INTRODUCTION

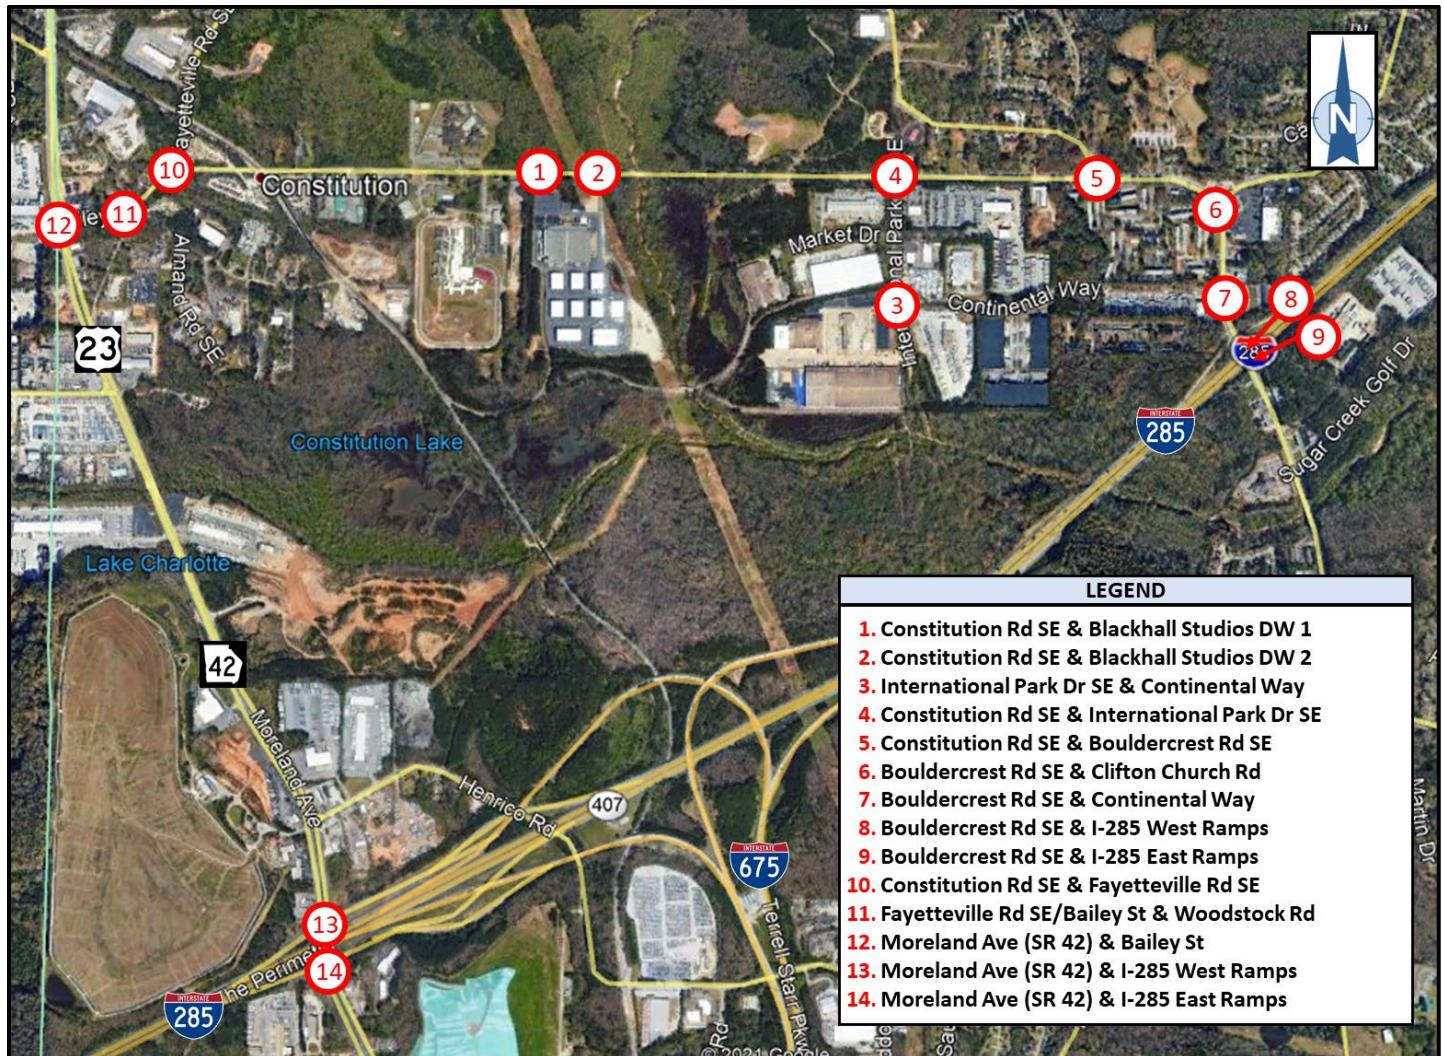

The site is located off Constitution Road SE between Moreland Avenue (SR 42) and Bouldercrest Road SE in Dekalb County, Georgia. The project location is shown in Figure 1. This project serves as an expansion (Phase 2) to the existing Blackhall Studios off Constitution Road SE.

Figure 1: DEVELOPMENT LOCATION MAP

The intersections included in the study are shown in Figure 2.

Figure 2: STUDY INTERSECTIONS MAP

OTHER PLANNED PROJECTS

Information regarding other relevant projects, planned for the near future in the proposed study area, is shown below in Table 1.

A total of two projects were identified. These planned projects were obtained from the following public entities:

- The Statewide Transportation Improvement Program (STIP) located outside Metropolitan Planning Organization (MPO) boundaries showed no projects that would affect the development.
- MPO funded transportation projects in the Transportation Improvement Program (TIP). Transportation projects in the Regional Transportation Program (RTP), funded from local, state, and federal planning partners. The project lists for both were found through the Atlanta Regional Commission (ARC). The two projects identified were both found in the TIP/RTP.
- Transportation projects outlined in Dekalb County's Transportation Plan (DCTP). One of the projects already identified in the TIP/RTP was also found in the DCTP.
- Georgia Department of Transportation's GeoPI website showed the same project identified in the TIP/RTP as well as Dekalb County's Transportation Plan.

