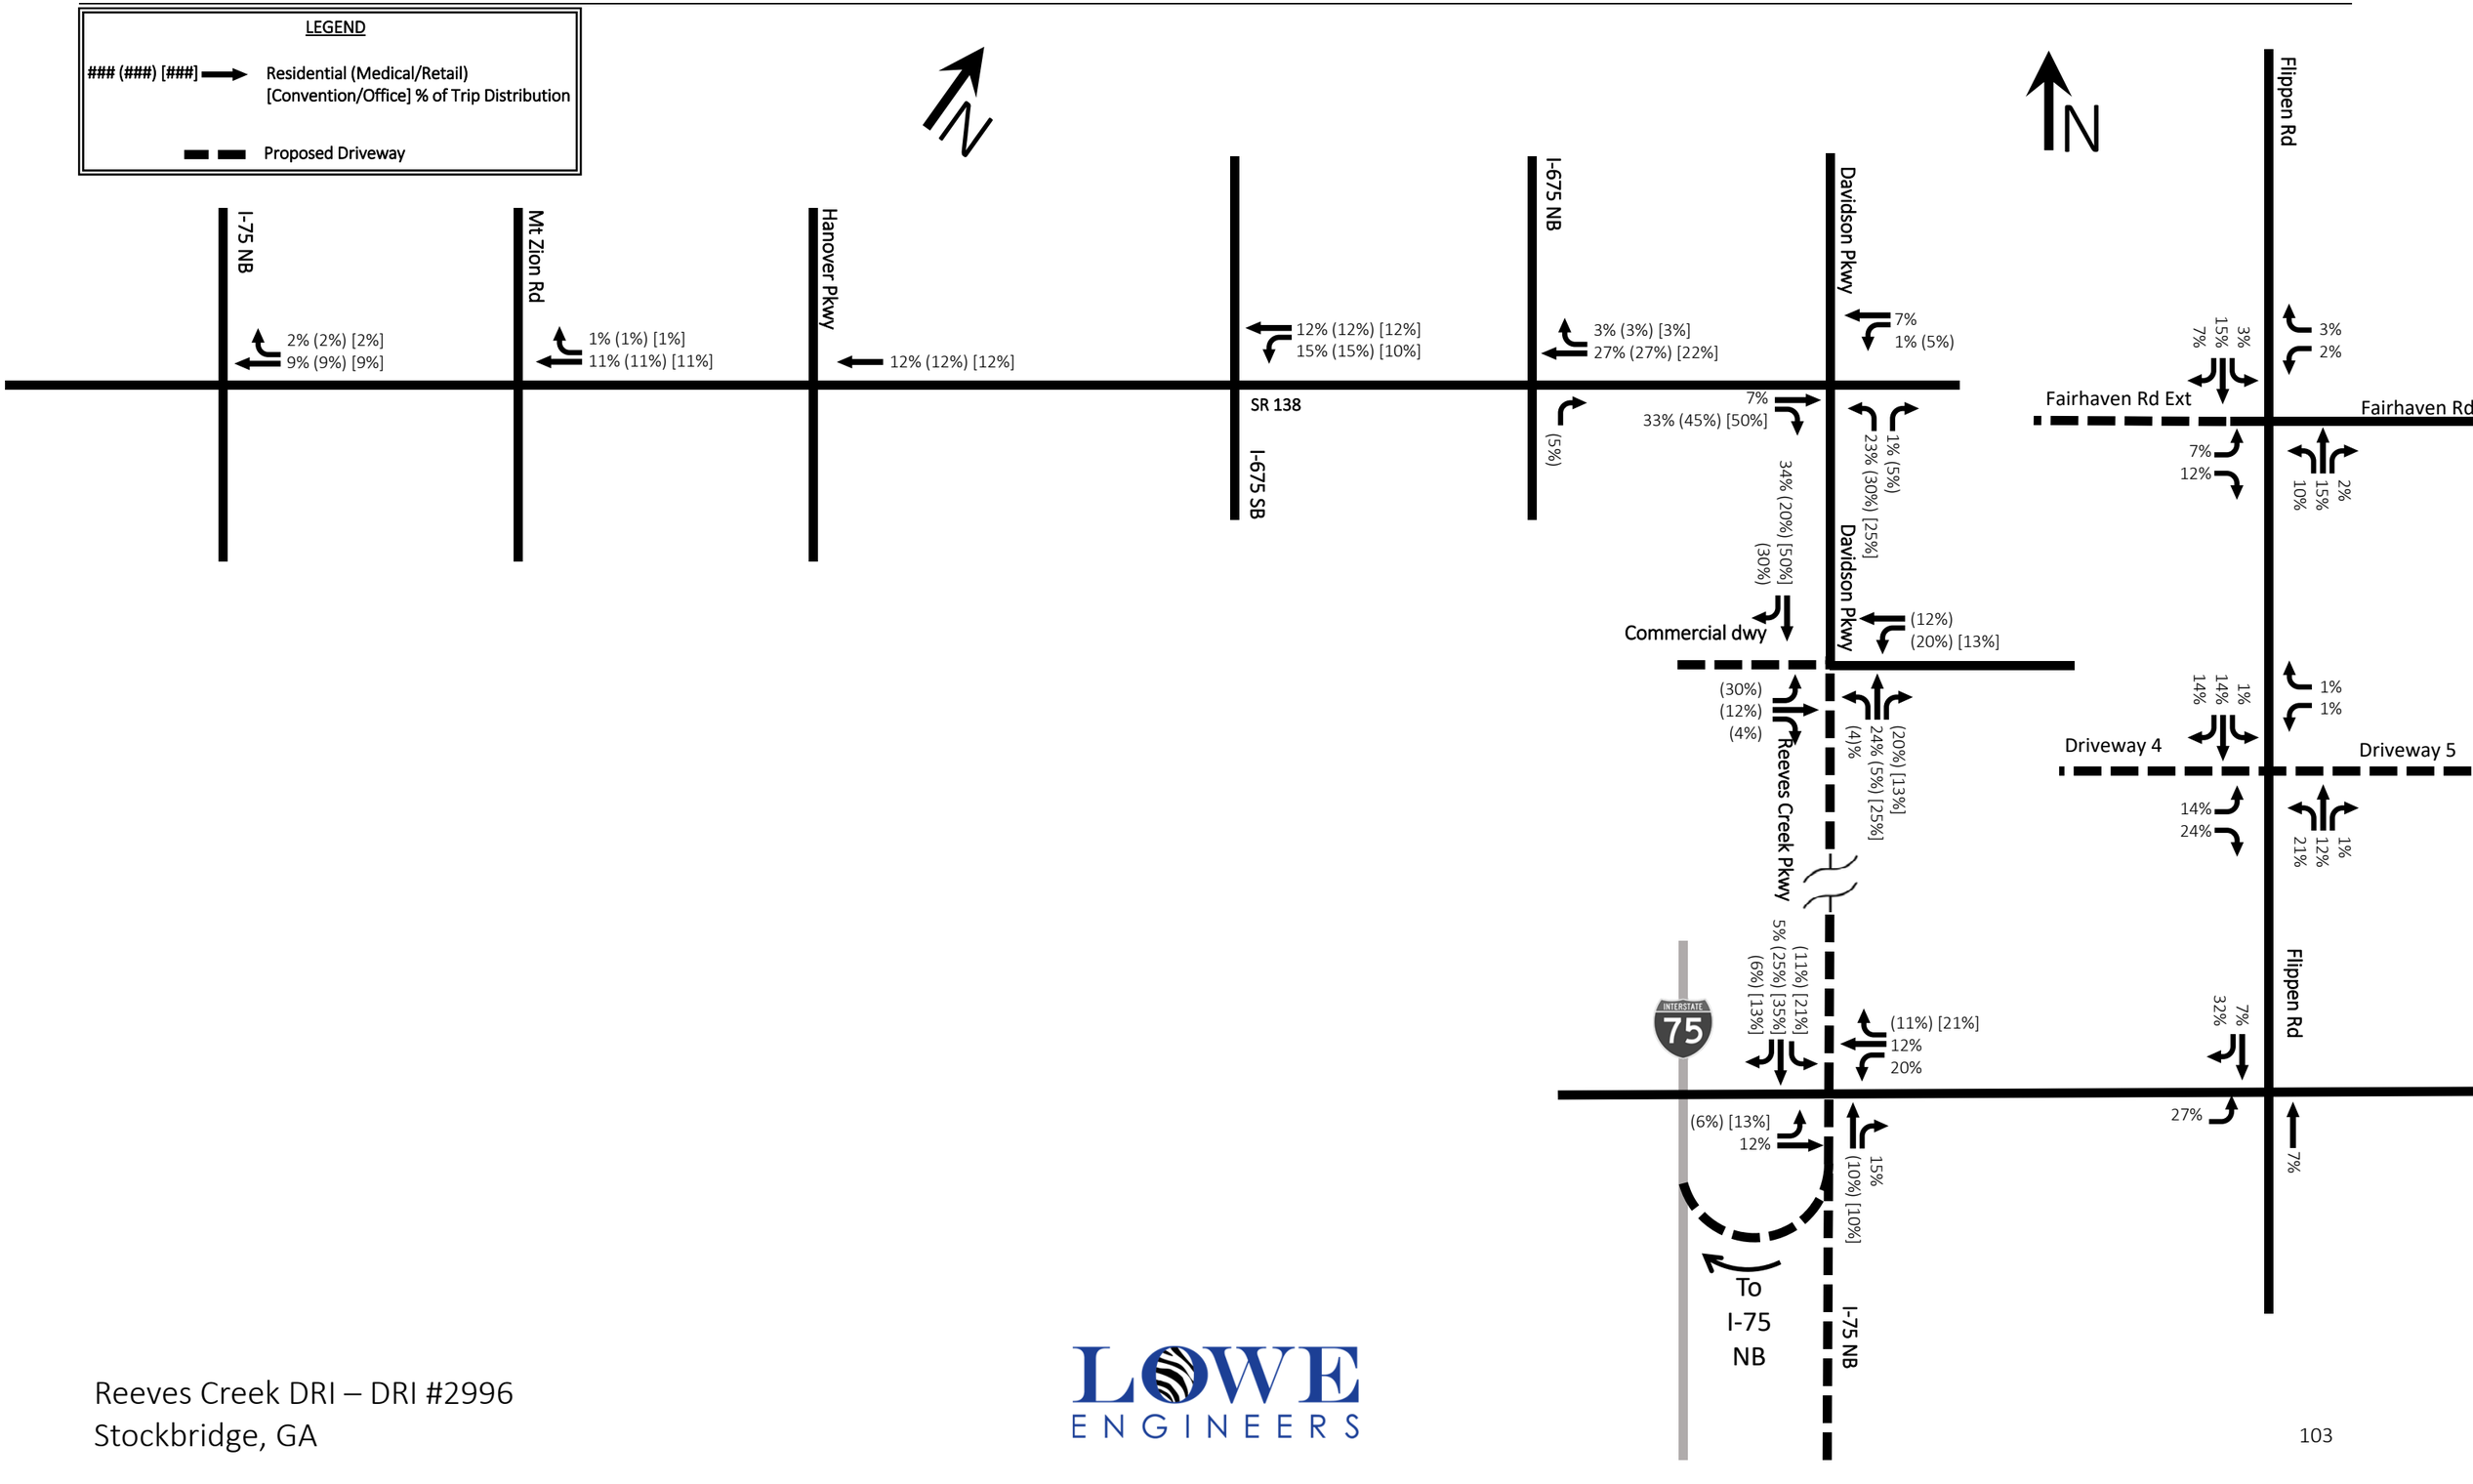
4.8 Proposed Interstate 75 Northbound-Only Interchange

A northbound-only (exit from and entrance to I-75 northbound only) interchange at Walt Stephens Road just east of I-75 has been proposed on the site plan for this project. The proposed northbound-only interchange is proposed to align with the proposed Reeves Creek Parkway. Given the very early stage of the project at this time, the typically lengthy process of getting a new interchange approved through Federal HighWay Administration (FHWA) (a process that would require an Interchange Justification Report (IJR)), and no guarantee that an interchange serving only one direction would even be considered, the analysis was performed with and without the northbound-only interchange. FHWA typically will approve interchanges that only face one direction (i.e., northbound entrance and southbound exit), but it is unknown if FHWA would approve such an interchange serving only one direction of travel.

Not all study intersections would be impacted by the presence, or lack thereof, of I-75 northbound-only interchange access. The intersections that would be expected to be impacted by the presence of I-75 northbound-only interchange access, are the following:

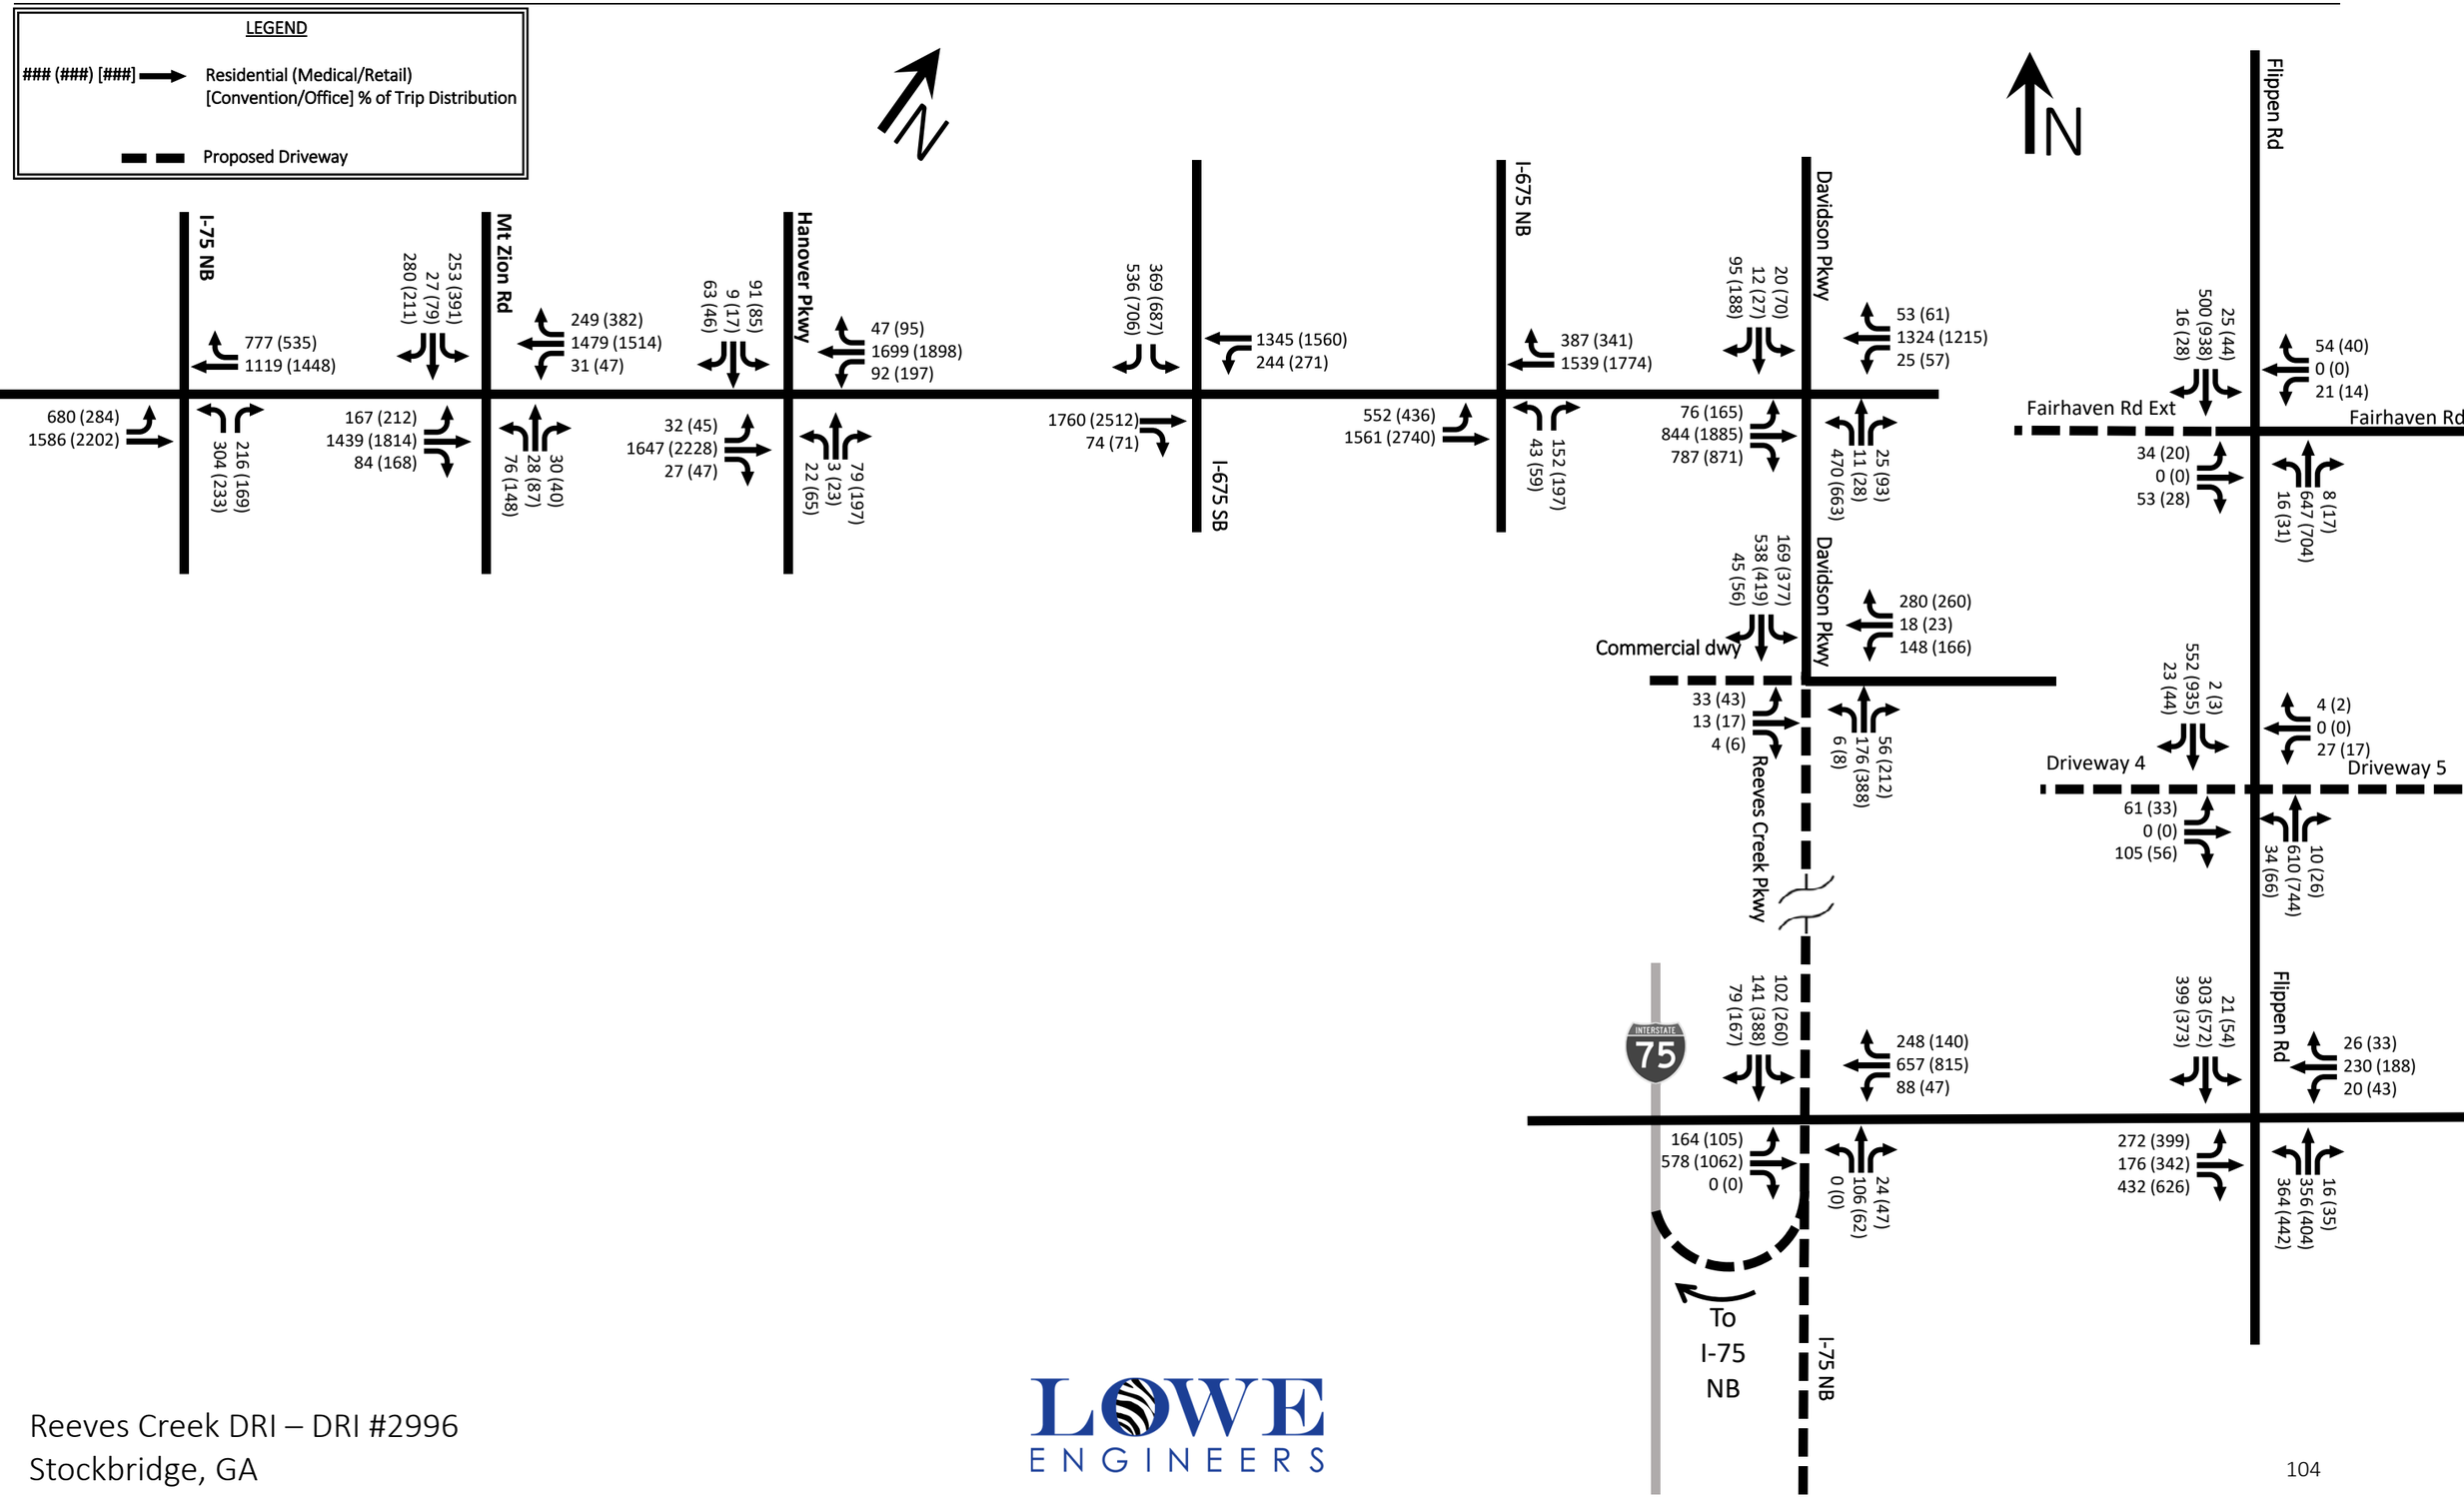
- SR 138/Stockbridge Rd at Davidson Pkwy
- SR 138/Lake Spivey Pkwy at I-675 NB
- SR 138/Lake Spivey Pkwy at I-675 SB
- SR 138/Lake Spivey Pkwy at Hannover Pkwy
- SR 138/Lake Spivey Pkwy at Mt Zion Rd
- SR 138/Lake Spivey Pkwy at I-75 NB
- Flippen Rd at Walt Stephens Rd/Red Oak Rd
- Flippen Rd at Fairhaven Rd
- Davidson Pkwy at proposed Reeves Creek Pkwy
- Walt Stephens Rd at proposed Reeves Creek Pkwy
- Flippen Rd at Site Driveways 4 and 5

The roadway segments that would be expected to be impacted by the presence of I-75 northbound-only interchange access are the following:



