P: 678.795.3600

## Executive Summary

A new mixed-use development in the City of Atlanta is planned for the eight acres' site located west of Marietta Boulevard NW and east of Chattahoochee Avenue NW. The developed is scheduled to be completed by 2024. The proposed site consists of the following land uses:

- 660 multifamily units
- 262,496 square feet (sf) offices
- 36,240 sf retail
- 35,000 sf market
- 10,000 sf restaurant use
- 135 rooms hotel

The development site is located in the northwest quadrant of the City, west of I-75 and east of I-285. A new street, Bolton Market Drive, will be constructed within the site between Chattahoochee Ave and Marietta Blvd; it will provide vehicular access to all the parking areas and buildings on the site. In addition to the new street's intersections with Chattahoochee Ave and Marietta Blvd, there will be a drop-off/pick-up off-road space on Marietta Boulevard and another vehicular access intersection on Chattahoochee Avenue, both south of Bolton Market Drive. The zoning is changing from Industrial (I-I) to Mixed Use (MRC-2).

When completed, the development is expected to generate 440 AM and 369 PM weekday peak hour (of the adjacent street) new entering vehicular trips with 282 AM and 471 PM new exiting vehicular trips are expected on the existing external roadway. Daily, the development is expected to generate a total of 14,946 new vehicular trips before internal capture reductions, retail and restaurant uses pass-by reductions (total 125 in and 125 out in the PM peak hour) were applied), and the 7.5% modal split reduction was applied. Assuming the same proportion of peak hour internal capture and pass by trip reductions occur throughout the day, approximately 8,152 new vehicular trips will be generated on the external roadway network, with approximately 815 of these trips originating and terminating within the block containing the development with about 3,670 new vehicular trips toward and 3,670 trips leaving the development area each day.

The intersection capacity analyses assumed approximately 30% of residential and 40% of non-residential generated new trips are expected to use Marietta Blvd north of the site, while 30% of residential and 25% of non-residential are expected to use Marietta Blvd south of the site, 25% residential and 20% non-residential will use Chattahoochee Ave to/from east of the site, and 15% of both will use Chattahoochee Ave to Le Dawn Ln, Marietta Rd, and Bolton Rd to/from the west.

The following are the recommendations from the study:

### Mitigation for Existing Conditions (Pre-existing deficiencies)

- Add westbound left turn lane on Chattahoochee Ave at Marietta Blvd

### Mitigation for No-Build Conditions (Includes Pre-existing plus Background Growth)

- Same as for existing conditions

### Mitigation for Build Conditions (Includes Pre-existing plus Background Growth plus Site Traffic)

- Same as for existing conditions

## A. Introduction

A new mixed-use development in the City of Atlanta containing 660 multifamily units, 262,496 square feet (sf) offices, 36,240 sf retail, a 35,000 sf market, 10,000 sf restaurant use, and a 135 rooms hotel is planned for the eight acres' site located west of Marietta Boulevard NW and east of Chattahoochee Avenue NW to be completed by 2024. The development site is located in the northwest quadrant of the City, west of I-75 and east of I-285. A new street, Bolton Market Drive, within the site will be constructed between Chattahoochee Avenue and Marietta Blvd providing vehicular access to all the parking areas and buildings on the site. In addition to the new street's intersections with Chattahoochee Ave and Marietta Blvd there will be a drop-off/pick-up off-road space on Marietta Boulevard and another vehicular access intersection on Chattahoochee Avenue, both south of Bolton Market Drive. The zoning is changing from Industrial (I-I) to Mixed Use (MRC-2).

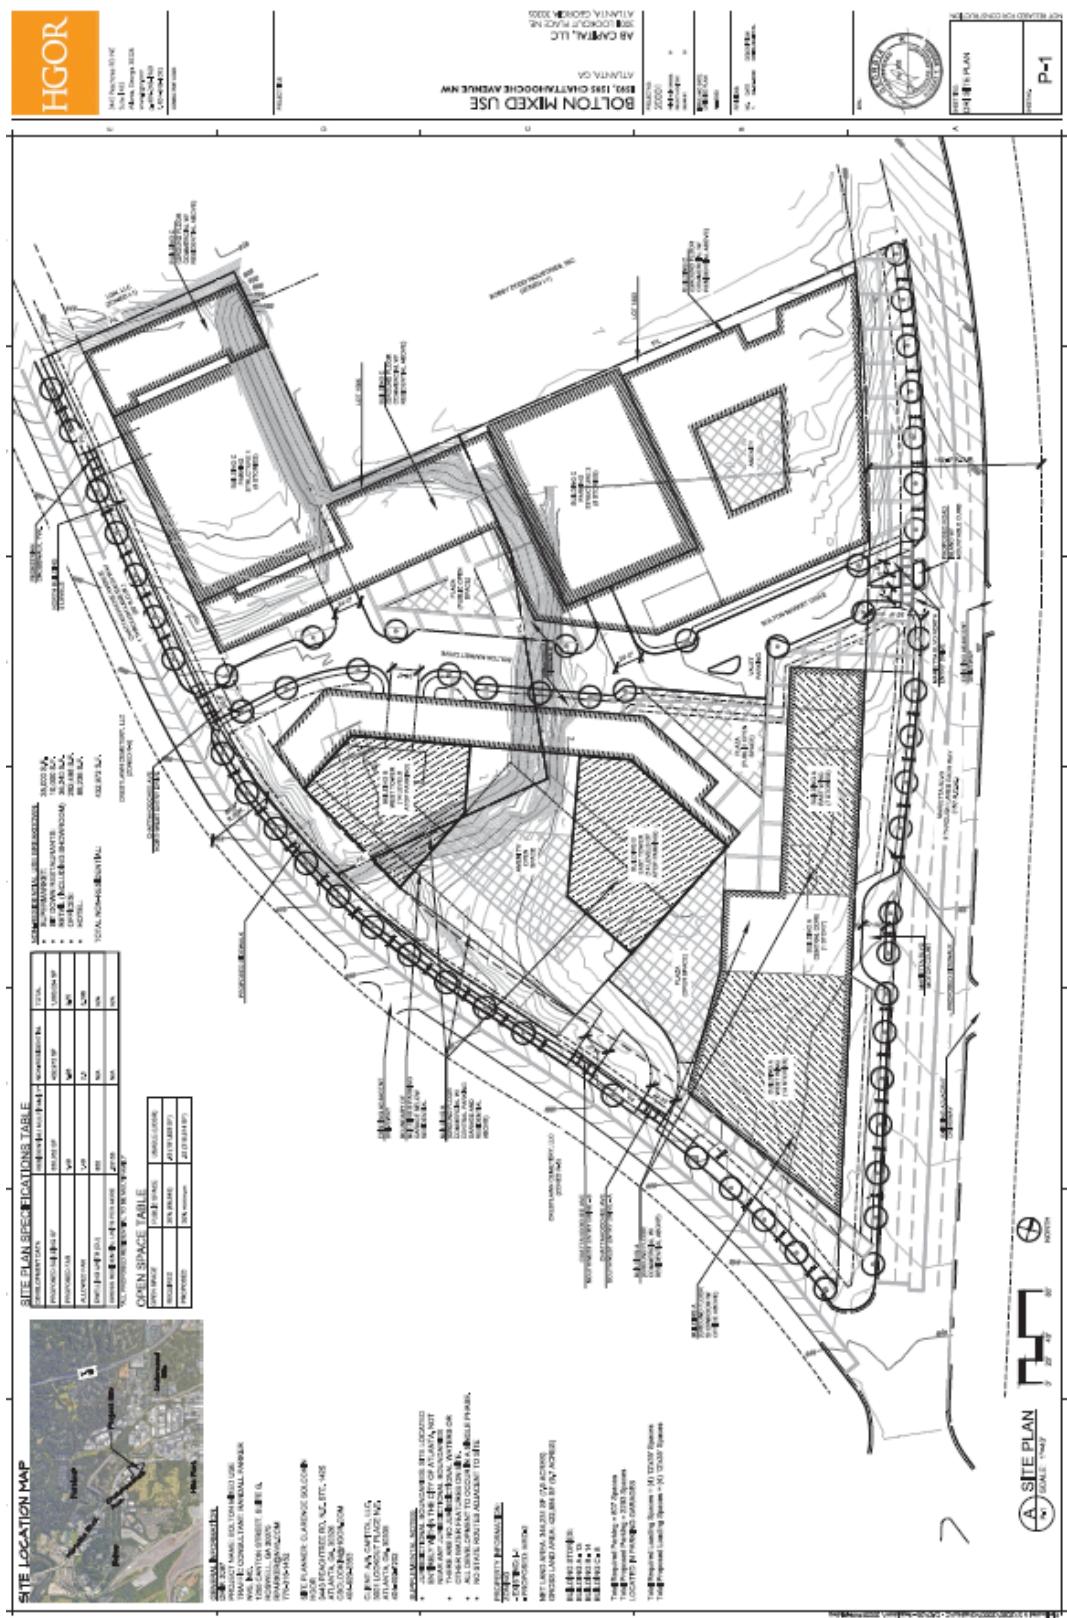

The purpose of this study is to identify the traffic impacts associated with the development – both existing traffic, future background growth traffic, and full future traffic and to assess if any mitigation is needed. The traffic impact study analyzes the levels of service at the development access points. Figure 1 shows the site location and Figure 2 shows the layout of the site in the northwest corner of Marietta Blvd and Chattahoochee Avenue. A copy of the site plan is included in the Appendix.