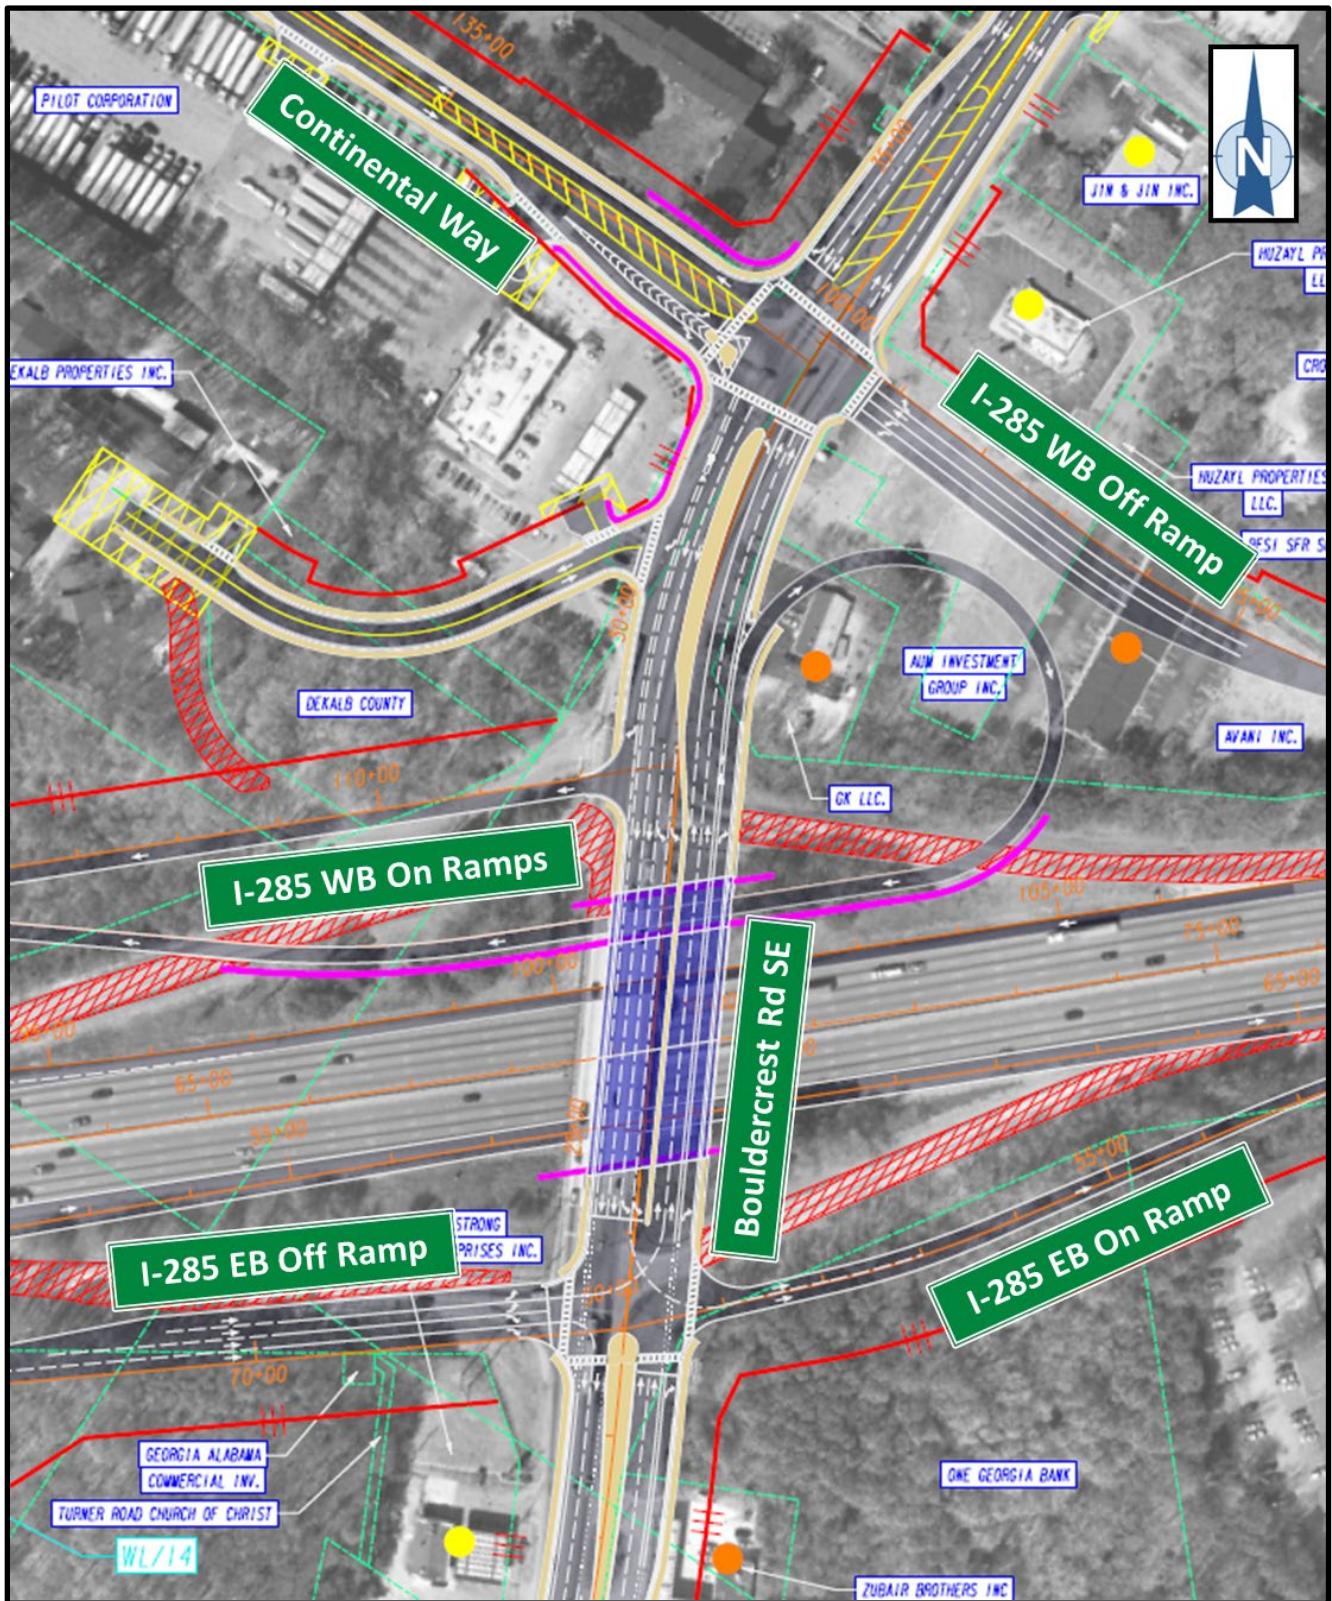

Table 1: OTHER PLANNED PROJECTS

| PUBLIC DOMAIN | PROJECT NUMBER | PROJECT TITLE | PROJECT BOUNDARY/INTERSECTION | PRELIMINARY (PE) YEAR | CONSTRUCTION (CST) YEAR |
|------------------------|------------------------|--|--|-----------------------|-------------------------|
| GeoPI, TIP/RTP, & DCTP | PI #713300-(DK-AR-207) | I-285 @ Bouldercrest Road Interchange Modification | Bouldercrest Road Bridge over I-285 | 2019 | 2023 |
| TIP/RTP | DK-162 | Bouldercrest Road Widening | I-285 to Linecrest Road (2-In to 4-In) | Long Range | 2026-2030 |