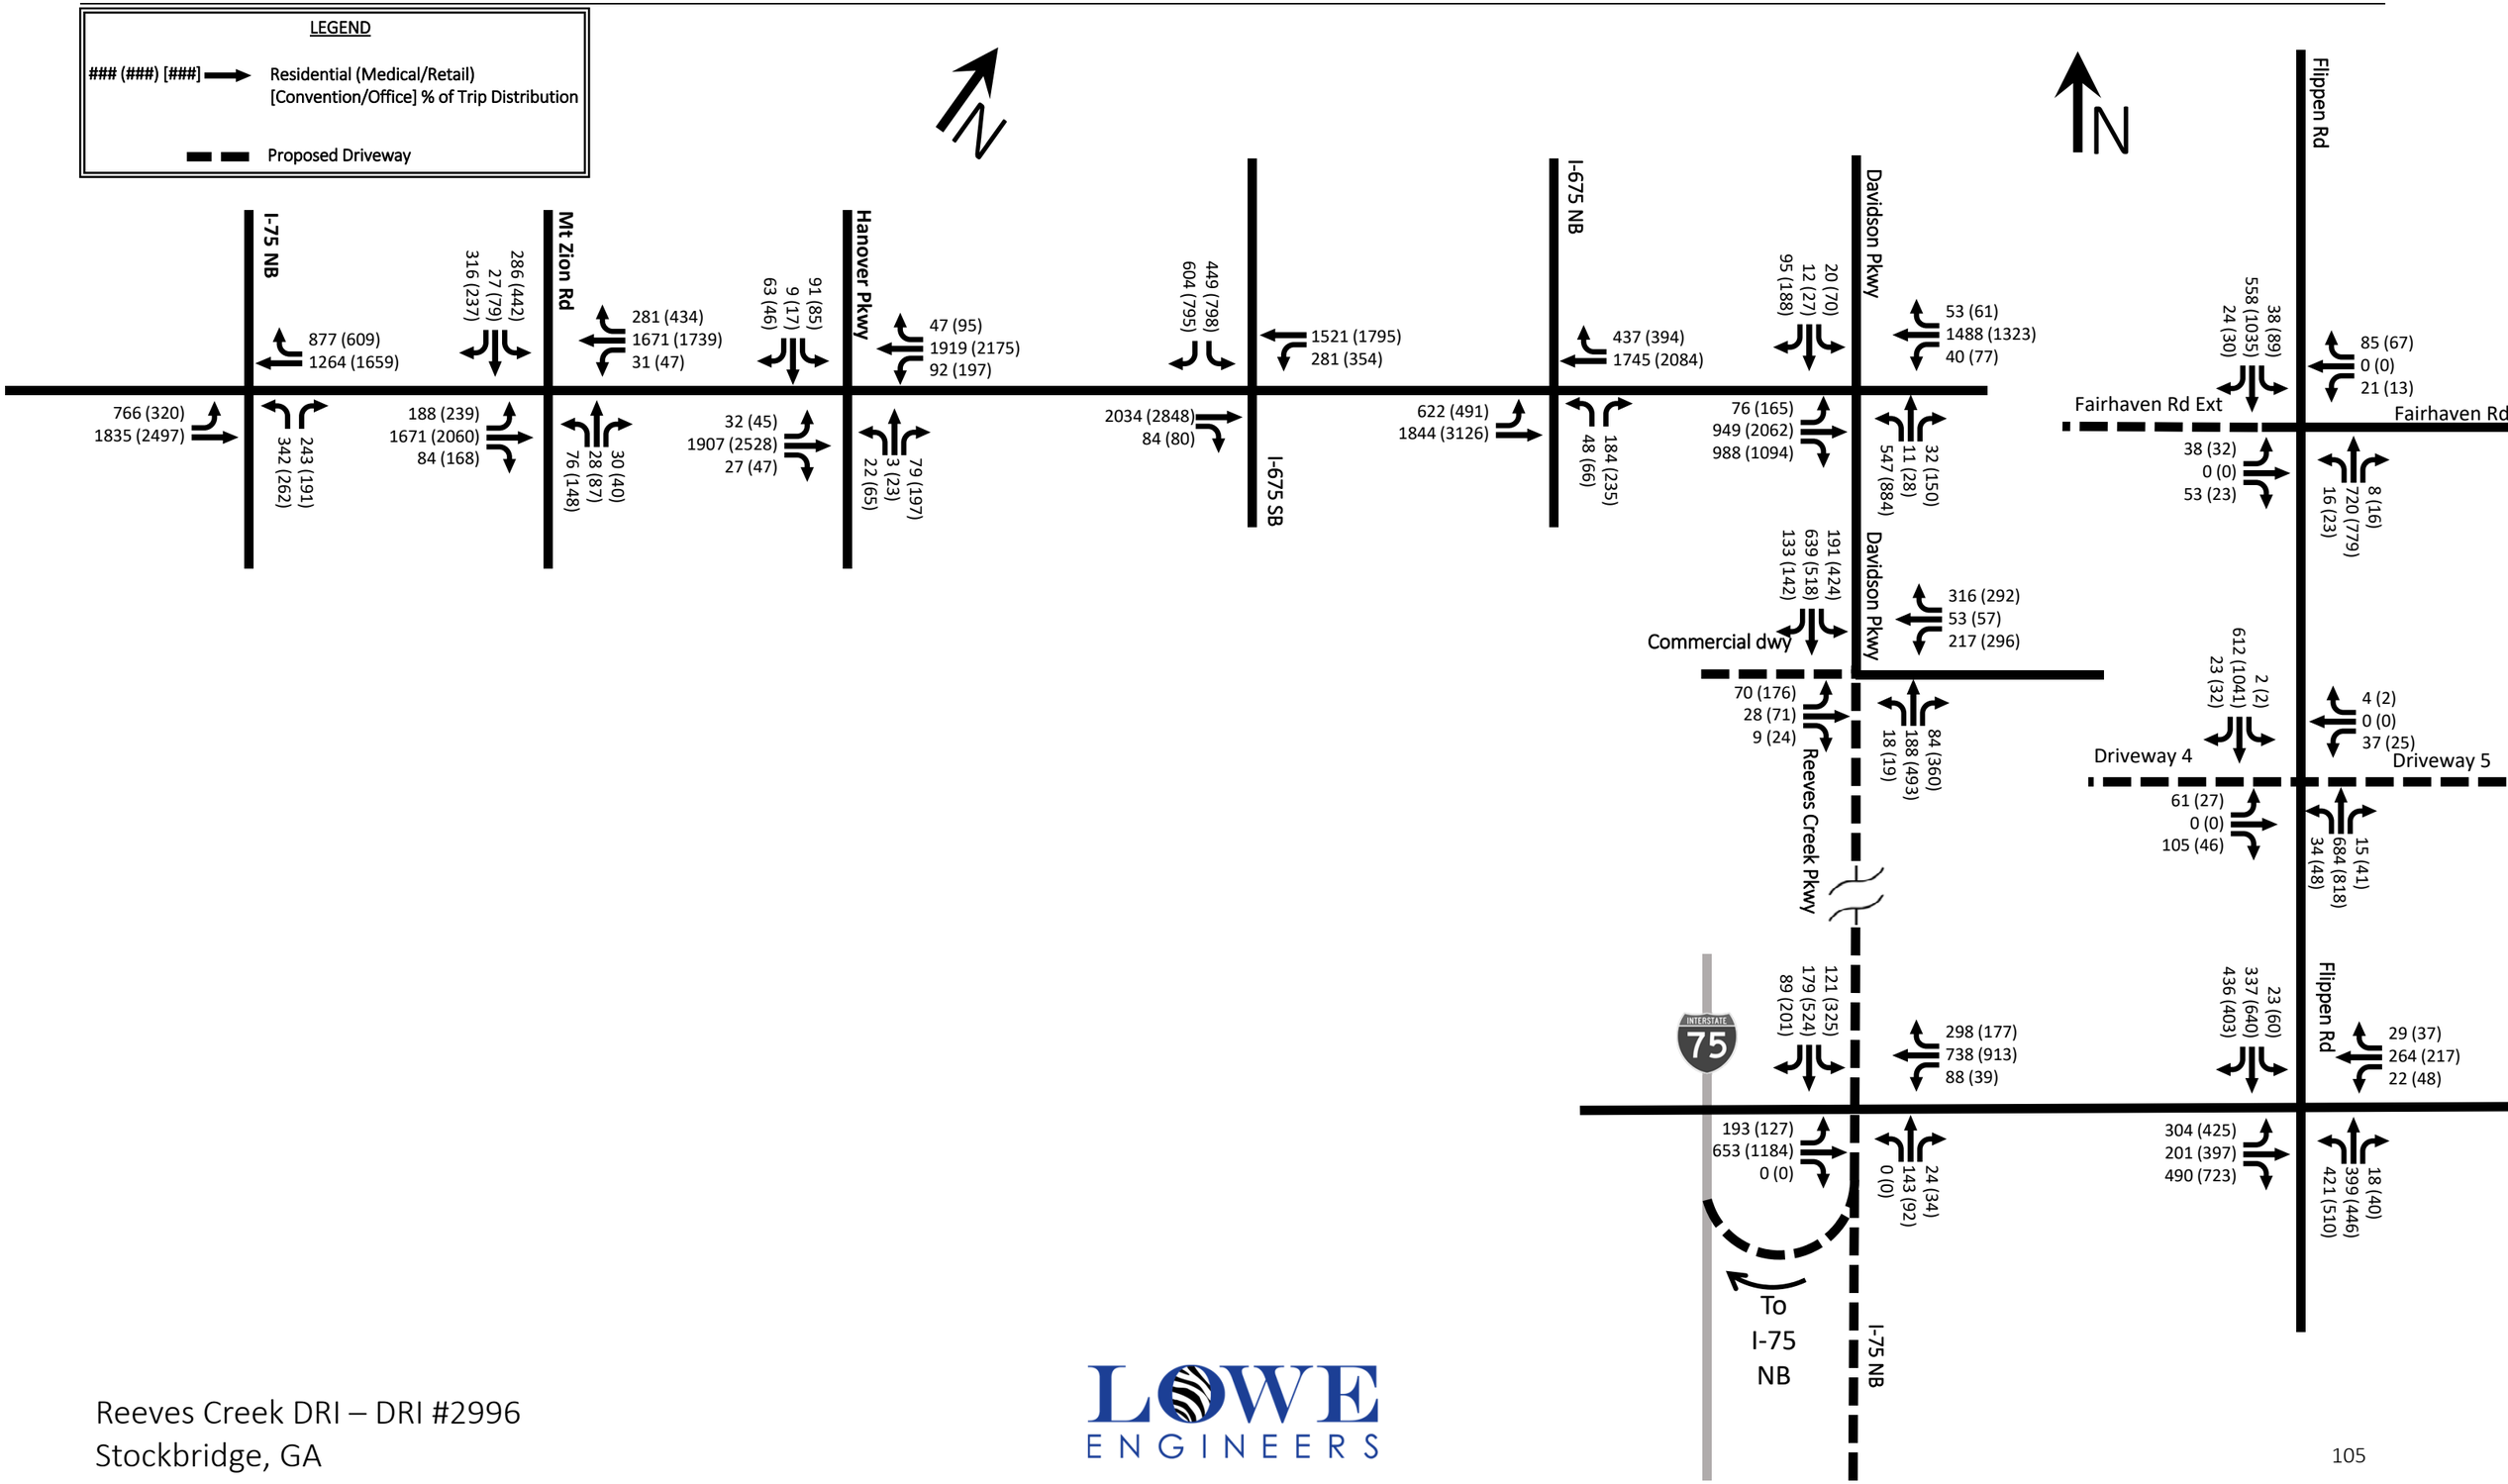
- Flippen Rd from Walt Stephens Rd/Red Oak Rd to SR 42-138/US 23/N Henry Blvd (northbound only)
- SR 138/Lake Spivey Pkwy from I-675 NB to Davidson Pkwy (both directions)
- SR 138/Lake Spivey Pkwy from I-675 SB to I-675 NB (westbound only)
- SR 138/Lake Spivey Pkwy from Hannover Pkwy to I-675 SB (westbound only)
- SR 138/Lake Spivey Pkwy from Mt Zion Rd to Hannover Pkwy (westbound only)
- SR 138/Lake Spivey Pkwy from I-75 NB to Mt Zion Rd (westbound only)
- Davidson Pkwy from SR 138/Stockbridge Rd to proposed Reeves Creek Pkwy (both directions)
- Walt Stephens Rd from Flippen Rd to proposed Reeves Creek Pkwy (both directions)

The trip distribution for the study intersections expected to be affected by the presence of an I-75 northbound-only interchange is shown below in Figure 17.



The total Build Phase 1 (2029) traffic volumes expected for the study intersections expected to be affected by the presence of an I-75 northbound-only interchange are shown below in Figure 18.

The total Build Phase 2 (2035) traffic volumes expected for the study intersections expected to be affected by the presence of an I-75 northbound-only interchange are shown below in Figure 19.



Reeves Creek DRI Trip Distribution with I-75 NB Interchange – Figure 17

Reeves Creek DRI Build Phase 1 2029 with I-75 NB Interchange – Figure 18

Reeves Creek DRI Build Phase 2 2035 with I-75 NB Interchange – Figure 19

4.8.1 Build Phase 1 2029 Capacity Analysis and Required Improvements – I-75 NB Interchange

The Build Phase 1 (2029) traffic volumes with the proposed I-75 northbound-only interchange were analyzed using a Synchro 10.0 model to determine the capacity of the AM and PM peak hours. The results are shown by lane group movement and total intersection capacity. Average vehicular delays are shown in seconds. Level of service (LOS) is a grading system as defined by the Highway Capacity Manual (HCM) where A is best, and F is worst. The HCM 6th Edition was used for analysis. Synchro output files are included in APPENDIX D.

The Background 2029 with Improvements Conditions described in Section 3.3.2 were employed as a base to determine necessary improvements for the Build Phase 1 (2029) Capacity Analysis with the proposed I-75 northbound-only interchange. Improvements were identified to bring the intersections affected by the presence of the proposed I-75 northbound-only interchange to adequate LOS in Build Phase 1 (2029) Conditions with the proposed I-75 northbound-only interchange. GRTA Technical Guidelines do not allow for the consideration of simple timing changes to be used as mitigation, but phase changes may be considered. All required improvements are to be geometric in nature; however, it might be possible in some locations to improve the intersection to LOS D or E with simple adjustments to signal timing.

All traffic signal timings remain the same as in 2029 Background Improved conditions, except for the following:

- SR 138/Stockbridge Road at Davidson Parkway
  - Changed phasing from permitted phasing on side streets to one protected only northbound left turn and one protected+permissive southbound left turn phase on side streets due to proposed geometry change on northbound approach from a single northbound left turn lane to a triple left turn lane.
- Walt Stephens Rd at proposed Reeves Creek Pkwy
  - Added protected+permissive eastbound left turn phase.

Traffic signal timings used in analysis are shown in APPENDIX D.

The following geometric improvements were implemented to bring the intersections affected by the presence of the proposed I-75 northbound-only interchange to adequate LOS in Build Phase 1 (2029) Conditions with the proposed I-75 northbound-only interchange:

SR 138/Stockbridge Rd at Davidson Pkwy
- Add 1 EBT lane, 1 WBT lane, 2 NBL lanes

SR 138/Lake Spivey Pkwy at I-675 NB
- Add 1 EBT lane, 1 NBR lane

Flippen Rd at Walt Stephens Rd/Red Oak Rd
- Add 1 NBL lane, 1 SBR lane, 1 EBL lane

Flippen Rd at Fairhaven Rd
- Add 1 EBR lane, 1 WBR lane

Walt Stephens Rd at proposed Reeves Creek Pkwy/proposed I-75 NB
- Add Eastbound protected+permissive left turn phase, add 1 EBT lane, 1 WBT lane, 1 SBT lane

Flippen Rd at Site Driveways 4 and 5
- Add 1 EBR lane, 1 WBR lane

Table 26 shows the Build Phase 1 (2029) Capacity Analysis with the proposed I-75 northbound-only interchange with necessary improvements.

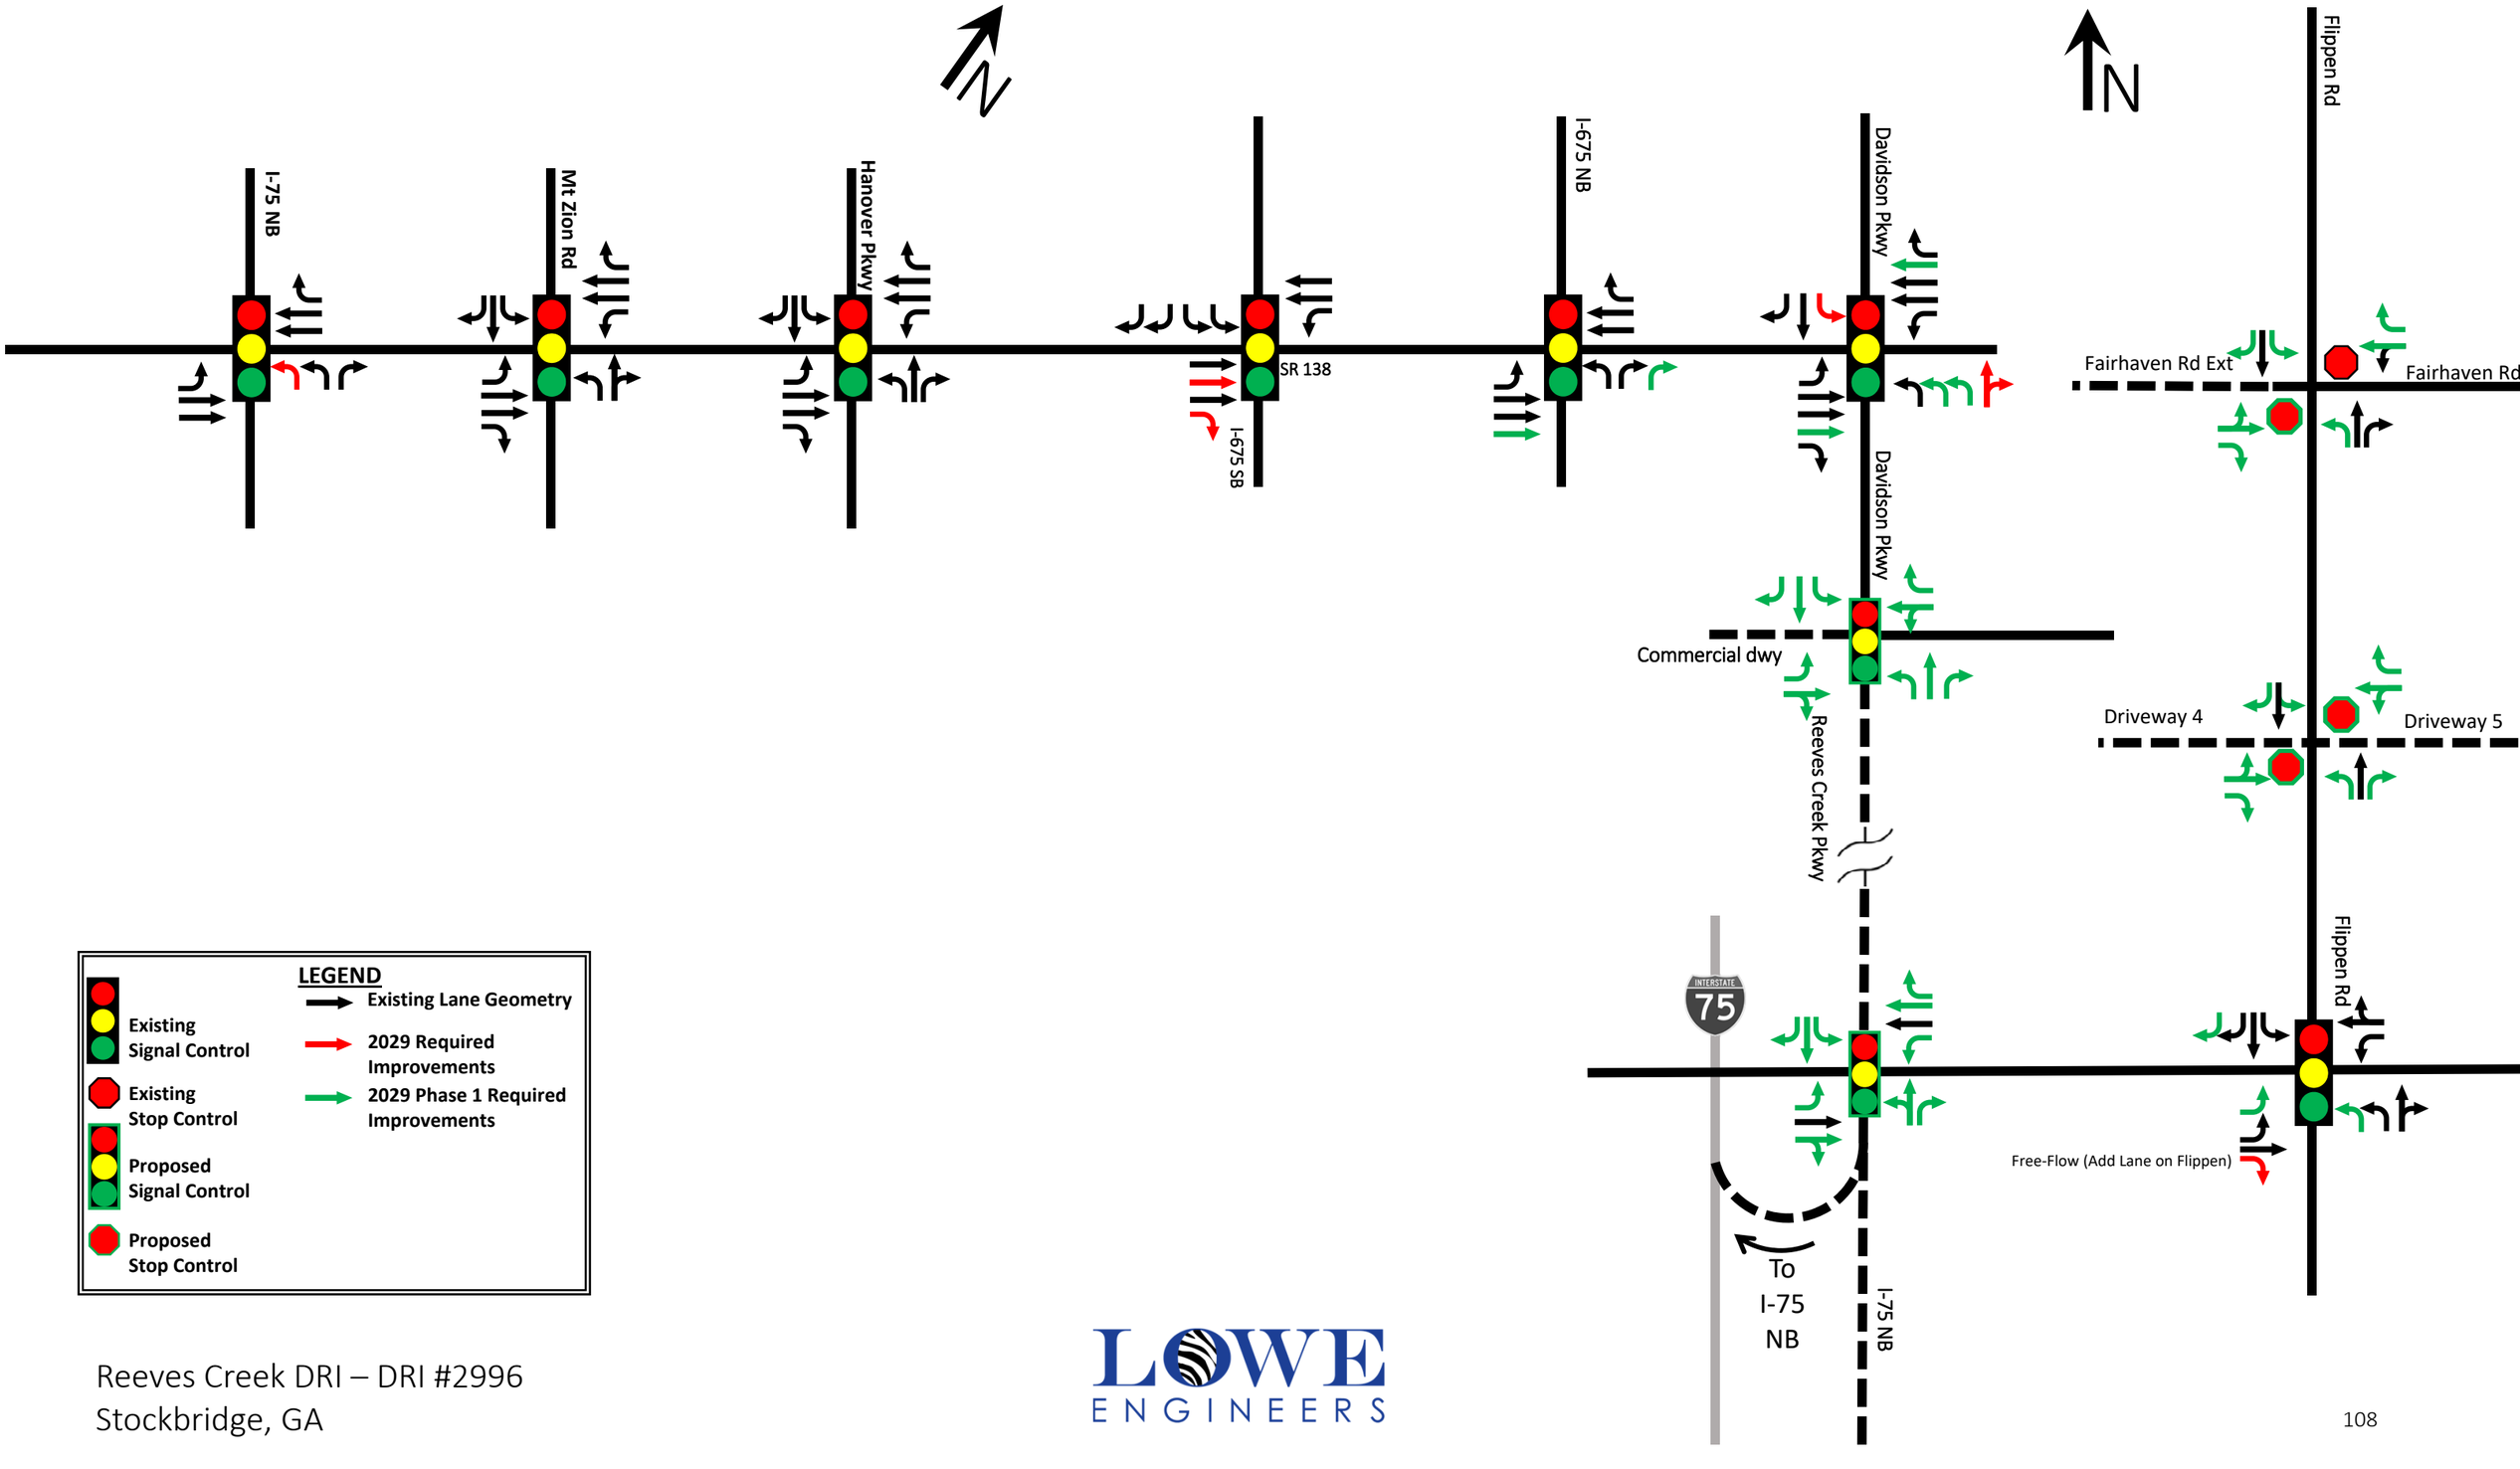


Table 26: Build Phase 1 (2029) Capacity Analysis Required Improvements - I-75 NB Interchange

Intersection	Control	Lane Group Movement	Build Phase 1 2029 - I-75 NB Int.			
			AM Peak Hour		PM Peak Hour	
			Delay (s)	LOS	Delay (s)	LOS

		EB R	14.5	B	21.3	C
		EB Approach	**35.0**	**E**	**117.9**	F
		WB L+T	72.3	F	271.0	F
		WB R	13.0	B	14.7	B
		WB Approach	**64.6**	**F**	**244.0**	F
		NB L	8.9	A	11.3	B
		SB L	8.9	A	9.6	A
		Intersection	5.7	-	8.2	-

Except for the unsignalized site driveways on Flippen Road at Fairhaven Road and Flippen Road at Site Driveways, all study intersections affected by the presence of the proposed I-75 northbound-only interchange are expected to operate at LOS D or better. The intersection of Flippen Road at Walt Stephens Road/Red Oak Road operates at LOS E during the PM peak hour, but since the Existing LOS at this intersection is F, the LOS standard for Background and Build conditions for the PM peak hour is E.

Figure 20 shows the required lane geometry for Build Phase 1 (2029) with the proposed I-75 northbound-only interchange.

4.8.2 Build Phase 1 2029 Segment Analysis and Required Improvements – I-75 NB Interchange

A segment capacity analysis was performed for all study roadway segments using HCS 7 software and HCM 6th Edition methodology. The Background 2029 with Improvements Conditions described in Section 3.3.4 were employed initially for the Build Phase 1 (2029) with the proposed I-75 northbound only interchange Segment Analysis to determine necessary improvements. The results of the segment analysis are summarized in Table 27. HCS 7 output files are included in APPENDIX D.

Table 27: Build Phase 1 (2029) Segment Analysis – I-75 NB Interchange

				AM		PM	
#	Segment	From	To	NB / EB	SB / WB	NB / EB	SB / WB
2	Flippen Rd	Walt Stephens Rd/Red Oak Rd	SR 42-138/US 23/N Henry Blvd	D	-	D	-
14	SR 138/Lake Spivey Pkwy	I-675 NB	Davidson Pkwy	B	D	D	D
15	SR 138/Lake Spivey Pkwy	I-675 SB	I-675 NB	-	C	-	D
16	SR 138/Lake Spivey Pkwy	Hannover Pkwy	I-675 SB	-	C	-	D
17	SR 138/Lake Spivey Pkwy	Mt Zion Rd	Hannover Pkwy	-	C	-	D
18	SR 138/Lake Spivey Pkwy	I-75 NB	Mt Zion Rd	-	D	-	D
22A	Davidson Pkwy	SR 138/Stockbridge Rd	*proposed* Reeves Creek Pkwy	C	E	E	E
26A	Walt Stephens Rd	Flippen Rd	*proposed* Reeves Creek Pkwy	B	E	B	E

The following segments are expected to experience inadequate LOS in Build Phase 1 (2029) Conditions during one or both peak hours:

Davidson Pkwy from SR 138/Lake Spivey Pkwy to proposed Reeves Creek Pkwy

- The segment analyzed as a two-lane section is expected to operate at LOS E during both peak hours in the westbound direction and at LOS E during the PM peak hour in the eastbound direction.

Walt Stephens Rd from Flippen Rd to proposed Reeves Creek Pkwy

- The segment is expected to operate at LOS E in the westbound direction during both peak hours.

One lane was added to mitigate the inadequate LOS. The results of the Build Phase 1 (2029) Segment Analysis with Improvements are shown below in Table 28.

Table 28: Build Phase 1 (2029) Segment Analysis Required Improvements – I-75 NB Interchange

				AM		PM	
#	Segment	From	To	NB / EB	SB / WB	NB / EB	SB / WB
22A	Davidson Pkwy	SR 138/Stockbridge Rd	*proposed* Reeves Creek Pkwy	A	A	A	B
26A	Walt Stephens Rd	Flippen Rd	*proposed* Reeves Creek Pkwy	-	B	-	B

Davidson Pkwy from SR 138/Lake Spivey Pkwy to proposed Reeves Creek Pkwy

- The LOS in the southbound direction is expected to improve from E to A during the AM peak hour.
- The LOS in the northbound direction is expected to improve from E to A during the PM peak hour.
- The LOS in the southbound direction is expected to improve from E to B during the PM peak hour.

Walt Stephens Rd from Flippen Rd to proposed Reeves Creek Pkwy

- The LOS in the westbound direction is expected to improve from E to B during both peak hours.

4.8.3 Build Phase 2 2035 Capacity Analysis and Required Improvements – I-75 NB Interchange

The Build Phase 2 (2035) traffic volumes with the proposed I-75 northbound-only interchange were analyzed using a Synchro 10.0 model to determine the capacity of the AM and PM peak hours. The results are shown by lane group movement and total intersection capacity. Average vehicular delays are shown in seconds. Level of service (LOS) is a grading system as defined by the Highway Capacity Manual (HCM) where A is best, and F is worst. The HCM 6th Edition was used for analysis. Synchro output files are included in APPENDIX D.

The Background 2035 with Improvements Conditions described in Section 3.4.2 were employed as a base to determine necessary improvements for the Build Phase 2 (2035) Capacity Analysis with the proposed I-75 northbound-only interchange. Improvements were identified to bring the intersections affected by the presence of the proposed I-75 northbound-only interchange to adequate LOS in Build Phase 2 (2035) Conditions with the proposed I-75 northbound-only interchange. GRTA Technical Guidelines do not allow for the consideration of simple timing changes to be used as mitigation, but phase changes may be considered. All required improvements are to be geometric in nature; however, it might be possible in some locations to improve the intersection to LOS D or E with simple adjustments to signal timing.

All traffic signal timings remain the same as in 2035 Background Improved conditions, except for the following:

- SR 138/Stockbridge Road at Davidson Parkway
  - Changed phasing from permitted phasing on side streets to one protected only northbound left turn and one protected+permissive southbound left turn phase on side streets due to proposed geometry change on northbound approach from a single northbound left turn lane to a quadruple left turn lane.
- Walt Stephens Rd at proposed Reeves Creek Pkwy
  - Added protected+permissive eastbound left turn phase.

Traffic signal timings used in analysis are shown in APPENDIX D.

The following geometric improvements were implemented to bring the intersections affected by the presence of the proposed I-75 northbound-only interchange to adequate LOS in Build Phase 2 (2035) Conditions with the proposed I-75 northbound-only interchange:

SR 138/Stockbridge Rd at Davidson Pkwy
- Add 1 WBT lane, 3 NBL lanes

SR 138/Lake Spivey Pkwy at I-675 NB
- Add 1 WBT lane

SR 138/Lake Spivey Pkwy at I-675 SB
- Add 1 EBT lane, 1 WBL lane, 1 SBL lane

SR 138/Lake Spivey Pkwy at Mt Zion Rd
- Add 1 EBT lane, 1 SBL lane

SR 138/Lake Spivey Pkwy at I-75 NB
- Add 1 WBT lane

Flippen Rd at Walt Stephens Rd/Red Oak Rd
- Add 1 NBT lane, 1 NBL lane, 1 SBT lane, 1 SBR lane, 1 EBL lane, 1 WBR lane

Flippen Rd at Fairhaven Rd
- Add 1 EBR lane

Davidson Pkwy at proposed Reeves Creek Pkwy

- Add 1 SBL lane, 1 EBR lane, 1 WBL lane

Walt Stephens Rd at proposed Reeves Creek Pkwy/proposed I-75 NB

- Add Eastbound protected+permissive left turn phase, add 1 EBT lane, 1 WBT lane, 1 SBT lane

Flippen Rd at Site Driveways 4 and 5

- Add 1 EBR lane, 1 WBR lane

Table 29 shows the Build Phase 2 (2035) Capacity Analysis with the proposed I-75 northbound-only interchange with necessary improvements.

Table 29: Build Phase 2 (2035) Capacity Analysis Required Improvements - I-75 NB Interchange

Except for the intersections of Flippen Road at Fairhaven Road, Flippen Road at Site Driveways, and Flippen Road at Walt Stephens Road/Red Oak Road, all study intersections affected by the presence of

the proposed I-75 northbound-only interchange are expected to operate at LOS D or better. The intersection of Flippen Road at Walt Stephens Road/Red Oak Road operates at LOS E during both peak hours, but in the AM peak hour, the LOS is only 1.8 seconds away from LOS D. Since the Existing LOS at this intersection is F during the PM peak hour, the LOS standard for Background and Build conditions for the PM peak hour is E.

Figure 21 shows the required lane geometry for Build Phase 1 (2029) with the proposed I-75 northbound-only interchange.

4.8.4 Build Phase 2 2035 Segment Analysis and Required Improvements – I-75 NB Interchange

A segment capacity analysis was performed for all study roadway segments using HCS 7 software and HCM 6th Edition methodology. The Background 2035 with Improvements Conditions described in Section 3.4.4 were employed initially for the Build Phase 2 (2035) with the proposed I-75 northbound only interchange Segment Analysis to determine necessary improvements. The results of the segment analysis are summarized in. HCS 7 output files are included in APPENDIX D**.**

Table 30: Build Phase 2 (2035) Segment Analysis – I-75 NB Interchange

26A	Walt Stephens Rd	Flippen Rd	*proposed* Reeves Creek Pkwy	B	B	C	B

The following segments are expected to experience inadequate LOS in Build Phase 2 (2035) Conditions during one or both peak hours:

Flippen Rd from Walt Stephens Rd/Red Oak Rd to SR 42-138/US 23/N Henry Blvd

- The segment is expected to operate at LOS E in the northbound direction during the PM peak hour.