This report summarizes the data collected, projected traffic at the study locations, analysis of traffic impacts including level of service (LOS), turn lane analysis, and conclusions from the analysis.

## Figure 2. Site Layout

## Traffic Impact Study for DRI 3097 Bolton Mixed Use in Atlanta, GA

NIV5

## B. Proposed Development Description

### B.1. Phasing

The development is planned to be completed in a single phase by 2021

### B.2. Transportation Facilities and LOS Standards

**Marietta Boulevard** is a four-lane, 45 mph minor arterial that connects I-285 with west Midtown.

**Chattahoochee Avenue** is a two-lane, major collector east of Marietta Boulevard and a local road west of Marietta Boulevard. It serves as a connection to Howell Mill Road and ultimately to I-75.

**Bolton Place** is a two-lane private road that will link Marietta Boulevard with Bolton Drive.

**Coronet Way** is a two-lane local road that serves as a connection and possible cut-thru to Bolton Rd northwest of the study area.

**Moores Mill Road** is a local two-lane road between Marietta Blvd and I-75.

**Bolton Road** is a local two-lane road between SR 280 and Coronet Way.

**MacArthur Boulevard** is a local two-lane road running west from Chattahoochee Ave to a dead end.

LOS D will be considered the minimum standard unless existing conditions are lower.

### B.3. Transit

There are MARTA bus routes along Marietta Blvd and near the site.

### B.4. Pedestrian and Bicycle Facilities

There are sidewalks along Marietta Blvd adjacent to the site. There are no bicycle facilities adjacent to the site.

## B.5. Traffic Volumes

Traffic counts at the first four Marietta Blvd intersections were collected on Thursday, April 18, 2018 while public schools were in session. These counts were then increased by 1.3% annually for two years to approximate the existing 2020 typical volumes. From these counts, the peak hour for the AM turning movements was 7:30 to 8:30 AM and the peak hour for the PM turning movements was 4:30 to 5:30 PM at the study intersections. Peak hour turning movement counts collected on November 6, 2019 were provided for the intersections Chattahoochee Ave at Collier Rd and Chattahoochee Ave at Carroll Dr. The volumes were adjusted for 6 months' growth at the same 1.3% annually and the Carroll Dr volumes were used with the previously collected and adjusted April 2018 Marietta Blvd and Chattahoochee Ave counts to estimate the Marietta Blvd at Carroll Dr volumes. Peak hour turning movement counts collected on Tuesday, September 16, 2014 at the intersections of Bolton Rd at Marietta Rd and at Marietta Blvd were increased by 3% to estimate the existing traffic volumes (the 2014 and 2019 Bolton Rd at Marietta Blvd counts were compared and showed a less than 0.5% annual growth rate increase on Bolton Rd). Southbound Marietta Rd AM volumes were changed from none counted to match complementary PM volumes, as requested.

### Study Intersections:

1. Marietta Blvd & Bolton Place (to be signalized)
2. Marietta Blvd & Coronet Way (signalized)
3. Marietta Blvd & Publix Driveway (signalized)
4. Marietta Blvd & Chattahoochee Ave (signalized)
5. Marietta Blvd & Carroll Dr (signalized)
6. Chattahoochee Ave & Collier Rd (signalized)
7. Marietta Rd and Bolton Rd
8. Bolton Market Drive on Marietta Blvd
9. Bolton Market Drive on Chattahoochee Ave
10. New South Site Access on Marietta Blvd
11. New Southwest Site Access on Chattahoochee Ave

Figures 3 and 4 show the study intersection existing (2020) peak hour turning movement volumes for the AM and PM peak hours, respectively. A 24-hour bidirectional vehicular count was collected on Marietta Blvd on Thursday, April 18, 2018. There were 31,024 vehicles counted, including 1,035 trucks with over three (3) axles in both directions. The count worksheets are included in the Appendix.