Based on the Letter of Understanding (LOU) issued by GRTA, the Bouldercrest Road Interchange modification project (PI #713300/DK-AR-207) shall be modeled as complete for both no-build and build conditions. This project affects Bouldercrest Road SE's intersections with Continental Way, I-285 WB Ramps, and I-285 EB Ramps. The I-285 WB Off Ramp will be reconstructed to intersect Bouldercrest Road SE opposite of Continental Way, creating a 4-leg signalized intersection. The off ramp will include dual left turn lanes, a through lane, and a right turn lane. The existing intersection of Bouldercrest Road SE and I-285 WB Ramps will be reconstructed as a divided roadway with on ramps on both sides of the road (normal on ramp and a loop on ramp for northbound traffic). The bridge will be upgraded to include two southbound through lanes, dual southbound left turn lanes, two northbound through lanes, and a northbound right turn lane.

The concept layout for the Bouldercrest Interchange modification project is shown below in Figure 3.

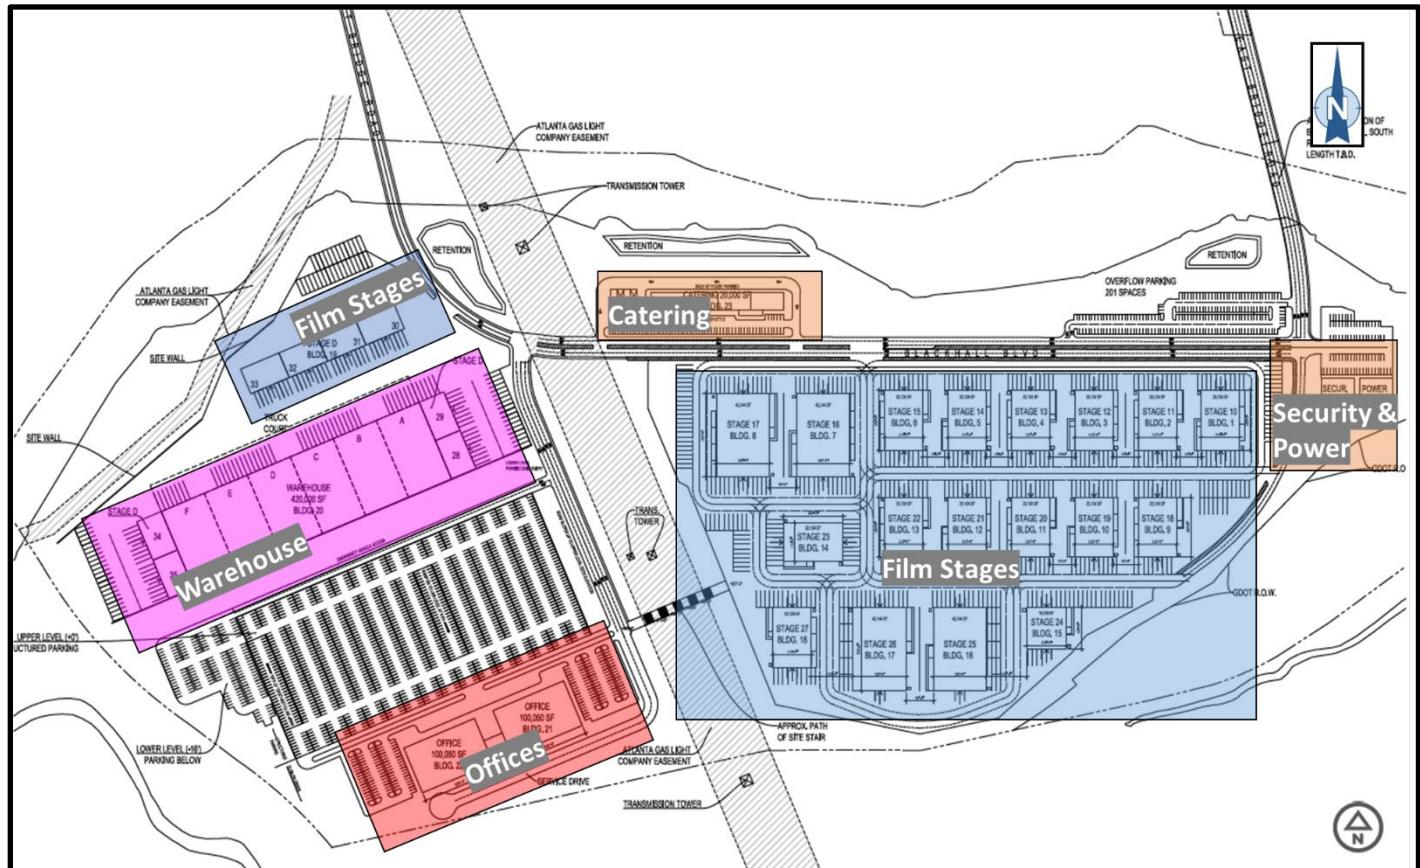

Figure 3: BOULDERCREST ROAD INTERCHANGE MODIFICATION

PROPOSED DEVELOPMENT

The site plan for the proposed Blackhall Phase 2 production studios development has been updated with an increase of 13,936 SF in film stage area and is shown below in Figure 4. The development will consist of film stage, office, and warehouse land uses. The catering along with the security and power are both anticipated to not generate any trips. A large scale site plan can be found in Appendix A.