SR 138/Lake Spivey Pkwy from I-675 NB to Davidson Pkwy

- The segment is expected to operate at LOS E in the westbound direction during the PM peak hour.

SR 138/Lake Spivey Pkwy from I-75 NB to Mt Zion Rd

- The segment is expected to operate at LOS E in the westbound direction during the PM peak hour.

Davidson Pkwy from SR 138/Lake Spivey Pkwy to proposed Reeves Creek Pkwy

- The segment is expected to operate at LOS E during both peak hours in the westbound direction and at LOS E during the PM peak hour in the eastbound direction.

One lane was added to mitigate the inadequate LOS. The results of the Build Phase 2 (2035) Segment Analysis with Improvements are shown below in Table 31.

Table 31: Build Phase 1 (2029) Segment Analysis Required Improvements – I-75 NB Interchange

				AM		PM	
#	Segment	From	To	NB / EB	SB / WB	NB / EB	SB / WB
2	Flippen Rd	Walt Stephens Rd/Red Oak Rd	SR 42-138/US 23/N Henry Blvd	A	-	B	-

18	SR 138/Lake Spivey Pkwy	I-75 NB	Mt Zion Rd	-	C	-	C
22A	Davidson Pkwy	SR 138/Stockbridge Rd	*proposed* Reeves Creek Pkwy	A	B	B	B

Flippen Rd from Walt Stephens Rd/Red Oak Rd to SR 42-138/N Henry Blvd

- The LOS in the northbound direction is expected to improve from E to B during the PM peak hour.

SR 138/Lake Spivey Pkwy from I-675 NB to Davidson Pkwy

- The LOS in the westbound direction is expected to improve from E to C during the PM peak hour.

SR 138/Lake Spivey Pkwy from I-75 NB to Mt Zion Rd

- The LOS in the westbound direction is expected to improve from E to C during the PM peak hour.

Davidson Pkwy from SR 138/Lake Spivey Pkwy to proposed Reeves Creek Pkwy

- The LOS in the southbound direction is expected to improve from E to B during the AM peak hour.
- The LOS in the northbound direction is expected to improve from E to B during the PM peak hour.
- The LOS in the southbound direction is expected to improve from E to B during the PM peak hour.

5 Conclusions

The proposed development is a mixed-use site located in northern Henry County, GA, near the City of Stockbridge and the I-75/I-675 interchange. The development will be located to the east of I-75 and I-675 and south of SR 138/Stockbridge Road. The proposed development is anticipated to be completed in two phases. Phase 1 is expected to be completed by 2029, and full build-out (Phase 2) in 2035. Both scenarios were analyzed for this report. A northbound-only interchange with I-75 has also been proposed to align with the proposed Reeves Creek Parkway on Walt Stephens Road on the southern end of the site. Both Phase 1 and Phase 2 were analyzed with and without the proposed northbound-only interchange.

The results of the segment analysis, capacity analysis, and summary of mitigation are below.

Table 32 shows the necessary Number of Lanes by study segment by scenario for the project. Shaded cells indicate when the lane addition is first needed.

Table 33 indicates the intersection geometric improvements by scenario for the project. GRTA Technical Guidelines do not allow for the consideration of simple timing changes to be used as mitigation, but phase changes may be considered. All required improvements are to be geometric in nature; however, it might be possible in some locations to improve the intersection to LOS D or E with simple adjustments to signal timing. A discussion on the geometric improvements is provided below.

From Table 32, it is seen that several roadway segments will experience inadequate LOS in future years. No roadway segment is expected to need to be improved more than once (i.e. a segment is 1 lane in Existing Conditions but is expected to be required to be 3 lanes in 2035 Background Conditions or 2035 Build Phase 2 conditions). The presence, or lack thereof, of the proposed I-75 northbound only interchange will affect the necessary Number of Lanes for segments on SR 138/Lake Spivey Parkway between I-75 northbound ramps and Davidson Parkway. The presence of the I-75 northbound only interchange would be expected to take some of reassigned traffic that would otherwise likely utilize SR 138/Lake Spivey Parkway to access I-75 northbound.

From Figures 8, 15, and 16 and Table 33, it is seen that some intersections, including, but not limited to, SR 138/Stockbridge Road at SR 42-138/US 23/N Henry Boulevard and Walmart Driveway, SR 138/Stockbridge Road at Davidson Parkway, and SR 138/Lake Spivey Parkway at I-675 southbound ramps, are expected to require significant geometric improvements that involve widening the existing roadway system to three or four lanes in at least one direction. Some of these improvements may not be geometrically feasible given right-of-way constraints or other considerations that would inhibit the required improvements greatly. DRI procedure is to show what is needed to meet the LOS standard established in Existing Conditions; however, given the excessive nature of some of the required improvements, coordination between the developer and local jurisdiction(s) to establish reasonable and agreed-upon improvements is strongly recommended.

If the proposed I-75 northbound only interchange is installed, all intersections expected to be affected by the presence, or lack thereof, of the proposed I-75 northbound only interchange would be expected to require the same or fewer improvements with the proposed I-75 northbound only interchange than without the proposed I-75 northbound only interchange. The only exception would be expected to be the intersection of Walt Stephens Road and the proposed Reeves Creek Parkway/I-75 northbound only ramps.

2029 [Programmed] Background Improvements

2035 Background Improvements

2029 Build Phase 1 Improvements

2035 Build Phase 2 Improvements

SR 138 at SR 42/US 23/N Henry Blvd

- The intersection operates at LOS C during the AM peak hour and LOS E during the PM peak hour in Existing Conditions; therefore, the LOS standard for Background and Build conditions is LOS D during the AM peak hour and LOS E in the PM peak hour.
- For Background 2029 Conditions, the additions of 1 NBL lane and 1 NBR lane are needed to meet the established LOS standard.
- For Background 2035 Conditions, the additions of 1 EBR lane and 1 WBL lane are needed to meet the established LOS standard.
- For Build Phase 1 2029 Conditions, the addition of 1 WBL lane is needed to meet the established LOS standard.
- For Build Phase 2 2035 Conditions, no further improvements are needed to meet the established LOS standard.

SR 42-138/US 23/N Henry Blvd at Rock Quarry Rd

- The intersection operates at LOS C during both peak hours in Existing Conditions; therefore, the LOS standard for Background and Build conditions is LOS D during both peak hours.
- For Background 2029 Conditions, no further improvements are needed to meet the established LOS standard.
- For Background 2035 Conditions, the additions of 1 NBL lane and 1 NBR lane are needed to meet the established LOS standard.
- For Build Phase 1 2029 Conditions, the addition of 1 NBR lane is needed to meet the established LOS standard.
- For Build Phase 2 2035 Conditions, the additions of 1 EBT lane and 1 WBL lane are needed to meet the established LOS standard.

SR 42-138/US 23/N Henry Blvd at S Lee St

- The intersection operates at LOS A during both peak hours in Existing Conditions and is expected to operate at LOS A during both peak hours in Background and Build scenarios; therefore, no further improvements are needed to meet the established LOS standard.

SR 42-138/US 23/N Henry Blvd at E Atlanta Rd/Harrel Dr

- The intersection operates at LOS D during the AM peak hour and LOS C during the PM peak hour in Existing Conditions; therefore, the LOS standard for Background and Build conditions is LOS D during both peak hours.
- For Background 2029 Conditions, the additions of 1 SBL lane and 1 WBR lane are needed to meet the established LOS standard.
- For Background 2035 Conditions, the additions of 1 NBL lane, 1 SBL lane, and 1 EBL lane are needed to meet the established LOS standard.
- For Build Phase 1 2029 Conditions, the additions of 1 SBL lane, 1 SBR lane, and 1 EBL lane are needed to meet the established LOS standard.
- For Build Phase 2 2035 Conditions, the additions of 1 SBR lane, 1 EBR lane, and 1 WBT lane are needed to meet the established LOS standard.

SR 42-138/US 23/N Henry Blvd at Flippen Rd/Shields Rd

- The intersection operates at LOS C during the AM peak hour and LOS E during the PM peak hour in Existing Conditions; therefore, the LOS standard for Background and Build conditions is LOS D during the AM peak hour and LOS E during the PM peak hour.

- For Background 2029 Conditions, the additions of 1 NBL lane and 1 EBR lane are needed to meet the established LOS standard.
- For Background 2035 Conditions and Build Phase 1 2029 Conditions, no further improvements are needed to meet the established LOS standard.
- For Build Phase 2 2035 Conditions, the additions of 1 NBR lane, 1 EBT lane, 1 WBT lane, and 1 WBL lane are needed to meet the established LOS standard.

SR 42-138/US 23/N Henry Blvd at Davidson Pkwy

- The intersection is side street stop-controlled, so the LOS is measured by the side street(s) approach and mainline left turn delays. The eastbound and westbound side street approaches operate at LOS F during both peak hours. The northbound and southbound mainline left turns operate at LOS A and B, respectively, for the AM peak hour and LOS C and B, respectively, for the PM peak hour. The LOS standard for Background and Build conditions is LOS E for the side street approaches during both peak hours and LOS D for both mainline left turns during both peak hours.
- Improvements are needed in Existing Conditions. These improvements were utilized in the Background and Build scenarios, but due to the increasing volume entering the intersection with a mere side street stop control, delays continue to worsen significantly into the Background and Build scenarios. The additions of 1 SBR lane, 1 EBR lane, and 1 WBR lane were implemented to attempt to meet the established LOS standard.
- GRTA DRI policy states that improvements must be made until LOS standard is met. However, due to the nature of this unsignalized intersection, the LOS standard cannot be met. Other improvements would need to be considered at this location to improve the LOS further, such as a traffic signal control or an alternative intersection design, including but not limited to a Restricted Crossing U-Turn (RCUT), Right-In/Right-Out Only (RIRO), or Median U-Turn (MUT).

SR 42-138/US 23/N Henry Blvd at SR 138/Stockbridge Rd/Walmart Dwy

- The intersection operates at LOS D during the AM peak hour and LOS F during the PM peak hour in Existing Conditions; therefore, the LOS standard for Background and Build conditions is LOS D during the AM peak hour and LOS E during the PM peak hour.
- For Background 2029 Conditions, the programmed improvements via GDOT P.I. No. 322050 of 1 NBT lane, 1 SBR lane, and 1 EBL lane are needed to meet the established LOS standard. Protected+permissive left turn phases were added for each side street approach.
- For Background 2035 Conditions, the additions of 1 EBT lane and 1 SBT lane are needed to meet the established LOS standard.
- For Build Phase 1 2029 Conditions and Build Phase 2 2035 Conditions, no further improvements are needed to meet the established LOS standard.

SR 42/US 23/N Henry Blvd at Valley Hill Rd

- The intersection operates at LOS C during both peak hours in Existing Conditions; therefore, the LOS standard for Background and Build conditions is LOS D during both peak hours.
- Programmed improvements from GDOT P.I. No. 322050 will provide 1 NBT lane and 1 SBT lane at the intersection.
- With GDOT's programmed improvements at the intersection, no further improvements are needed to meet the established LOS standard in Background and Build conditions.

SR 138/Stockbridge Rd at Walter Way

- The intersection operates at LOS A during the AM peak hour and LOS C during the PM peak hour in Existing Conditions; therefore, the LOS standard for Background and Build conditions is LOS D during both peak hours.
- For Background 2029 Conditions, Background 2035 Conditions, and Build Phase 1 2029 Conditions, no further improvements are needed to meet the established LOS standard.
- For Build Phase 2 2035 Conditions, the addition of 1 EBR lane is needed to meet the established LOS standard.

SR 138/Stockbridge Rd at Daniel Dr

- The intersection operates at LOS A during both peak hours in Existing Conditions; therefore, the LOS standard for Background and Build conditions is LOS D during both peak hours.
- No further improvements are needed to meet the established LOS standard.

SR 138/Stockbridge Rd at Davidson Pkwy

- The intersection operates at LOS B during the AM peak hour and LOS D during the PM peak hour in Existing Conditions; therefore, the LOS standard for Background and Build conditions is LOS D during both peak hours.
- For Background 2029 Conditions, 1 NBL lane, 1 NBT+R lane and the addition of 1 SBL lane are needed to meet the established LOS standard. Side street phasing changed to permissive only.
- For Background 2035 Conditions, the addition of 1 EBT lane is needed to meet the established LOS standard; however, the delay is 56.9 seconds, which is only 1.9 seconds beyond LOS D.
- For Build Phase 1 2029 Conditions, the additions of 3 NBL lanes, 1 NBR lane, 2 EBT lanes, and 2 WBT lanes are needed to meet the established LOS standard. The glut of necessary lane improvements at this intersection is due primarily to the anticipated number of northbound left turn volume expected from the project traffic. With no I-75 northbound-only interchange, most of the project traffic is expected to gravitate to this intersection to access I-675 and I-75.
- For Build Phase 2 2035 Conditions, the additions of 5 NBL lanes, 1 NBR lane, 2 EBT lanes, and 3 WBT lanes are needed to meet the established LOS standard. The glut of necessary lane improvements at this intersection is due primarily to the anticipated number of northbound left turn volume expected from the project traffic. With no I-75 northbound-only interchange, most of the project traffic is expected to gravitate to this intersection to access I-675 and I-75.
- For Build Phase 1 2029 Conditions with I-75 northbound-only interchange, the additions of 2 NBL lanes, 1 EBT lane, and 1 WBT lane are needed to meet the established LOS standard. The necessary improvements to meet the LOS standard are less significant than those without the I-75 northbound-only interchange.
- For Build Phase 2 2035 Conditions with I-75 northbound-only interchange, the additions of 3 NBL lanes and 1 WBT lane are needed to meet the established LOS standard. The necessary improvements to meet the LOS standard are less significant than those without the I-75 northbound-only interchange.

SR 138/Lake Spivey Pkwy at I-675 NB

- The intersection operates at LOS C during the AM peak hour and LOS B during the PM peak hour in Existing Conditions; therefore, the LOS standard for Background and Build conditions is LOS D during both peak hours.
- For Background 2029 Conditions, no further improvements are needed to meet the established LOS standard.

- For Background 2035 Conditions, the additions of 1 NBR lane, 1 EBL lane, and 1 EBT lane are needed to meet the established LOS standard.
- For Build Phase 1 2029 Conditions, the additions of 1 NBR lane, 1 EBL lane, and 1 EBT lane are needed to meet the established LOS standard.
- For Build Phase 2 2035 Conditions, the addition of 1 WBT lane is needed to meet the established LOS standard.
- For Build Phase 1 2029 Conditions with I-75 northbound-only interchange, the additions of 1 NBR lane and 1 EBT lane are needed to meet the established LOS standard.
- For Build Phase 2 2035 Conditions with I-75 northbound-only interchange, the addition of 1 WBT lane is needed to meet the established LOS standard.

SR 138/Lake Spivey Pkwy at I-675 SB

- The intersection operates at LOS C during both peak hours in Existing Conditions; therefore, the LOS standard for Background and Build conditions is LOS D during both peak hours.
- For Background 2029 Conditions, the additions of 1 EBT lane and 1 EBR lane are needed to meet the established LOS standard.
- For Background 2035 Conditions and Build Phase 1 2029 Conditions, no further improvements are needed to meet the established LOS standard.
- For Build Phase 2 2035 Conditions, the additions of 1 SBL lane, 1 EBT lane, 1 WBT lane, and 1 WBL lane are needed to meet the established LOS standard.
- For Build Phase 1 2029 Conditions with I-75 northbound-only interchange, no further improvements are needed to meet the established LOS standard.
- For Build Phase 2 2035 Conditions with I-75 northbound-only interchange, the additions of 1 SBL lane, 1 EBT lane, and 1 WBL lane are needed to meet the LOS standard.

SR 138/Lake Spivey Pkwy at Hannover Pkwy

- The intersection operates at LOS A during the AM peak hour and LOS B during the PM peak hour in Existing Conditions; therefore, the LOS standard for Background and Build conditions is LOS D during both peak hours.
- For Background 2029 Conditions, Background 2035 Conditions, and Build Phase 1 2029 Conditions, no further improvements are needed to meet the established LOS standard.
- For Build Phase 2 3035 Conditions, the addition of 1 EBT lane or 1 WBT lane is needed to meet the established LOS standard.
- For Build Phase 1 2029 Conditions and Build Phase 2 2035 Conditions with I-75 northbound-only interchange, no further improvements are needed to meet the established LOS standard.

SR 138/Lake Spivey Pkwy at Mt Zion Rd

- The intersection operates at LOS B during both peak hours in Existing Conditions; therefore, the LOS standard for Background and Build conditions is LOS D during both peak hours.
- For Background 2029 Conditions and Background 2035 Conditions, no further improvements are needed to meet the established LOS standard.
- For Build Phase 1 2029 Conditions, the addition of 1 SBL lane is needed to meet the established LOS standard.
- For Build Phase 2 2035 Conditions, the additions of 1 SBL lane, 1 EBT lane, and 1 WBT lane are needed to meet the established LOS standard.
- For Build Phase 1 2029 Conditions with I-75 northbound-only interchange, no further improvements are needed to meet the established LOS standard.

- For Build Phase 2 2035 Conditions with I-75 northbound-only interchange, the additions of 1 SBL lane and 1 EBT or 1 WBT lane are needed to meet the established LOS standard.

SR 138/Lake Spivey Pkwy at I-75 NB

- The intersection operates at LOS C during the AM peak hour and LOS A during the PM peak hour in Existing Conditions; therefore, the LOS standard for Background and Build conditions is LOS D during both peak hours.
- For Background 2029 Conditions, the addition of 1 NBL lane is needed to meet the established LOS standard.
- For Background 2035 Conditions, the additions of 1 EBL lane and 1 WBR lane are needed to meet the established LOS standard.
- For Build Phase 1 2029 Conditions, Build Phase 2 2035 Conditions, and Build Phase 1 2029 Conditions with I-75 northbound-only interchange, no further improvements are needed to meet the established LOS standard.
- For Build Phase 2 2035 Conditions with I-75 northbound-only interchange, the addition of 1 WBT lane is needed to meet the established LOS standard.

SR 138/Lake Spivey Pkwy at I-75 SB

- The intersection operates at LOS B during the AM peak hour and LOS D during the PM peak hour in Existing Conditions; therefore, the LOS standard for Background and Build conditions is LOS D during both peak hours.
- For Background 2029 Conditions, the addition of 1 SBR lane is needed to meet the established LOS standard.
- For Background 2035 Conditions and Build Phase 1 2029 Conditions, no further improvements are needed to meet the established LOS standard.
- For Build Phase 2 2035 Conditions, the addition of 1 SBL lane is needed to meet the established LOS standard.

SR 138/Lake Spivey Pkwy at Speer Rd/Mt Zion Pkwy

- The intersection operates at LOS D during both peak hours in Existing Conditions; therefore, the LOS standard for Background and Build conditions is LOS D during both peak hours.
- For Background 2029 Conditions, the addition of 1 NBR lane is needed to meet the established LOS standard.
- For Background 2035 Conditions, the additions of 1 EBT lane and 1 WBT lane are needed to meet the established LOS standard; however, the delay is 63.3 seconds, which is only 8.3 seconds beyond LOS D.
- For Build Phase 1 2029 Conditions and Build Phase 2 2035 Conditions, no further improvements are needed to meet the established LOS standard.

SR 138/Lake Spivey Pkwy at Spivey Rd

- The intersection operates at LOS B during both peak hours in Existing Conditions; therefore, the LOS standard for Background and Build conditions is LOS D during both peak hours.
- No further improvements are needed to meet the established LOS standard.

Walt Stephens Rd at Spivey Rd

- The southbound left turn movement operates at LOS F during the AM peak hour and LOS C during the PM peak hour in Existing Conditions. The eastbound mainline left turn movement operates at LOS B during the AM peak hour and LOS A during the PM peak hour in Existing Conditions.
- The intersection is side street stop-controlled, so the LOS is measured by the side street(s) approach and mainline left turn delays.
- Improvements are needed in Existing Conditions. These improvements were utilized in the Background and Build scenarios, but due to the increasing volume entering the intersection with a mere side street stop control, delays continue to worsen significantly into the Background and Build scenarios. The additions of 1 SBR lane, 1 EBL lane, and 1 WBR lane were implemented to attempt to meet the established LOS standard.
- GRTA DRI policy states that improvements must be made until LOS standard is met. However, due to the nature of this unsignalized intersection, the LOS standard cannot be met. Other improvements would need to be considered at this location to improve the LOS further, such as a traffic signal control or an alternative intersection design, including but not limited to a Restricted Crossing U-Turn (RCUT), Right-In/Right-Out Only (RIRO), or Median U-Turn (MUT).

Walt Stephens Rd at Speer Rd/Blackhall Rd

- The intersection operates at LOS C during both peak hours in Existing Conditions; therefore, the LOS standard for Background and Build conditions is LOS D during both peak hours.
- For Background 2029 Conditions, the addition of 1 WBR lane is needed to meet the established LOS standard of D; however, the delay is 58.4 seconds, which is only 3.4 seconds beyond LOS D.
- For Background 2035 Conditions and Build Phase 1 2029 Conditions, no further improvements are needed to meet the established LOS standard.
- For Build Phase 2 2035 Conditions, the addition of 1 SBL lane is needed to meet the established LOS standard; however, the delay is 60.8 seconds, which is only 5.8 seconds beyond LOS D.

Walt Stephens Rd at Brentwood Pkwy/Monarch Village Way

- The intersection operates at LOS C during the AM peak hour and LOS B during the PM peak hour in Existing Conditions; therefore, the LOS standard for Background and Build conditions is LOS D during both peak hours.
- For Background 2029 Conditions, Background 2035 Conditions, and Build Phase 1 2029 Conditions, no further improvements are needed to meet the established LOS standard.
- For Build Phase 2 2035 Conditions, the LOS in the AM peak hour worsens to LOS E. However, the delay is only 2.5 seconds beyond LOS D, so no further improvements were pursued to meet the established LOS standard.

Flippen Rd at Walt Stephens Rd/Red Oak Rd

- The intersection operates at LOS C during the AM peak hour and LOS F during the PM peak hour in Existing Conditions; therefore, the LOS standard for Background and Build conditions is LOS D during the AM peak hour and LOS E during the PM peak hour.
- For Background 2029 Conditions, the addition of 1 EBR lane (free flow add onto Flippen Road) is needed to meet the established LOS standard.
- For Background 2035 Conditions and Build Phase 1 2029 Conditions, no further improvements are needed to meet the established LOS standard.
- For Build Phase 2 2035 Conditions, the additions of 1 NBT lane, 1 NBL lane, 1 SBT lane, 1 SBR lane, and 1 EBL lane are needed to meet the established LOS standard.

- For Build Phase 1 2029 Conditions with I-75 northbound-only interchange, the additions of 1 NBL lane, 1 SBR lane, and 1 EBL lane are needed to meet the established LOS standard.
- For Build Phase 2 2035 Conditions with I-75 northbound-only interchange, the additions of 1 NBT lane, 1 NBL lane, 1 SBT lane, 1 SBR lane, 1 EBL lane, and 1 WBR lane are needed to meet the established LOS standard.

Flippen Rd at Banks Rd/Village Way

- The intersection operates at LOS B during both peak hours in Existing Conditions; therefore, the LOS standard for Background and Build conditions is LOS D during both peak hours.
- No further improvements are needed to meet the established LOS standard.

Banks Rd at Tye St

- The southbound left turn movement operates at LOS B during both peak hours in Existing Conditions; therefore, the LOS standard for Background and Build conditions is LOS D during both peak hours.
- No further improvements are needed to meet the established LOS standard.

Rock Quarry Rd at Banks Rd/Carrington Ridge

- The intersection operates at LOS C during both peak hours in Existing Conditions; therefore, the LOS standard for Background and Build conditions is LOS D during both peak hours.
- Programmed improvements from GDOT P.I. No. 322050 will provide 1 NBT lane and 1 SBT lane at the intersection.
- With GDOT's programmed improvements at the intersection, no further improvements are needed to meet the established LOS standard in Background and Build conditions.

Rock Quarry Rd at Red Oak Rd/Red Oak Village

- Except for the westbound approach during the AM peak hour, both side street approaches operate at LOS E or worse during both peak hours in Existing Conditions; therefore, the LOS standard for Background and Build conditions is LOS E during both peak hours, except for the westbound approach during the AM peak hour. The LOS standard for the westbound approach during the AM peak hour is LOS D.
- Programmed improvements from GDOT P.I. No. 322050 will provide 1 NBT lane, 1 NBL lane, 1 SBT lane, and 1 SBL lane at the intersection and transform the intersection into an unsignalized Restricted Crossing U-Turn (RCUT) as part of the widening. The side street approaches will only be able to turn right and make a U-turn at a designated median opening. However, left turns from Rock Quarry Road will still be physically allowed.
- With GDOT's programmed improvements at the intersection, no further improvements are needed to meet the established LOS standard in Background and Build conditions.

Red Oak Rd at Tye St

- The intersection operates at LOS A during the AM peak hour and LOS B during the PM peak hour in Existing Conditions; therefore, the LOS standard for Background and Build conditions is LOS D during both peak hours.
- No further improvements are needed to meet the established LOS standard.

Davidson Pkwy at Walter Way

- The intersection operates at LOS A during the AM peak hour and LOS B during the PM peak hour in Existing Conditions; therefore, the LOS standard for Background and Build conditions is LOS D during both peak hours.
- For Background 2029 Conditions, Background 2035 Conditions, and Build Phase 1 2029 Conditions, no further improvements are needed to meet the established LOS standard in Background and Build conditions.
- For Build Phase 2 2035 Conditions, the additions of 1 SBR lane, 1 EBT lane, and 1 WBT lane are needed to meet the established LOS standard.
- While the preceding improvements help the intersection meet the established LOS standard, multi-lane approaches on all-way stop controlled intersections are typically not the norm. Other improvements may need to be considered at this location by Build Phase 2 2035 Conditions, such as a traffic signal control or an alternative intersection design, including but not limited to a Restricted Crossing U-Turn (RCUT), Right-In/Right-Out Only (RIRO), or Median U-Turn (MUT).

Flippen Rd at Fairhaven Rd

- The westbound side street approach operates at LOS C during both peak hours in Existing Conditions; therefore, the LOS standard for Background and Build conditions is LOS D during both peak hours.
- For Background 2029 Conditions, no further improvements are needed to meet the established LOS standard.
- For Background 2035 Conditions, the addition of 1 WBR lane is needed to meet the established LOS standard; however, the delay is 40.8 seconds, which is only 5.8 seconds beyond LOS D.
- For Build Phase 1 2029 Conditions and Build Phase 1 2029 Conditions with I-75 northbound-only interchange, the west leg of the intersection will be added as proposed Fairhaven Road Extension, and the east leg of the intersection will have residential development added as part of the proposed development. Turn lanes are warranted at the intersection as follows:
    - Northbound left turn lane
    - Northbound right turn lane
    - Southbound left turn lane
    - Southbound right turn lane
    - While not recommended by the NCHRP Turn Lane Warrants, inadequate LOS on both the eastbound and westbound single-lane approaches prompted the addition of right turn lanes on both side street approaches.
    - GRTA DRI policy states that improvements must be made until LOS standard is met. However, due to the nature of this unsignalized intersection, the LOS standard cannot be met. Other improvements would need to be considered at this location to improve the LOS further, such as a traffic signal control or alternative intersection.
- For Build Phase 2 2035 Conditions and Build Phase 2 2035 with I-75 northbound-only interchange, the same conditions from Build Phase 1 2029 and Build Phase 1 2029 with I-75 northbound-only interchange apply.

Davidson Pkwy at proposed Reeves Creek Pkwy

- Turn lanes are warranted at the intersection as follows:
    - Northbound left turn lane
    - Northbound right turn lane
    - Southbound left turn lane

    - Southbound right turn lane
    - Two-lane eastbound and westbound approaches
- Traffic Signal is warranted in Build Phase 1 2029 Conditions with the proposed I-75 northbound-only interchange, which is the scenario that is expected to produce the lesser amount of traffic at this intersection.
- For Build Phase 1 2029 Conditions, the intersection is expected to operate at LOS C during the AM peak hour and LOS D during the PM peak hour with the following lane configurations:
    - 1 NBL, 1 NBT, 1 NBR
    - 2 SBL, 2 SBT, 2 SBR
    - 1 EBL, 1 EBT+R
    - 1 WBL+T, 1 WBR
- For Build Phase 2 2035 Conditions, the intersection is expected to operate at LOS C during the AM peak hour and LOS D during the PM peak hour with the following lane configurations:
    - 1 NBL, 2 NBT, 1 NBR
    - 2 SBL, 2 SBT, 1 SBR
    - 1 EBL, 1 EBT, 1 EBR
    - 1 WBL, 1 WBT, 1 WBR
- For Build Phase 1 2029 Conditions with I-75 northbound-only interchange, the intersection is expected to operate at LOS C during both peak hours with the following lane configurations:
    - 1 NBL, 1 NBT, 1 NBR
    - 1 SBL, 1 SBT, 1 SBR
    - 1 EBL, 1 EBT+R
    - 1 WBL+T, 1 WBR
- For Build Phase 2 2035 Conditions with I-75 northbound-only interchange, the intersection is expected to operate at LOS C during the AM peak hour and LOS D during the PM peak hour with the following lane configurations:
    - 1 NBL, 1 NBT, 1 NBR
    - 2 SBL, 1 SBT, 1 SBR
    - 1 EBL, 1 EBT, 1 EBR
    - 1 WBL, 1 WBT, 1 WBR

Walt Stephens Rd at proposed Reeves Creek Pkwy/I-75 NB

- The traffic signal warrant and turn lane warrants were performed in the absence of the proposed I-75 northbound-only interchange.
- Turn lanes are warranted at the intersection as follows:
    - Eastbound left turn lane
    - Westbound right turn lane
    - Two-lane southbound approach
- Traffic Signal is warranted in Build Phase 1 2029 Conditions without the proposed I-75 northbound-only interchange, which is the scenario that is expected to produce the lesser amount of traffic at this intersection.
- For Build Phase 1 2029 Conditions, the intersection is expected to operate at LOS B during the AM peak hour and LOS C during the PM peak hour with the following lane configurations:
    - 1 SBL, 1 SBR
    - 1 EBL, 1 EBT
    - 1 WBT, 1 WBR

- For Build Phase 2 2035 Conditions, the intersection is expected to operate at LOS A during the AM peak hour and LOS D during the PM peak hour with the following lane configurations:
    - 1 SBL, 1 SBR
    - 1 EBL (protected+permissive phase added), 1 EBT
    - 1 WBT, 1 WBR
- For Build Phase 1 2029 Conditions with I-75 northbound-only interchange, the intersection is expected to operate at LOS C during both peak hours with the following lane configurations:
    - 1 NBL+T lane, 1 NBR lane
    - 1 SBL lane, 1 SBT lane, 1 SBR lane
    - 1 EBL lane (protected+permissive phase added), 1 EBT lane, 1 EBT+R lane
    - 1 WBL lane, 2 WBT lanes, 1 WBR lane
- For Build Phase 2 2035 Conditions with I-75 northbound-only interchange, the intersection is expected to operate at LOS C during the AM peak hour and LOS D during the PM peak hour with the same lane configurations as those in Build Phase 1 2029 Conditions with I-75 northbound-only interchange.