Figure 3: Existing Volumes – AM Peak

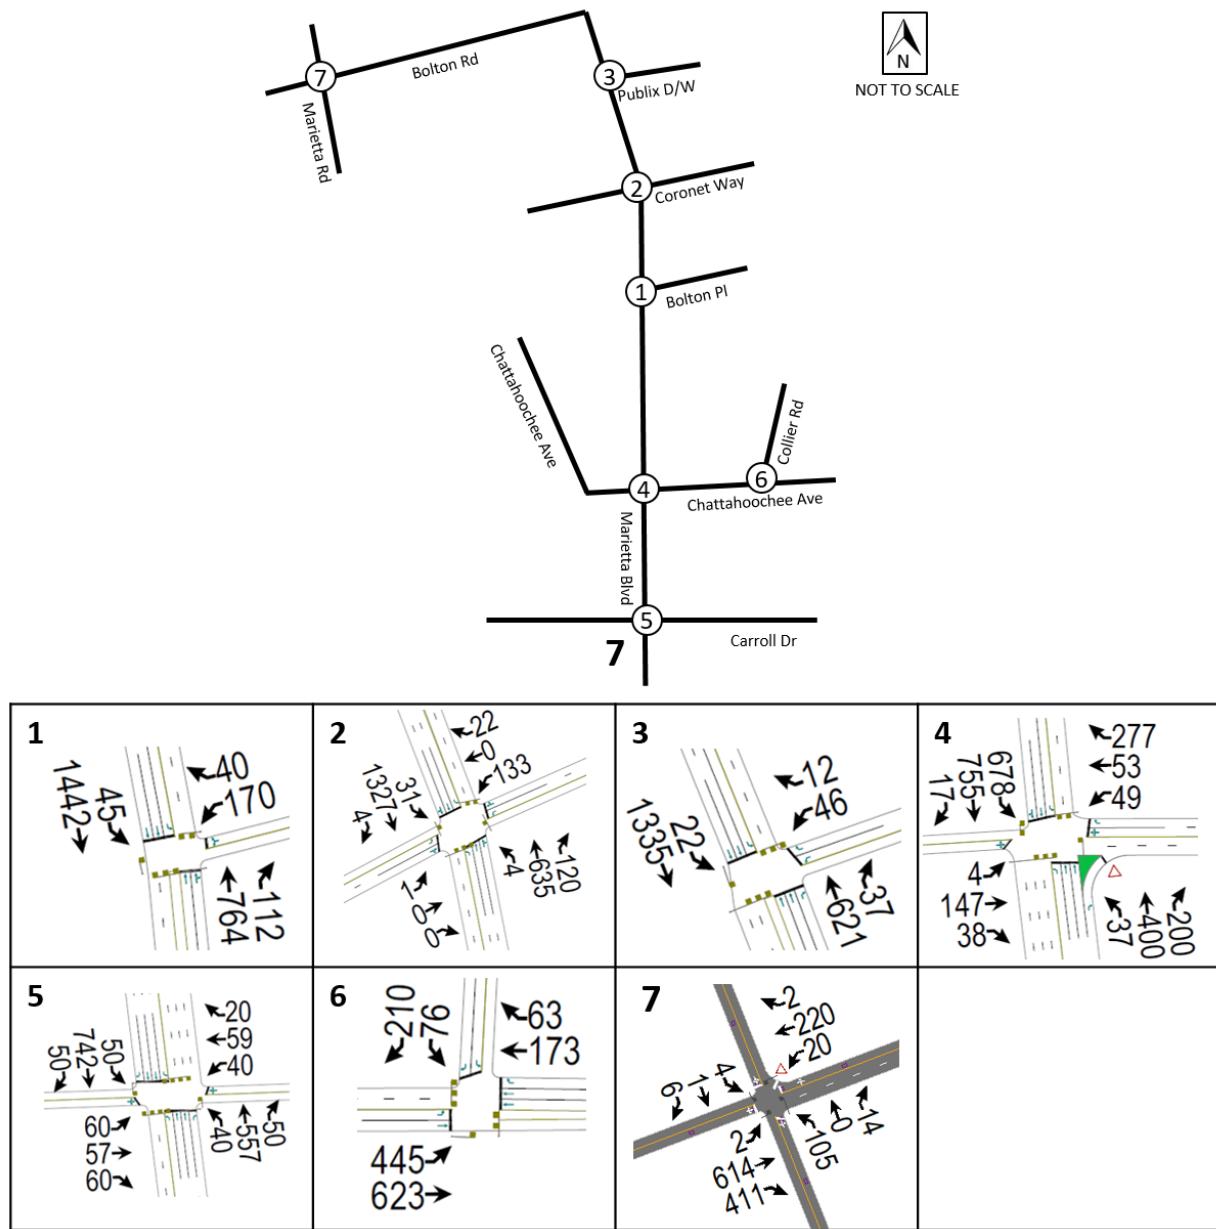

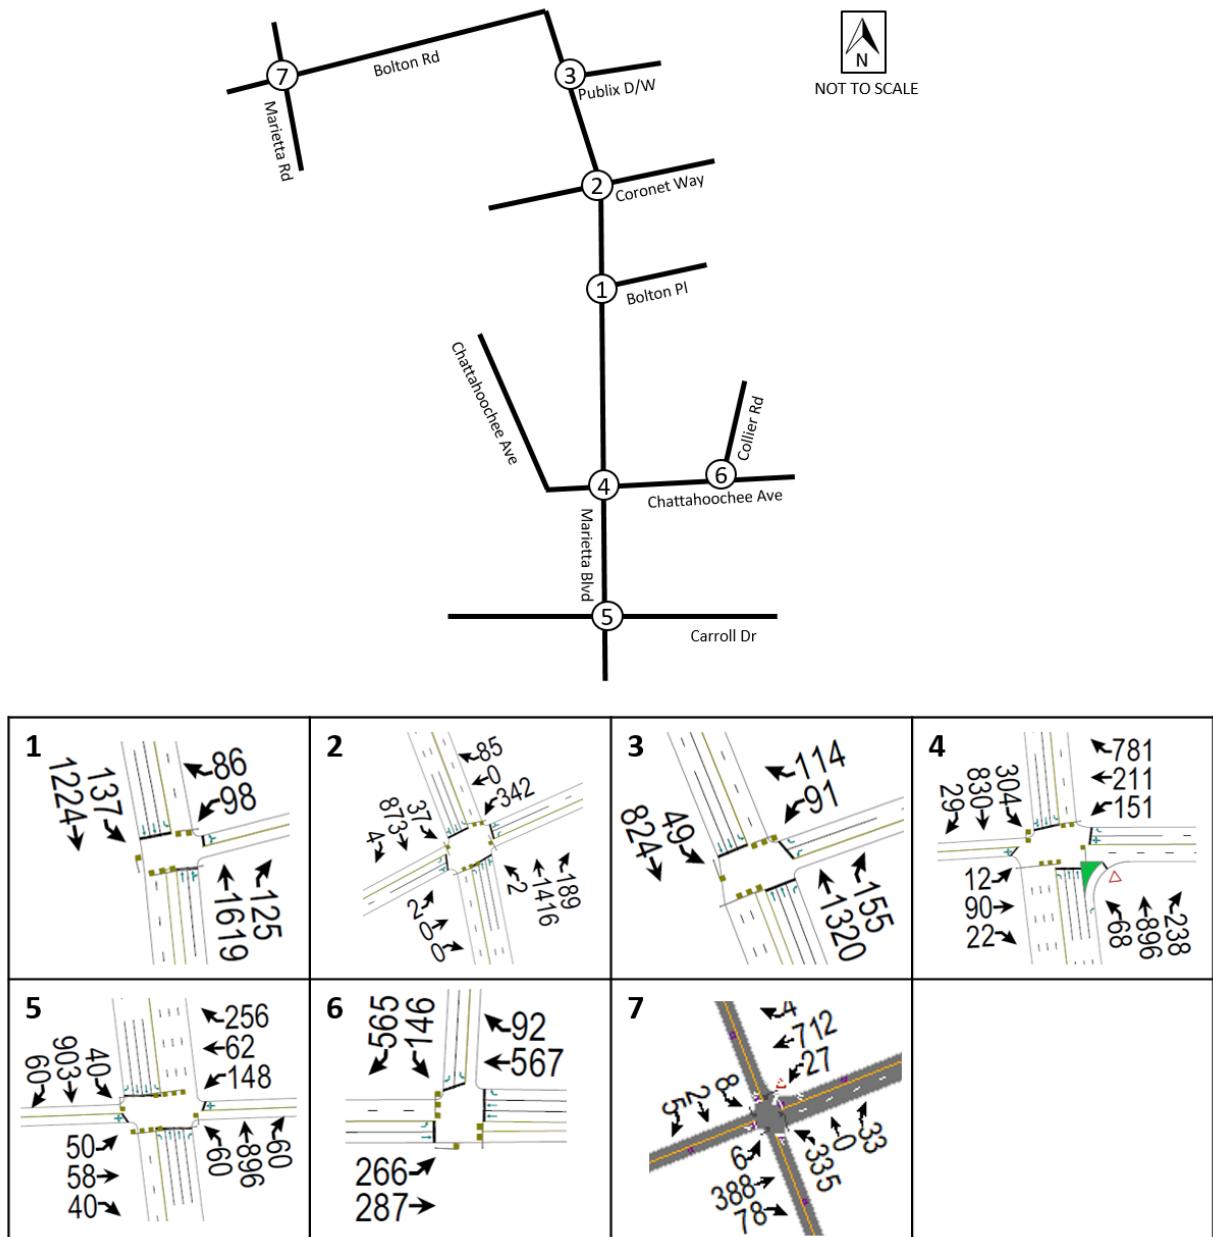

Figure 4: Existing Volumes – PM Peak

## C. Future Conditions

### C.1. No Build (Background) Growth

The existing volumes were increased by 1.3% annually (for a conservative growth estimate) for four (4) years for the No Build (background) traffic volumes as shown in Figures 5 and 6.

### C.2. Planned/programmed Improvements

According to ARC's Transportation Improvement Program, the Regional Transportation Plan (Atlanta Region's Plan), GDOT's construction work programs, City of Atlanta and Fulton County's programmed projects, and the GA STIP, no projects are programmed or planned to be completed within the study area.

The existing lane configurations and existing and planned traffic control (Bolton Place at Marietta Blvd to be signalized by 2021) at the study intersections were used for the analyses.