Figure 4: SITE PLAN

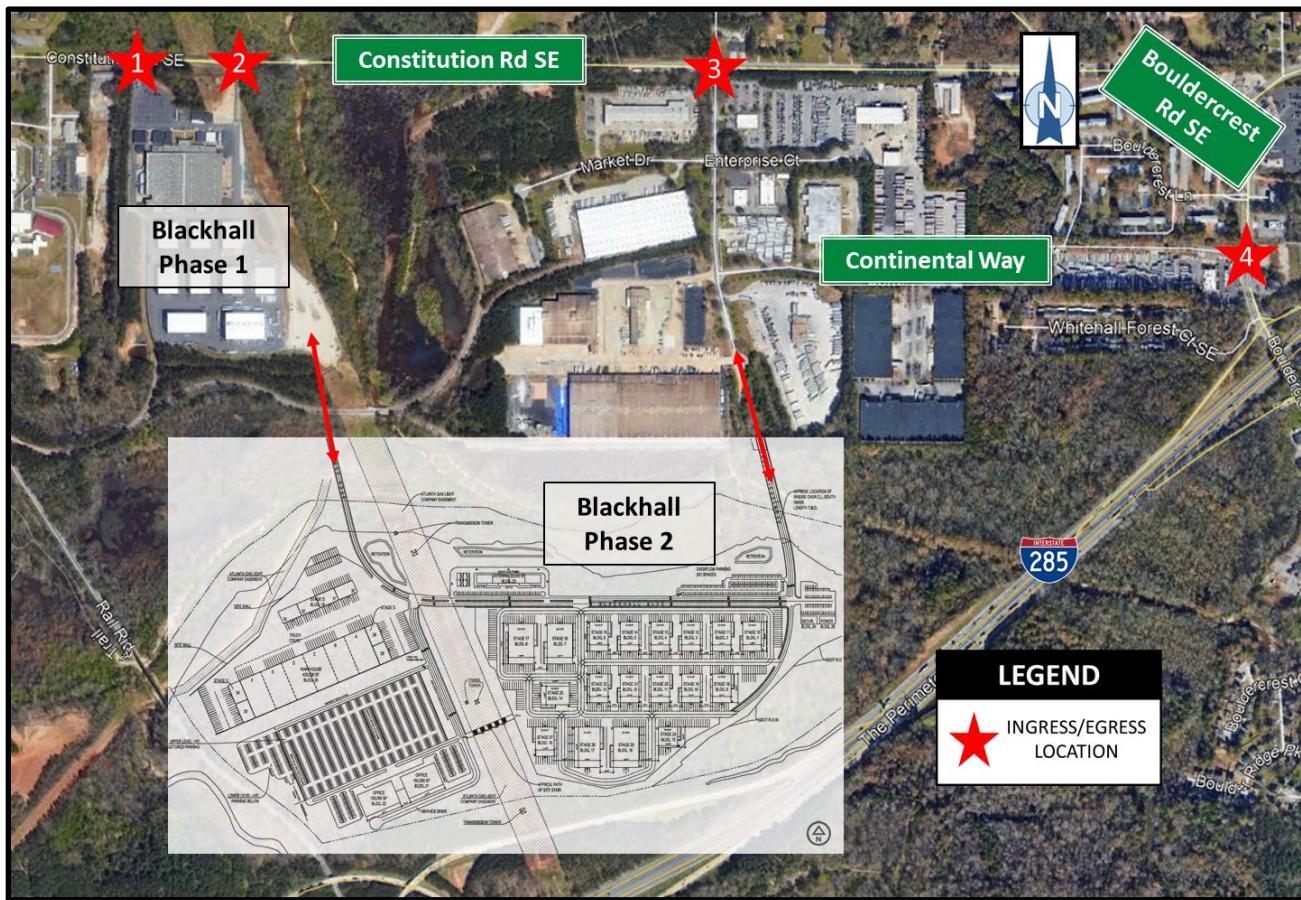

A summary of the proposed land uses, and total square footages associated with the proposed development are:

- **Warehouse** – approximately 420,000 total square feet
- **Office** – approximately 200,100 total square feet
- **Film Stage** – approximately 552,436 total square feet

Figure 5 illustrates the ingress/egress points where the site can be entered/exited from.

Figure 5: INGRESS/EGRESS LOCATIONS

In total, there are four (4) potential points of ingress/egress for the site:

1. Blackhall Studios Driveway 1 on Constitution Road SE
2. Blackhall Studios Driveway 2 on Constitution Road SE
3. From International Park Drive SE to Constitution Road SE
4. From Continental Way to Bouldercrest Road SE