Flippen Rd at Site Driveways 4 and 5

- For Build Phase 1 2029 Conditions and Build Phase 1 2029 Conditions with I-75 northbound-only interchange, the east and west legs of the intersection will have residential development added as part of the proposed development. Turn lanes are warranted at the intersection as follows:
    - Northbound left turn lane
    - Northbound right turn lane
    - Southbound right turn lane
    - While not recommended by the NCHRP Turn Lane Warrants, inadequate LOS on both the eastbound and westbound single-lane approaches prompted the addition of right turn lanes on both side street approaches.
    - GRTA DRI policy states that improvements must be made until LOS standard is met. However, due to the nature of this unsignalized intersection, the LOS standard cannot be met. Other improvements would need to be considered at this location to improve the LOS further, such as a traffic signal control or alternative intersection.
- For Build Phase 2 2035 Conditions and Build Phase 2 2035 with I-75 northbound-only interchange, the same conditions from Build Phase 1 2029 and Build Phase 1 2029 with I-75 northbound-only interchange apply.

APPENDIX A: Site Plan

I:\2018\2018196\0 Preliminary\2018196 DRI.dwg, PREVIOUS PAPER SIZE (30.00 X 42.00 INCHES), SCRAM PMLTBL.DWG TO PDF.PC3, JOHN WISE, August 21, 2019 1:55:55 PM

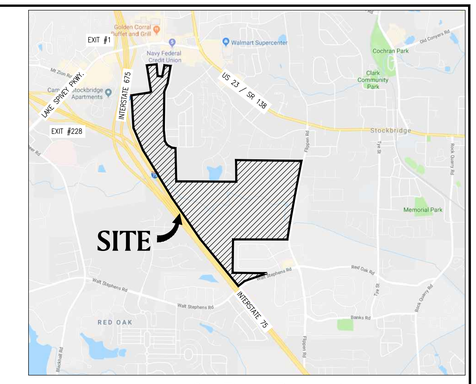
SITE & LAND ANALYSIS - COMMERCIAL

RESTAURANTS & HOTELS (SR 138)	±18.3 ACRES
3 HOTELS (4–STORY, 100+ ROOMS)	±160,000 S.F.
RETAIL SHOPS	±15,000 S.F.
3 RESTAURANT OUTLOTS	±15,000 S.F.
PARKING ALLOWED	500 SPACES (1 SP/ROOM & 1 SP/150 S.F.)
FLOOR AREA RATIO	±0.24
MEDICAL OFFICE PARK	±29.1 ACRES
14 OFFICE BLDGS.	±250,000 S.F.
PARKING ALLOWED	150 SPACES (5 SP/PHYSICIAN)
FLOOR AREA RATIO	±0.20
RETAIL POWER CENTER	±33.4 ACRES
CLUB WAREHOUSE	±135,000 S.F.
PARKING ALLOWED	900 SPACES (1 SP/150 S.F.)
HOME IMPROVEMENT WAREHOUSE	±100,000 S.F.
PARKING ALLOWED	250 SPACES (1 SP/400 S.F.)
RETAIL ANCHOR/SHOPS	±75,000 S.F.
TOTAL BLDG. AREA	±310,000 S.F.
PARKING ALLOWED	2,067 SPACES (1 SP/150 S.F.)
FLOOR AREA RATIO	±0.22
RESTAURANTS & RETAIL (PARKWAY)	±35.7 ACRES
OFFICE & FLEX SPACE PARK	±18.5 ACRES
OFFICE & FLEX SPACE	±150,000 S.F.
4 2–STORY OFFICES	±120,000 S.F.
PARKING ALLOWED	900 SPACES (1 SP/300 S.F.)
FLOOR AREA RATIO	±0.33

SITE & LAND ANALYSIS - COMMERCIAL

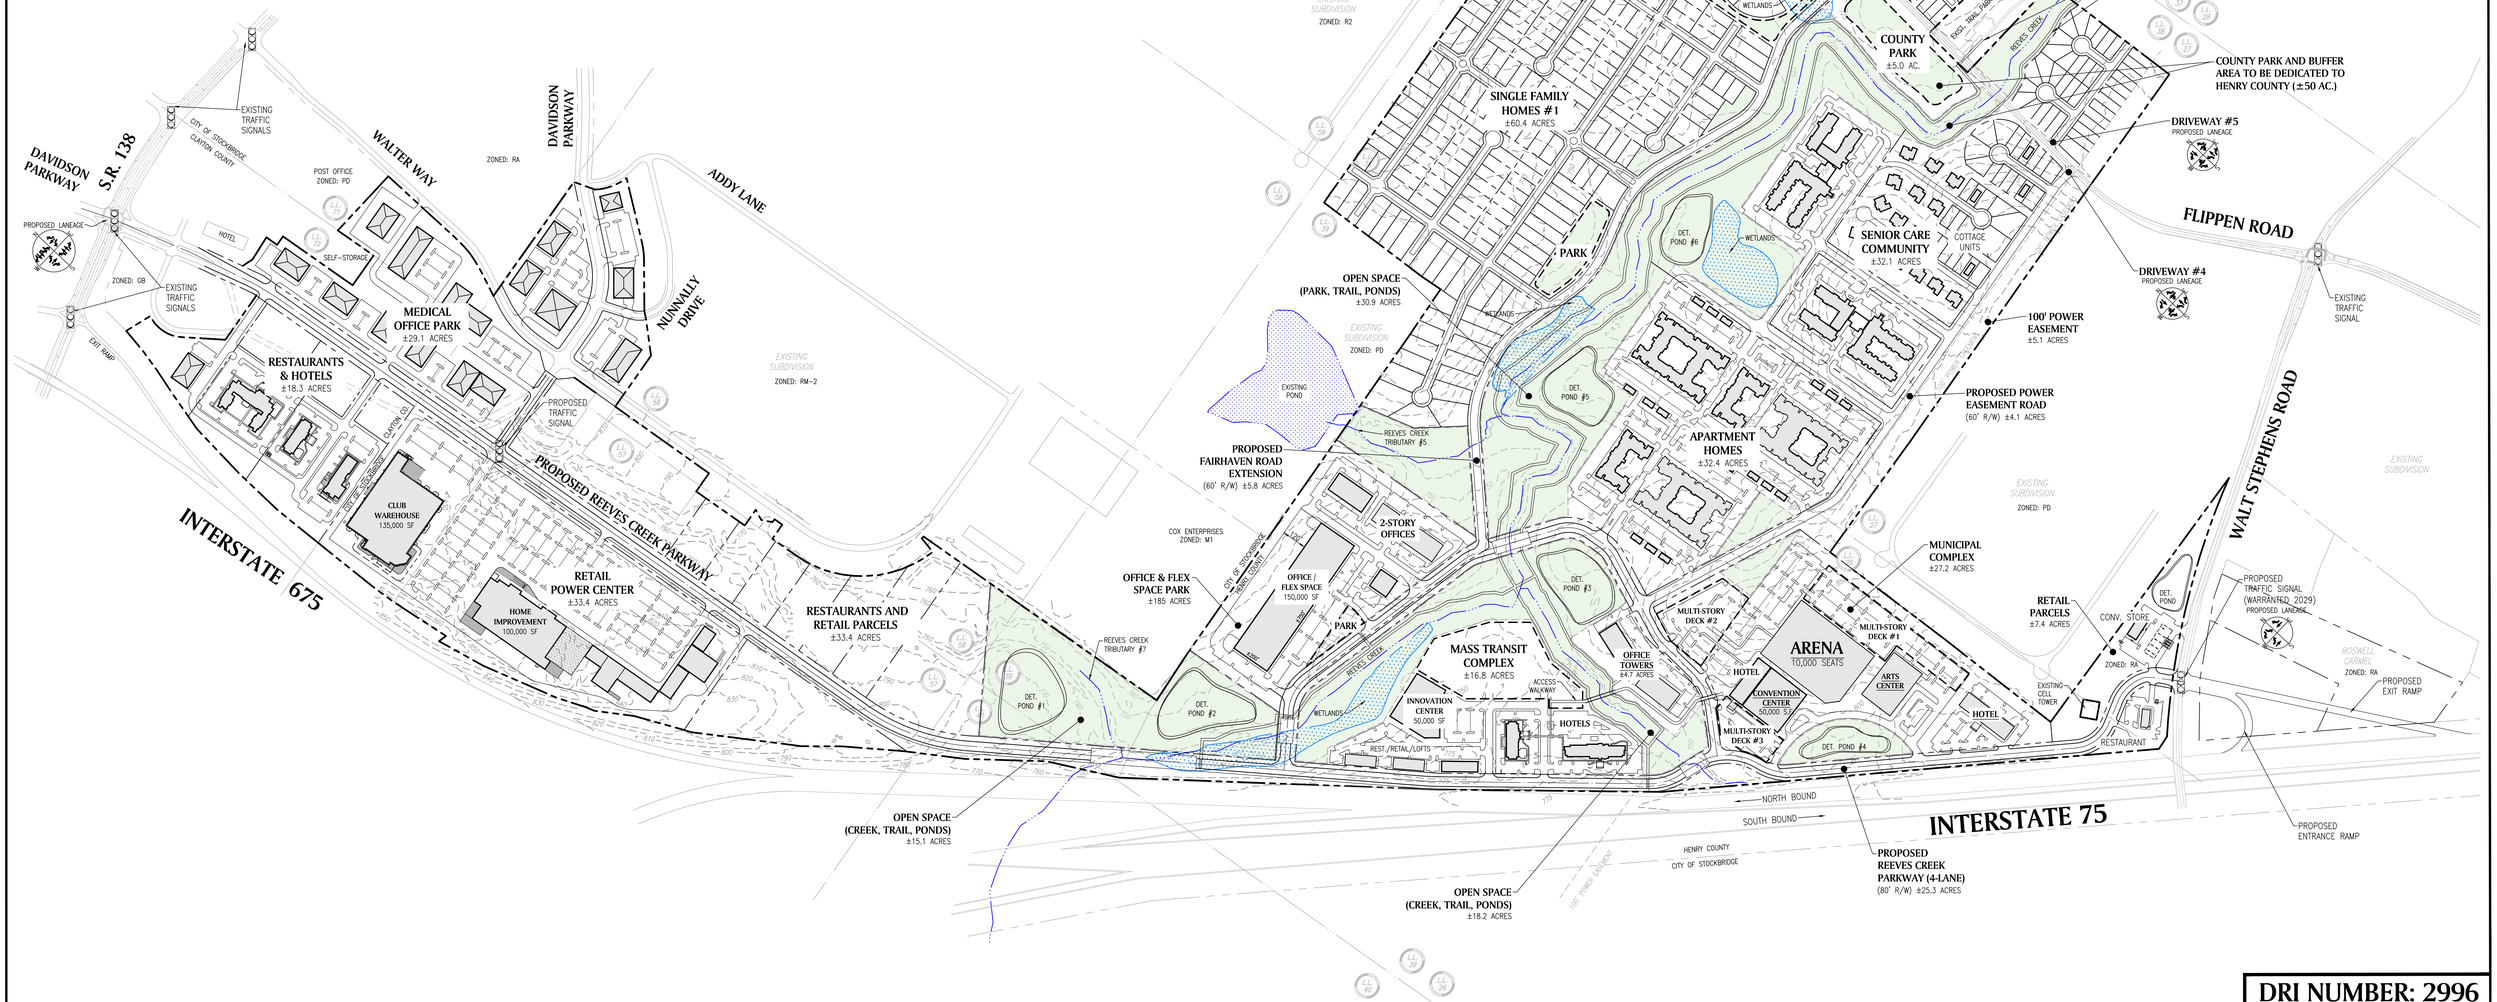
MASS TRANSIT COMPLEX	±16.8 ACRES
MASS TRANSIT STATION	±40,000 S.F.
PARKING ALLOWED	33 SPACES (1 SP/3 SEATS IN WAITING AREA)
INNOVATION CENTER	±50,000 S.F.
2 HOTELS (4–STORY, 100+ ROOMS)	±80,000 S.F.
RESTAURANT/RETAIL/LOFTS	±75,000 S.F.
PARKING ALLOWED	1,158 SPACES (1 SP/150 S.F. / 1 SP/400 S.F.)
FLOOR AREA RATIO	±0.33
OFFICE TOWERS	±4.7 ACRES
BUILDING #1 (10–STORY)	±200,000 S.F.
BUILDING #2 (10–STORY)	±200,000 S.F.
TOTAL BLDG. AREA	±400,000 S.F.
PARKING ALLOWED	1,334 SPACES (1 SP/300 S.F.)
FLOOR AREA RATIO	±1.95
MUNICIPAL COMPLEX	±27.2 ACRES
ARENA (10,000 SEATS)	±150,000 S.F.
PARKING ALLOWED	3,334 SPACES (1 SP/3 FIXED SEATS)
ARTS CENTER	±45,000 S.F.
CONVENTION CENTER	±52,000 S.F.
PARKING ALLOWED	1,040 SPACES (1 SP/50 S.F.)
2 HOTELS (5–STORY, 120+ ROOMS)	±200,000 S.F.
3 MULTI–STORY PARKING DECKS	±240 SPACES
PARKING ALLOWED	240 SPACES (1 SP/ROOM)
FLOOR AREA RATIO	±0.38

SITE & LAND ANALYSIS - RESIDENTIAL



SINGLE FAMILY HOMES #1	±60.4 ACRES
TYPICAL 60' X 140' LOTS	±206 HOMES
HOUSING RATIO	±3.4/ACRES
PARKING ALLOWED	380 SPACES (2 SP/DWELLING UNIT)
SINGLE FAMILY HOMES #2	±22.4 S.F.
TYPICAL 60' X 120' LOTS	± 76 HOMES
HOUSING RATIO	±3.4/ACRE
PARKING ALLOWED	150 SPACES (2 SP/DWELLING UNIT)
TOWNHOMES	±18.0 ACRES
TYPICAL 45' X 120' LOTS	±130 HOMES
PARKING ALLOWED	102 SPACES (1 SP/DWELLING UNIT)
SENIOR CARE COMMUNITY	±32.1 ACRES
SINGLE FAMILY COTTAGES	±33 UNITS
DUPLEX FAMILY UNITS	±15 UNITS
4–STORY INDEPENDENT LIVING	±168 UNITS
3–STORY ASSISTED LIVING	±160 UNITS
MEMORY CARE	±40 UNITS
PARKING ALLOWED	416 SPACES (1 SP/BEDROOM)
APARTMENT HOMES	±32.4 ACRES
3 – BLDG. #1 (4–STORY)	
X 50 UNITS/FLOOR	±600 UNITS
2 – BLDG. #3 (4–STORY)	
X 25 UNITS/FLOOR	±200 UNITS
PARKING ALLOWED	1,600 SPACES (2 SP/DWELLING UNIT)

SITE & LAND ANALYSIS - PUBLIC DEDICATION



COUNTY PARK	±5.0 ACRES
PARKING ALLOWED	40 SPACES (8 SP/1 ACRE)
EXIST. 100' POWER EASEMENT	±5.1 ACRES
PROPOSED REEVES CREEK PARKWAY	±25.3 ACRES
4–LANE PARKWAY, 80' R/W,	
TOTAL ±2.56 MILES LONG	
PROPOSED FAIRHAVEN ROAD EXTENSION	±5.0 ACRES
3–LANE ROAD, 60' R/W	
TOTAL ±0.68 MILES LONG	
PROPOSED POWER EASEMENT ROAD	±4.1 ACRES
3–LANE ROAD, 60' R/W,	
TOTAL ±0.57 MILES LONG	

LAND USE SUMMARY

COMMERCIAL LAND USES	±145.4 ACRES (31.3%)
MUNICIPAL LAND USES	±27.2 ACRES (5.8%)
RESIDENTIAL LAND USES	±183.8 ACRES (39.5%)
OPEN SPACE	±74.3 ACRES (16.0%)
(3) ROAD DEDICATED RIGHT–OF–WAY	±34.4 ACRES (7.4%)
TOTAL LAND AREA	±465.1 ACRES

REVISED PROJECT CONCEPT REPORT

Project Type:	Widening	P.I. Number:	322050
GDOT District:	3, 7	County:	Clayton, Henry
Federal Route Number:	23	State Route Number:	42
	Project Number:	STP00-0037-02(056)	

The approved concept is being revised to 1) reflect the extension of the southern termini to south of SR 138 to provide for a second northbound thru lane through the SR 138 intersection, 2) reflect the inclusion of an 11-foot inside lane and a shared use path in the typical section, 3) reflect the replacement of the bridge culvert at Panther Creek with a bridge, and 4) reflect the inclusion of restricted crossing U-turn (RCUT) intersections between SR 138 and I-675.

Submitted for approval:

Consultant Designer – McGee Partners, Inc.	8/22/2016 Date
Albert Shelby State Program Delivery Engineer	9/17/16 Date

* For Christopher Raymond/KLP State Traffic Engineer	10-3-2016 Date
* Bill DuVall/KLP State Bridge Engineer	9-28-2016 Date

* Recommendations on file

- ☐ MPO Area: This project is consistent with the MPO adopted Regional Transportation Plan (RTP)/Long Range Transportation Plan (LRTP).
- ☐ Rural Area: This project is consistent with the goals outlined in the Statewide Transportation Plan (SWTP) and/or is included in the State Transportation Improvement Program (STIP).

Matthew Fowler State Transportation Planning Administrator	Sept 23, 2016 Date

PLANNING, APPROVED CONCEPT, AND BACKGROUND

Project Justification Statement:

The proposed widening of SR 42/US 23 from SR 138 in Henry County to I-675 in Clayton County has long been a priority as part of a larger planned initiative to multi-lane SR 42 to improve mobility and connectivity from I-285 to the City of Stockbridge. The Concept for the widening of SR 42/US 23 from SR 138 to I-675 was approved by the Department on July 26, 1991. The project has been included in the Atlanta Regional Commission's Regional Transportation Plan since that time.

Land use along the project corridor largely consists of commercial development. There are several strip shopping centers, as well as small retail and service oriented businesses. On the southern end of the corridor much of the commercial development is associated with vehicle repair and maintenance, sales, and a salvage yard. Gas station convenience stores are concentrated on the north and south ends of the corridor at the project termini. There are some single family homes adjacent to the corridor, but much the residential development is within six to eight planned subdivisions accessed from secondary roads intersecting SR 42. There is one large church, Liberty Baptist Church, located at the intersection of SR 42 and Valley Hill Road. The smaller Rocky Mountain Church and cemetery are located on Old Macon Road, north of the intersection with SR 42. Finally institutional development includes the Clayton County Community Services Head Start Day Care facility at the intersection of SR 42 and Brookwood Boulevard, and a Henry County Waste Water Treatment facility accessed from Old Macon Highway. There are no large industrial or commercial employers or large educational facilities along the corridor.

The existing two lane section on this Urban Minor Arterial has insufficient capacity to accommodate projected traffic volumes exceeding 30,800 vehicles by 2042. As a result, Level of Service is projected to be E/F on the north end of the corridor, and D/E on the southern end in the same year. In addition to operational concerns for the corridor, crash rates for the latest years available (2011 to 2014) show crash and injury rates exceed statewide averages, in some years over twice the statewide average. No fatalities were recorded for the report years. The majority of the crashes have occurred at the signalized intersections of SR 42 with SR 138, Valley Hill Road and I-675 Ramps. At five locations along the corridor, substandard vertical curves do not provide stopping sight distance for the posted 45 mile per hour (mph) speed limit. Termini on both ends consist of four lane sections.

The major performance goals of the project are to improve mobility and operational efficiency along the corridor, reduce crash frequency and severity, and reduce congestion.

Prepared by McGee Partners & Edwards-Pitman Environmental.

Existing conditions:

SR 42/US 23 south of SR 138 is a five-lane roadway with urban shoulders, including sidewalks. The route transitions to a two-lane roadway with rural shoulders north of SR 138. . The route transitions to a five-lane roadway with urban shoulders without sidewalks as it approaches I-675. North of I-675, SR 42/US 23 is a four-lane roadway with raised median and urban shoulders without sidewalks. The route's intersections with SR 138, Valley Hill Road and the I-675 ramps are signalized. Panther Creek is conveyed under SR 42/US 23 through a quadruple 10'x9' bridge culvert. Major utilities along the project include a 24" Clayton County waterline from Valley Hill Road to north of Biscayne Road and one 30" and three 36" Williams-Transco gas pipelines which cross SR 42/US 23 just north of Panther Creek.

Description of the <u>approved</u> concept:

The proposed project would improve SR 42/US 23 from SR 138 in Henry County and the City of Stockbridge to I-675 in Clayton County, a distance of 2.3 miles. The existing two-lane roadway would be widened to four

12-foot lanes with 20' raised median with urban shoulders and sidewalks. The bridge culvert at Panther Creek would be replaced with a new quadruple 10'x9' bridge culvert. The intersections at SR 138, Valley Hill Road and the I-675 ramps would continue to be signalized.

Federal Oversight: ☐ PoDI ☐ Exempt ☒ State Funded ☐ Other

Projected Traffic as shown in the approved Concept Report: AADT
Open Year (2010): 26,100 Design Year (2030): 42,700

Updated Traffic: ADT 24 HR T: 7.0 %
Open Year (2022): 26,700 Design Year (2042): 33,930

Functional Classification (Mainline): Urban Minor Arterial Street

Complete Streets - Bicycle, Pedestrian, and/or Transit Standard Warrants:
Warrants met: ☐ None ☒ Bicycle ☒ Pedestrian ☐ Transit
Warrants were met for Bicycle and Pedestrian, but not for Transit. The corridor is not served by fixed-route transit, nor is the corridor within a 3/4-mile pedestrian catchment area of an existing fixed-route transit facility. Cyclists will be accommodated on 10-foot shared use path on one side of SR 42. Pedestrians will be accommodated on the shared use path and a 5-foot sidewalk on the other side of SR 42. These accommodations will be included on the proposed bridge over Panther Creek.

VE Study anticipated: ☐No ☐ Yes ☒ Completed – Date: 4/4/2011
(VE Implementation Letter is attached.)

PROPOSED REVISIONS

Approved Features:	Proposed Features:
• **Project Termini** The approved project limits are from SR 138 to I-675.	• **Project Termini** From approximately 800 feet south of SR 138 to I-675
• **Typical Section** The approved typical section includes a four-lane roadway with 20-foot raised median, 12-foot lanes, 16-foot urban shoulder with 6-foot buffers and 5-foot sidewalks.	• **Typical Section** Four-lane roadway with 20-foot raised median, 12-foot outside lanes and 11-foot inside lanes, 16-foot urban shoulder with 6-foot buffers and a 5-foot sidewalk on one side and a 10-foot shared use path on the other
• **Bridge Type** The approved concept calls for the existing quadruple 10-foot x 9-foot bridge culvert at Panther Creek to be replaced by a new quadruple 10-foot x 9-foot bridge culvert.	• **Bridge Type** Existing quadruple 10-foot x 9-foot bridge culvert at Panther Creek will be replaced by an approximately 110-foot long x 89-foot wide single-span bridge.
• **Intersection Control** The approved concept calls for maintaining signalized intersections along SR 42 at SR 138, Valley Hill Road and the I-675 ramps, along with providing full-access median openings at other side roads along the corridor, some of which will be evaluated for signal warrants.	• **Intersection Control** SR 42 at SR 138 and the I-675 ramps will be maintained as conventional signalized intersections. A series of restricted crossing U-turn (RCUT) intersections will be constructed between SR 138 and I-675 at selected side roads, some of which will be evaluated for signal warrants.

Reason(s) for change:

- **Project Termini.** The southern project terminus was extended to approximately 800 feet south of SR 138 to provide for adequate length dual left turn lanes to SR 138 westbound while transitioning the tow northbound SR 42/US 23 thru lanes through the SR 138 intersection.
- **Typical Section**. The inside basic lane width was reduced to 11 feet per the VE Implementation Letter from April 2011 and a shared use path was included in order to comply with the Department's warrants for bicycle accommodation along the SR 42 corridor.
- **Bridge Type.** Bridge type was revised to construct a conventional bridge over Panther Creek due to concerns with anticipated increase in maintenance of a bridge culvert related to debris, siltation and scour with undermining.
- **Intersection Control.** Intersection control was revised to include RCUT intersections, in lieu of full-access median openings, in order to reduce delay, frequency of crashes and severity of crashes along SR 42.

Design Variances and/or Exceptions needed: None anticipated.

ENVIRONMENTAL AND PERMITS

Potential environmental impacts of proposed revision: The typical section would be reduced to minimize impacts to eligible historic resources across from one another along the corridor. Horizontal alignment shifts in some areas would avoid impacts to eligible historic resources. Waters of the US have been identified, and impacts determined based on revised design.

Have proposed revisions been reviewed by environmental staff? ☐ No ☒ Yes

Environmental responsibilities (Studies/Documents/Permits): The Design Consultant would be responsible for resource identification, assessment of impacts and preparation of permits.

Air Quality:

Is the project located in a PM 2.5 Non-attainment area?	☒ No	☐ Yes
Is the project located in an Ozone Non-attainment area?	☐ No	☒ Yes
Is a Carbon Monoxide hotspot analysis required?	☐ No	☒ Yes

The proposed changes do not differ significantly from the conforming plan's description. The proposed limits would remain SR 138 to the south and I-675 to the north, and proposed widening remains two to four lanes. The proposed changes are not anticipated to result in significant differences to air quality. Based on Level of Service and design year traffic, a CO hotspot analysis is anticipated.

Environmental Comments and Information:

NEPA: The project is now proposed to be constructed with state funds only. No NEPA or GEPA Document is required.

Ecology: Habitat is present for pink lady slipper, and would require survey between April and June. Removal of the existing culvert would require survey for protected altimaha shiner. Clear spanning the stream with a single span bridge instead of replacing the culvert would avoid impacts. Impacts to streams are likely, as well as within their buffers. Regional Permit No. 96 is anticipated, as well as a buffer variance.

Archeology: An archaeology Phase I survey has not been conducted for the corridor. Potential impacts to archaeological resources have not been determined.

History: The proposed widening would require property within the boundary of two eligible resources located across from one another. A Memorandum of Agreement is anticipated to mitigate impacts to these resources.

Air Quality: A quantitative hotspot analysis would be required for CO.
Public Involvement: A PIOH was held on July 28, 2016. A meeting synopsis is attached.

MS4 Permit Compliance – Is the project located in a MS4 area? ☐ No ☒ Yes

PROJECT COST AND ADDITIONAL INFORMATION

Item	Estimated Cost	Date of Estimate	Funded By
Base Construction Cost:	$20,599,485	10/14/2016	
Engineering and Inspection:	$1,029,974	10/14/2016	
Contingencies:	$2,595,535	10/14/2016	
Liquid AC Adjustment:	$707,653	10/14/2016	
Total Construction Cost:	$24,932,647		GDOT
Right-of-Way:	$11,182,000	8/17/2016	GDOT
Utilities (reimbursable costs):	$1,932,000	6/7/2016	GDOT
Environmental Mitigation:	$74,000	8/19/2016	GDOT
TOTAL PROJECT COST:	**$38,120,647**		

Recommendation: It is recommended that the project termini, typical section, bridge type and intersection control be revised as described herein, and for the concept to be approved for implementation.

Comments: A robust traffic operations analysis is planned to further analyze the RCUTs and U-Turn Crossovers in order to refine their locations. Spacing between RCUTs and U-turn Crossovers will be evaluated for the need to prepare any Design Variances. Driveway locations and design will be refined as the preliminary design phase commences.

LAST ESTIMATE UPDATE

REVISED COST ESTIMATES

CONSTRUCTION*	$	24,932,647.16
RIGHT OF WAY	$	
UTILITIES	$	

*Cost Contains **12** % Contingency

REASONS FOR COST INCREASE AND CONTINGENCY JUSTIFICATION:

Cost estimate update prepared during concept validation. Cost increase due to inclusion of potential MS4 facilities, refined quantity takeoffs, increased unit costs, direction to replace Panther Creek culvert with bridge in lieu of extending the culvert. Construction contingency of 12% used since project development is still in concept stage on a capacity adding reconstruction project.

CONTINGENCY SUMMARY

DATE June 7, 2016

FROM Scott Parker, District Utilities Engineer

TO Kevin B. VanHouten, Project Manager

SUBJECT **PRELIMINARY UTILITY COST (ESTIMATE)**

As requested by your office, we are furnishing you with a Preliminary Utility Cost estimate for each utility with facilities potentially located within the project limits.

FACILITY OWNER	NON-REIMBURSABLE	REIMBURSABLE
Atlanta Gas Light	750,000	
BellSouth d/b/a AT&T Georgia	420,000	
Charter Communications	24,000	
Clayton County Water	192,000	192,000
Comcast	96,000	
Georgia Power (Distribution)		420,000
Henry County Water & Sewer	120,000	120,000
Williams Gas Pipeline/Transco		1,200,000
TOTALS	**$ 1,602,000**	**$ 1,932,000**

Total Preliminary Utility Cost Estimate **3,312,000**.

If you have any questions, please contact Harland Smith at 706-646-7606.

Estimated Mitigation Costs

Dear Tommy,

Based on the current design, the proposed project would impact one water of the US along the corridor, identified as Intermittent Stream 2 (IS 2). Approximately 390 linear feet of stream and 21,000 square feet of IS 2 buffer would be impacted with proposed improvements.

The project is located within Hydrologic Unit Code (HUC) 03070103. Assuming worst case factors to estimate required mitigation credits, stream impacts would require approximately 1,776 mitigation credits, and buffer encroachment would require approximately 531 credits. Using the latest per-credit cost of $31.75 provided by Georgia Department of Transportation (January 2016) the table below provides a total estimate for mitigation associated with these impacts.

	Stream Impact	Buffer Impact
Impact Quantity	390 linear feet	21,000 square feet
Estimated Credits	1,776	531
Mitigation Cost	$57,000	$17,000
Total Mitigation Cost	$74,000	

If you have questions or need further assistance please contact me at 678.932.2228.

Sincerely,
Edwards Pitman

DATE: April 4, 2011

FROM: Ronald E. Wishon, State Project Review Engineer REW

TO: Bobby K. Hilliard, PE, State Program Delivery Engineer
Attn.: Charner Rodgers

SUBJECT: IMPLEMENTATION OF VALUE ENGINEERING STUDY ALTERNATIVES

The VE Study for the above project was held January 24-27, 2011. Responses were received on March 23, 2011. Revised responses were received April 4, 2011. Recommendations for implementation of Value Engineering Study Alternatives are indicated in the table below. The Project Manager shall incorporate the VE alternatives recommended for implementation to the extent reasonable in the design of the project.