Figure 5: No-Build Traffic Volumes – AM Peak

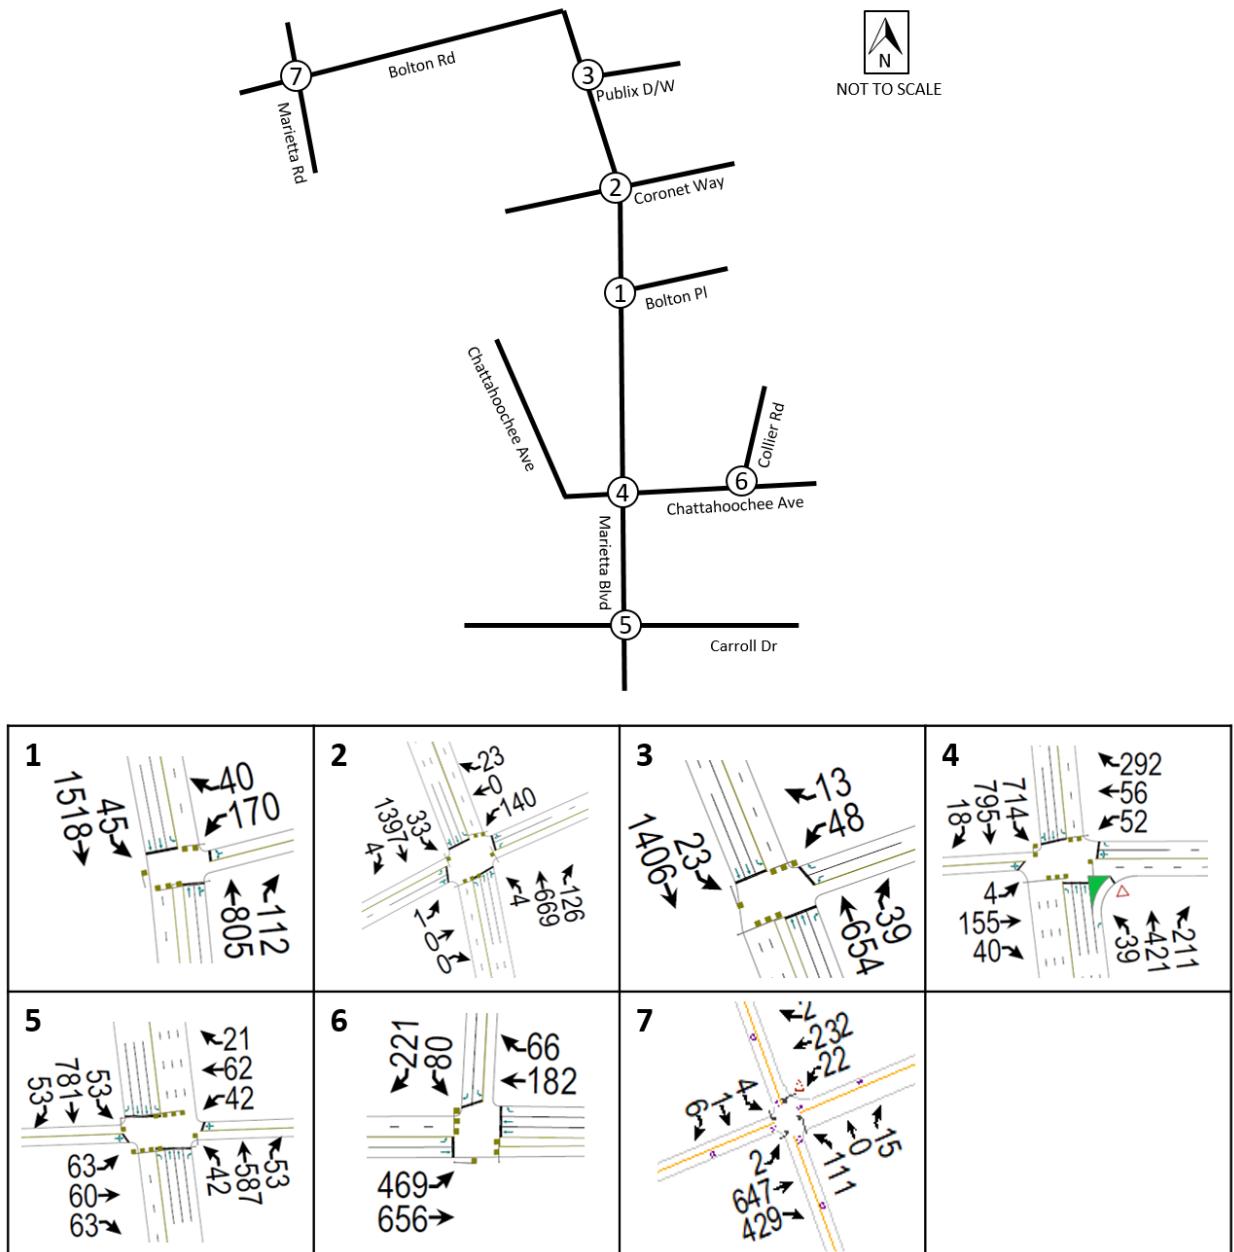

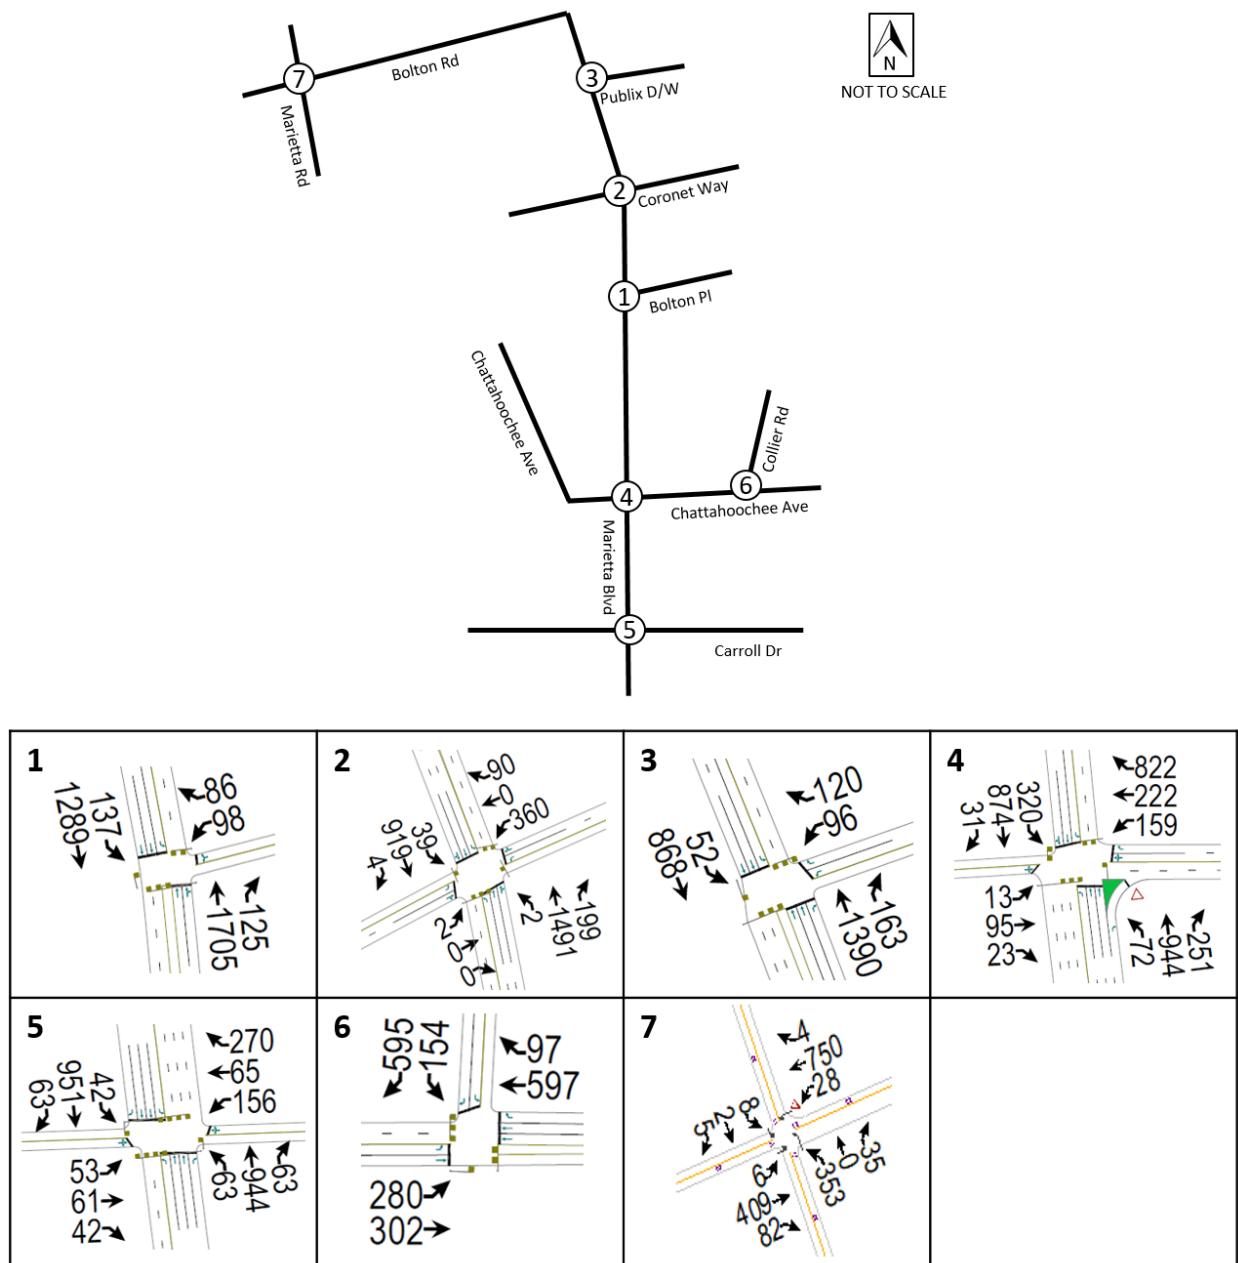

Figure 6: No-Build Traffic Volumes – PM Peak

### C.3. Project Trip Generation

Table 1 summarizes the project trip generation calculated using the Institute of Transportation Engineers' (ITE) Trip Generation Manual, 10th Edition, 2017.

**Table 1: Project Trip Generation**

Land Use (ITE LUC) Density		Total	In	Out
Apartments (221) 660 Dwelling Units	Daily	3,596	1,798	1,798
	AM Peak Hour	218	57	161
	PM Peak Hour	271	165	106
Hotel (310) 135 Rooms	Daily	1,098	549	549
	AM Peak Hour	62	37	25
	PM Peak Hour	75	38	37
Office (710) 262,496 sf	Daily	2,706	1,353	1,353
	AM Peak Hour	273	235	38
	PM Peak Hour	285	46	239
Retail (820 & 850) 71,240 sf	Daily	6,708	3,354	3,354
	AM Peak Hour	304	185	119
	PM Peak Hour	613	305	308
	PM Pass-by trips	-216	-108	-108
Restaurants (931) 10,000 sf	Daily	838	419	419
	AM Peak Hour	8	4	4
	PM Peak Hour	78	52	26
	PM Pass-by trips	-34	-17	-17
Total New Project Trips within the site	Daily	14,946	7,473	7,473
	AM Peak Hour	865	518	347
	PM Peak Hour	1,322	606	716
Internal Capture within the Site	AM Peak Hour	-84	-42	-42
	PM Peak Hour	-414	-207	-207
Total New Project Trips (after Internal Capture Reduction)	AM Peak Hour	781	476	305
	PM Peak Hour	908	399	509
New External Vehicular Trips (after 7.5% Modal Split Reduction)  (after Bypass trips reductions)		11,542	5,771	5,771
	AM Peak Hour	722	440	282
	PM Peak Hour	859	369	471
	PM Peak Hour	609	244	346
Net New Trips at Existing Intersections	Daily	10,388	5,194	5,194
	AM Peak Hour	650	396	254
	PM Peak Hour	548	228	320

Internal capture between different land uses within the site were calculated using the ITE Trip Generation Manual criteria (Appendix includes worksheets) to reduce the number of new external trips.