ZONING/FUTURE LAND USE MAP

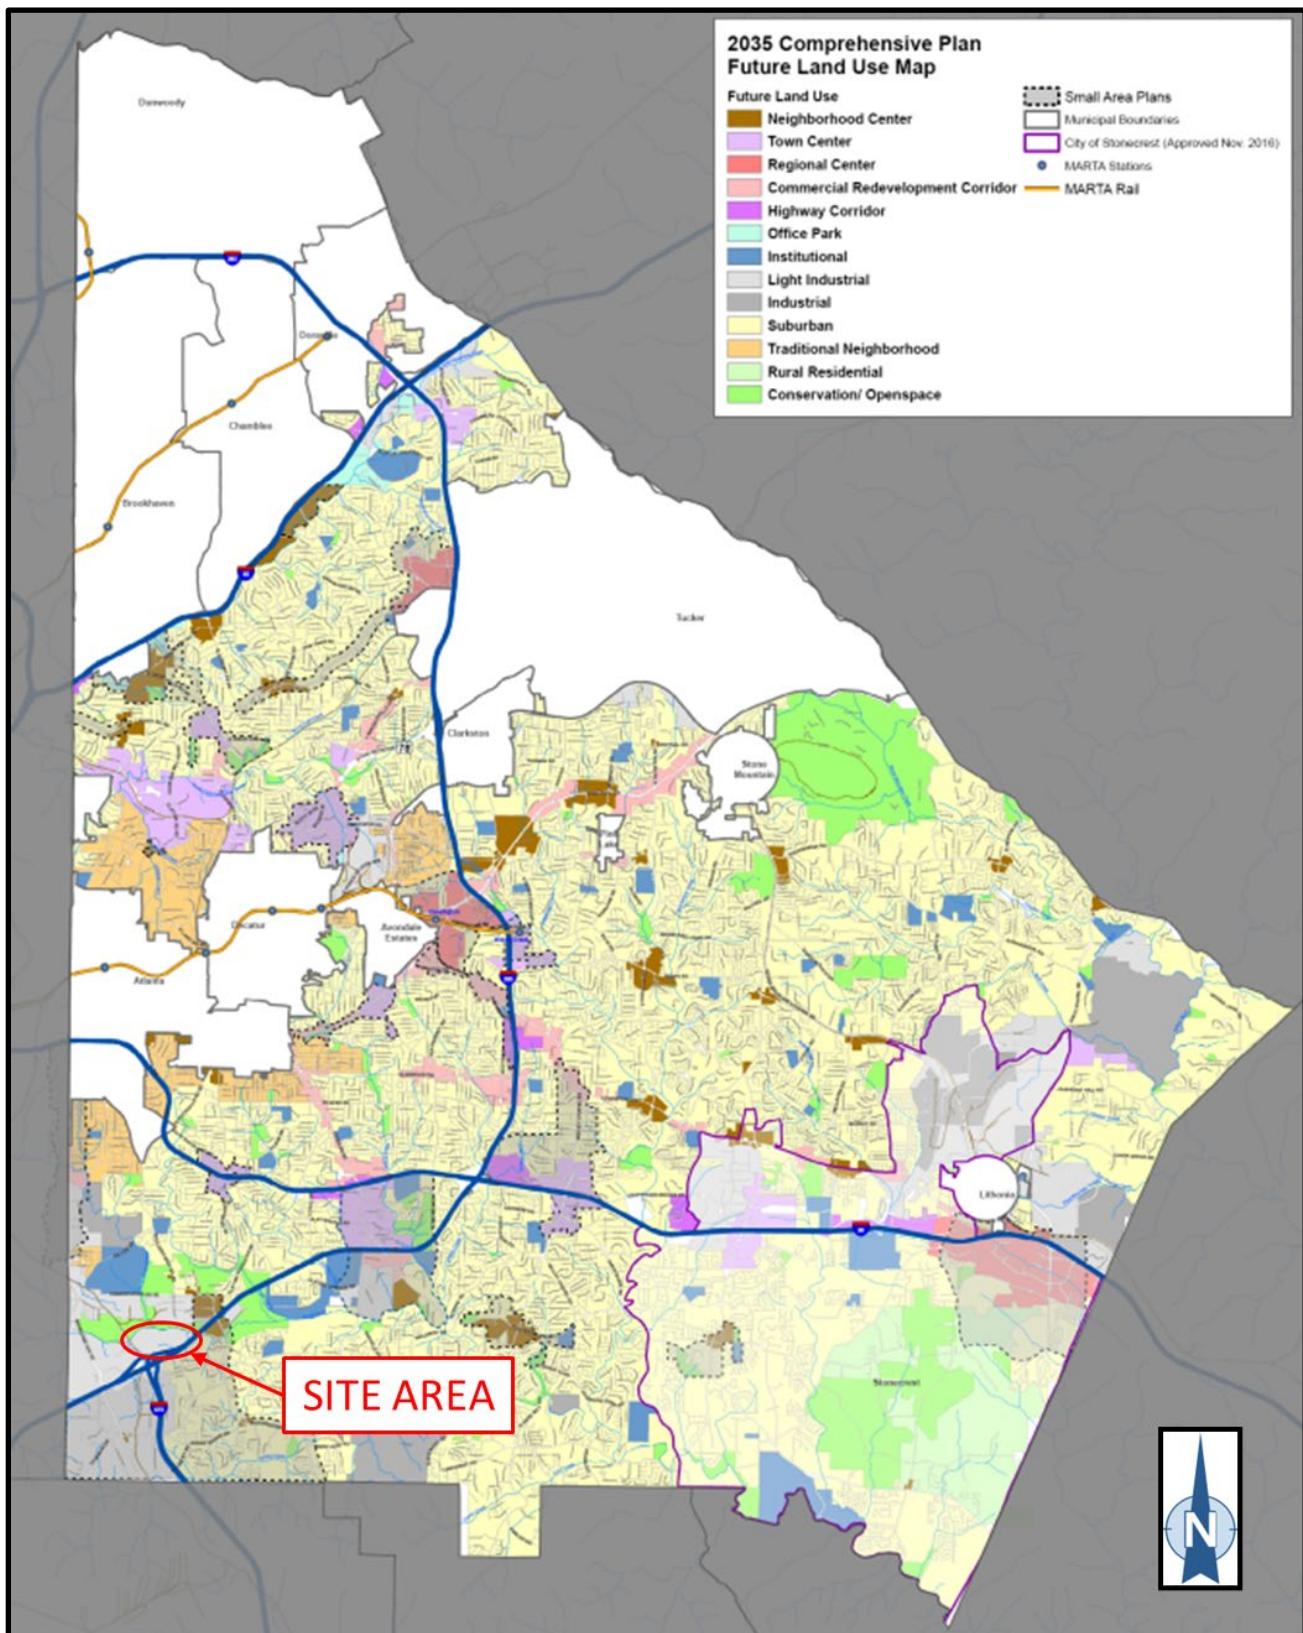

The development area currently has a zoning designation “M” as it is a light industrial district. The outlined land with this zoning is shown below in Figure 6.

Figure 6: ZONING FOR SITE AREA

The future land use map from Dekalb County’s 2035 Comprehensive Plan also shows the development land as being light industrial. The future land use map is shown on the following page in Figure 7.