ALT #	Description	Potential Savings/LCC	Implement	Comments
RD-1	Use 11 foot inside, 12 foot outside lanes throughout the project	$938,824	Yes	This will be done.
RD-3	Shorten tie on Old Macon Highway and eliminate the median opening	$614,684	No	Old Macon Hwy. carries heavy trucks from both the Waste Water Treatment Plant and a trailer truck storage area located near this intersection. Closing the median opening will cause these trucks to make U-turns at Sunset Hill Rd for SB vehicles or Valley Hill Road for NB vehicles. Neither intersection is currently designed for truck traffic U-turns. Due to the proximity of a townhome community at Sunset Hill, there is not adequate room to accommodate a truck U-turn.
RD-7	Construct a 12 foot urban shoulder	$2,954,842	No	With the adoption of 24"curb & gutter for this project, the minimum offset from the edge of travel way is 13½'. In accordance with ROW guidelines, a 2' offset is needed in order to provide the required clearance for the utility poles, resulting in a minimum 15½'shoulder.

RD-11	Use Modular Block Walls in lieu of poured in place GA Std. 4948-B Retaining walls	$225,394	Yes	This will be done for walls greater than 10 ft high, provided that the tie back does not interfere with underground utilities or pipes.
RD-12	Use GA Std. 9031-L Gravity walls in lieu of poured in place GA Std. 4948-B Retaining walls	$221,392	Yes	This will be done for walls less than 10 ft high, depending on the bearing capacity of the soil.
RD-15	Use a 4 inch concrete median thickness in lieu of 7 ½ inch	$246,092	Yes	This will be done.
RD-16	Remove and replace existing pavement to eliminate leveling in select areas	$579,921	Yes	This will be done.

The Office of Engineering Services concurs with the Project Manager's responses.

Subject: **Value Engineering Study**
STP-037-2(56) Henry and Clayton Counties
SR 42/US23 from SR 138 to I-675
P.I. No.: 322050

Ms. Rodgers:

The following are our responds to the VE items resulted from the study by PBS&J.

	VE item No.	Saving	Implement	Comments
RD-1	Use 11' inside lanes, 12' outside lanes throughout the project.	$938,824	Yes	SR42/US23 is classified as Urban Minor Arterial. The newly released GDOT "Design Policy Manual" dated 2/10/2011, does allow for 11 ft wide lane on this type of road classification. Design truck count percent is 6.5% for this project; therefore, maintaining a 12ft. wide outside lane is desirable.
RD-3	Shorten tie on the Old Macon Hwy. and eliminate the median opening.	$614,684	Not Recommended	Old Macon Hwy. carries heavy tracks from both the Waste Water Treatment Plant and a significant sized trailer truck storage area located near this intersection. Closing the median at the Old Macon Hwy. intersection will cause these heavy traffics to make "U" turn at either Sunset Hill Road for southbound traffics or at Valley Hill Road for the northbound traffics. Currently, both intersections are not designed for truck traffic "U" turn. Due to the proximity of a near by town home at the Sunset Hill Blvd., there is not enough room to accommodate a truck "U" at this intersection. Closing off the median opening at this intersection will encourage trucks traffic to travel into heavy

FAX (404) 607-8890

				residential area along Edward Rd. and Homestead Rd. which is not desirable. Curb & gutter can be used along this re-aligned Old Macon Hwy. to eliminate any potential impact on the existing cemetery.
RD-7	Use of 12' urban shoulder.	$2,954,842	Not Recommended.	In accordance with the GDOT "Design Policy Manual" all utility poles shall have 12ft minimum clearance (Table 5.2 – "Horizontal Clearances of Utilities Installation: Urban Shoulder") from the face of curb to the face of utility obstacle. With the adoption of 24" curb & gutter for this project, the minimum offset from the edge of travel way (lip of gutter) is 13ft-6in. Therefore, in accordance with the guide line for setting right-of-way, page 6-19 of the GDOT "Design Policy Manual", 2ft offset is required, resulting in 15ft-6in minimum shoulder.
RD-11	Use of modular block walls in-lieu of cast-in-place concrete cantilever wall.	$225,394	Yes. Use this type of wall with height greater than 10 ft.	Modular wall can be used for all retaining walls greater than 10ft high, provided that the tie back does not interfere with underground utilities or pipes.
RD-12	Use of gravity walls in-lieu of cast-in-place concrete cantilever wall.	$221,392	Yes. Use this type of wall with height less than 10 ft.	GDOT standard gravity retaining wall can be used for all retaining walls equal or less than 10ft high. The choice of using this type of retaining wall will also depend on the bearing capacity of soil on site due to the heavy mass of this type of wall.
RD-15	Use of 4" in-lieu of 71/2" concrete median for new median (not on existing pavement)	$246,092	Yes	This should be done

RD-16	Remove and replace existing pavement to eliminate leveling in selected area.	$579,921	Yes	This should be done

If you have any questions, please give me a call at 404-853-6874 or send an e-mail to ckong@wrjinc.com. Thank you.

P.I. Number: 322050
County: Clayton, Henry

A traffic study was performed to analyze the operational improvements of a proposed widening of SR 42/US 23 from south of SR 138 in Henry County to I-675 in Clayton County, P.I. No. 322050. The analysis considered the impact of increased traffic on the Build and No Build alternatives, as well as the possible inclusion of restricted crossing U-turn (RCUT) intersections. The analysis utilized traffic projections for the project, which were approved by GDOT on September 9, 2015.

The basic steps followed to perform the analysis were:

- Analyze segments along SR 42 both inside and outside of the project limits to determine level of service in accordance with Chapter 14 – Multilane Highways and Chapter 15 – Two-Lane Highways of the Transportation Research Board's (TRB) *Highway Capacity Manual, 2010 Edition (HCM)*.
- Analyze the existing signalized intersections to determine level of service in accordance with Chapter 18 – Signalized Intersections of the *HCM*.
- Adjust the approved traffic volumes to represent a corridor with RCUT and median U-turn (MUT) intersections.
- Investigate major RCUT and MUT intersections for signalization utilizing Warrant 1 from FHWA's *Manual on Uniform Traffic Control Devices (MUTCD)*.
- Analyze major RCUT and MUT intersections to determine level of service in accordance with Chapter 18 – Signalized Intersections and Chapter 19 – Two-Way Stop-Controlled Intersections of the *HCM*.

Segment Analysis

Table 1 shows the SR 42 segment analysis. It demonstrates the improvement on future traffic operations by building additional capacity.

Table 1: HCM Multilane and Two-Lane Highway Analysis

Location	Segment	Peak	2014 Exist	2022 No Build	2022 Build	2042 No Build	2042 Build
North of the Project Limits	I-675 to Lake Harbin Rd	AM	B	B	B	B	B
		PM	B	B	B	C	C
Project Limits	Valley Hill Rd to I-675	AM	D	D	B	E	B
		PM	E	E	B	F	C
	SR 138 to Valley Hill Rd	AM	C	C	A	D	B
		PM	D	D	B	E	B
South of the Project Limits	Flippen Rd to SR 138	AM	B	B	B	C	C
		PM	C	C	C	D	D

Signalized Intersection Analysis

Table 2 shows the performance of the existing signalized intersections, if operated as traditional intersections instead of RCUTs.

Table 2: HCM Signalized Intersection Analysis (LOS/Delay (s))

Intersection	Peak	2014 Exist	2022 No Build	2022 Build	2042 No Build	2042 Build
I-675 SB	AM	B (14.3)	B (18.6)	B (19.2)	C (20.1)	C (22.5)
	PM	C (28.3)	C (29.3)	C (32.2)	D (46.2)	D (51.0)
I-675 NB	AM	B (12.3)	C (23.1)	C (27.9)	C (34.8)	D (53.5)

Valley Hill Rd	AM	B (19.4)	C (20.5)	B (18.4)	C (24.3)	C (20.0)
	PM	A (9.4)	B (10.6)	A (8.6)	B (16.6)	B (10.6)
SR 138	AM	D (37.3)	D (41.4)	D (38.1)	D (51.2)	D (44.6)
	PM	D (50.9)	E (70.8)	E (56.8)	F (166.8)	F (118.8)

RCUT and MUT Analysis

In coordination with GDOT traffic operations staff, the attached schematic layout was developed depicting a series of RCUT and MUT intersections along SR 42 between SR 138 and I-675. Table 3 summarizes the signal warrants for movements at the proposed major RCUT and MUT intersections. None of the movements meet Warrant 1, Eight-Hour Vehicular Volume at 100%; however, the left/U-turn movement for Davis Road, Daniel Drive, Valley Hill Drive and the U-turn movement south of Homestead Road meet at 70%.

Table 3: Signal Warrant Summary for RCUT and MUT Intersections

		Warrant 1A		Warrant 1B		Combined Warrant 1A & 1B		Warrant 1A		Warrant 1B		Combined Warrant 1A & 1B	
		100%		100%		80%		70%		70%		56%

SR 42 from SR138 to I-675
Concept Design - MS4 Stormwater Summary Report

Introduction

The SR 42 roadway segment from SR138 to I-675 encompasses approximately 2.5 miles and is located in both Henry and Clayton Counties, just northeast of the I-75/I-675 interchange. The existing roadway corridor consists mostly of a 2-lane roadway with a rural shoulder section and some sections in the more developed portions are 4-lane with curb and gutter. The proposed project, as outlined in the Concept Report, includes widening and the addition or curb and gutter and sidewalks.

MS4 Compliance

The SR42 from SR138/Henry to I-675/Clayton Project resides in an NPDES designated MS4 (Municipal Separate Storm Sewer Systems) area. Due to the increased stormwater requirements for projects in these zones, it is important that stormwater is evaluated early in the design process as it could affect right-of-way, typical sections, cost, and environmental aspects of the project. As part of this design phase, a concept level hydrology study was performed to size stormwater facilities in an effort to determine

possible right-of-way needs and to provide a rough cost estimate. GDOT MS4 Guidelines will be followed for the stormwater design and MS4 compliance on this project in accordance with the GDOT Manual on Drainage Design for Highways.

An initial site visit has been performed and data has been collected to begin the hydrology study. Existing and proposed drainage basins, impervious areas, and time of concentrations have been calculated and preliminary stormwater management facilities have been sized, but will need to be refined as the design progresses and as additional survey data is available. This report provides a summary of the findings at this time and also includes notes as to where infeasibility is anticipated. During preliminary design, more detailed calculations and details will be developed to show MS4 compliance on the project, along with an MS4 Infeasibility & Outfall Level Exclusion Report.

Existing Conditions

There are twenty-five (25) outfalls along the existing roadway corridor. Generally, each end of the project limits is a high point, with the road sloping down to Panther Creek near the middle of the project roadway corridor. Following is a brief summary of the existing basins. A more detailed explanation will be provided during subsequent design phases with the final stormwater report. Drainage maps are included with this report on sheets STORM-001 to STORM-006 showing the locations of each of the outfalls described below.

Basins 1 - 2 are the western most basins of the subject roadway beginning near Davidson Parkway and extending to Davis Road. These basins are heavily developed and stormwater runoff is from roadway drainage and commercial development. These basins outfall into a closed drainage system. It appears that this closed drainage system ties into or just downstream of a series of ponds located behind the Walmart shopping development. Additional survey and data gathering will be required to confirm the downstream outfall point. Since the basins outfall to a closed drainage system, slight increases of flow are not anticipated to have significant adverse impacts downstream.

Basins 3 - 8 begins near Davis Road and extends to just south of Valley Hill Road. These basins contain a mix of roadway, commercial development, residential areas, and wooded areas and ultimately outfall into a tributary to Panther Creek. This tributary has steep slopes, an existing dam, and a detention pond that has evidence of a high level of flow and a high level of debris. Given the sensitivity of an existing dam and other features of that tributary, the design team feels that it is critical, regardless of feasibility, to keep the flow to those areas the same or less than existing conditions flow.

Pond at Downstream End of Basins 3-8

Basins 9 – 17 encompasses SR42 from just south of Valley hill road to the Sunset Hill subdivision and these basins outfall just upstream of Panther Creek. These basins are less developed with a lot of wooded areas. The basin outfalls flow through overland flow and ditches in the wooded areas directly into the Panther Creek floodplain. There is an existing residential area located in a portion of the floodplain and the drainage patterns in that area are unclear. This will be further reviewed in subsequent design phases. It shall be noted that Panther Creek is a greater than 5 sq. mile basin at the crossing of SR42, which means that the existing stormwater flows in this area are small relative to the flows in the downstream creek. Therefore, increases in these existing flows would be anticipated to have no significant adverse impacts downstream.

Panther Creek Outfall

Basins 18 – 22 are located north of Basin 17 along SR 42 and outfall on the west side of SR42 into a series of pipes, ditches, and ponds that flow behind the commercial development and adjacent to a residential area. These basins combine and ultimately outfall into Panther Creek after sitting in a low area adjacent to a the Sunset Hills residential subdivision. There is a significant amount of debris present in the downstream ponds. The upstream contributing areas are a combination of residential and commercial properties with some wooded areas as well. Any increases in flow in this area would have to be analyzed closely to ensure no adverse impacts to the downstream residences, which are located fairly close to waterways with what appears to be minimal freeboard during a flood condition.

Low Area Downstream of Basins 18-22

Basins 23-25 are the northern most watersheds on the project. These basins outfall to the ditches that run parallel to the I-675 ramps. These existing basins contain mostly roadway runoff with some commercial development also contributing to the runoff. Since the existing outfall ditches are fairly large and in mostly wooded areas, increases in flow are not anticipated to have a significant adverse impact downstream. Additional field investigation and possibly supplemental survey will be required to provide a more detailed analysis of these basins.

Proposed Conditions - MS4 Stormwater Approach

The SR42 Road corridor is being widened with sidewalks being added to both sides of the road. The proposed project results in >5,000sf net change in impervious area and a disturbance of greater than 1 acre; therefore, this project must comply with the GDOT MS4 stormwater requirements. The design team has reviewed the basins listed above and developed a concept level MS4 Stormwater Plan to provide water quality, channel protection, overbank flood protection, and extreme flood protection where required and where feasible. This section provides a brief summary of the proposed basins and MS4 compliance options for treating the new pavement resulting from the project.

For a project such as this one, stormwater ponds provide the most effective treatment because they are dual-purpose BMPs meeting both stormwater quantity and quality control. Where possible, stormwater ponds were the option analyzed for treatment to minimize construction and maintenance costs. In other areas where traditional stormwater ponds are not feasible due to limited right-of-way, other options such as bioretention areas and enhanced swales were considered.

Basins 1 – 2 result in a minimal net change in the impervious area to the basin outfalls. Since there is very little increase in impervious area, the changes in flow are minimal. The project discharges into a closed drainage system and these minimal increases in flow are expected to have no significant impact on that downstream system. A detailed downstream analysis will be prepared during subsequent design phases to confirm no adverse impacts downstream.

Basin 3 has very little increase in impervious area, mostly resulting from the addition of sidewalk and a small area of road widening. This basin has increases in flow of about 2-3cfs so a BMP was analyzed to provide water quality treatment and mitigate the increase in flow. Due to the limited area available, and the fact that the BMP will be adjacent to the sidewalk, a bioretention area is anticipated to be the best solution. This will be further reviewed during subsequent design phases for feasibility and other BMPs will also be considered if needed.

Basin 4 has a significant increase in impervious area and, therefore, is anticipated to result in considerable increases in flow. There is an existing dam located just downstream of the outfall at Basin 4. The design team feels it is critical to show a decrease in flow at this point, and, therefore, recommends a stormwater pond be constructed to provide water quality and decrease flows. Even if this is cost infeasible, it is recommended to at least provide detention in this basin. Another option considered would be to pipe this flow down to Panther Creek to minimize the flow going to the existing Basin 4 outfall. A pond would be anticipated near Panther Creek to treat this runoff as well as runoff from other basins. This will further be reviewed in subsequent design phases for feasibility. Based on the survey data, this would likely result

in conflict with existing bypass pipes, but a conflict box may be considered in this location. See subsequent section in this report for more details on the proposed conflict box.

Basins 5 – 11 result in a significant increase in impervious area due to the road widening and addition of sidewalks, also resulting in substantial increases in flow at each outfall. Since the Basin 5-8 outfalls are already located in areas of concern, the design team recommends piping this flow down near Panther Creek to reduce the flow going to the sensitive area described in existing conditions. A pond would be constructed near Panther Creek at the existing Basin 11 outfall to provide water quality treatment for these basins prior to discharge. Since the Panther Creek drainage area is greater than 5 sq. mile, it is anticipated that Channel Protection, Overbank Flood Protection, and Extreme Flood Protection would not be required since the increase in flow resulting from the project would be insignificant relative to the overall flow in the Creek and the timing of the peaks would likely result in no increase in the peak flow. GDOT has requested a detailed downstream analysis using hydrograph routing be provided to demonstrate that the project would not result in any adverse impacts downstream. If this cannot be demonstrated, then detention would be required to accommodate Channel Protection, Overbank Flood Protection, and Extreme Flood Protection. The pond shown in the concept report is sized assuming detention is required to display the more conservative footprint.

Basin 12 results in a slight increase in impervious area due to the road widening. The road centerline shifts in this area, resulting in more of the proposed pavement going to Basin 13. A stormwater pond was sized for Basin 12. Similar to Basins 5-11, the pond will ideally only be to provide water quality since the basin discharges directly into a greater than 5 sq. mile drainage basin. As noted, a detailed downstream analysis using hydrograph routing be provided to demonstrate that the project would not result in any adverse impacts downstream. If this cannot be demonstrated, then detention would be required to accommodate Channel Protection, Overbank Flood Protection, and Extreme Flood Protection. The footprint shown in the drainage maps included in this report would increase if detention was also required and due to the terrain in that area would likely become infeasible without impacting a stream buffer and requiring additional fill in the floodplain, triggering additional FEMA requirements.

Basin 13 results in a significant increase in impervious area due to the road widening and, therefore, an increase in flow. Stormwater ponds and enhanced swales were reviewed for Basin 13, but the area available to construct a pond is not large enough for the volumes required. The surrounding terrain is too steep to even construct water quality measures, and therefore, detention cannot be provided either. As the design progresses and cross sections are developed, bioslopes will also be reviewed for feasibility in this area. This basin will be included in the detailed downstream analysis and, only if warranted, the Basin 11 pond can be sized to offset any anticipated adverse impacts of not providing detention in this Basin, since the outfall of Basins 13 converges with the Basin 11 outfall just downstream along Panther Creek.

Basins 14 - 21 result in a significant increase in impervious area due to the road widening and addition of sidewalks, also resulting in substantial increases in flow at each outfall. To minimize the impacts of these increased flows to the adjacent properties (specifically since many are residential areas), the design team recommends piping this flow down to Panther Creek near the existing Basin 15 outfall to reduce the flow going to the sensitive area described in existing conditions. A pond would be constructed near Panther Creek to provide water quality treatment for these basins prior to discharge. Since the Panther Creek

drainage area is greater than 5 sq. miles, it is anticipated that Channel Protection, Overbank Flood Protection, and Extreme Flood Protection would not be required since the increase in flow resulting from the project would be insignificant relative to the overall flow in the Creek and the timing of the peaks would likely result in no increase in the peak flow. GDOT has requested a detailed downstream analysis using hydrograph routing be provided to demonstrate that the project would not result in any adverse impacts downstream. If this cannot be demonstrated, then detention would be required to accommodate Channel Protection, Overbank Flood Protection, and Extreme Flood Protection. The pond shown in the concept report is sized assuming detention is required to display the more conservative footprint.

Basin 22 results in a significant increase in impervious area and, therefore, a substantial increase in flow at the outfall point to this basin. A stormwater pond was sized to provide Water Quality, Channel Protection, Overbank Flood Protection, and Extreme Flood Protection. Due to the lack of available right of way, this pond would result in the take of entire parcel between the road and an existing business. In addition, a detailed downstream analysis would be required since the flow from this outfall enters an existing residential area, some of which appears to have limited freeboard to the residential parcels and nearby structuress. Additional survey data is also needed in this area as there are concerns about the impact of this pond to a stream and to the utilities, which may result in the location being infeasible. If the pond is not feasible, the design team recommends piping this additional flow to the pond at Panther Creek near outfall 15. This would increase the pipe sizes to convey the flow to that point and would increase the pond size at Panther Creek, but appears to be an option that could be considered if needed. This would also require a detailed downstream analysis as mentioned above.

Basins 23 and 24 are combined in the proposed condition and routed to the Basin 24 outfall. Only a minimal amount of impervious area is added to these basins, most of which is sidewalk and a small amount of road widening. A stormwater pond was sized for this basin to provide Water Quality, Channel Protection, Overbank Flood Protection, and Extreme Flood Protection. Feasibility of this pond will be reviewed during a subsequent design phase.

Basin 25 results in a minimal amount of impervious area added to the basin, most of which is sidewalk and an area for turn around. A stormwater pond was sized for this basin to provide Water Quality, Channel Protection, Overbank Flood Protection, and Extreme Flood Protection. Feasibility of this pond will be reviewed during a subsequent design phase. At the current time, this pond will likely be infeasible due to cost given the size relative to the associated improvements in the basin. A smaller pond was sized farther upstream in this basin, but this pond would eliminate access to the parcel so it would also be infeasible.

Modeling Approach

To prepare a concept level stormwater model of the project, the design team used Hydraflow Hydrographs and the NRCS Curve Number Method (previously referred to as SCS Method). In this program, existing and proposed hydrographs were created based on drainage areas, curve numbers, and time of concentrations for each basin. Ponds or other BMPs were also modeled in their applicable basin. These hydrographs were compared at each outfall point to determine the extent of BMPs required to not only provide water quality treatment and channel protection, where required, but to also make sure the post-project flow at each point was reduced or resulted in no significant adverse impacts. Included as an

attachment to this report are a summary of the results. These results include estimated flow values pre-project and post-project along with information on anticipated BMPs and other applicable notes. During subsequent design phases more data will be provided on the modeling and detailed results.

Conflict Boxes

Due to the concerns of increasing discharge at some of the existing outfall, many of the basins are being piped down to Panther Creek to minimize impacts to adjacent businesses and residential areas. The goal would be to allow the off-site bypass to continue under the road in culverts as it does today, while the most of the road drainage will be captured and piped downstream. One issue that was discovered during the site visit and subsequent review of the survey is that there is limited cover to allow the bypass pipes to continue under or over the proposed road pipes. The design team wants to investigate the option of using a conflict box in these areas to allow the new road drainage pipes to be piped through areas of conflicts using concrete boxes and ductile iron pipe. This idea was presented to GDOT during an MS4 preliminary concept review meeting. GDOT was receptive to this idea, provided modeling be done to show that ductile iron pipes won't restrict the flow through the boxes and that surcharge won't create issues such as pressure on the ductile iron pipe. This modeling will be reviewed as part of the detailed downstream analysis needed for the project. A preliminary detail will be developed in subsequent design phases.

Future Downstream Analysis

This project takes a somewhat unique approach to the stormwater management. In lieu of providing ponds or other BMPs at each outfall, multiple drainage basins are combined and piped to downstream outfalls. While the initial post-project compared to pre-project numbers demonstrate that flows at the outfall points are generally reduced or that no adverse impacts are anticipated, there is still an issue of the timing of the peak flows farther downstream that will need to be addressed in subsequent design phases. This detailed downstream analysis will need to show that the peak flow from Panther Creek does not coincide with any peak flows from the project construction, resulting in an overall increase in flow and possible flooding. Due to the quantity of storm drain pipe, ponds, and the FEMA regulated stream at the outfall, the design team would recommend that the downstream analysis be performed in a program such as XP-SWMM or other similar software to provide dynamic modeling that can account for the storage along the system and show areas of flooding concern. This program results in hydrographs that can be compared to demonstrate no adverse impacts. This detailed downstream analysis can also be calibrated with the bridge hydraulic study for the project. If the detailed study results in increases in adverse impacts downstream, then additional detention may be required within the project limits.

Next Steps

During subsequent design phases, the stormwater design will be updated as the roadway design progresses. The detailed downstream analysis will be performed to determine if the conflict boxes will work and/or if additional detention will be required on the project. The pond locations and sizes will be reviewed in more detail and refined for right-of-way acquisition. A more detailed stormwater management report will be prepared and will include the required reporting for infeasibility and outfall level exclusions.

As part of the next phase of design, additional survey and geotechnical investigation will also be required. Since some of the MS4 facilities and outfalls are not located adjacent to the road, at this time there is limited survey data in these areas. This additional survey will be required to prepare detailed grading and confirm feasibility. Also, some geotechnical investigation is required in the proposed pond locations, specifically in the ponds located in or adjacent to the Panther Creek floodplain, to determine the existing ground water elevations and soil properties for the pond design.

SR 42 CONCEPT DESIGN - MS4 BASIN BY BASIN ANALYSIS

PROJECT DRAINAGE AREA ID	BMP(S) ANTICIPATED	APPLICABLE OUTFALL LEVEL EXCLUSIONS OR INFEASIBILITY CRITERIA	GENERAL NOTES
1	NONE	Outfall Level #6 - Change in Impervious is minimal (although not zero); Infeasibility #5 - Would require displacement of business; Infeasibility #9 - Site too small.	Change in flow less than 1 cfs. Flow is assumed to go to pond downstream of Walmart Pond. Need survey confirmation.
2	NONE	Outfall Level #6 - Change in Impervious is minimal (although not zero); Infeasibility #5 - Would require displacement of business; Infeasibility #9 - Site too small. Option would require additional ROW with demolition of existing parking.	Consider removing 1950 SF of pavement in walmart far parking lot to account for the 1950 SF of new impervious in Basin 2.
3	BIORETENTION AREA	Possible Outfall Level #6 - Change in Impervious is minimal (although not zero)	Adding 0.1 acres of new impervious to 8.5 acres drainage basin. Potentially treat in small bioretention area but will require additional right of way, additional curbing or small wall in parking area. May be cost infeasible.
4	EXCAVATED STORMWATER WET POND	NONE	Pond treats existing pavement while letting some proposed pavement bypass due to elevation issues with pipes. Alternate: if routed to Pond 11 (Church Pond), there will be a conflict with the existing crossdrain at STA 218+50.
5	NONE	NONE	Flow routed to Pond 7 or Pond 11 (Church Pond)
6	NONE	NONE	Flow routed to Pond 7 or Pond 11 (Church Pond)
7	OPTIONAL EXCAVATED STORMWTER WET POND	NONE	This pond is optional and would drastically reduce the size of Pond 11.
8	NONE	NONE	Flow routed to Pond 7 or Pond 11 (Church Pond). Cross drains in this basin and the basin 9 will not remain, all bypass water captured in the longitudinal system.
9	NONE	NONE	Flow routed to Pond 11 (Church Pond). Cross drains in this basin and the basin 8 will not remain, all bypass water captured in the longitudinal system.
10	NONE	NONE	Flow routed to Pond 11 (Church Pond)
11	WATER QUALITY ONLY POND OR WET POND	CPv, OFB, EFP waived due to discharging in >5 sq. mi. basin	Pond sizing provided for WQ only or total in case environmental issues require overall treatment.
12	EXCAVATED STORMWATER WET POND	NONE	Only need to treat the water quality volume since we are discharging into a basin of greater than 5 square miles
13	?	Infeasibility #9 - Site too small.	Can't fit pond. Consider overcompensating in Basin 11 (Pond)
14	NONE	NONE	Roadway routed to Pond 15.
15	EXCAVATED STORMWATER WET POND STA 271+00 RT	CPv, OFB, EFP waived due to discharging in >5 sq. mi. basin	Pond located in flood plain. Need geotech for water table. Difficult to get bottom of pond above river normal pool. Ok for a wet pond?
16	NONE	NONE	Roadway routed to Pond 15.
17	NONE	NONE	Roadway routed to Pond 15.
18	NONE	NONE	Roadway routed to Pond 15.
19	NONE	NONE	Roadway routed to Pond 15.
20	NONE	NONE	Roadway routed to Pond 15.
21	NONE	Outfall Level #6 - No increase in impervious area.	No new impervious area
22	EXCAVATED STORMWATER WET POND STA 301+00 LT	NONE	Possible stream impacts. Need more survey for confirmed drainage patterns. Alternative: This Basin can be routed to Pond 15, but the bottom of the pond would likely be at or below normal pool for the river. Ok for a wet pond?
23	NONE	NONE	Existing and new impervious area routed to Pond in basin 24 in post-project conditions
24	EXCAVATED AND DAMMED STORMWATER WET POND STA 328+00 RT	NONE	Slope sidewalk from 325+50 to 329+00 away from road into pond on north side.
25	EXCAVATED STORMWATER WET POND STA 326+50 LT	NONE	Slope sidewalk from 325+50 to 327+50 away from road into pond on south side.

Meeting Notes

Stockbridge City Hall
June 8, 2016
P.I. No. 322050 – SR 42 from SR 138 to I-675

Josh Sofsky McGee Partners 770-938-6400 jsofsky@mcgeepartners.com

The purpose of the concept team meeting was to present the proposed SR 42 concept and revised concept report as well as allowing discussion by the attendees.

GDOT Project Manager Kevin VanHouten welcomed attendees, gave a brief project description and made introductions. He noted that the project is scheduled for Right-of-Way in 2017 and Construction in 2019. He said that Right-of-Way Authorization should change to 2018 and Construction to 2020.

Project Overview
Tommy Crochet of McGee Partners provided an overview of the project. The justification is to improve the level of service along the corridor due to increasing volumes and to reduce crash frequency and severity. The termini are both four-lane roads at the north and south ends.

Public Involvement
The Public Information Open House (PIOH) is scheduled for July 28th from 5 to 7 pm at the Ted Strickland Community Center located at 137 North Berry Street, Stockbridge, Georgia 30281. Flyers for the event are available, and a dry run should occur a couple weeks prior. Public input may help influence the location of RCUT intersections and the shared use path.

Concept Layout
The proposed improvements include providing four basic lanes from SR 138 to I-675. The vertical alignment mostly follows existing grade in order to use existing pavement and simplify staging. The grade will be raised at Panther Creek to replace the existing four-barrel culvert with a bridge. The existing "rollercoaster" profile is smoothed between Sunset Hills Boulevard and Biscayne Boulevard by filling in the sags and cutting one of the crests.

Displacements should be limited to properties where SR 42 is widened to the east, near Old Atlanta Highway. Two historical resources are located across the street from each other north of Sunset Hills Boulevard. The typical section is tightened through this area to minimize impacts. Impacts are minor on the east side, but large trees are impacted on the west.

The project must comply with GDOT's MS4 Permit. The south end of the project is urbanized and does not have many options for treatment, but minimal impervious surface should be added here. Offsite drainage should continue to flow through cross drains, but pavement drainage should be piped downhill to ponds adjacent to Panther Creek. These ponds are more feasible than options upland in developable parcels. Increased flows at some of the existing cross-drain outfalls should be avoided due to risk of adverse impact to downstream properties.