Pass-by reduction of trips on the external roadways for the PM peak hour (but not at the site driveways' entering and exiting trips) for the retail and restaurants was applied (27% of the new project trips and approximately 4.5% of the 2,779 existing trips counted on Marietta Blvd during the PM peak hour).

In addition, the agreed upon 7.5% modal split reduction was applied to calculate the number of new vehicular trips expected at the external study intersections.

Within the same block as the development, roughly bounded by Le Dawn Ln and to the north, Chattahoochee Ave to the west and south, and Liberty Parkway to the east and north, the numerous new residential developments and the Marietta Mixed Use Development (DRI #2929) either planned or under construction at the time of the existing traffic counts collection are expected to absorb approximately 10% of the new external vehicular trips at site access intersections on Chattahoochee Ave and at the intersections of Bolton Place and Bolton Dr with Marietta Blvd within the block. For these analyses, these trips were included in the site driveway turning movement volumes but not in the existing external study intersections volumes.

#### C.4. Trip Distribution and Assignment

The intersection capacity analyses assumed approximately 30% of residential and 40% of non-residential generated new trips are expected to use Marietta Blvd north of the site, while 30% of residential and 25% of non-residential are expected to use Marietta Blvd south of the site, 25% residential and 20% non-residential are expected to use Chattahoochee Ave to and from east of the site, and 15% of both to use Chattahoochee Ave, Le Dawn Ln, Marietta Rd, Bolton Rd, I-285 and I-20 to and from the west. See figure below: Figures 4 & 5 show the project trips and the Build volumes