Figure 7: DEKALB COUNTY 2035 FUTURE LAND USE MAP

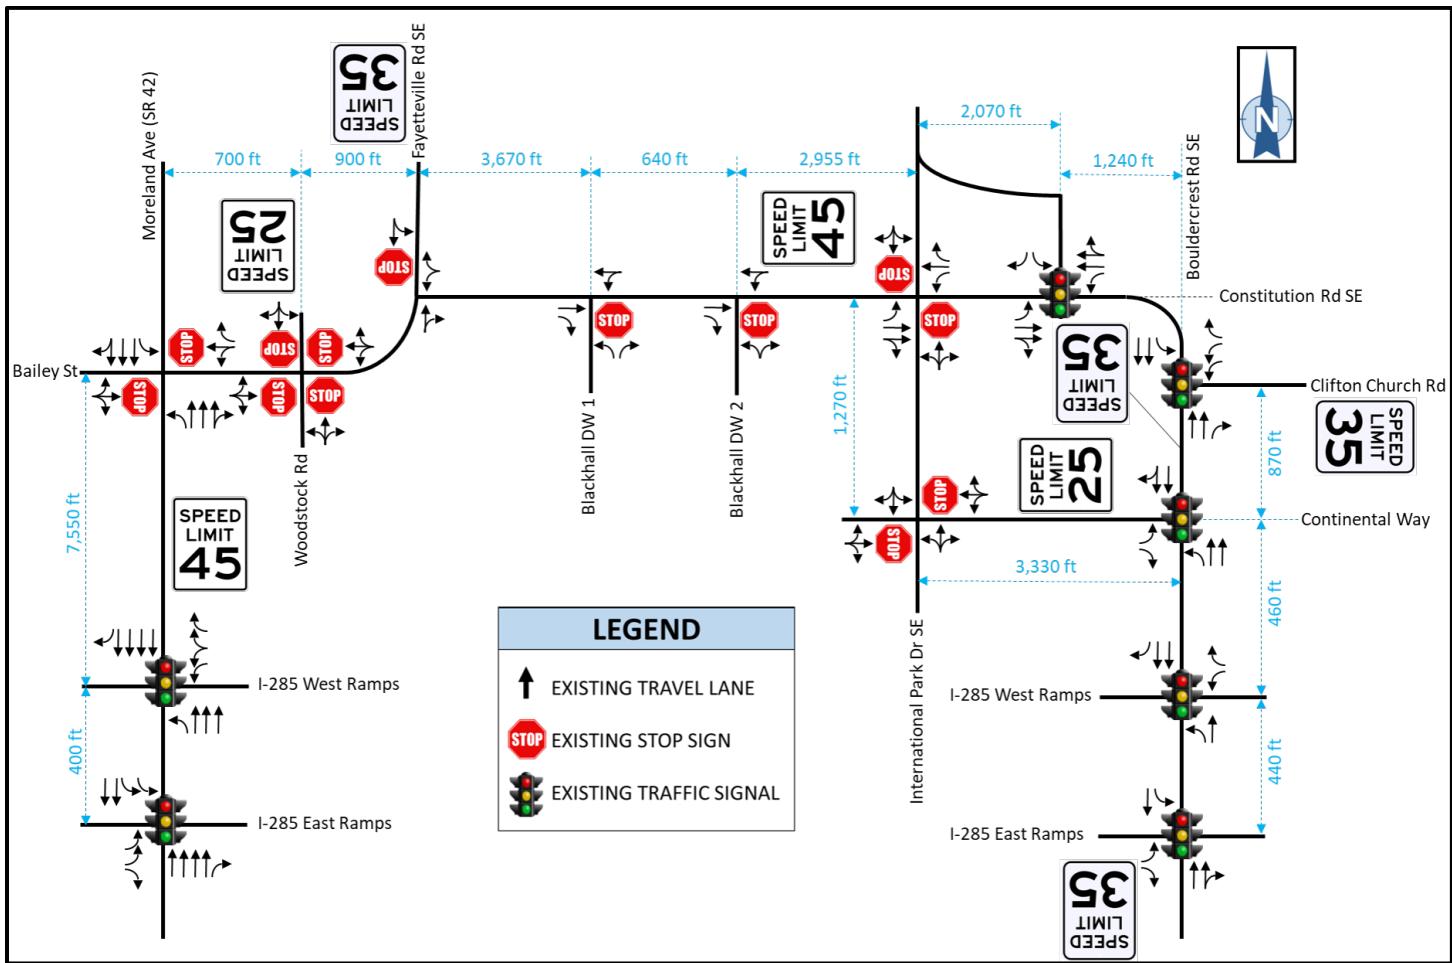

EXISTING CONDITIONS

An existing conditions inventory was conducted of the current conditions at the study intersections, including roadway geometry, traffic control, and traffic volumes. There is a railroad crossing on the west end of Constitution Road SE. The railroad crossing inventory form can be found in Appendix B.

INVENTORY OF EXISTING GEOMETRY AND TRAFFIC CONTROL

The existing roadway geometry and traffic control in the study area are shown in Figure 8 below.

Figure 8: EXISTING CONDITIONS

EXISTING ALTERNATIVE TRANSPORTATION

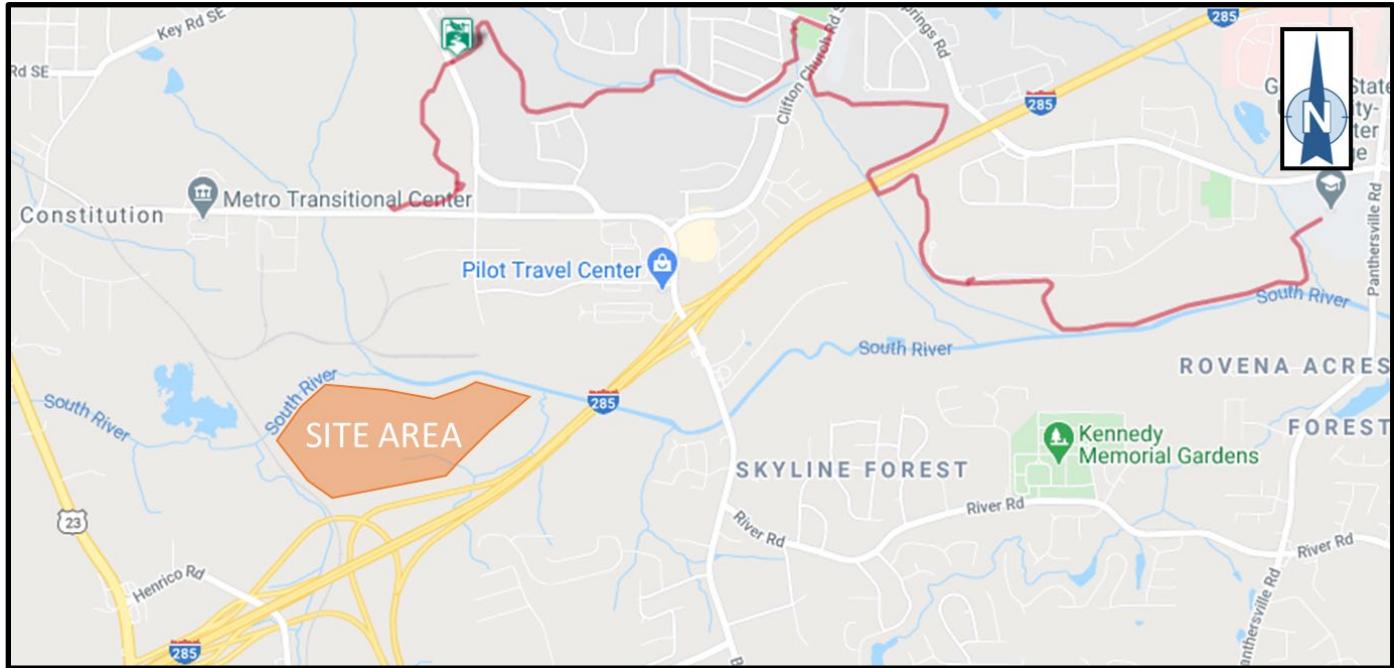

Alternate methods of transportation near the proposed development were identified: MARTA bus routes and a bike route. Two MARTA bus routes come near the site, with Route 49 (Moreland Avenue) having a bus stop on Constitution Road SE approximately 1,120 feet to the west of the existing Blackhall Studios Driveway 1. Route 32 (Bouldercrest Road SE) has a bus stop past the I-285 Interchange. The MARTA bus routes are shown below in Figure 9.

Figure 9: MARTA BUS ROUTES

The bike route identified is the South River Trail. It spans from the Atlanta Radio Control Club on Constitution Road SE to Georgia State University – Perimeter College off Clifton Springs Road. The Atlanta Radio Control Club is located in between the existing Blackhall Studios driveways and International Park Drive SE. The bike route is shown below in Figure 10.

Figure 10: SOUTH RIVER BIKE TRAIL

EXISTING TRAFFIC VOLUMES

Turning Movement Counts (TMCs) were conducted at the study intersections on Wednesday, February 10, 2021 from 6:00 AM to 9:00 AM and 4:00 PM to 7:00 PM. The peak hours were established to be 7:15 to 8:15 AM and 4:00 to 5:00 PM. Existing peak hour turning movement volumes are shown in Figure 11 below. The turning movement data is provided in Appendix C.