Stockbridge City Hall
June 8, 2016
P.I. No. 322050 – SR 42 from SR 138 to I-675

The concept layout depicts proposed right-of-way and easements. Standard right-of-way is typically fifteen feet behind the back of sidewalk. The roadway slopes should be contained within permanent easements, if not right-of-way. McGee Partners will send Kevin VanHouten the conceptual layouts with parcel numbers, right-of-way and easement areas in order to request a conceptual right-of-way cost estimate.

The City of Stockbridge asked about the property left over at the corner of Davis Road and SR 42 when Davis Road is shifted. It is surplus property and is not conducive to a pond. Right-of-way negotiations have not commenced.

Construction staging should be straightforward, because one side can be built while traffic travels on the existing pavement. Traffic can then be staged on one side of the road while the other side is being constructed.

Revised Concept Report
The original concept in 1991 called for widening and a raised median. The current traffic projections warrant the same. Bicycle accommodations appear to be warranted and are proposed to be met with a ten-foot multiuse path along the east side of the road. The construction may begin further south of SR 138 in order to add a second northbound thru lane at the intersection. The inside travel lane may be reduced to eleven feet wide based on recommendations in the value engineering study.

An existing pavement analysis was conducted by Ranger Consulting, which showed that much of the roadway is conducive to overlay. Concrete pavement will not be used on this project.

Kevin VanHouten asked when Underground Storage Tanks (USTs) would be investigated. Tommy said that this should occur towards the end of preliminary plans before right-of-way.

Quinton Spann with GDOT Planning requested additional information. He asked for a description of land uses along the corridor and general statement about the location of crashes added to the Project Justification Statement.

Project cost estimates should be completed before the Public Information Open House.

Traffic Operations
Widening the roadway to four lanes should provide the necessary capacity. Some degradation of the level of service at the SR 138 intersection is likely in 2042, but still acceptable.

Restricted Crossing U-Turns (RCUTs) are proposed on this project after a meeting with GDOT Traffic Operations. These alternative intersections are known to reduce overall crashes as well as crash severity. Truck loons capable of handling a WB-67 U-turn are shown at some locations.

Stockbridge City Hall
June 8, 2016
P.I. No. 322050 – SR 42 from SR 138 to I-675

Since this is not a commonly used intersection in Georgia, public education will be necessary. GDOT's VERG is producing an RCUT simulation for this project. The FHWA has produced a video and brochures about RCUTs as well. All of these resources should be available at the PIOH. Tyler Peek of GDOT District 3 Traffic Operations explained that the time increase of making a right turn and a U-turn due to an RCUT is similar to the delay from a traffic signal. He also noted that an RCUT location in Henry County has improved crash results over the previous condition. Tommy asked Tyler to produce a case study for the intersection.

Michael Harris of the City of Stockbridge inquired why the traffic signal at Valley Hill Road is shown as removed. Tyler Peek explained that southbound left turns only meet the 70% warrant, so a signal is not required. The RCUT intersection eliminates the westbound left turn onto SR 42 southbound. The layout should reflect "Potential Signals to be Evaluated" at Daniel Drive, Valley Hill Road and south of Homestead Road.

David Simmons of the Henry County DOT drew attention to the potential development across from the Valley Hill Road intersection, and noted their driveway could line up with the RCUT. Tommy suggested the driveway should be located just north before the next median U-turn. David also explained that the empty lot at Old Macon Highway is sometimes used to store trailers. This intersection would no longer have full access, but truck U-turn loons are provided just south and half a mile north of the intersection. Tyler explained that an RCUT at the Old Macon Highway intersection was discussed, but the spacing was too close to Sunset Hills Boulevard.

Matt Sanders with GDOT Engineering Services questioned the proposed U-turn just south of the I-675 northbound ramps. He was concerned how vehicles would turn against the fast-moving off ramp traffic. Tommy noted that this U-turn needs more investigation. Its proximity to the northbound off ramp could facilitate a wrong way driver, but it is needed for access for properties near the ramps. Matt noted that its back to back turn lanes reduce storage for southbound left turns into the gas station.

Aminul Islam with GDOT District 7 Traffic Operations asked if U-turning drivers would improperly use the signal at the ramp intersection. Tommy explained this could be mitigated through signs or channelization. Aminul was also concerned about the change in Waffle House's access. Tommy indicated a Waffle House representative had inquired about the project and property access prior to constructing the new restaurant, and they were told a median would be installed across their access. Tommy explained that change in access is not compensable. Aminul noticed many driveways on the plan. McGee Partners will send the concept drawings to the GDOT District Traffic Offices, so they can determine which driveways, if any, can be eliminated.

Stockbridge City Hall
June 8, 2016
P.I. No. 322050 – SR 42 from SR 138 to I-675

Bruce Mercer with Clayton County asked if larger trucks can make a U-turn at the Brookwood intersection. Standard U-turn pavement is available at the intersection, but larger trucks must use one of the loons up or downstream from the intersection.

Fiber optic cable should not need to be run between traffic signals. Tyler specified that cellular communication should be specified for all traffic signals on the state network.

Environmental
GDOT has decided to pay for the project with state funds instead of federal. This allows state environmental oversight, which is much more streamlined than the NEPA process. Ecology permits are still required, as well as archaeology studies. Historical impacts must be coordinated with SHPO and possibly mitigated. Josh Earhart of Edwards Pitman is leading the Assessment of Effects. It should include a memorandum of agreement for the historic resources across the street from each other. Plant species and fish species in Panther Creek should be surveyed. The project's effect on air quality should also be measured.

Utilities
The major utility conflicts along the project corridor were discussed. A sanitary sewer line along Panther Creek should be undisturbed by the proposed bridge. Clayton County's 24-inch water main has its own 20-foot wide easement. The project will impact the water line most of its length, so both the water line and the easement will need to be relocated. The Williams-Transco Pipeline with four gas lines will need to have their casings extended. Georgia Power distribution lines will also be impacted.

Harland Smith of GDOT Utilities explained that a 15-foot clear corridor should be required for relocated aerial lines. Tommy mentioned that sewer manholes would end up in the travel lanes near Panther Creek, and questioned whether this would cause access issues.

The Project Framework Agreement will detail who will pay for utility relocations. Kevin explained that the local governments can contribute funding to accelerate utility relocations. He believes rescission letters were sent to Clayton County, Henry County and the City of Stockbridge, relieving them of any financial obligation for the project. Kevin will research and send copies of the letters to the respective jurisdictions.

Subject: PI# 322050, Henry/Clayton Countes -- Public Information Open House Synopsis
Date: Friday, July 29, 2016 4:44:54 PM

Hi everyone,

Below please find below a brief synopsis of last night's Open House. Please let me know if you have questions or concerns.

Brief Project Description	The proposed project would widen a 2.2 mile section of the road from two to four lanes between SR 138 in Henry County and I-675 in Clayton County, with a 20-foot concrete median serving as a divider. The shoulders would consist of 30-inch curb and gutter, a 6-foot landscaped grass strip, and a 10-foot wide multi-use trail on the east side with a 5-foot sidewalk on the west side of SR 42/US 23. The project would also include implementing a series of Restricted Crossing U-Turn (RCUTs) intersections. The overall objective of the proposed project is to provide increased efficiency and safety as traffic projections continue to rise on this main road.		
Date of Open House	July 28, 2016	*End of Comment Period*	August 8, 2016
Number in Attendance	60 people		
Media in Attendance	Press representative for Henry Herald news, Clayton News, and the Henry Neighbor Newspaper		
Officials in Attendance (list name and title)	➢ Anthony S. Ford – Mayor Pro Tem, City of Stockbridge ➢ Elton Alexander – Councilman, City of Stockbridge ➢ Hernitha "Neat" Robinson – Council Member, City of Stockbridge ➢ Scott Cumbie – Sergeant, Henry County Police Department ➢ Dale Hall – Administration and Community Services Director, City of Stockbridge ➢ Daniela Perry – Representative for Senator Johnny Isakson ➢ Blake Prince – County Commissioner, Henry County Board of Commissioners ➢ Dana Lemon – GDOT Board Member of the 13th District		
Comment Breakdown (for comments provided at the Open House) ➢ *Concerns about too much Right-of-Way (ROW) being taken* *Liberty Baptist Church* *The Hobby Shop* *Tony's Lawn Mower* ➢ *Concerns about access to buildings with new RCUTs and large median* ➢ *Desire to have screening vegetation placed around the detention pond* ➢ *Confusion/unrest about the location of the detention ponds*			

➢ *Concerns about the mosquito issues accompanying the proposed detention pond* ➢ *Concerns about the noise of construction during local church hours* ➢ *Safety concern about the use of only one lane at the intersection of Darrs Road and Old Atlanta Road (south of Walmart)* ➢ *Concerns about having the trail on either side of the road as opposed to just one side* ➢ *Desire to place landscaping within median and ROW* ➢ *Questions about whether public transportation stops such as MARTA or bus stops will be incorporated* ➢ *Desire to see ROW remnants used for public use* ➢ *Questions about whether amenities (benches, trash bins, bike racks, etc) will be planned along the road* ➢ *Desire to have a sidewalk installed along Old Atlanta Road* ➢ *Concerns about the lack of access points to the multi-use trail* ➢ *Desire to see the multi-foot path extended to Davison Prkwy* ➢ *Concerns about removing the traffic signal at Valley Hill Road*							
For	9	*Conditional*	4	*Uncommitted*	2	*Against*	3
Major concerns:		Access to businesses; aesthetics of stormwater ponds; mosquito control; increase limits of sidewalks and multi-use trail; parking and access loss; traffic signals

☒ MPO Area: This project is consistent with the MPO adopted Regional Transportation Plan (RTP)/Long Range Transportation Plan (LRTP).

☐ Rural Area: This project is consistent with the goals outlined in the Statewide Transportation Plan (SWTP) and/or is included in the State Transportation Improvement Program (STIP).

CINDY VAN DYKE*/EKP — State Transportation Planning Administrator — Date: 1/26/2018

*- RECOMMENDATION ON FILE

PROJECT LOCATION MAP

PLANNING AND BACKGROUND

Project Justification Statement: Rock Quarry Road in Henry County is classified as an urban minor arterial. It is a two lane north-south facility that connects motorists from SR 42 to Eagles Landing Parkway. Rock Quarry Road has intermittent turn lanes at various locations and has no continuous linear sidewalks. There is a large number of commercial and industrial businesses along the proposed project segment, as well as residential housing. This project is currently identified in the Atlanta Regional Commission's (ARC) Regional Transportation Plan (RTP), Plan 2040, and is included in the Transportation Improvement Program (TIP). This project is located within the Atlanta MPO boundary and is listed in the TIP as HE-161A.

The current, 2016, AADT on Rock Quarry Road ranges between 12,630 and 21,008. The corresponding level of service (LOS), as calculated in HCS 2010, is LOS "E". This corridor was also analyzed in the Atlanta region's travel demand model (Year 2044, no build) to project future conditions if no changes are made. The projected 2044 (no build) traffic volumes for this corridor range between 17,732 and 29,495 with a corresponding projected LOS "E".

Other major projects in the vicinity of this project include: Rock Quarry Road Extension (new alignment) from SR 138/US 23 to the intersection of E. Atlanta Rd and Valley Hill Road, East Atlanta Road widening from Valley Hill Road to Fairview Road, Patrick Henry Parkway widening from Jodeco Road to Eagles Landing Parkway; Eagles Landing Parkway widening from Eagles Pointe Pkwy to US 23, and Western Parallel Connector (new alignment) from Hudson Bridge Road to Jonesboro Road.

The project was originated by Henry County, which recently removed an at-grade railroad crossing along Rock Quarry Road with the construction of a new 4-lane bridge over the Norfolk Southern railroad. The new structure was designed and built to accommodate the future widening proposed by this project. The County seeks to increase the capacity of the corridor to reduce congestion and improve mobility for its users, including pedestrians and cyclists. In addition to reducing congestion, the project will correct some geometric deficiencies to improve both intersection and stopping sight distance. Also, an improved pavement section will be designed to withstand the heavy truck traffic, especially at the north end of the project. This project is aligned with the goals and objectives in the Statewide Transportation Plan and the Atlanta Regional Commission's Plan 2040 by aiming to improve access to jobs, reduce congestion costs, and focus on the region's strategic priority transportation system. The purpose of the project is to reduce congestion, accommodate existing and future projected traffic and improve access to SR 42 and Eagles Landing Pkwy.

Existing conditions: Rock Quarry Road is a rural section consisting of two 11- foot lanes and grass shoulders.

Other projects in the area:

Functional Classification (Mainline): Urban Minor Arterial Street

Complete Streets - Bicycle, Pedestrian, and/or Transit Standard Warrants:

Warrants met: ☐ None ☒ Bicycle ☒ Pedestrian ☐ Transit

Bicycle accommodations are required by standard warrant #3- Bicycle accommodations shall be considered in all planning studies and shall be included in all reconstruction, new construction, and capacity-adding projects that are located in areas with any of the following conditions:

3. along project alignments with bicycle travel generators and destinations (i.e. residential neighborhoods, commercial centers, schools, colleges, scenic byways, public parks, transit stops/stations, etc.)

- Bicycle warrants are to be met with a 10' Multi-Use Path on the East side of the Roadway.

Pedestrian accommodations shall be considered in all planning studies, and be included in all reconstruction, new construction, and capacity-adding projects which include curb and gutter as part of an urban border area. Pedestrian accommodations shall also be considered along roadways with rural shoulders, which meet any of the following conditions:

1. along corridors with pedestrian travel generators and destinations (i.e. residential neighborhoods, commercial areas, schools, public parks, transit stops and stations, etc.), or areas where such generators and destinations can be expected prior to the design year of the project;

- Pedestrian Warrants are being met with a 10' Multi-Use Path on the East side of the Roadway and a 5' sidewalk on the West Shoulder of the Roadway.

County: Henry

Is this a 3R (Resurfacing, Restoration, & Rehabilitation) Project? ☒ No ☐ Yes

Pavement Evaluation and Recommendations

Initial Pavement Evaluation Summary Report Required?	☒ No	☐ Yes	
Initial Pavement Type Selection Report Required?	☐ No	☒ Yes	
Feasible Pavement Alternatives:	☐ HMA	☐ PCC	☒ HMA & PCC

Pavement Type Selections shall be completed/submitted prior to Preliminary Plans, during Preliminary Design.

DESIGN AND STRUCTURAL

Description of the proposed project: The proposed project will take place in the city of Stockbridge and will consist of widening Rock Quarry Road beginning at Eagles Landing Parkway and ending at North Henry Boulevard/SR 138/US 23/SR 42. The mainline will be widened from the existing 2 lanes to a 4-lane roadway with a raised median. The mainline measures approximately 2.45 miles from begin of project to end of project.

Major Structures: Rock Quarry Road

Structure	Existing	Proposed
Structure ID: 151-5120-0 Bridge on Rock Quarry Road over Norfolk Southern RR	-235' long and 81.5' deck width -Roadway Width 34.2' -curb/sidewalk width 5.5'	- Bridge shall remain 235' long with a 81.5' deck width - East edge of Bridge deck shall have a 8' shared use path on raised curb with a 7' buffer(5' sidewalk + 2' lane offset) between roadway and pedestrian/bike traffic - 5.5' raised median offset 2' from travel lanes - 2 - 12' outside travel lanes and 2 11' inside travel lanes - West Edge shall retain the 5.5' of existing sidewalk
Structure ID: 151-5018-0 4-Barrel Box Concrete Culvert At Rum Creek	-Culvert (10' X 9' X 81') - 45° Skew - 4 Barrel Concrete Box Culvert	Proposed Extension of each end of Culvert.
Box Culvert – Just North of Rum Creek	- Culvert (5' X 6' X 65') - 0° Skew - Single Barrel Concrete Box Culvert	Proposed Extension of each end of Culvert.
Structure ID: 151-5019-0 3-Barrel Box Concrete Culvert At Reeves Creek	- Culvert (10' X 9' X 58') - 0° Skew - 3 Barrel Concrete Box Culvert	Proposed Extension of each end of Culvert.

Pavement Type	ASPHALT		HMA OR PCC

*According to current GDOT design policy if applicable

Is the project located on a NHS roadway? ☒ No ☐ Yes

Design Exceptions/Design Variances to FHWA or GDOT Controlling Criteria anticipated:

FHWA or GDOT Controlling Criteria	No	Undeter-mined	Yes	DE or DV	Approval Date (if applicable)
1. Design Speed	☒	☐	☐		
2. Design Loading Structural Capacity	☒	☐	☐		

Design Variances to GDOT Standard Criteria anticipated:

GDOT Standard Criteria	Reviewing Office	No	Undeter--mined	Yes	Approval Date (if applicable)
1. Access Control	DP&S	☒	☐	☐	
2. Shoulder Width	DP&S	☒	☐	☐	
3. Intersection Sight Distance	DP&S	☒	☐	☐	
4. Intersection Skew Angle	DP&S	☒	☐	☐	
5. Tangent Lengths on Reverse Curves	DP&S	☒	☐	☐	
6. Lateral Offset to Obstruction	DP&S	☒	☐	☐	
7. Rumble Strips	DP&S	☒	☐	☐	
8. Safety Edge	DP&S	☒	☐	☐	
9. Median Usage	DP&S	☐	☐	☒	
10. Roundabout Illumination Levels	DP&S	☒	☐	☐	
11. Complete Streets Warrants	DP&S	☒	☐	☐	
12. ADA Requirements in PROWAG	DP&S	☒	☐	☐	
13. GDOT Construction Standards	DP&S	☒	☐	☐	
14. GDOT Drainage Manual	DP&S	☒	☐	☐	
15. GDOT Bridge & Structural Manual	Bridges	☒	☐	☐	

A design variance is anticipated for #9 Median Usage. To fit a minimum size shared-use path on the bridge we have reduced the total median width to 9.5' (5.5' raised). Policy requires a 20ft raised median for a proposed roadway with an ADT higher than 24,000 in the Design Year. The median shall be less than 20' in width for a total of 1,130' including the bridge.

VE Study anticipated: ☒ No ☐ Yes ☐ Completed – Date:

Lighting Required: ☒ No ☐ Yes

Off-site Detours Anticipated: ☒ No ☐ Undetermined ☐ Yes

Transportation Management Plan [TMP] Required: ☐ No ☒ Yes
If Yes: Project classified as: ☒ Non-Significant ☐ Significant
TMP Components Anticipated: ☒ TTC ☐ TO ☒ PI

INTERSECTIONS AND INTERCHANGES

Major Interchanges/Intersections: Intersection of Rock Quarry Road and N Henry Blvd/SR-42. A five lane section of SR-42 meets with the new 4-lane Rock Quarry Rd at a signalized T-intersection.

Intersection Control Evaluation (ICE) Required: ☐ No ☒ Yes

- *ICE Stage 1 – Screening Decision Record,*
- *Concurrence Request*
- *ICE Stage 2 – Alternative Selection Decision Record,*
- *Waiver Request*

Roundabout Peer Review Required: ☒ No ☐ Yes ☐ Completed – Date:

UTILITY AND PROPERTY

Railroad Involvement: A Norfolk Southern-owned railroad line crosses the project and will require coordination. The bridge on Rock Quarry Rd that spans over the Norfolk Southern Railroad tracks shall be modified to add a median to separate the opposing directions of travel and to add additional sidewalk onto the bridge deck. A detention basin will also be placed near Norfolk Southern Railroad ROW.

Utility Involvements: Atlanta Gas Light Clayton, ATT/D Telecom, Charter Communications Telecom, Comcast Communications Telecom, Clayton County Water Authority, Georgia Power, Henry County Water, Henry County Sewer, City of Stockbridge Water, City of Stockbridge Sewer, Tower Cloud, Inc. Telecom

SUE Required: ☐ No ☒ Yes ☐ Undetermined

Public Interest Determination Policy and Procedure recommended: ☒No ☐Yes

Right-of-Way (ROW): Existing width: 50-100ft. Proposed width: 100-150ft.
Required Right-of-Way anticipated: ☐None ☒Yes ☐Undetermined
Easements anticipated: ☐None ☒Temporary ☒Permanent ☒Utility ☐Other

Anticipated total number of impacted parcels: 81
Displacements anticipated: Businesses: N/A
Residences: 1
Other:
Total Displacements: 1

Location and Design approval: ☐ Not Required ☒ Required

Impacts to USACE property anticipated: ☐ No ☐ Yes ☒ Undetermined

CONTEXT SENSITIVE SOLUTIONS

Issues of Concern: Due to the abundance of residential neighborhoods and apartment complexes the need for pedestrian improvements along Rock Quarry Road has been brought up as an issue of concern; also there are plans for the corridor to tie into a future trail system throughout Henry County.

Context Sensitive Solutions Proposed: The new roadway will contain both pedestrian and bicycle accommodations, the west side of Rock Quarry Road will feature a 5 ft. sidewalk and the east side will feature a 10 ft. multi-use trail. Coordination with Henry County shall be done to ensure the multi-use path conforms to plans for future trail systems.

ENVIRONMENTAL & PERMITS

Anticipated Environmental Document:

NEPA: ☐ PCE ☒ CE ☐ EA-FONSI ☐ EIS

GEPA: ☐ Type A ☐ Type B ☐ EER ☐ None

Level of Environmental Analysis:

☒ The environmental considerations noted below are based on preliminary desktop or screening level environmental analysis and are subject to revision after the completion of resource identification, delineation, and agency concurrence.

☐ The environmental considerations noted below are based on the completion of resource identification, delineation, and agency concurrence.

Water Quality Requirements:

MS4 Permit Compliance – Is the project located in a MS4 area? ☐ No ☒ Yes

Is Non-MS4 water quality mitigation anticipated? ☒ No ☐ Yes

Environmental Permits/Variances/Commitments/Coordination anticipated:

Permit/Variance/Commitment/ Coordination Anticipated	No	Yes	Remarks
1. U.S. Coast Guard Permit	☒	☐	
2. Forest Service/NPS	☒	☐	
3. CWA Section 404 Permit	☐	☒	
4. Tennessee Valley Authority Permit	☒	☐	
5. 33 USC 408 Decision	☒	☐	
6. Buffer Variance	☒	☐	
7. Coastal Zone Management Coordination	☒	☐	
8. NPDES	☐	☒	
9. FEMA	☐	☒	
10. Cemetery Permit	☒	☐	
11. Other Permits	☒	☐	
12. Other Commitments	☒	☐	
13. Other Coordination	☒	☐	

Is a PAR required? ☒ No ☐ Yes ☐ Completed – Date:

- *Proposed Walls listed in the Major Structures box were added to avoid Wetland impacts.*
- *2:1 slopes were used near stream crossings to limit the amount of stream impacts required for culvert extensions.*

Environmental Comments and Information:

NEPA/GEPA: Special studies still in progress; no significant environmental issues anticipated; no Section 4(f) resources identified in project area.

Ecology: The Ecology Survey is not yet complete. Protected species and/or habitat not anticipated. Will require seasonal surveys. Three stream crossings: Rum Creek, Reeves Creek, and 1 unnamed tributary. Five potential wetlands.

History: History Survey complete. Three eligible resources anticipated.

Archeology: Archeology Survey complete. One potentially eligible resource anticipated; however, no impacts to the potential resource are anticipated. One cemetery in project area; however, no impacts are anticipated.

Air Quality:

Is the project located in an Ozone Non-attainment area?	☐ No	☒ Yes
Is a Carbon Monoxide hotspot analysis required?	☐ No	☒ Yes

A Type I analysis is not yet complete. The proposed project concept conforms to the plan's model description. The project would extend approximately from Eagles Landing Parkway to SR 42/SR 138 for a total length of 2.45 miles; widen the existing roadway from 2 lanes to 6 lanes; and would open to traffic by network year 2030. The proposed project is included in the Region's Air Quality Conformity Analysis.

Noise Effects: Study not yet complete. Noise barrier analysis requirement anticipated. Mitigation not anticipated

Public Involvement: Meetings with individual stakeholders such as hospital, homeowners associations, and Chamber of Commerce followed by one Public Information Open House.

Major stakeholders: Traveling Public, Henry County, the City of Stockbridge, and GDOT.

CONSTRUCTION

Issues potentially affecting constructability/construction schedule: No issues are known at this time that would affect the constructability or construction schedule of the project.

Early Completion Incentives recommended for consideration: ☒ No ☐ Yes

COORDINATION, ACTIVITIES, RESPONSIBILITIES, AND COSTS

Federal Aviation Administration (FAA) coordination anticipated: ☒No ☐ Yes

Initial Concept Meeting: The Initial Concept Meeting was held on November 16, 2016. The project schedule, no-build criteria, and project concerns were discussed. The preferred option, Rock Quarry Rd. widening from 2-lane to 4-lane roadway with raised median, was chosen. The minutes have been added as an attachment to this document.

Concept Meeting: The Concept Team Meeting was held on February 28, 2017. The meeting was located at the GDOT Main Office, 600 W. Peachtree St NW, Atlanta, GA.

Other coordination to date: Kick-Off Meeting September 8, 2016; Traffic Operations Meeting September 27, 2016; Stakeholders Meetings February 8, 2017

Project Cost Estimate Summary and Funding Responsibilities:

	PE Activities					
	PE Funding	Section 404 Mitigation	ROWΔ	Reimbursable Utilities^	CST*	Total Cost
Funded By	M230/Local	Local	Local	Local	Local	
$ Amount	$1,500,000.00	$225,000.00	$7,171,200.00	$2,180,000.00	$20,599,004.02	$31,675,204.02
Date of Estimate		9/26/2017	8/24/2017	3/08/2018	3/08/2018	

*CST Cost includes: Construction, Engineering and Inspection, Contingencies and Liquid AC Cost Adjustment.

^Reimbursable Utilities Cost includes Preliminary Railroad Cost for Surface Work

ΔROW includes costs for MS4 ROW for BMPs.

ALTERNATIVES DISCUSSION

Alternative selection: The preferred alternative is to widen Rock Quarry Rd. to four lanes and include restricted crossover U-turn(R-CUT) intersections at selected locations. The four lane option provides a better flow of traffic and less congestion for the build year and growth in future years. The no-build option is not viable due to the existing amount of traffic and congestion along Rock Quarry Rd. A 5-lane (14-ft flush median) option was not considered due to the design year ADT exceeding the ADT allowed (ADT 30,175 > 24,000) for a flush median and would not allow for the safety and capacity improvements that R-CUT intersections would offer. Implementation of a 5-lane (14-ft flush median) would require additional ROW to be purchased to incorporate a future 20-ft raised median, which we have already proposed.

Preferred Alternative: Rock Quarry Rd. 4-Lane raised median. This option will widen from a 2-lane undivided roadway to a 4- lane divided roadway with a 20 ft. raised median and restricted crossover U-turn (R-CUT) intersections. It requires three culvert extensions and a slight change in the horizontal alignment. This project also includes a multi-use path and sidewalk to provide more safety and mobility for bikers and pedestrians.

Estimated Property Impacts:	**81**	**Estimated Total Cost:**	**$31,675,204.02**
Estimated ROW Cost:	**$7,171,200.00**	**Estimated CST Time:**	**24 Months**

Rationale: This alternative adequately achieves the goal of increasing the mobility and accessibility of roadway to users, while at the same time providing improved safety for bikers/pedestrians. R-CUT intersections also provide more safety for roadway traffic at intersections.

No-Build Alternative: Maintain existing 2-lane undivided configuration on Rock Quarry Rd.

Estimated Property Impacts:	**0**	**Estimated Total Cost:**	**0**
Estimated ROW Cost:	**0**	**Estimated CST Time:**	**0**

Rationale: Due to the congestion and future developments along Rock Quarry Rd., the no-build alternative was not a viable option.

Alternative 1: Rock Quarry Rd. 5-Lane (14 ft flush median). This option will widen from a 2-lane undivided roadway to a 4- lane roadway with a 14 ft. flush median. It requires three culvert extensions and a slight change in the horizontal alignment. This project also includes a multi-use path and sidewalk to provide more safety and mobility for bikers/pedestrians.

Estimated Property Impacts:	**N/A**	**Estimated Total Cost:**	**N/A**
Estimated ROW Cost:	**N/A**	**Estimated CST Time:**	**N/A**

Rationale: A 5-lane (14-ft flush median) option was not considered due to the design year ADT exceeding the ADT allowed (ADT 30,175 > 24,000) for a flush median. Implementation of a 5-lane (14-ft flush median) would require additional ROW to be purchased to incorporate a future 20-ft raised median, which we have already proposed. The flush median option eliminates the option for R-CUT intersection and provides less safety for roadway traffic at intersections.

Comments: More Stakeholder meetings to be held with HOA in January 2019.

INTERDEPARTMENT CORRESPONDENCE

FILE P.I. No. **0015090** **OFFICE** Program Delivery

PROJECT DESCRIPTION
Widening - Rock Quarry Road from north of Eagles Landing Road to SR42/SR138

DATE March 8, 2017

From: Albert V. Shelby, Division Director of Program Delivery

To: Lisa L. Myers, State Project Review Engineer
via Email Mailbox: **CostEstimatesandUpdates@dot.ga.gov**

Subject: REVISIONS TO PROGRAMMED COSTS

PROJECT MANAGER Ricardo Maxwell

MGMT LET DATE 9/15/2022

MGMT ROW DATE 6/15/2020

PROGRAMMED COSTS (TPro W/OUT INFLATION)			**LAST ESTIMATE UPDATE**	
CONSTRUCTION	**$**	27,247,882.81	DATE	8/8/2017
RIGHT OF WAY	**$**	7,171,200.00	DATE	8/24/2017
UTILITIES	**$**	3,675,000.00	DATE	8/8/2017

REVISED COST ESTIMATES

CONSTRUCTION*	**$**	20,599,004.02
RIGHT OF WAY	**$**	7,171,200.00
UTILITIES	**$**	2,140,000.00

*Cost Contains **20** % Contingency

REASONS FOR COST INCREASE AND CONTINGENCY JUSTIFICATION:

The updated construction, utility, & railroad costs are based on a preliminary layout since concept development is reaching the final stages. A 20% contingency was chosen because this is a reconstruction/rehabilitation project with added capacity & the concept report hasn't been approved yet. Please note, the parametric CES estimate was developed by Croy Engineering on behalf of Henry County but Croy also provided specific quantities to calculate fuel adjustments. For right-of-way, this is a no-change update. Henry County has submitted a right-of-way cost estimate, it has not been submitted for GDOT approval.