Figure 7: Site Distribution

Figure 8: Project Trips – AM Peak

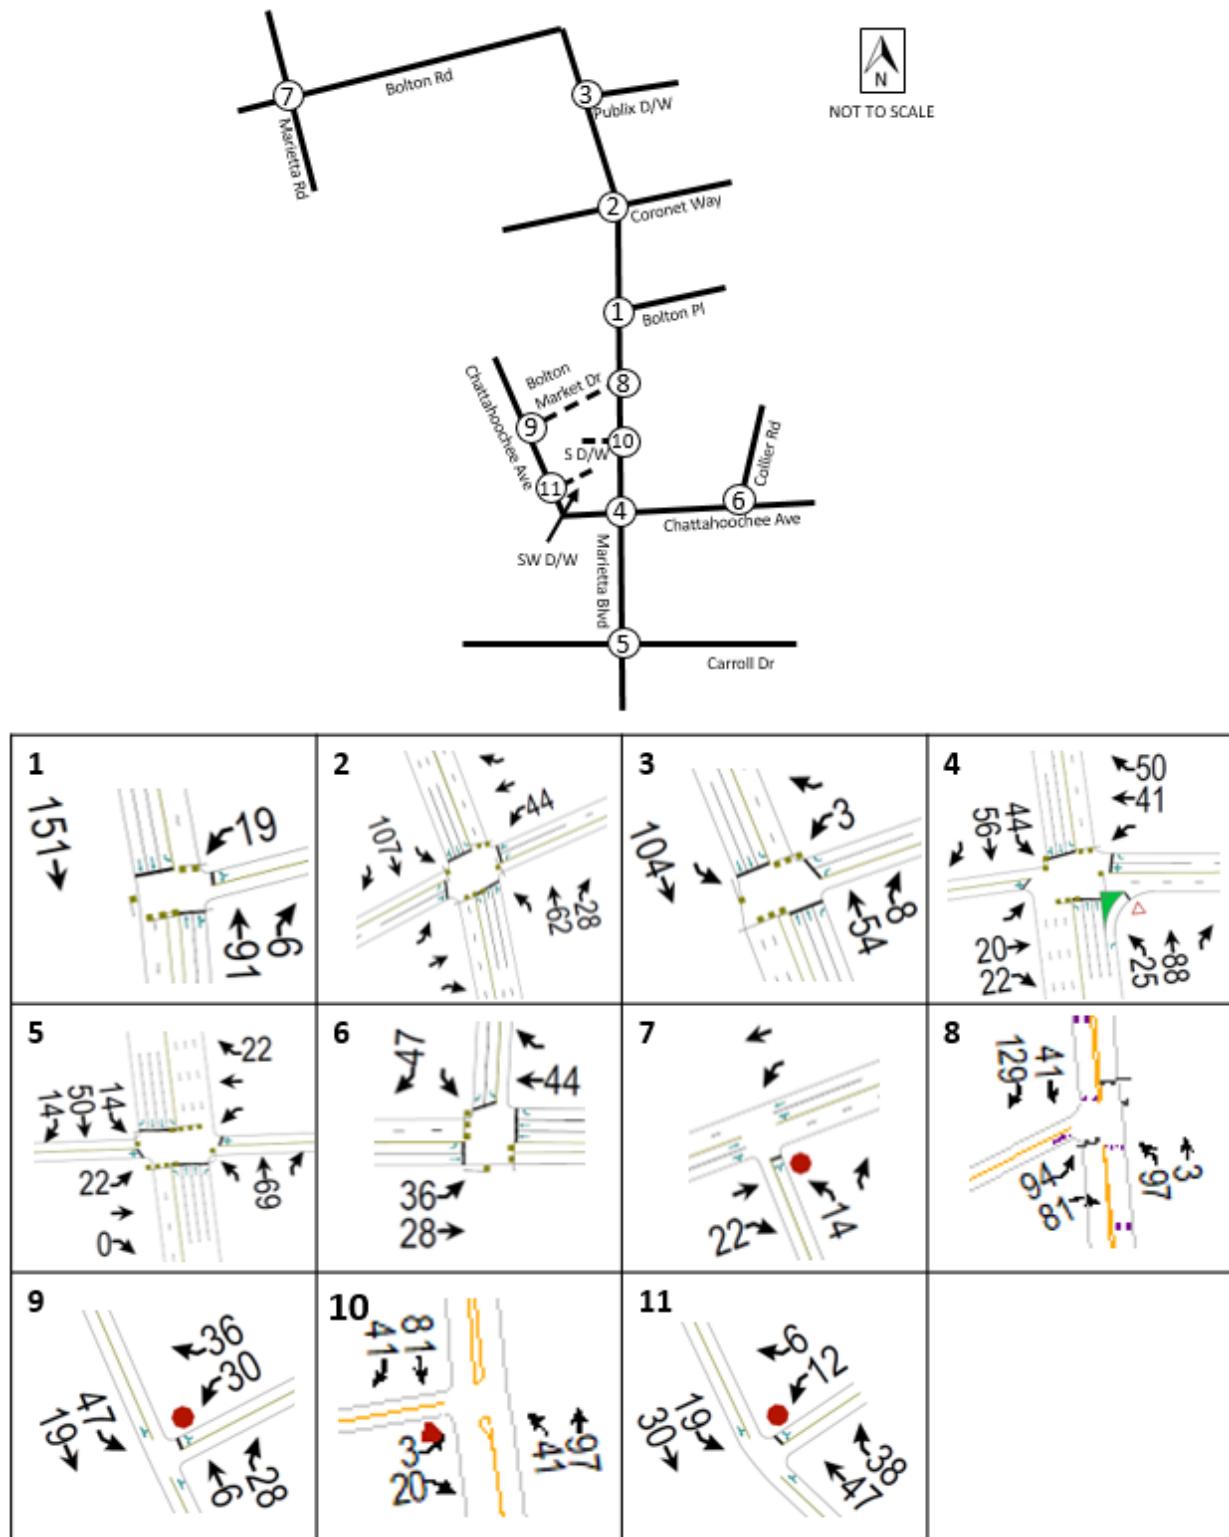

Figure 9: Project Trips – PM Peak

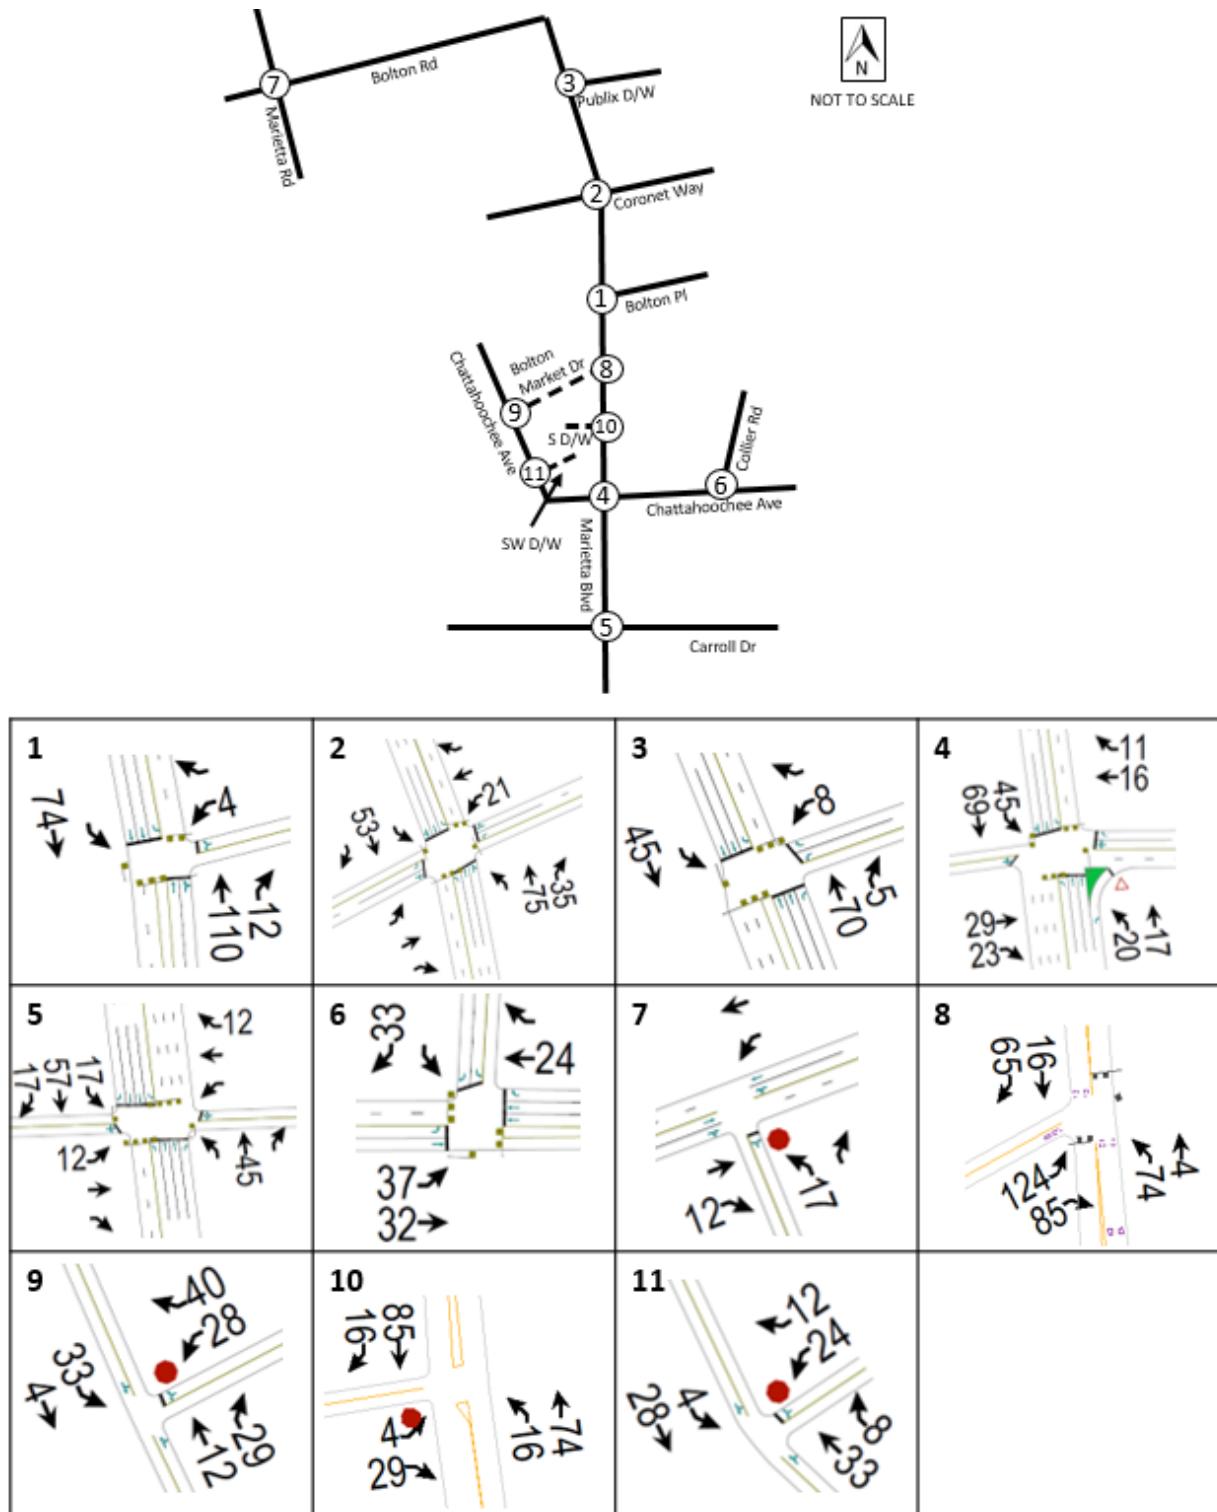

Figure 10: Build Traffic Volumes – AM Peak

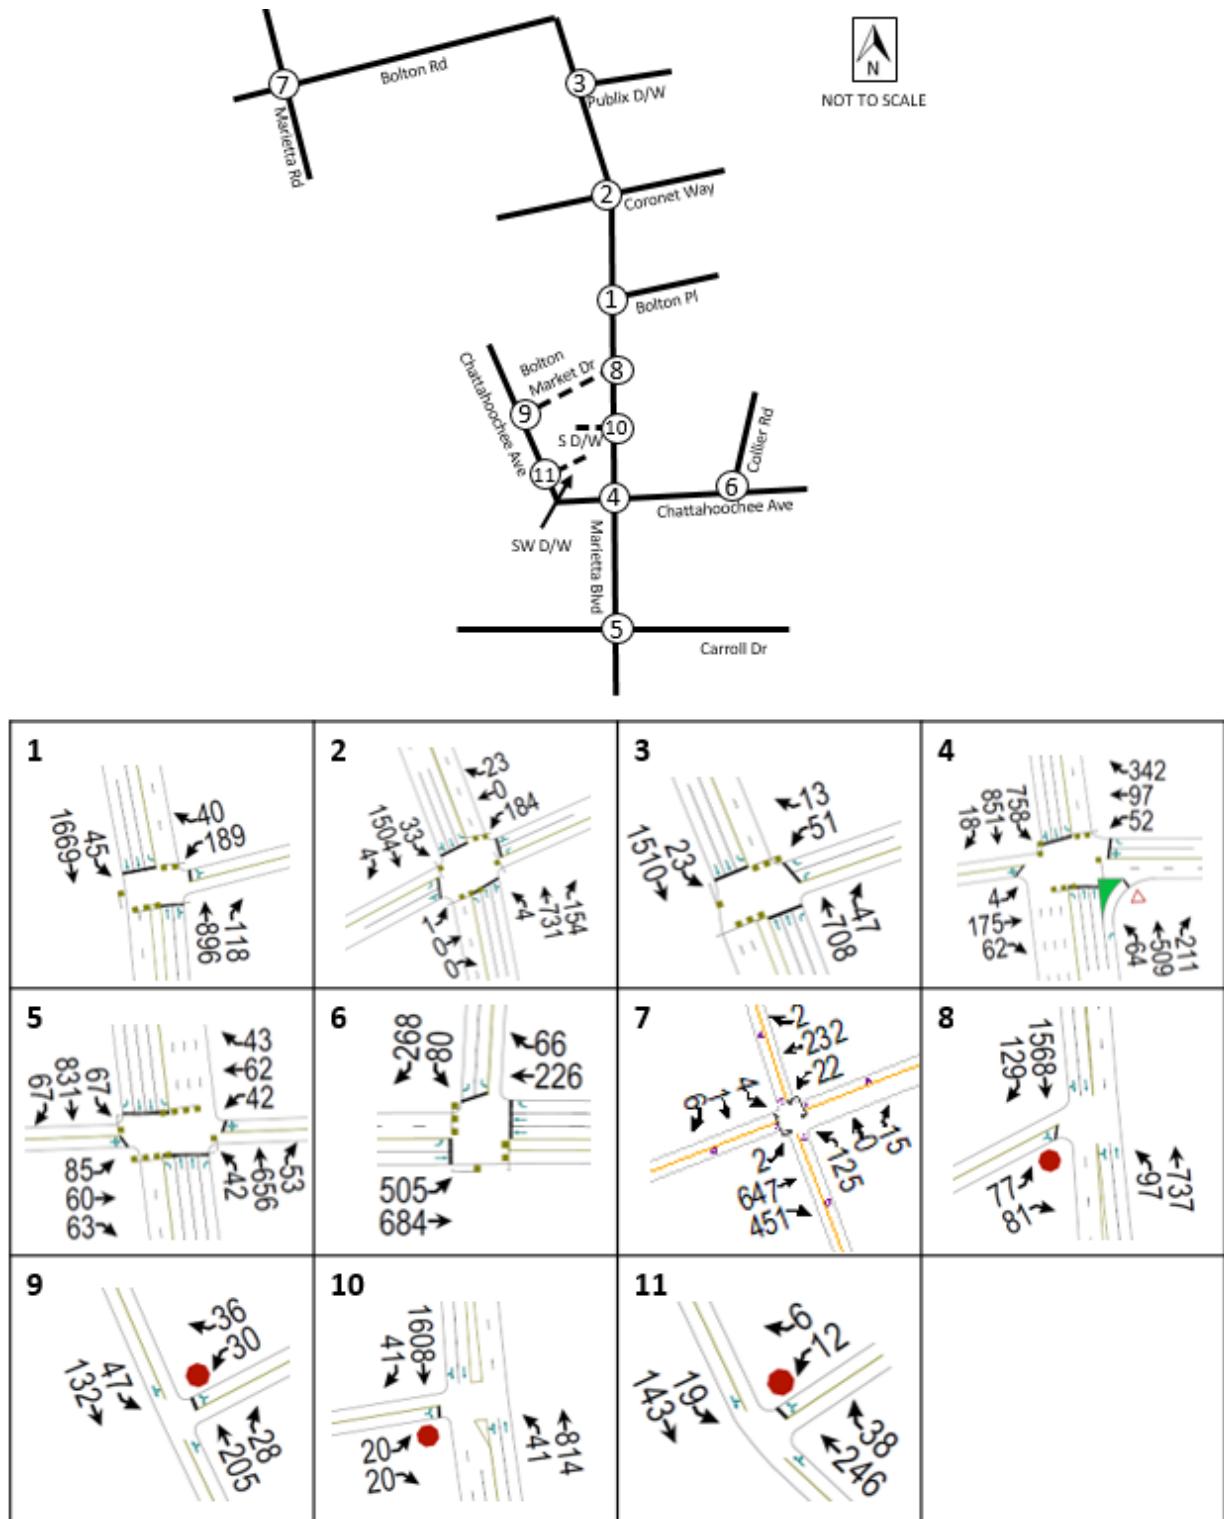

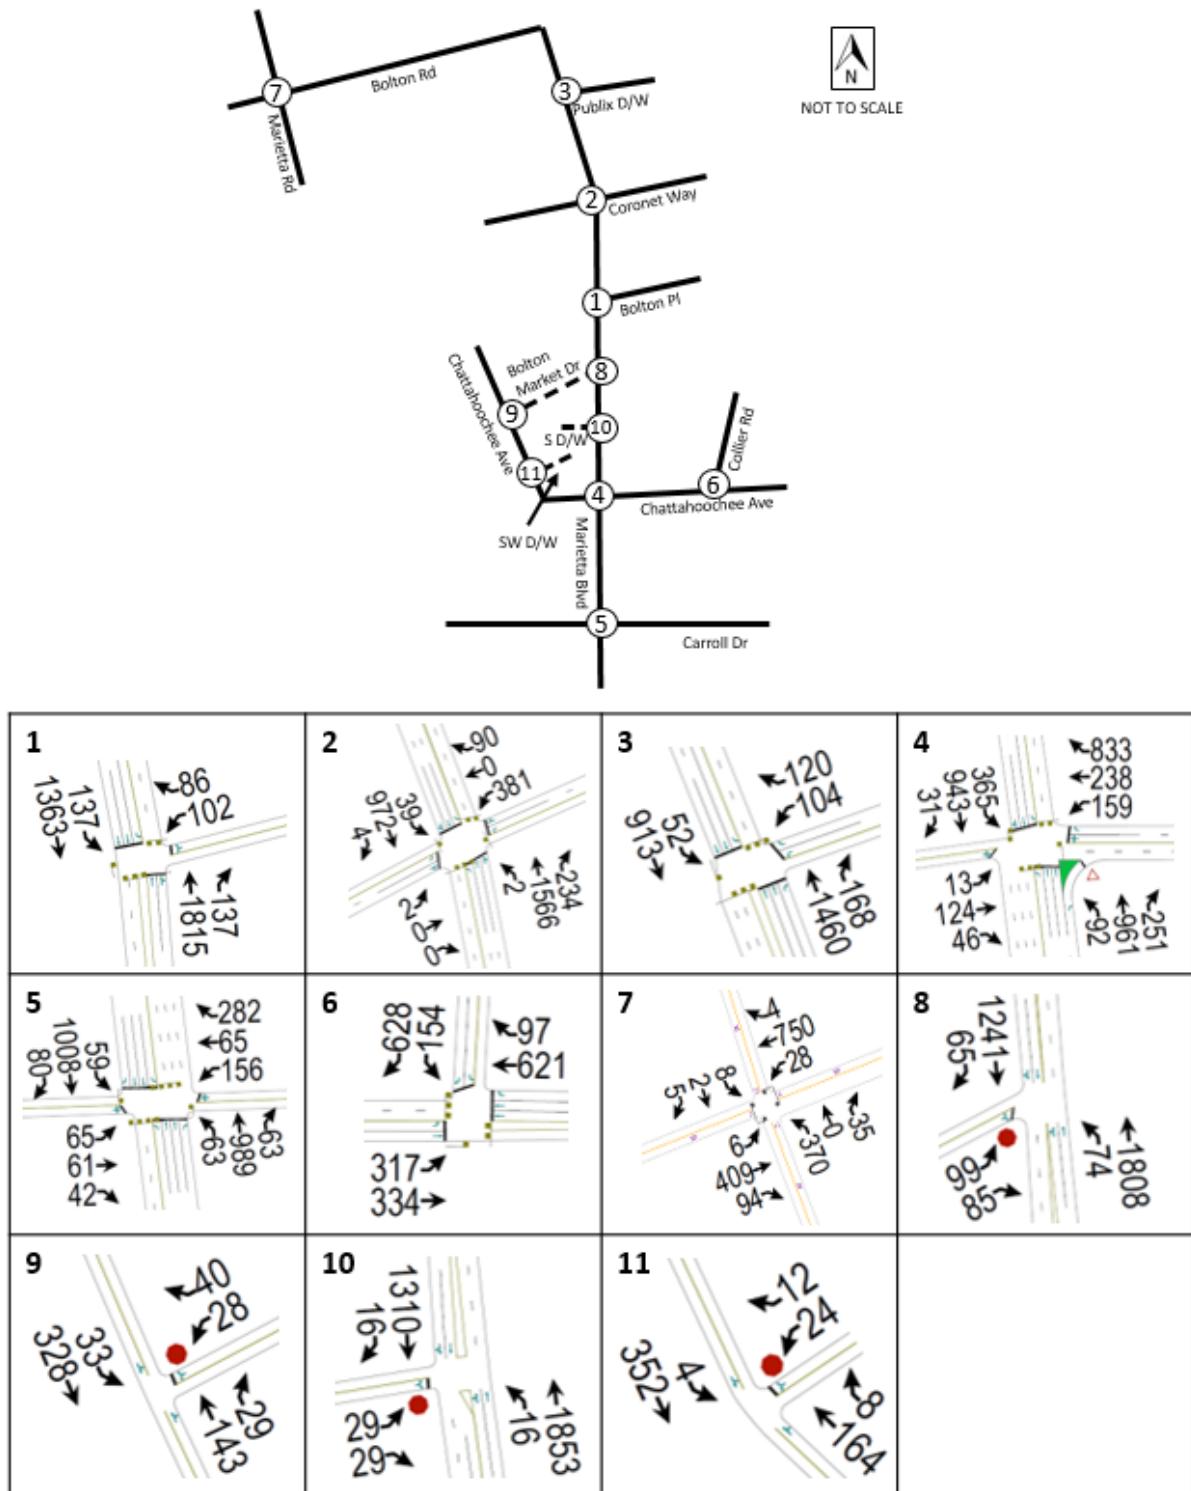

Figure 11: Build Traffic Volumes – PM Peak

## D. Traffic Impact Analyses

The analysis in each of the scenarios for the study was performed using the traffic analysis software Synchro® 10. Average vehicular delays are calculated and reported as Levels of Service (LOS) as defined by the Highway Capacity Manual (HCM). Worksheets are included in the Appendix.