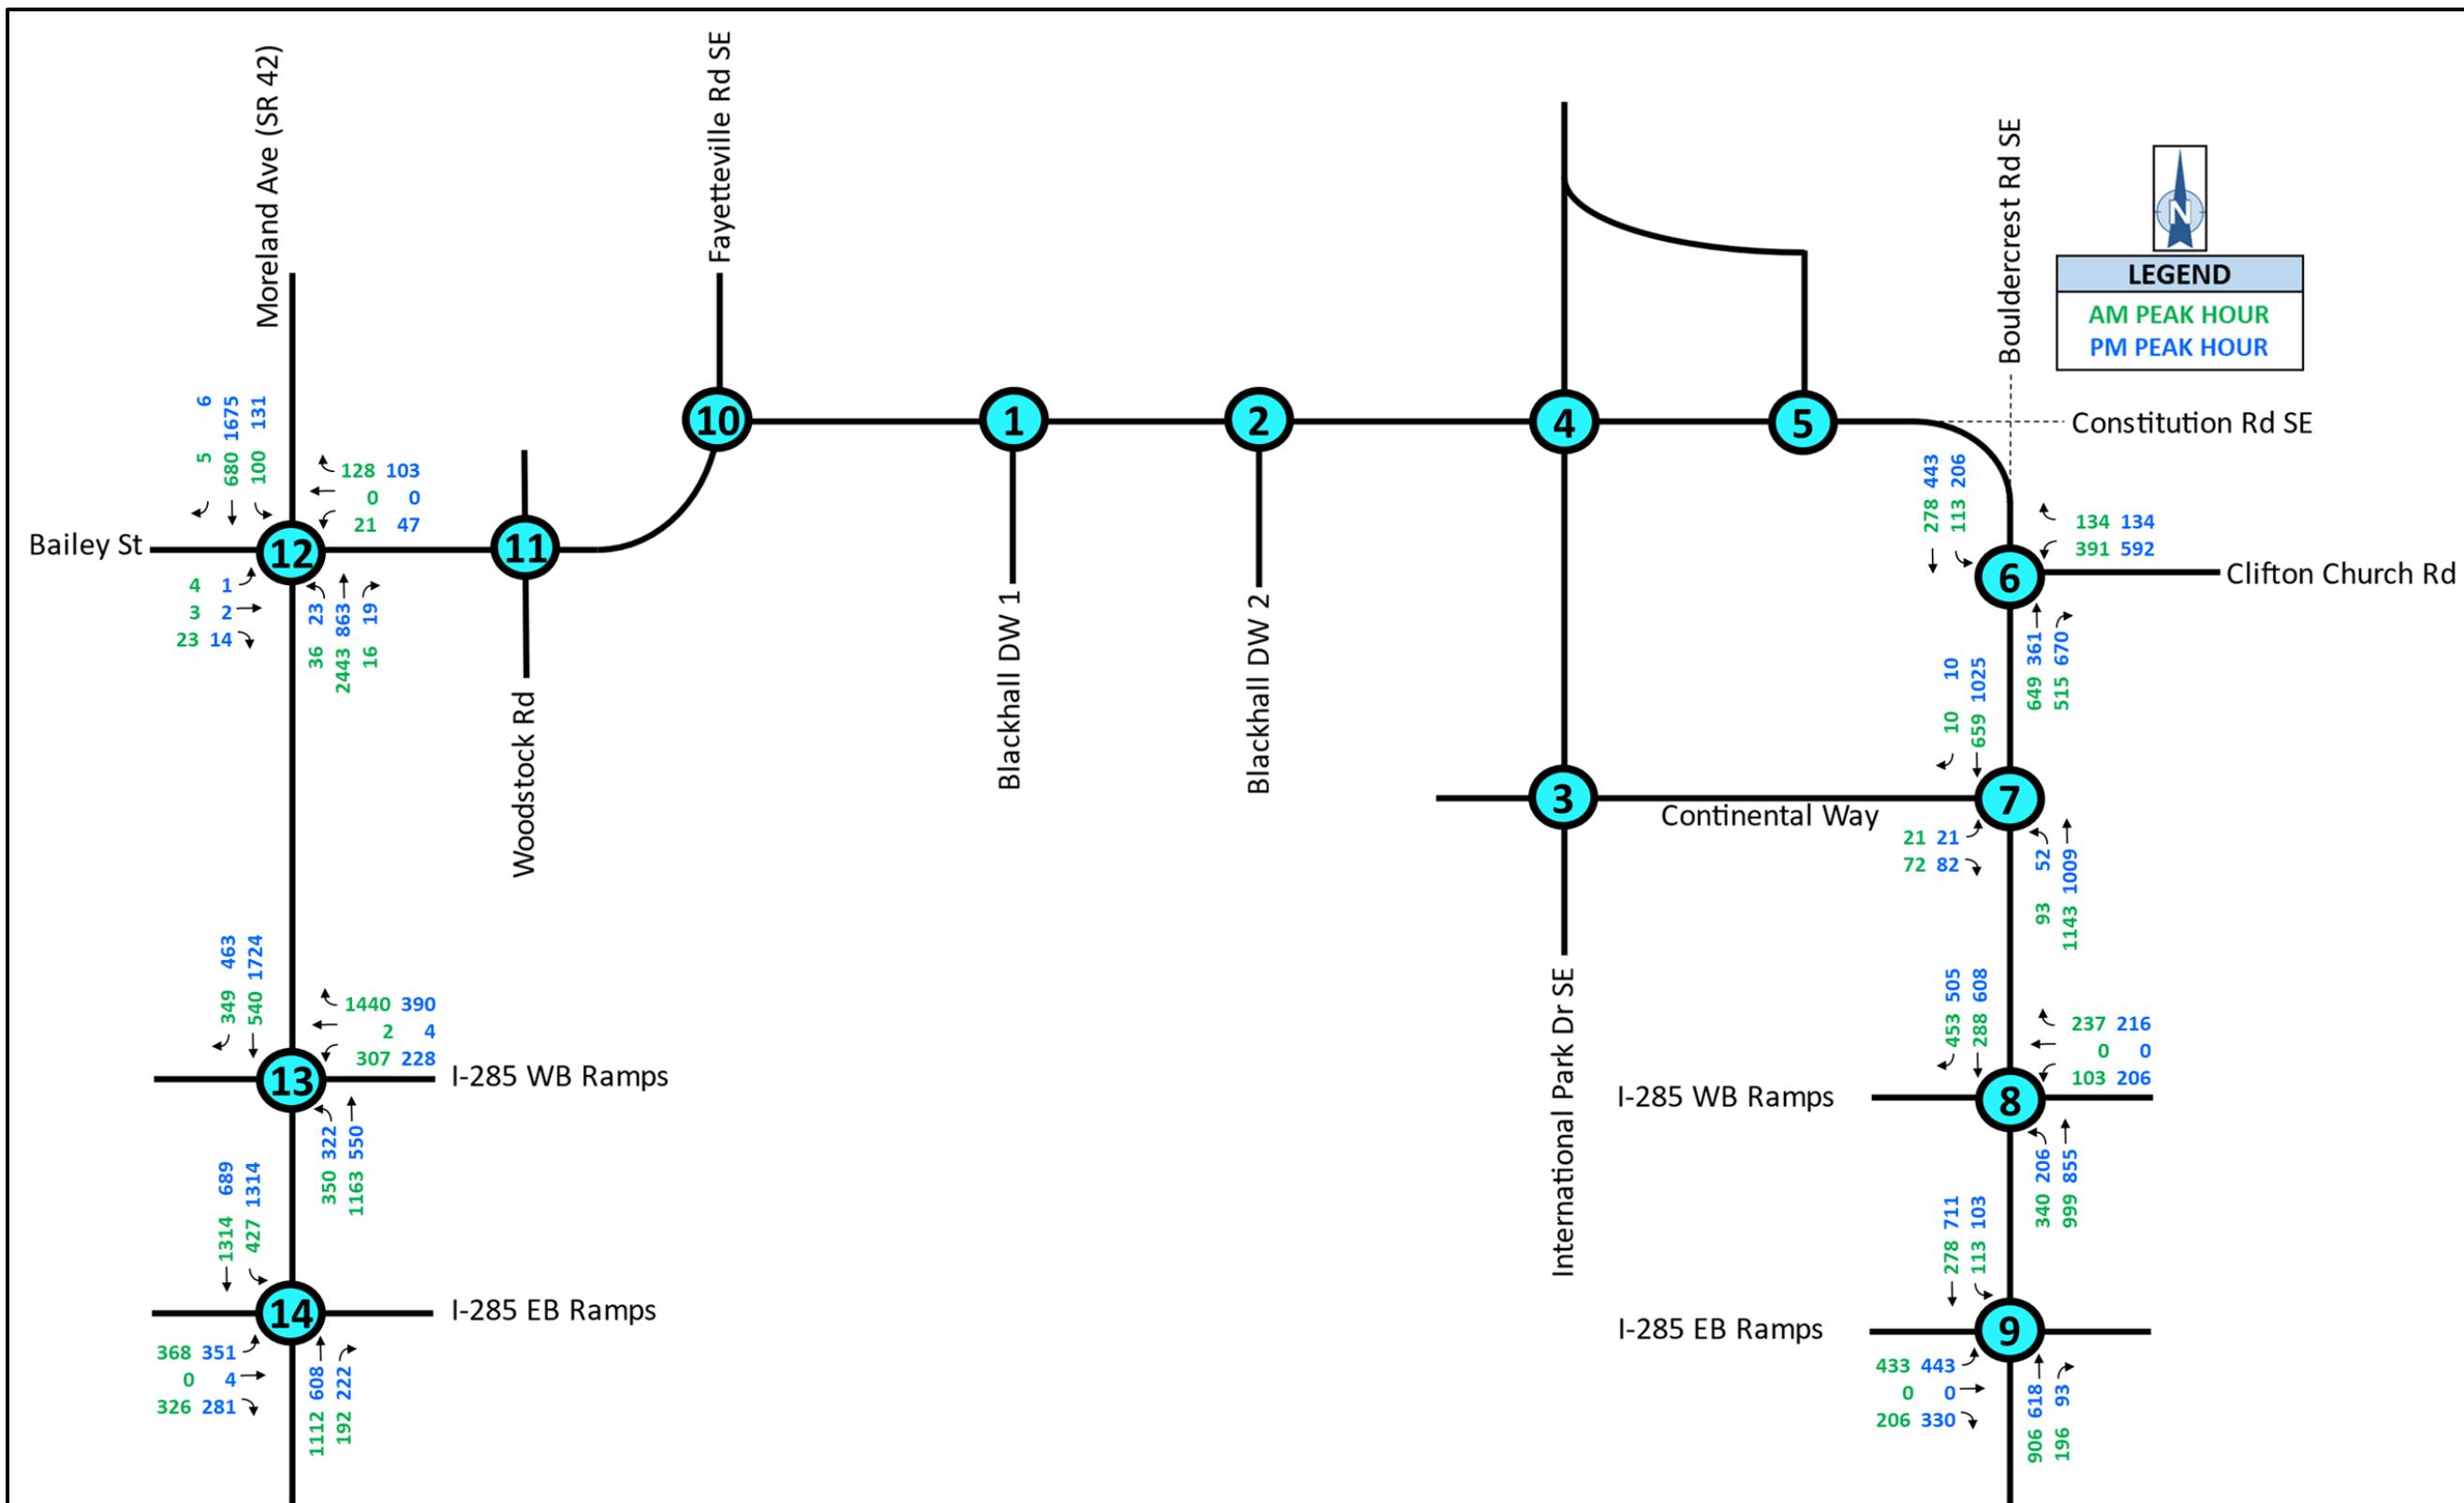

Figure 11: EXISTING TRAFFIC VOLUMES (2021)

PREVIOUSLY COUNTED VOLUMES

Previously collected TMCs were acquired in order to compare to the volumes counted in 2021. The older TMCs are from 2018 and 2019 and have been grown to the existing year of 2021. The grown volumes are shown below in Figure 12.

Figure 12: PREVIOUSLY COUNTED VOLUMES (GROWN TO 2021)

COVID-19 TRAFFIC ADJUSTMENT

Due to the COVID-19 pandemic, GDOT issued guidance (April 2020) on the collection of Turning Movement Counts (TMC's). Examples of guidance provided by the document states the following:

- Confirm if traffic data has been collected within the past three years at any study locations.
- Identify nearby continuous or short-term count stations from GDOT's Traffic Analysis and Data Application (TADA) to compare to newly collected daily volumes.

Multiple sources were contacted to acquire recent traffic data that have been collected within the past few years. Traffic counts collected in 2019 for PI 713300 (Bouldercrest Interchange) were provided by WSP/GDOT and include the following study intersections:

6. Bouldercrest Road SE & Clifton Church Road
7. Bouldercrest Road SE & Continental Way
8. Bouldercrest Road SE & I-285 West Ramps
9. Bouldercrest Road SE & I-285 East Ramps