CONTINGENCY SUMMARY

A.	**CONSTRUCTION COST ESTIMATE:**	$ 15,995,130.88	Base Estimate From CES		
B.	**ENGINEERING AND INSPECTION (E & I):**	$ 799,756.54	Base Estimate (A) x	**5**	%
C.	**CONTINGENCY:**	$ 3,358,977.48	Base Estimate (A) + E & I (B) x	**20**	%
			See % Table in "Risk Based Cost Estimation" Memo		
D.	**TOTAL LIQUID AC ADJUSTMENT:**	$ 445,139.11	Total From Liquid AC Spreadsheet		
E.	**CONSTRUCTION TOTAL:**	$ **20,599,004.02**	(A + B + C + D = E)		

REIMBURSABLE UTILTY COSTS

UTILITY OWNER	REIMBURSABLE COST
See attached estimates (railroad & utility)	$ 2,140,000.00
TOTAL	**$ 2,140,000.00**

LABOR COST $71,116.60

TOTAL $209,935.15
25% Contingency Fee $52,483.79
Grand Total $262,418.94

The cost information shown represents a reasonable professional opinion of probable cost based upon HCWA experience.
HCWA makes no warranty, express or implied, that the cost of the work will not vary from the opinion of probable cost.

DEPARTMENT OF TRANSPORTATION
STATE OF GEORGIA

INTERDEPARTMENT CORRESPONDENCE

FILE: **PI #0015090, Henry County** **OFFICE: State Utilities Office**

FROM: Jill Franks for: **Patrick Allen, State Utilities Administrator** **DATE: June 23, 2017**

TO: Albert Shelby, State Program Delivery Administrator
Attn: Jason Mobley, Project Manager

SUBJECT: **PRELIMINARY RAILROAD COST FOR SURFACE WORK (CONCEPT ESTIMATE)**

A review of railroads located within the project limits on the above referenced project has been conducted based on the proposed concept layout provided. Listed below is a breakdown of the estimated railroad costs:

FACILITY OWNER	NON-REIMBURSABLE	REIMBURSABLE
Norfolk Southern Railway Company		
– P.E. cost for bridge over railroad	**$0.00**	**$ 15,000.00-20% LOCAL**
– Const. inspection cost for bridge over railroad	**$0.00**	**$ 25,000.00-100% LOCAL**
Total Reimbursement Cost:	**$0.00**	**$ 40,000.00**

Total railroad surface work reimbursable cost for the above project is estimated to be:

$40,000.00

Please note that this amount does not include other reimbursable utility costs that may be associated with this project. This PE funds are 20% LOCALLY funded and CONSTR funds are 100% LOCAL.

If you have any questions, please contact Jill Franks, (404) 631-1370, jfranks@dot.ga.gov or Marcela Coll, (404)631-1372 mcoll@dot.ga.gov.

Re: Rock Quarry Road Widening, Henry County, P.I. #0015090

Approximately 400 linear feet of impacts to 3 perennial streams are anticipated at this time.

Based on the current Standard Operation Procedures (SOPs) for determining the required amount of stream mitigation credits, it is anticipated that 2,277 stream mitigation credits would be required. Based on the sum of factors under current SOPs, this project requires an average 5.58 stream mitigation credits per linear foot of impact. The current cost for stream credits inside the primary service area, at the closest mitigation bank to the impact site, is $38 per credit. As such, the current mitigation estimate is as follows:

2,277 credits at $38 each = $86,527, rounded say **$90,000**

The SOPs are scheduled to change on December 15, 2017. Currently, most projects average about 3.5 credits per linear foot of impact and it is anticipated that they would average about 9 credits per linear foot of impact after the SOPs change (approximately 2.58 times the current SOP). As such, the current mitigation estimate for after December 15, 2017 is as follows:

2,277 credits X 2.58 = 5,875 credits
5,875 X $38* = $223,364 total anticipated cost, rounded say **$225,000**

*This factor fluctuates with time.

1. For unsignalized intersections with stop control only on the minor street, LOS are reported for the side street approaches.
2. "Err" is a software output representing that the delay has exceeded 300 seconds and is undefined by empirical formulas.

TECHNICAL MEMORANDUM

To: Ricardo Maxwell
Georgia Department of Transportation, Program Delivery

From: Aimee Turner, E.I.T., IMSA TS I, Croy Engineering

Date: March 2018

RE: Summary of Traffic Engineering
Rock Quarry Road Widening (P.I. 0015090), Henry County

Introduction

This technical memorandum summarizes the traffic engineering report for the Rock Quarry Road Widening project. The Rock Quarry Road Widening project, P.I. # 0015090, will widen the existing 2-lane Rock Quarry Road to a 4-lane median divided corridor from N Park Drive/Eagles Springs Drive to N Henry Blvd/SR 138/US 23/SR 42. Improvements will also include the installation of sidewalks and a multi-use path of the east and west sides of the roadway, respectively.

Existing Conditions

Under the 2016 existing traffic conditions, all of the signalized intersections are operating at an acceptable level of service (LOS), while a considerable number of the side streets at unsignalized intersections are operating below acceptable LOS for one or both of the peak hours. Moreover, the roadway capacity of Rock Quarry Road corridor is currently below the acceptable LOS for all segments.

Crash data demonstrates that there has been a significant number of crashes along this arterial, with the majority of the crashes being contributed to rear end and angle crashes. Moreover, Rock Quarry Road's crash rates for both injuries and fatalities exceeds the State of Georgia averages for Urban Minor Arterials. There is a recognizable need to implement techniques to reduce the frequency and severity of crashes along the corridor.

No Build Analyses

Under the 2024 No Build condition, all of the signalized intersections would continue to operate at an acceptable LOS, while an increasing number of side streets at unsignalized intersections would be operating below acceptable LOS for one or both of the peak hours. Moreover, the roadway capacity of Rock Quarry Road corridor would continue to operate below the acceptable LOS for all segments.

By the 2044 design year, the majority of the signalized and unsignalized intersections would be operating below the acceptable LOS, many of which having delay exceeding the software parameters. The Rock Quarry Road corridor is below the acceptable LOS for all segments based on the capacity analysis.

Signal Warrant and Intersection Control Evaluation (ICE) Analyses

With the added capacity from the road widening, signal warrant analyses were conducted at three intersections that were identified as potentially suitable locations for a traffic signal. The three intersections evaluated for a traffic signal installation along Rock Quarry Road are Hospital Drive, Windsong Drive, and Red Oak Road. In conjunction with the signal warrant analysis, GDOT's Roundabout Tool was used to determine if a roundabout at the aforementioned intersections would be a suitable alternative. The final recommendations from the signal warrant analyses are shown in Table 1 for each intersection.

Table 1: Rock Quarry Road Signal Warrant Analyses Results

	Warrants Met?	Signal Recommended?
Hospital Drive at Rock Quarry Road	Yes	Yes
Windsong Drive at Rock Quarry Road	No	No
Red Oak Road at Rock Quarry Road	No	No

Per GDOT Policy 4A-5, Intersection Control Evaluation (ICE), GDOT requires the completion of an ICE Tool for all intersection improvements where at least one of the intersecting roadways is designated as a State Route or the design and construction of the project includes State or Federal funding. A Stage 1 Screening and Stage 2 Alternative Selection tool was completed for each intersection, and the final build alternatives are listed in Table 2 below.

Table 2: ICE Analysis Build Alternatives per Intersection

Rock Quarry Road at	Build Alternative

VITAS Inpatient Facility Driveway	RCUT [2]

1. The existing traffic control configuration was maintained.
2. The Build Alternative differs from the ICE Tool's preferred alternative.

Build Analyses

Under the 2024 Build conditions, the analysis shows that the Build condition would decrease the delay and improve the roadway LOS for all of the intersections with the exception of Railroad Street during the morning peak hour. With the added capacity on Rock Quarry Road under the Build conditions, the ensuing increase in traffic volumes has an unacceptable impact on operations at unsignalized intersections. By the 2044 design year, signalized and unsignalized intersections would be operating at undesirable LOS for one or both peak hours. The 2044 Build Rock Quarry Road corridor LOS would be at an acceptable LOS for all segments based on the capacity analysis.

In terms of safety, the Crash Modification Factors (CMF) Clearinghouse gives a CMF of 0.341 for converting a 2-lane roadway to 4-lane divided roadway, which would theoretically results in a 66% reduction in crashes under the Build condition.

Conclusion

Based on the findings of this analysis, the Rock Quarry Road project to widen to 4-lane median divided corridor yields advantageous benefits encompassing improvements to traffic operations, including improved LOS and reductions in delay, anticipated crash reductions, and improvements to bike and pedestrian accommodations.

All data pertaining to the traffic engineering analysis including the full traffic forecasting report, traffic diagrams, ICE Documentation, and traffic engineering report were submitted to GDOT as separate deliverables and are available upon request.

TECHNICAL MEMORANDUM

To: Christina Barry, P.E.
Georgia Department of Transportation, Office of Traffic Operations

From: Aimee Turner, E.I.T., IMSA TS II, Croy Engineering

Date: March 9, 2018

RE: ICE Analysis Concurrence and Waiver Requests
Rock Quarry Road Widening (P.I. 0015090), Henry County

Introduction

The purpose of this memorandum is to summarize the results of the Intersection Control Evaluation (ICE) analysis for P.I. 0015090, Rock Quarry Road Widening, for concurrence from the Office of Traffic Operations. The project will widen the existing 2-lane Rock Quarry Road to a 4-lane median divided corridor starting at N Henry Blvd/SR 138/US 23/SR 42 and tie in north of N Park Drive/Eagles Springs Drive. Figure 1 displays the preliminary concept design.

Figure 1: Rock Quarry Road Widening Preliminary Concept Design

GDOT requires the completion of an ICE Analysis per GDOT Policy 4A-5 for all intersection improvements where at least one of the intersecting roadways is designated as a State Route or the design and construction of the project includes State or Federal funding. It is important to note that the traffic engineering analysis for P.I. 0015090 was more than mid-way at the time supplemental revisions were made to the ICE policy related to the submission of Stage 1-Screening Decision Record for concurrence before proceeding to Stage 2 – Alternate Selection Decision Record for approval. Thus, this memo summarizes the findings of both Stage 1 and Stage 2 as they were done in succession prior to the revisions to the ICE policy.

Stage 1: Screening Decision Record

A Stage 1 Screening was completed for all study intersections along Rock Quarry Road. A number of unsignalized and signalized traffic control alternatives were evaluated per intersection. Alternatives were selected based on their ability to address the operational and safety concerns at the intersection while being context-sensitive to the the corridor as a whole.

With the added capacity from the road widening, signal warrant analyses were conducted at three intersections that were identified as potentially suitable locations for a traffic signal. The three intersections evaluated for a traffic signal installation along Rock Quarry Road were Hospital Drive, Windsong Drive, and Red Oak Road. A traffic signal was warranted at Hospital Drive; thus, a traffic signal was included as an alternative to be evaluated for their respective ICE analyses. Table 1 shows alternative selected to review.

Table 1: ICE Analysis Build Alternatives per Intersection

at N Park Trl/Eagles Walk	RI/RO		
at Hospital Dr	Traffic Signal	Multilane Rndbt	RCUT
at Killearn Blvd	RI/RO		

A full ICE analysis, Stage 1 and Stage 2 documentation, was only required at the one on-system intersection, Rock Quarry Road at SR 42/SR 138/N Henry Boulevard. Although Stage 2 documentation is not required for linear projects' intersections, a high-level Stage 2 analysis was completed for each intersection to further document the ranking of each alternative per intersection.

Stage 2: Alternative Selection Decision Record

During Stage 2 of the analysis, a review of existing conditions and a comparison of project costs, traffic operations, safety factors, environmental impacts, and stakeholders' input per alternative was completed. Taking into account the aforementioned criteria, the ICE Tool scored and ranked each alternative. Following a review of the highest scored alternatives at each intersection, how each fit in the context of the entire corridor, and consulting with Henry County, the final preferred alternatives for traffic control were selected.

Table 8 lists the traffic control alternative recommended for the Build condition per intersection as part of the widening of Rock Quarry Road. The preliminary concept design and all ICE Tool spreadsheets are attached.

Table 2: ICE Analysis Build Alternatives per Intersection

Rock Quarry Road at	Build Alternative
N Henry Blvd/SR 42/SR 138	Traffic Signal[1]

Hospital Drive	Traffic Signal
Killearn Boulevard	RI/RO

1. The existing traffic control configuration was maintained.
2. The Build Alternative differs from the ICE Tool's preferred alternative.

Waiver Requests

With the widening of Rock Quarry Road, a waiver of the ICE Analysis is requested for all intersections that will be reconfigured to right-in/right-out access only. The justification for the waiver is the limited access due to the closed median.

There are three instances where the preferred alternative from the ICE Tool is not recommended for the Build condition. The three intersections are Rock Quarry Road at Railroad Street, at Banks Road, and at the entrance to VITAS Inpatient Facility, respectively. A waiver for deviation from the ICE Tool's preferred alternative at the three intersections above is requested. The justification for the build alternative per intersection is listed below:

At Railroad Street:

- **ICE Tool's Recommendation:** Restricted crossing U-turn (RCUT)
- **Build Alternative Selection:** Conventional minor stop (TWSC)
- **Justification:** A conventional minor stop is recommended versus the ICE Tool's preferred alternative of a Right-In/Right-out because of the negative impact the number of tractor trailers exiting the side streets would have on downstream U-turns.

At Banks Road:

- **ICE Tool's Recommendation:** Multi-lane Roundabout
- **Build Alternative Selection:** Traffic Signal
- **Justification:** Maintaining the existing traffic light at Banks Road was recommended versus the ICE Tool's preferred alternative of a roundabout because of the projected costs of the roundabout design. Considering the grades approaching Banks Road, northbound - 6.1% and southbound - 1.7%), a more detailed cost estimate was completed to show more realistic project costs. To accommodate the inscribed diameter of a multi-lane roundabout at this intersection, it would require a total take of the commercial properties at 880-890 Rock Quarry Road. The total cost to install a multi-lane roundabout is approximate 3 times that to install a traffic signal. Moreover, Henry County has expressed the desire to maintain the existing signalized traffic control at the intersection.

At VITAS Inpatient Facility Driveway:

- **ICE Tool's Recommendation:** Right-in/Right-Out with Downstream U-turn
- **Build Alternative Selection:** Restricted crossing U-turn (RCUT)
- **Justification:** Need to accommodate the frequency of emergency vehicles accessing the VITAS Inpatient Facility.

GDOT INTERSECTION CONTROL EVALUATION (ICE) WAIVER FORM

ICE Version 2.01
Revised 9/18/2017

Waiver Request - Level 1

In certain circumstances where an ICE would otherwise be required, an ICE may be waived based on appropriate evidence presented with a written request. Scenarios in which an ICE waiver request may be considered include:

1. Proposed improvements do not substantially alter the character of the intersection, and are considered minor in nature, such as extending existing turn lane(s) or modifying signal phasing at an existing traffic signal
2. The intersection is along a divided, multilane roadway and will be limited to a closed median with only right-in/right-out access that will operate acceptably; or
3. The intersection is along an undivided, two-lane roadway that will not be widened and meets the following criteria:
   - Low risk in terms of exposure (total intersection entering volume less than 1,000 vehicles /day)
   - Latest 5 years of crash history is not indicative of a crash problem (no discernible crash patterns coupled with low crash frequency and severity)
   - Layout has no unusual or undesirable geometric features (such as restricted sight distance)
   - The proposed changes are not expected to adversely affect safety

A Waiver Form should also be submitted to document an agreed upon decision to select a preferred alternative other than the highest scoring alternative in Stage 2.

ICE waiver forms with supporting documentation should be submitted for approval to the Chief Engineer / District Engineer (or delegate). Any questions regarding the waiver process may be routed to the State Traffic Engineer.

MS4 Concept Report Summary

Attach the following checklist information to the Concept Report Template:

Is there a Project Level Exclusion that applies to this project: ☒ No ☐ Yes

If yes, please indicate which of the following exclusions apply:

- ☐ Roadways that are not owned or operated (maintained) by GDOT may not require post-construction BMPs. Coordinate with the appropriate local government or entity to determine stormwater management requirements.
- ☐ The project location is not within a designated MS4 area.
- ☐ Maintenance and safety improvement projects whereby the sites are not connected and disturbs less than one acre at each individual site. This includes projects such as repaving, shoulder building, fiber optic line installation, sign addition, and sound barrier installation.
- ☐ Projects that have their environmental documents approved or right-of-way plans submitted for approval on or before June 30th, 2012.
- ☐ Road projects that disturb less than 1 acre or for site development projects that add less than 5,000 ft^2 of impervious area.

GDOT Pavement Design Tool - Version 2.0

Kick Off Meeting Minutes- P.I. 0015090

Project & PI:	Rock Quarry Road from Eagles Landing Parkway to SR 42/SR 138, P.I. 0015090
Location:	Henry County SPLOST Office Conference Room, 112 Zack Hinton Pkwy, McDonough, GA
Moderator:	Roque Romero, Henry County
Design Firm:	Croy Engineering, LLC, Chris Rideout, Project Manager
Date:	8 September 2016
Time:	9:00 AM – 10:15 AM
Attendees:	David Webb (Croy), Chris Rideout (Croy), Krystal Stovall-Dixon (GDOT), Jason Mobley (GDOT), Michael Marget (GDOT), Chae H. Yi (Henry Co.), Roque Romero (Henry Co.)

- Project Description/Background: 2.9 miles of roadway widening, from the Eagles Landing to SR 42/138, Henry County

- Overview of Project

  - The project extends from Eagles Landing Parkway to SR 42/138
  - Current proposed typical section is 4-11 foot lanes, 20’ raised median, with a 10’ multi-use path on one side and 5’ sidewalk on the other
  - Design speed will be 45 mph.

- Project Baseline Schedule/Timeline

  - Henry County expected to provide Croy with an NTP on 9/12/2016.
  - Current schedule is a draft prepared by Croy. Jason will distribute amongst GDOT SME for comment
  - Initial Concept Team Meeting – Early November 2016
  - Public Information Open House (PIOH): January 2017
  - Concept Report Approval: March 2017
  - Environmental Document Approval: June 2018
  - Preliminary Plans Submission and Review (PFPR): November 2017

- Project Items

  - Hospital Drive intersection – Croy will confirm whether a traffic signal is warranted
  - Rum Creek is a potential mitigation site
  - Look at “R cuts” for left turn in access at some locations
  - Need to locate/create a project justification statement
  - Interconnectivity of signals?
  - Henry County to confirm the use of mast arms vs strain poles for the signals
  - County prefers illuminated street signs
  - Croy will follow Henry County MS4 guidelines
  - Henry County will handle utility coordination efforts
  - It is anticipated that Henry County will let the project
  - Croy will prepare an initial cost estimate, Construction and ROW, as soon as the concept has been better defined.

- Action Items

    - Croy will provide Jason a list of team partners with contact information for his records
    - Croy will prepare a preliminary concept for the initial concept team meeting
    - Croy survey will send property owner's list to Henry Co. for them to send out survey notification letters
    - Croy expected to begin survey 1-2 weeks after notification letters have been sent
    - Croy will begin concept development
    - Initial concept team meeting to be scheduled in November
    - ICTM agenda to be coordinated between Croy and GDOT

Croy Engineering, LLC
200 North Cobb Parkway
Building 400, Suite 413
Marietta, Georgia 30062

Rock Quarry Road (P.I. 0015090)

Traffic Operations Meeting – September 27, 2016 *(Meeting Notes)*

AGENDA

- Existing Traffic Operations
  - Major Congestion Points
  - Pedestrian Activity

    Majority of pedestrian activity occurs south of Carrington Ridge
- Crash History
  - GEARS

    GEARS Crash Records database will be use to complete safety analysis.
- Traffic Counts
  - Count Locations

    Assume typical peak periods for Turning Movement counts;

    (7AM – 9 AM; 4 PM – 6 PM)
  - Types of Count Data to be Collected
    - *12-Hr Turning Movement Counts (TMC)*
      1. *Red Oak Rd @ Rock Quarry Rd*
      2. *Hospital Dr @ Rock Quarry Rd*
      3. *Windsong Dr @ Rock Quarry Road*
    - *2-Hr AM/PM Peak Turning Movement Count (TMC)*
      1. *N Henry Blvd/SR 42/SR 138/US 23 @ Rock Quarry Rd*
      2. *Banks Rd @ Rock Quarry Rd*
      3. *North Park Dr @ Rock Quarry Rd*
    - *24-Hr Bi-directional/Classification on Rock Quarry Rd*
      1. *South of S. Lee Street*
      2. *South of Banks Road*
      3. *South of N. Park Trail*

- Signal Warrant Analysis
    - Intersections to Analysis for Signal
        - Banks Road @ Rock Quarry Road *(Signal already exists)*
        - Red Oak Road @ Rock Quarry Road
        - Hospital Drive @ Rock Quarry Road
        - *Windsong Dr @ Rock Quarry Road*
    - *Follow GDOT's process for completing Signal Warrant Analyses*.
- Traffic Forecasting Methodology
    - Travel Demand Model versus Historical Regression

      Use Henry County's Travel Demand Model to determine project growth rate in region.
- Future Land Use
    - Pending Developments in Region
    - Areas Susceptible to Development
    - *Review "Henry County In Motion"*
- Traffic Operations Analysis
    - *Assess adding northbound dual lefts at Rock Quarry Road and SR 42.*
    - Signal Timing Data Requests
        - *Henry County DOT can provide signal timing data for Rock Quarry Rd @ Eagles Landing Pkwy and Rock Quarry Rd @ Banks Rd/Carrington Ridge*
        - *GDOT will be contacted for signal timing data for Rock Quarry Rd @ SR 42*
        - *Signals are not currently interconnected. For future coordination considerations, Henry County would prefer wireless connections.*

- Transportation/Roadway Discussion
    - *Henry County: Future plans to extend Rock Quarry Road north of SR 42*
    - *Henry County DOT prefers K-value from 1990 Green Book*

- Closing
    - *Action Items*
        - *Schedule Traffic Counts*
        - *Complete crash records summary*
        - *Schedule meeting with GDOT's Office of Planning to discuss Traffic Forecasting Methodology*
        - *Coordinate with ARC for the latest Henry County Travel Demand Model data*
        - *Request signal timing data for traffic models*
        - *Review "Henry County In Motion" (CTP) for future land use/transportation/etc.*

Rock Quarry Road (P.I. 0015090)

Initial Concept Team Meeting – November 16, 2016

AGENDA

- The Project Justification -Ongoing
- Planning concept/modeling data/STIP project definition Unavailable
- Need for an Interchange Justification Report (IJR) or Interchange Modification Report (IMR). – IJR or IMR not required. No proposed interchange
- Safety concerns – truck traffic, sight distance issues at Banks
- Need for a formal or informal location inspection - TBD
- Alternatives considered to date – Widening to 4-11' lanes and 20' raised median, pedestrian and bicycle accommodations via a 10' multi-use path and 5' sidewalk.
- Preliminary design traffic– In process
- Accident data for the most recent three years for which complete data is available – utilizing GEARS Crash Records
- Location of potential roundabouts or traffic signals.
  - Banks Road @ Rock Quarry Road (Signal already exists)
  - Red Oak Road @ Rock Quarry Road
  - Hospital Drive @ Rock Quarry Road
  - Windsong Dr @ Rock Quarry Road
- Traffic Engineering Study – in process
- ITS opportunities - TBD
- ITS architecture - TBD
- Ultimate operating agency or other users of the ITS system – Henry County
- Maintenance issues with the ITS system - TBD
- Other GDOT offices, other state or local agencies that will be affected by the ITS system - TBD
- Staging and traffic control, including Traffic Management Plan – Widening will alternate sides of the existing roadway and 2 lanes of traffic will be maintained during construction. Existing culverts are expected to be extended outside of traffic.TMP will be required but expected to be classified non-significant
- Work zone safety and mobility requirements

- Traffic calming techniques to be implemented
  - 20’ median
  - Urban Shoulder
- Maintenance problems, including drainage and pavement problems – Unknown
- Proposed design criteria including design speed 45 mph majority (35 mph north of bridge?)
- Proposed type of access control – per Henry County
- District information on public contacts and concerns to date - None
- Evaluate the extent of public outreach efforts and coordination needed – PIOH at a minimum
- Coordination with FHWA, FTA, GRTA, State Road and Tollway Authority (SRTA), and other non-environmental Federal, state and local agencies and/or governments - FHWA
- Requirements for:
  - Mapping – Field survey on-going
  - Aerial photography – already flown, shown in concept
  - Tax plats with property owners names – In process
- Photographs or Video logs –In process
- Proximity to (< 200’ of existing crossing) and impacts to railroads and railroad right-of ways – Existing bridge recently constructed over railroad to accommodate widened section of Rock Quarry Road. Possible MS4 detention facility north of the Railroad tracks.
- Proximity to and impacts to airports n/a
- Existing structures and their condition
  - Existing bridge
  - 2 existing culverts
- Temporary access requirements for the removal of existing bridges and/or the construction of new bridges n/a
- Environmental concerns:
  - History – Historic impacts, if any will be evaluated
  - Potential for Archaeology? None expected, will be evaluated
  - Neighborhoods – Various subdivisions, a few property owners will be within close proximity to the widened roadway
  - Special interest groups Not expected
  - Context Sensitive Design-Additional modes of transportation accommodated
  - Cemeteries - None
  - Parks and recreation Park north of concrete plant

- Need for a Practical Alternatives Report (PAR) -TBD
- Wetlands and streams, open waters, buffers, floodplains 2 stream crossings, possible wetlands in stream areas
- Endangered species Not expected – full ecology
- Erosion and Sedimentation Control – 3 phase with staging
- Designated MS4 Area(s) In MS4 area, possible facilities shown on concept
- Air Quality – Air quality impacts will be studied
- Potential for noise impacts Noise impacts will be evaluated

- Possible permits required:
  - U. S. Army Corps of Engineers Section 404 Permit-probable
  - U. S. Army Corps of Engineers Section 408 Permit-not expected
  - Tennessee Valley Authority (TVA)-n/a
  - U. S. Coast Guard (USCG)-n/a
  - Stream Buffer Variance -possible
- Opportunities to accommodate other modes of transportation – pedestrian and bicycle
- Coordination with other GDOT and local projects - ongoing
- Existing right-of-way – varies 50’ to 100’
- General location, size of utilities, and the need to employ an Overhead/Subsurface Utility Engineering (SUE) investigation to be used for further concept development – SUE Level B will be completed
- Determine if the Public Interest Determination Policy and Procedure should be used for the Project - TBD
- Risk Assessment – SME’s
- Concurrence to proposed project schedule
  - Concept Approval – June 2017
  - Preliminary Plans Complete – December 2017
  - Right of Way Plans Complete – June 2018
  - Final Plans Complete – March 2019

Concept Team Meeting Minutes-P.I. 0015090

Project & PI:	Rock Quarry Road Widening, PI #0015090
Location:	GDOT Main Office; 600 W. Peachtree St NW, Atlanta, GA
Moderator:	Jason Mobley, Project Manager
Design Firm:	Croy Engineering, LLC, Chris Rideout, Project Manager
Date:	February 28th, 2017
Time:	1:30-2:30 pm
Attendees:	See attached sign in sheets

- Jason Mobley, GDOT Project Manager, called the meeting to order and led introductions
- Project Description: David Webb from Croy Engineering gave an overview of the project discussing the proposed layout, including the R-cuts for intersection control. Chris Rideout then began to go over the draft concept report.
- The Project Justification Statement was discussed. GDOT Planning stated that Croy Engineering could go ahead and resubmit the PJS with unapproved traffic numbers.
- Other projects in the area and funding were noted.
- Erik Rohde with GDOT Design noted that a Pavement Type Selection will be required because the project will replace most of the existing paving on the corridor.
- The Design and Structural section of the report was discussed, along with the proposed typical section.
- Lighting of the project was discussed. The city of Stockbridge and Henry County will discuss how/if the road will be lighted and decide if it should be included in the project.
- No Design Variances or Exceptions are anticipated with the project.
- The utilities along the corridor will be verified – including Clayton County Water Authority. Roque Romero with Henry County noted that Georgia Transmission needed to be added to the list of utility companies and that utility easements will be required for the project.
- Albert Shelby with GDOT OPD confirmed that a Public Interest Determination Policy and Procedure was not required for the project.
- Context sensitive solutions were discussed including noise walls.
- Michelle McIntosh with Croy Engineering discussed the environmental process and permits. A Categorical Exclusion is currently anticipated; however, that is a determination that will be made by FHWA after environmental studies have been conducted.
- Albert Shelby stated that if there was any public controversy surrounding the project then it could possibly be upgraded to an Environmental Assessment.

- The party responsible table will be completed by Croy along with the funding responsibilities.
- The preferred alternative and no build were discussed.
- Aimee Turner with Croy Engineering discussed the ongoing traffic analysis of the corridor, including potential signal/roundabout locations and verifying the applicability of R cuts at the remaining intersections of the corridor.
- Jason Mobley asked all of the present GDOT SMEs for any additional concerns on the project, none were noted that had not already been discussed.
- Jason Mobley then adjourned the meeting.

Summary of Stakeholder Meetings

To: Jason Mobley, Roque Romero-Muniz, Chris Rideout, David Webb, Michael Margut, Dan Dobry

CC: Project File

From: Michelle McIntosh

Date: February 9, 2017

Re: Widening of Rock Quarry Road, Henry County – P.I. #0015090

The project team has identified three (3) stakeholders along the proposed project corridor for the widening of Rock Quarry Road: Piedmont Henry (hospital), the Gardens of Eagles Landing Homeowners Association (HOA), and the Windsong Plantation Property Owners Association (POA). As such, a series of three (3) stakeholder meetings were conducted yesterday, February 8, 2017 with the identified stakeholders.

The primary purpose of the meetings was to coordinate the preliminary layouts with the stakeholders, discuss potential impacts to their respective facilities, and receive feedback from the stakeholders prior to proceeding to a Public Information Open House (PIOH). Henry County, Georgia Department of Transportation (GDOT), and Croy Engineering staff attended the meetings (see Attachment 1 – Sign-in Sheet).

At 3:30pm, the project representatives met with Steve Jordan, Director of Engineering for Piedmont Henry, at his office located at 950 Hospital Drive, Stockbridge, GA. It is not anticipated that the hospital will be directly impacted by project implementation; consequently, the primary purpose for the meeting was to discuss potential impacts regarding access to and from the hospital, particularly with regards to emergency response vehicles. Mr. Jordan was shown the draft conceptual layouts and the following items were discussed:

- Mr. Jordan stated that a traffic signal was really needed at Hospital Drive and Rock Quarry Road. The main entrance to the hospital is on Eagles Landing Parkway; however, the emergency entrance for ambulances and other vehicles is via Rock Quarry and Hospital Drive. Vehicles, including ambulances, tend to enter via the Rock Quarry Road entrance but exit via Eagle Landing or by taking a right onto Eagle Landing because it is too difficult to take a left onto Rock Quarry Road.
- Who owns Hospital Drive, the City or the County?
- Piedmont Henry is currently in the progress of developing their 5-year Strategic Plan. The draft plan includes a 5-story tower (1 story for emergency, 2 stories for parking,

and 3 stories for patient rooms), approximately 2 new medical buildings, a 500 space parking deck, a new access road from Rock Quarry Road located just south of the proposed detention pond between Windsong Drive and Eagle Walk. Michelle McIntosh will call Mr. Jordan in about 2 months to see if the 5-year Strategic Plan is available yet.