### D.1. Existing Capacity Analysis

The results of the Existing Traffic Volumes' capacity analysis are shown in Table 2.

**Table 2: Existing Capacity Analysis**

Intersection	Control	Movement	AM		PM	
			Delay (s)	LOS	Delay (s)	LOS
Bolton Place at Marietta Blvd	Signal	Overall	9.0	A	0.7	A
Coronet Way at Marietta Blvd	Signal	Overall	10.6	B	13.5	B
Publix Dr at Marietta Blvd	Signal	Overall	5.1	A	10.9	B
Chattahoochee Ave at Marietta Blvd	Signal	Overall	16.0	B	87.3	F
	With WBLT Ln	Overall	15.8	B	26.4	C
Carroll Dr at Marietta Blvd	Signal	Overall	9.9	A	18.6	B
Chattahoochee Ave at Collier Rd	Signal	Overall	17.7	B	23.8	C
Marietta Rd at Bolton Rd	Signal	Overall	10.4	B	13.9	B

Most of the study intersections operate adequately with the existing lane configurations and existing or planned control (Bolton Place at Marietta Blvd to be signalized by 2021) for existing traffic volumes. However, a modification at the intersection of Chattahoochee Ave and Marietta Blvd to provide a dedicated westbound left-turn lane was identified to provide adequate existing operations in the PM peak hour..

## D.2. No-Build Capacity Analysis

The results of the No-Build capacity analysis are shown in Table 3.

**Table 3: No-Build Capacity Analysis**

Intersection	Control	Movement	AM		PM	
			Delay (s)	LOS	Delay (s)	LOS
Bolton Place at Marietta Blvd	Signal	Overall	7.0	A	4.1	A
Coronet Way at Marietta Blvd	Signal	Overall	5.9	A	15.7	B
Publix Dr at Marietta Blvd	Signal	Overall	5.6	A	11.8	B
Chattahoochee Ave at Marietta Blvd	Signal	Overall	14.7	B	96.0	F
	With WBLT Ln	Overall	11.3	B	29.9	C
Carroll Dr at Marietta Blvd	Signal	Overall	10.4	B	19.9	B
Chattahoochee Ave at Collier Rd	Signal	Overall	13.9	B	25.2	C
Marietta Rd at Bolton Rd	Signal	Overall	12.0	B	16.5	B

Most of the study intersections are expected to operate adequately with the existing lane configurations and existing or planned control (Bolton Place at Marietta Blvd to be signalized by 2021) for No-Build traffic volumes. However, a modification at the intersection of Chattahoochee Ave and Marietta Blvd to add a westbound left-turn lane was identified to provide adequate operations in the 2024 PM peak hour without the project traffic..

### D.3. Build Conditions Capacity Analysis

The results of the Build conditions intersection capacity analysis are shown in Table 5.

**Table 4: Build Capacity Analysis**

Intersection	Control	Movement	AM		PM	
			Delay (s)	LOS	Delay (s)	LOS
Bolton Place at Marietta Blvd	Signal	Overall	11.4	B	18.1	B
Coronet Way at Marietta Blvd	Signal	Overall	6.9	A	20.9	C
Publix Dr at Marietta Blvd	Signal	Overall	5.9	A	17.3	B
Chattahoochee Ave at Marietta Blvd	Signal	Overall	20.0	C	83.3	F
	With WBLT Ln	Overall	17.0	B	34.9	C
Carroll Dr at Marietta Blvd	Signal	Overall	11.4	B	25.6	C
Chattahoochee Ave at Collier Rd	Signal	Overall	18.3	B	34.6	C
Marietta Rd at Bolton Rd	Signal	Overall	13.2	B	17.7	B
Bolton Market Drive at Marietta Blvd	Side Street Stop	NB	18.7	B	0.5	A
		SB	0	A	0	A
		EB	2147	F	1766	F
	With Signal	Overall	3.8	A	6.5	A
Bolton Market Drive at Chattahoochee Ave	Side Street Stop	NB	0	A	0	A
		SB	7.8	A	7.6	A
		WB	11.1	B	11.2	B
New South Site Access on Marietta Blvd	Side Street Stop	NB	15.8	C	12.4	B
		SB	0	A	0	A
		EB	34.6	D	32.7	D
New Southwest Site Access on Chattahoochee Ave	Side Street Stop	NB	0	A	0	A
		SB	7.9	A	7.6	A
		WB	11.1	B	11.6	B

Most of the study intersections are expected to operate adequately with the existing lane configurations and existing or planned control (Bolton Place at Marietta Blvd to be signalized by 2021) for Build (with project) traffic volumes. However, for existing, as well as No-Build and Build volumes a modification at the intersection of Chattahoochee Ave and Marietta Blvd to provide a dedicated westbound left-turn lane was identified. A traffic signal at the Bolton Market Drive at Marietta Blvd intersection, when warranted, was also identified to allow left-turning exiting vehicles access to Marietta Blvd northbound during peak hours, while the other site access intersections are expected to operate adequately.

## E. Recommendations

A new mixed-use development in the City of Atlanta containing 660 multifamily units, 262,496 square feet (sf) offices, 36,240 sf retail, a 35,000 sf market, 10,000 sf restaurant use, and a 135 rooms hotel is planned for the eight acres' site located west of Marietta Boulevard NW and east of Chattahoochee Avenue NW to be completed by 2024. The development site is located in the northwest quadrant of the City, west of I-75 and east of I-285. A new street, Bolton Market Drive, within the site will be constructed between Chattahoochee Ave and Marietta Blvd providing vehicular access to all the parking areas and buildings on the site. In addition to the new street's intersections with Chattahoochee Ave and Marietta Blvd there will be a drop-off/pick-up off-road space on Marietta Boulevard and another vehicular access intersection on Chattahoochee Avenue, both south of Bolton Market Drive. The zoning is changing from Industrial (I-I) to Mixed Use (MRC-2).

When completed, the development is expected to generate 440 AM and 369 PM weekday peak hour (of the adjacent street) new entering vehicular trips with 282 AM and 471 PM new exiting vehicular trips are expected on the existing external roadway. Daily, the development is expected to generate a total of 14,946 new vehicular trips before internal capture reductions, retail and restaurant uses pass-by reductions (total 125 in and 125 out in the PM peak hour) were applied), and the 7.5% modal split reduction was applied. Assuming the same proportion of peak hour internal capture and pass by trip reductions occur throughout the day, approximately 8,152 new vehicular trips will be generated on the external roadway network, with approximately 815 of these trips originating and terminating within the block containing the development with about 3,670 new vehicular trips toward and 3,670 trips leaving the development area each day.

The intersection capacity analyses assumed approximately 30% of residential and 40% of non-residential generated new trips are expected to use Marietta Blvd north of the site, while 30% of residential and 25% of non-residential are expected to use Marietta Blvd south of the site, 25% residential and 20% non-residential will use Chattahoochee Ave to/from east of the site, and 15% of both will use Chattahoochee Ave to Le Dawn Ln, Marietta Rd, and Bolton Rd to/from the west.

### Mitigation for Existing Conditions (Pre-existing deficiencies)

- Add westbound left turn lane on Chattahoochee Ave at Marietta Blvd

### Mitigation for No-Build Conditions (Includes Pre-existing plus Background Growth)

- Same as for existing conditions

### Mitigation for Build Conditions (Includes Pre-existing plus Background Growth plus Site Traffic)

- Same as for existing conditions
- #8 Marietta Blvd at Bolton Market Drive
  - Add traffic signal, when warranted

<sup>1</sup>Land Use Codes (LUCs) from *Trip Generation Manual*, published by the Institute of Transportation Engineers.

<sup>2</sup>Total estimate for all other land uses at mixed-use development site is not subject to internal trip capture computations in this estimator.

<sup>3</sup>Enter trips assuming no transit or non-motorized trips (as assumed in ITE *Trip Generation Manual*).

<sup>4</sup>Enter vehicle occupancy assumed in Table 1-A vehicle trips. If vehicle occupancy changes for proposed mixed-use project, manual adjustments must be made to Tables 5-A, 9-A (O and D). Enter transit, non-motorized percentages that will result with proposed mixed-use project complete.

<sup>5</sup>Vehicle-trips computed using the mode split and vehicle occupancy values provided in Table 2-A.

<sup>6</sup>Person-Trips

\*Indicates computation that has been rounded to the nearest whole number.

Intersection Summary

HCM 6th Ctrl Delay 11.3  
HCM 6th LOS B

Notes

User approved volume balancing among the lanes for turning movement.

Unsignalized Delay for [NBR] is excluded from calculations of the approach delay and intersection delay.