- The signal warrant analysis is currently in progress. Do emergency vehicles factor into the signal warrant analysis? Will the 5-Year Plan for Piedmont Henry affect the traffic analysis and the signal warrant analysis? [A subsequent conversation with Dan Dobry, Traffic Engineer for this project,
- Mr. Jordan was supportive of the project and stated that it was very much needed. Once the PIOH details are finalized, Michelle McIntosh will send PIOH flyers to Mr. Jordan who will post them and distribute them to staff members.

The meeting with Mr. Jordan adjourned at approximately 3:50pm.

The project representatives met with Mr. Arthur Dunbar, President of the Gardens of Eagles Landing HOA, at 4:30pm at the Henry County SPLOST Offices located at 112 North Zack Hinton Highway, McDonough, GA. Mr. Dunbar was shown the draft conceptual layouts and the following items were discussed:

- A concern was expressed regarding the encroachment of the proposed transportation facilities toward the houses that back up to Rock Quarry Road, the subdivision sign at the entrance, the subdivision wall located just north of Gardens Walk, and the vegetation located just south of Gardens Walk. Mr. Dunbar was assured that every effort was being made to avoid impacts to the wall and that construction easements would be temporary.
- Concerns were expressed regarding the proposed R-cut on Rock Quarry Road at the subdivision. The inability to make a left out of the sub-division will likely be unpopular with the homeowners and will be problematic for the 3 or 4 school buses that enter and exit the subdivision. It was explained that for safety reasons the R-cuts are in-line with the new GDOT policy. R-cuts are proposed throughout the Rock Quarry Road corridor as well as other proposed and recent improvement corridors in Henry County. Roque Romero-Muniz will coordinate with the Board of Education. The bus routes may need to be modified slightly and the right-in/right-outs can be modeled to accommodate the school buses.
- Concerns were expressed regarding potential impacts to the “swampy” area on the west side of Rock Quarry Road, across from the subdivision. Mr. Dunbar was advised that ecological studies are currently on-going. If the area is determined to be a wetland under the jurisdiction of the U.S. Army Corps of Engineers (USACE), any impacts to the wetland would be permitted and mitigated, if required, through the USACE and the project would be designed in accordance with all applicable environmental laws and regulations.
- Concerns were expressed regarding the proposed project’s potential impacts to the sub-division’s detention pond, which is old and having issues. Mr. Dunbar was assured that the road project would have no effects to the detention pond.

The meeting with Mr. Dunbar adjourned at approximately 5:00pm.

At 5:30pm, the project representatives met with three Board Members of the Windsong Plantation POA. The meeting was held at the Windsong Plantation Clubhouse, Stockbridge, GA. The Board Members were shown the draft conceptual layouts and the following items were discussed:

- The primary purpose of the proposed widening is alleviate congestion. The primary purpose of the median is to improve safety. The members concurred that congestion alleviation is needed because there are over 415 homes in the Community and in the morning it sometimes takes 5 to 10 minutes to get out of the sub-division via the Rock Quarry entrance/exit. Also, many travelers use the subdivision as a cut thru between Rock Quarry Road and Eagles Landing Parkway. The Board Members would like to see a traffic signal at Rock Quarry Road and Windsong Drive.
- The Board Members were very hopeful that the PIOH would be held at the Merle Manders Conference Center. Michelle McIntosh will contact Harland Smith of the GDOT, who is making the PIOH arrangements and see if this is feasible.
- Concerns were expressed regarding potential noise impacts and it was asked what mitigation measures are being considered. It was explained that noise studies have not yet been conducted. If it is determined that noise impacts will occur, a noise barrier analysis will be conducted. If the criteria for a barrier is met, then a noise wall would be proposed; however, some communities would prefer not to have the noise wall constructed.
- The Windsong Plantation sign at Rock Quarry Road was built to be movable in anticipation of the proposed roadway widening.
- What is the project schedule? We are currently in the concept phase. The design phase should take 1 to 2 years and the right-of-way acquisition phase should also take another 1 to 2 years, although the right-of-way funding has not been identified yet. Hopefully, construction will be in approximately 3 to 4 years.
- Coordination should also be conducted with the either David Grace or Kathy of the Eagle's Landing Community Association or Mike Reece with Century Management.

The meeting with the Windsong Plantation Board Members adjourned at approximately 6:10pm.

As asides in between the various stakeholder's meetings, the project team discussed the following items:

- Potential traffic signals should not be shown at the PIOH. Only show existing or already warranted signals.
- The GDOT is potentially moving the PIOH out from March 22, 2017 to April 13, 2017 to accommodate the makings of the signs. Who is responsible for the signs, GDOT or

the County? If the signs are made by the County, would we have to post-pone the PIOH? Signs must be up 10 days prior to the PIOH. [Jason Mobley will follow-up]

- The methodology for traffic has been approved. When is the next traffic milestone? [Croy will follow-up]

The meeting was adjourned at approximately 6:15pm.

Public Involvement Log
Widening and Reconstruction of Rock Quarry Road, Henry County
GDOT Project #0015090

Tuesday, March 14, 2017
I voice-mail was left for me about 9:15am from Mr. Lou Goglia, who is a home owner in the Gardens at Eagle's Landing subdivision. Mr. Goglia owns the property that backs up to Rock Quarry Road with the swimming pool in the back yard. I returned his call at approximately 9:45am.

Mr. Goglia expressed concerns regarding the proposed widening, as listed below:

- Does not believe the proposed widening will alleviate congestion. A huge part of the problem is the truck traffic. The commercial area south of Banks Street is also a part of the congestion problem.
- He and his wife spend a lot of time in his back yard and his wife has Chronic Obstructive Pulmonary Disease (COPD). Also, his bedroom is located approximately 98 feet from the centerline. He feels that a wall is needed to mitigate emissions and noise.

Mr. Goglia was assured that I would prepare this record of phone conversation for the project records and was encouraged to attend the upcoming Public Information Open House (PIOH) on April 13, 2017. I advised him that it would be a good opportunity to learn more about the project and to make comments during the official public comment period. Mr. Goglia assured me that he and his wife would attend. He also provided me with his e-mail address and I subsequently forwarded him the flyer with specific PIOH information.

Tuesday, March 14, 2017
I received a phone call from Mr. Ezekial Pettway at approximately 11:00am. Mr. Pettway is the President of the Windsong Plantation Property Owners Association (WPPOA) and has been identified as one of the Stakeholders along the project corridor.

Mr. Pettway phoned as a follow-up from our Stakeholders Meeting on February 8, 2017. He was wondering when and where the PIOH was scheduled so that he could disseminate the information to the property owners in the Windsong Plantation sub-division. I provided him the requested information and forwarded him an electronic copy of the PIOH flyer. I advised him that the flyer had not been approved yet but that I expected to obtain approval on March 29th and that I would email him a stack of flyers as soon as I received approval.

Wednesday, March 15, 2017

I was courtesy copied on an email from Ms. Brenda Bloomer to Jason Mobley, PM. Ms. Bloomer operates the hospice located at 931 Rock Quarry Road. I responded to Ms. Bloomer on Thursday, March 16th, providing a response to her environmental questions and Jason Mobley responded to Ms. Bloomer Friday, March 17th regarding the construction schedule. The e-mails can be found in Appendix 1 – Correspondence.

Friday, March 17, and Monday, March 20, 2017

I received an email from Michael Margut, the assigned NEPA Analyst at the GDOT Office of Environmental Services (OES). He had received a phone call from a representative for the City of Stockbridge in response to the early coordination letters that had been sent. Mr. Margut was provided contact information for two community leaders in the Rock Quarry Road project area and emailed the information to me. The e-mail can be found in Appendix 1 – Correspondence.

In response to the information provided, I attempted to contact both of the identified community leaders on Monday March 20th. No answer or voice mail was received in an attempt to contact Mr. Alphonso Thomas. Since I also have his e-mail address, I followed up with an email to him with the PIOH Flyer attached. I offered to send hard copies for him to distribute to the community if he would let me know how many to send. The email can be found in Appendix 1 – Correspondence.

No answer was received in an attempt to call the Reverend Doctor Jacquelyn Johnson of Trinity Church. However, I left a voice mail letting her know about the PIOH and asking her to call me on my cell phone about the PIOH.

Tuesday, March 21, 2017

Today I was on Rock Quarry Road doing some environmental field surveys and I had a conversation with one of the property owners. I spoke with Mr. Chuck Evans, owner of Evans Sand & Gravel, located on the east side of Rock Quarry Road directly across from Nova Circle. Mr. Evans discussed the following concerns:

- Based on the current layouts, Mr. Evans security fence and a portion of his structure would be impacted. Mr. Evans wants to make sure that the security fence is replaced.
- Mr. Evans obtains sand and gravel from the quarry located on the west side of Rock Quarry Road, just north of the Southern Railroad and across from Mahers Quarry Road. Because the quarry is located south of his business, he is concerned about the proposed inability to turn left. The U-turn at the R-cut does not appear to be able to accommodate the dump trucks and tractor trailer trucks.
- Mr. Evans sells the gravel and sand which is loaded and taken away by tractor trailers and dump trucks. Access to and from his business for these large vehicles must be maintained.

Wednesday, March 22, 2017

While in the field on Tuesday, March 21st, I received a phone call, voice mail, and e-mail from various GDOT employees letting me know that there was a typo in the flyer. The typo has since been corrected. This morning a corrected flyer was sent to 3 individuals: Ezekial Pettway, Brenda Bloomer, and Alphonso Thomas. The erroneous flyer had previously been sent to them and so I sent them the revised flyer and let them know that time had been corrected. The updated e-mail chains can be found in Appendix 1 – Correspondence.

GDOT Office of Environmental Services | PIOH Summary of Comments

PI#(s): 0015090, County: Henry County

GDOT NEPA Planner: Michael Margut **Date Submitted:** 5/4/2017
Consultant Preparer (if applicable): Michelle McIntosh, Croy Engineering, LLC
GDOT Project Manager: Jason Mobley

Basic Meeting and Response Letter Info	
Meeting Date: 4/13/2017	Number of Attendees: 64
End of Comment Period: 4/24/2017	

Forms at the Meeting	*Forms or Letters Mailed to OES or OPD*	*Court Reporter Statements*	*Comments from OES's Website*
14	7	4	2*

*A commentor provided comments by 2 venues. The comments were combined for a total of 26 comments.

Disposition of Comments:

No. Opposed	*No. In Support*	*No. Uncommitted*	*Conditional*
0	7	7	12

Major Concerns:
The primary concerns indicated were with regard to the proposal of a raised median and the proposal for R-cuts that will allow for right-out turning movements only and will require u-turns. Other concerns included requests for traffic signals and environmental concerns relating to air and noise impacts.

Public Officials:
Ms. Dana Lemon, Transportation Board Member; Captain Henry Bratton, Henry County Police Department; Mayor Pro-Tem Anthony S. Ford, City of Stockbridge

Media:
Media representatives were not identified at the open house.

Comment Responses:
Responses to comments received will be provided by the project sponsor, Henry County.

Please find attached a PDF of all comments and the public official sign in sheet (or a link to the PDF) and a Word document of the draft response letter.

RE: Response to Comments Received from Public Information Open House
Rock Quarry Road Widening, Henry County
GDOT Project Identification #0015090

Dear Mr. Abrams:

Thank you for your comments concerning the proposed Rock Quarry Road Widening. We appreciate your participation and all of the input that was received as a result of the April 13, 2017 Public Information Open House (PIOH). Every comment received, including verbal comments provided to the court reporter and comments submitted online, will be made part of the project's official record.

A total of 64 people attended the PIOH. Of the 26 respondents who formally commented, 7 were in support of the project, 0 were opposed, 7 were uncommitted, and 12 expressed conditional support.

The attendees of the open house and those sending in comments within the comment period raised the following important questions and concerns. Henry County has prepared this one response letter that addresses all comments received so that everyone can be aware of the concerns raised and the responses given. Please find the comments summarized below (in *italics*) followed by our response.

- *Commenters expressed disappointment that a traffic signal is not currently planned for the intersections of Rock Quarry Road with Hospital Drive, Windsong Drive, Red Oak Road, Ashley Woods Apartments, or various business entrances located in the area of Nova Circle and Railroad Street.*

  Response: At this time, a traffic signal is not proposed at these intersections. A Traffic Engineering Study, which measures traffic volumes, pedestrian movements, and the physical characteristics of the roadway, is currently underway. It is undetermined, at this time, which intersections will meet the requirements for signalization.

- *Commenters expressed annoyance with R-cuts and U-turns, which they felt negatively impacted their subdivisions and/or businesses. One commenter asked where the R-cuts are planned along the corridor.*

  Response: The design shown at the PIOH reduces the opportunity for conflict and promotes efficient operations throughout the project corridor. A Restricted Crossing U-Turn (R-cut) intersection would reroute side-street left turn movements to the nearby U-turn. The separation of turning vehicles from through traffic would reduce delay, congestion, and the opportunity for crashes. U-turns will be designed to accommodate turning maneuvers for large trucks and school buses.

  As shown at the PIOH, R-cut intersections are proposed at Windsong Drive, Garden Walk, the hospice, Stonegate at Eagles Landing Apartments, Reeves Parkway, the concrete plant just north of Reeves Parkway, South Lee Street, and Nova Circle. R-cuts would be a more effective method of traffic control than a signal at these locations. Some of the benefits that R-cut intersections would provide to the traveling public include:

  - Drivers will only have to focus on traffic coming from one direction at a time.
  - Nationally, R-cuts have decreased fatal crashes by 70% and injury crashes by 42%.
  - Provides access to local businesses and commercial areas because the U-turns accommodate all movements.

- *A commenter from Windsong Plantation expressed concerns that the proposed R-cut (right out only) will affect access to the hospital from their sub-division.*

  Response: The R-cut at Windsong Drive will require drivers who are going to the hospital to take a right onto Rock Quarry Road, drive north approximately 1,200 feet, and make a U-turn to go south on Rock Quarry Road toward the hospital. Because the driver would not have to wait for a simultaneous break in both northbound and southbound traffic, the time difference is expected to be minimal and the opportunity for conflict is expected to decrease.

- *Commenters expressed annoyance with the proposed raised median.*

  Response: The design shown at the PIOH enables efficient operations throughout the project corridor and reduces the opportunity for accidents. It is GDOT policy to provide raised medians on multi-lane roadways with high turning volumes and an average daily traffic (ADT) of 24,000 vehicles for the design year. The projected traffic volumes for Rock Quarry Road indicate an ADT of over 30,000, well above the 24,000 threshold. The provision of raised medians on roadways such as Rock Quarry Road would reduce turning conflicts and crashes by up to 55 percent. The addition of the median would concentrate turning and crossing maneuvers at a limited number of intersections and would provide a physical barrier between opposing directions of travel. The provision of

a raised median would also provide a mid-way refuge for pedestrians and bicyclists crossing the roadway so that they would only have to focus on traffic coming from one direction at a time.

- *Commenters requested aesthetic improvements along the proposed corridor. Requests included median landscaping, lighting improvements, mast arm poles rather than standard signal poles, and aesthetic noise walls, if required.*

  At this time, the only proposed landscaping features would be the grassed strip between the edge of roadway gutter and the sidewalk/multi-use path. Since the project is still very early in the plan development process, this is subject to change as more coordination with Henry County, the City of Stockbridge, and GDOT takes place.

  Lighting improvements are not currently proposed as part of the improvements on Rock Quarry Road. Since the project is still very early in the plan development process, this is also subject to change as more coordination with Henry County, the City of Stockbridge, and GDOT takes place.

  It has not yet been determined whether or not noise walls would be incorporated into the proposed project. Therefore, the type of noise wall, if any, is still unknown. Since this comment was received at the PIOH, it will be considered at the appropriate stage of plan development.

- *Since the Rock Quarry Road Corridor and the SR 42 widening project both terminate at SR 138/North Henry Boulevard, one commenter requested that the scope of the project be extended to include intersection and sidewalk improvements on SR 138/North Henry Boulevard to accommodate the additional traffic from the proposed Rock Quarry Road widening and the proposed SR 42 widening.*

  Response: The purpose of the proposed project is to improve the capacity and operations of Rock Quarry Road. Although the proposed project would upgrade the existing signal at SR 138/North Henry Boulevard, there are no improvements proposed along SR 138/North Henry Boulevard as part of this project and there are currently no projects programmed by Henry County, the City of Stockbridge, or GDOT to improve that corridor. If you would like to recommend a project for programming, you may contact the Henry County and/or City of Stockbridge Departments of Planning.

- *Commenter requested that the southern terminus of the project be extended south to include improvements at Rock Quarry Road intersection with Eagles Spring Drive/North Park Court.*

  Response: The purpose of the proposed project is to improve the capacity and operations of Rock Quarry Road from the terminus of the existing multi-lane, divided section approximately 500 feet north of Eagles Spring Drive/North Park Court to SR 138/North

Henry Boulevard to provide a continuous, multi-lane, divided corridor from Eagles Landing Parkway to SR 138/North Henry Boulevard. Any improvements to the existing multi-lane, divided section of Rock Quarry Road would need to be programmed as a different project. If you would like to recommend a project for programming, you may contact the Henry County and/or City of Stockbridge Departments of Planning.

- *While some commenters requested crosswalks in general along the corridor, other commenters requested crosswalks specifically in the areas of the Georgia Power easement to provide access to the Reeves Creek Trail and in the area of Ashley Woods Apartments.*

  Response: Crosswalks consistent with GDOT and Americans with Disability Act (ADA) requirements will be provided at all intersections with existing or proposed traffic signals along the corridor. Currently, there are existing traffic signals at Banks Road and SR 138/North Henry Boulevard to provide for pedestrian crossings. In order to provide a pedestrian crossing in the area of the Georgia Power easement or Ashley Woods Apartments, a mid-block pedestrian signal would have to be provided that stops all vehicles in both directions. According to the Federal Highway Administration's Manual on Uniform Traffic Control Devices, approximately 20 pedestrians would need to cross Rock Quarry Road at these locations to warrant a mid-block pedestrian signal. Considering the projected pedestrian counts do not support this need, mid-block pedestrian signals are not proposed as part of the Rock Quarry Road widening project.

- *Commenters requested that the scope of the project be extended to include connectivity between the proposed sidewalks/multi-use trail on Rock Quarry Road and the Reeves Creek Trail (along the existing Georgia Power Easement) and parking for Reeves Creek Trail off of Rock Quarry Road.*

  Response: The purpose of the proposed project is to improve the capacity and operations of Rock Quarry Road. There are no improvements proposed to improve access to the Reeves Creek Trail as part of this project. Connectivity with the Reeves Creek Trail would require extending the multi-use trail approximately 650 feet east to Rock Quarry Road. Any such improvements would need to be programmed as a separate project through coordination between Henry County and the City of Stockbridge. In accordance with GDOT's Complete Streets policies, the currently programmed project is being designed to ensure that facilities can be added when a future need becomes evident.

- *Commenters with homes in the Gardens of Eagles Landing subdivision that back up to Rock Quarry Road requested a noise wall to reduce noise and air impacts, as well as to improve privacy affected by the proposed, extended edge-of-pavement.*

  Response: Air Quality and Noise Impact Studies have not yet been completed for this project. If noise impacts are identified, a Noise Wall Analysis will be conducted to consider the feasibility of mitigation measures, such as noise walls.

- *Commenters requested copies of various environmental documents for the proposed project, including the Environmental Assessment, the Traffic Analysis, the Air Quality Study, and the Noise Impact Study.*

  Response: The requested environmental studies are on-going at this time. Commenters requesting to see the studies will be provided copies once the studies have been completed and approved by the appropriate agencies. The requests have been added to the Environmental Commitments Table for the project and will be provided prior to the right-of-way acquisition phase of the project.

- *Will the wall at the Gardens at Eagles Landing sub-division be affected by the project?*

  Response: At this time, the project is still in the conceptual phase of the plan development process and it is uncertain as to whether or not the wall at Gardens at Eagles Landing sub-division will be affected. However, the design team will make every effort to avoid any impacts to the wall. As the project progresses into the final design and more specific design details become available, we will be able to determine what effects, if any, project implementation will have on the wall.

- *Commenter requested that businesses in the area be notified prior to construction and informed how construction will affect access to and from their business.*

  Response: Property owners along the corridor, particularly those whose driveways would be affected by construction, are normally made aware of the construction schedule during the right-of-way and easement acquisition stage of the project. Construction of the proposed project may create inconveniences to motorists, but construction activities will be conducted in a manner that would maintain access and minimize conflict with traffic.

- *One commenter requested that the speed limit be reduced along the project corridor. Another commenter requested that the speed limit be reduced specifically in the area of the new senior living facility development.*

  Response: Speed limit restrictions in Henry County are determined by the Henry County Commissioner of Roads and Revenues. Requests for speed limit modifications should be made with that office.

Again, thank you for taking the time to participate and for your comments. Community input is essential to these projects. Should you have further questions, comments or concerns, please call the Project Manager for Henry County, Chris Rideout, at 770-971-5407 or the Environmental Analyst, Michelle McIntosh, at the same telephone number.

Sincerely,

Roque Romero

CROY ENGINEERING Engineers Planners Surveyors

Summary of Level of Analysis Meeting with FHWA

To: Jason Mobley, Roque Romero-Muniz, Chris Rideout, Keisha Jackson, Krystal Stovall-Dixon, Chae Yi
CC: Project File
From: Michelle McIntosh
Date: August 7, 2017
Re: Widening of Rock Quarry Road, Henry County – P.I. #0015090

A meeting was held on Thursday, August 3, 2017 at 10:00am at the Georgia Department of Transportation General Office. The meeting was staffed by Chetna Dixon, Federal Highway Administration; Krystal Stovall-Dixon, PE, GDOT/Office of Program Delivery; Chae Yi, Henry County; Roque Romero-Muniz, Henry County; Chris Rideout, PE, Croy Engineering; Keisha Jackson, NEPA Specialist, Atkins; and Michelle McIntosh, NEPA Specialist, Croy Engineering.

The primary purpose of the meeting was to discuss the level of analysis (LOA) under the National Environmental Policy Act (NEPA) for the proposed widening and reconstruction of Rock Quarry Road. Handout materials including the draft project description, the draft need and purpose, the project location map, a summary of identified environmental resources and anticipated impacts, and the Summary of Comments Received at the PIOH were provided to Ms. Dixon prior to the meeting.

Led by Chris Rideout, the meeting began with an overview of the project's conceptual layout and proposed typical section. Michelle McIntosh then provided an overview of the environmental studies to date, all resources identified in the general project area, the anticipated impacts to the resources, the public involvement that has occurred to date, and public concerns that had been raised to date.

At that point, a general discussion was held regarding the required LOA for the project. The project team proposed that a Categorical Exclusion be prepared since anticipated environmental impacts are minimal. While agreeing that the team had done a good job minimizing environmental impacts to the greatest extent possible, Ms. Dixon was somewhat concerned about a Categorical Exclusion because widening projects are not specifically listed in 23 CFR 771.117(c) and due to concerns she had regarding the level of controversy.

Ms. Dixon stated that a written request should be provided to the FHWA requesting a specific level of documentation with respect to 23 CFR 771.117. It was agreed that the letter should be provided no later than August 11, 2017; however, Ms. Dixon would not be available for review the week of August 18th.

FOLLOW-UP INFORMATION AS OF AUGUST 10, 2017:

After the meeting with FHWA, while the above noted minutes were in review, the drafting of the written request for a Categorical Exclusion was begun. However, prior to completion, Ms. Dixon contacted Ms. Jackson via telephone stating that we should move forward with a Categorical Exclusion for this project. The record of phone conversation is attached.

Subject: 0015090, Henry County| CE Justification Statement

Hello: Chetna just called to inform me that we are to move forward with a CE submittal for this project and the no justification statement is needed. She indicated that we should submit whatever we feel is necessary. Chetna will follow up with Carla as well.

Michelle: I think we should submit a CE with an ICE discussion.

Subject: RE: Rock Quarry Road, Henry County, P.I. #0015090--Project Overview Information

Good Morning Carla,

Thank you for submitting the Summary of Environmental Findings for the above referenced project. It appears the proposed project could be cleared with a CE. An August 2, 2017 Overview of the Environmental Process to Date states, a commitment to one more stakeholder meeting with the Gardens at Eagles Landing Home Owner's Association and subdivision after the air and noise studies have been completed. However, we are not prepared to make a final decision at this time on the level of NEPA document for the above referenced project until after public involvement (PI) activities are completed on the project. We can revisit the level of NEPA document after PI activities are completed on the project. Please advise if you have any comments or questions.

Thanks,

Good morning, Chetna.

Attached are several documents that should help introduce you to the subject project. There is a brief overview, the draft need and purpose statement and draft minutes of the 7/27/2017 HOA meeting, the summary of comments from the April 12, 2017 PIOH, and the Rock Quarry Road project. Unfortunately, there is no federal project id number for this project in the information available to OES.

Intersection Summary

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary	
HCM 6th Ctrl Delay	21.0
HCM 6th LOS	C

Notes

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Unsignalized Delay for [EBR] is excluded from calculations of the approach delay and intersection delay.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

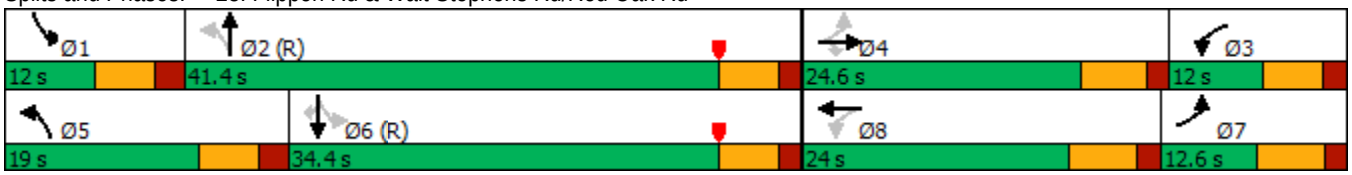
~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.



95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary	
HCM 6th Ctrl Delay	26.4
HCM 6th LOS	C

Notes

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Unsignalized Delay for [EBR] is excluded from calculations of the approach delay and intersection delay.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

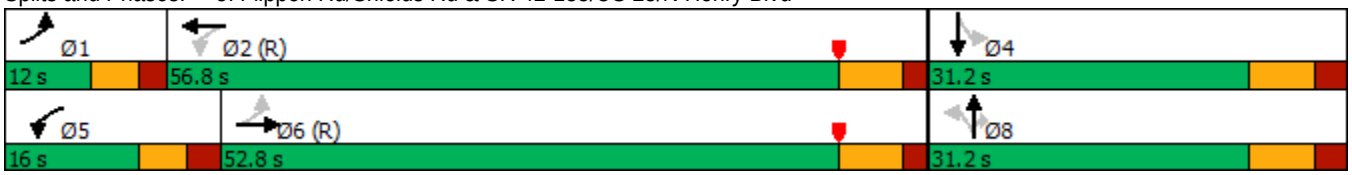
~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.



95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

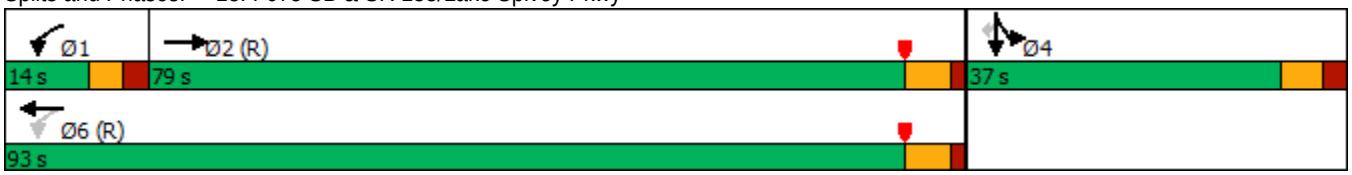
~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.



95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

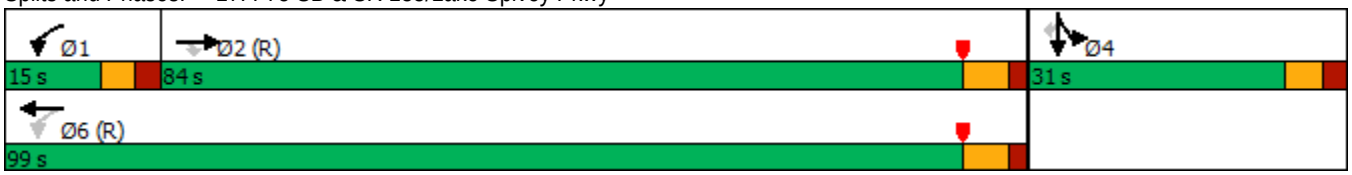
~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.



95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

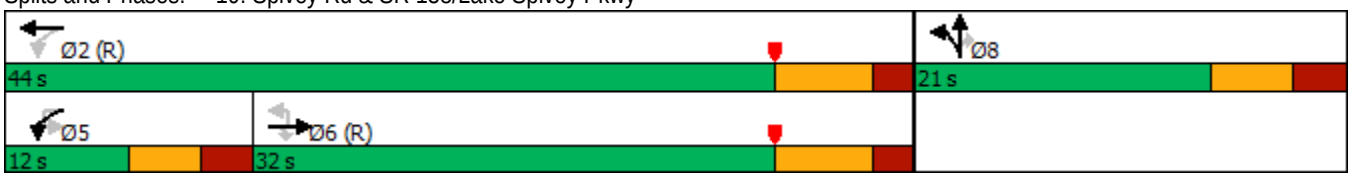
~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.



95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Notes

User approved volume balancing among the lanes for turning movement.

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Intersection Summary

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

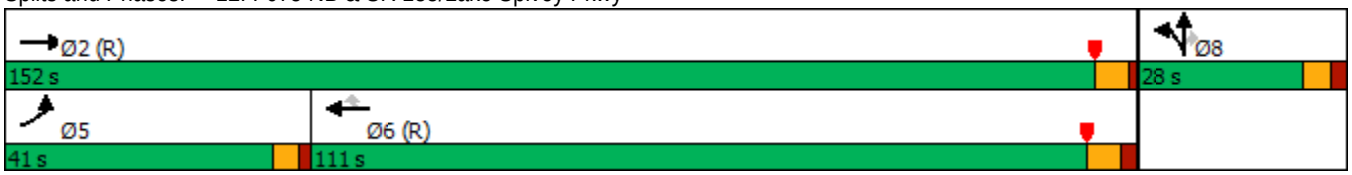
HCM 6th Ctrl Delay		22.8	
HCM 6th LOS		C	

Notes



* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Unsignalized Delay for [EBR] is excluded from calculations of the approach delay and intersection delay.

Intersection Summary

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.