A traffic study titled “Dekalb County Moreland Avenue (US 23/SR 42) Corridor Scoping Study” completed by Grice Consulting Group, LLC was obtained and contained traffic counts from May of 2018 for the following study intersections:

12. Moreland Avenue (SR 42) & Bailey Street
13. Moreland Avenue (SR 42) & I-285 West Ramps
14. Moreland Avenue (SR 42) & I-285 East Ramps

Study intersections 6, 7, and 12 were counted again to establish controlled count locations. The previous counts from 2018 and 2019 were grown (using a locally determined growth rate) to the existing year of 2021. The newly counted volumes have been compared to the grown volumes:

- Comparison of Newly Counted Volumes and Grown Volumes (Intersections 6, 7, 12)
 - The pre-COVID traffic volumes used the higher volumes between the newly counted and grown counts.
 - The instances where the newly counted volumes were higher than the grown volumes, and used in place of the grown volumes, include the following:
 - Moreland Avenue (SR 42) and Bailey Street (Intersection 12)
 - Southbound left in the AM peak hour.
 - Eastbound and westbound left in both peak hours.
 - Westbound right and through in the PM peak hour.
 - Bouldercrest Road SE and Clifton Church Road (Intersection 6)
 - Southbound through in the PM peak hour.
 - Bouldercrest Road SE and Continental Way (Intersection 7)
 - Southbound right in the PM peak hour.
 - Eastbound left and right in the PM peak hour.
 - Northbound left in both peak hours.

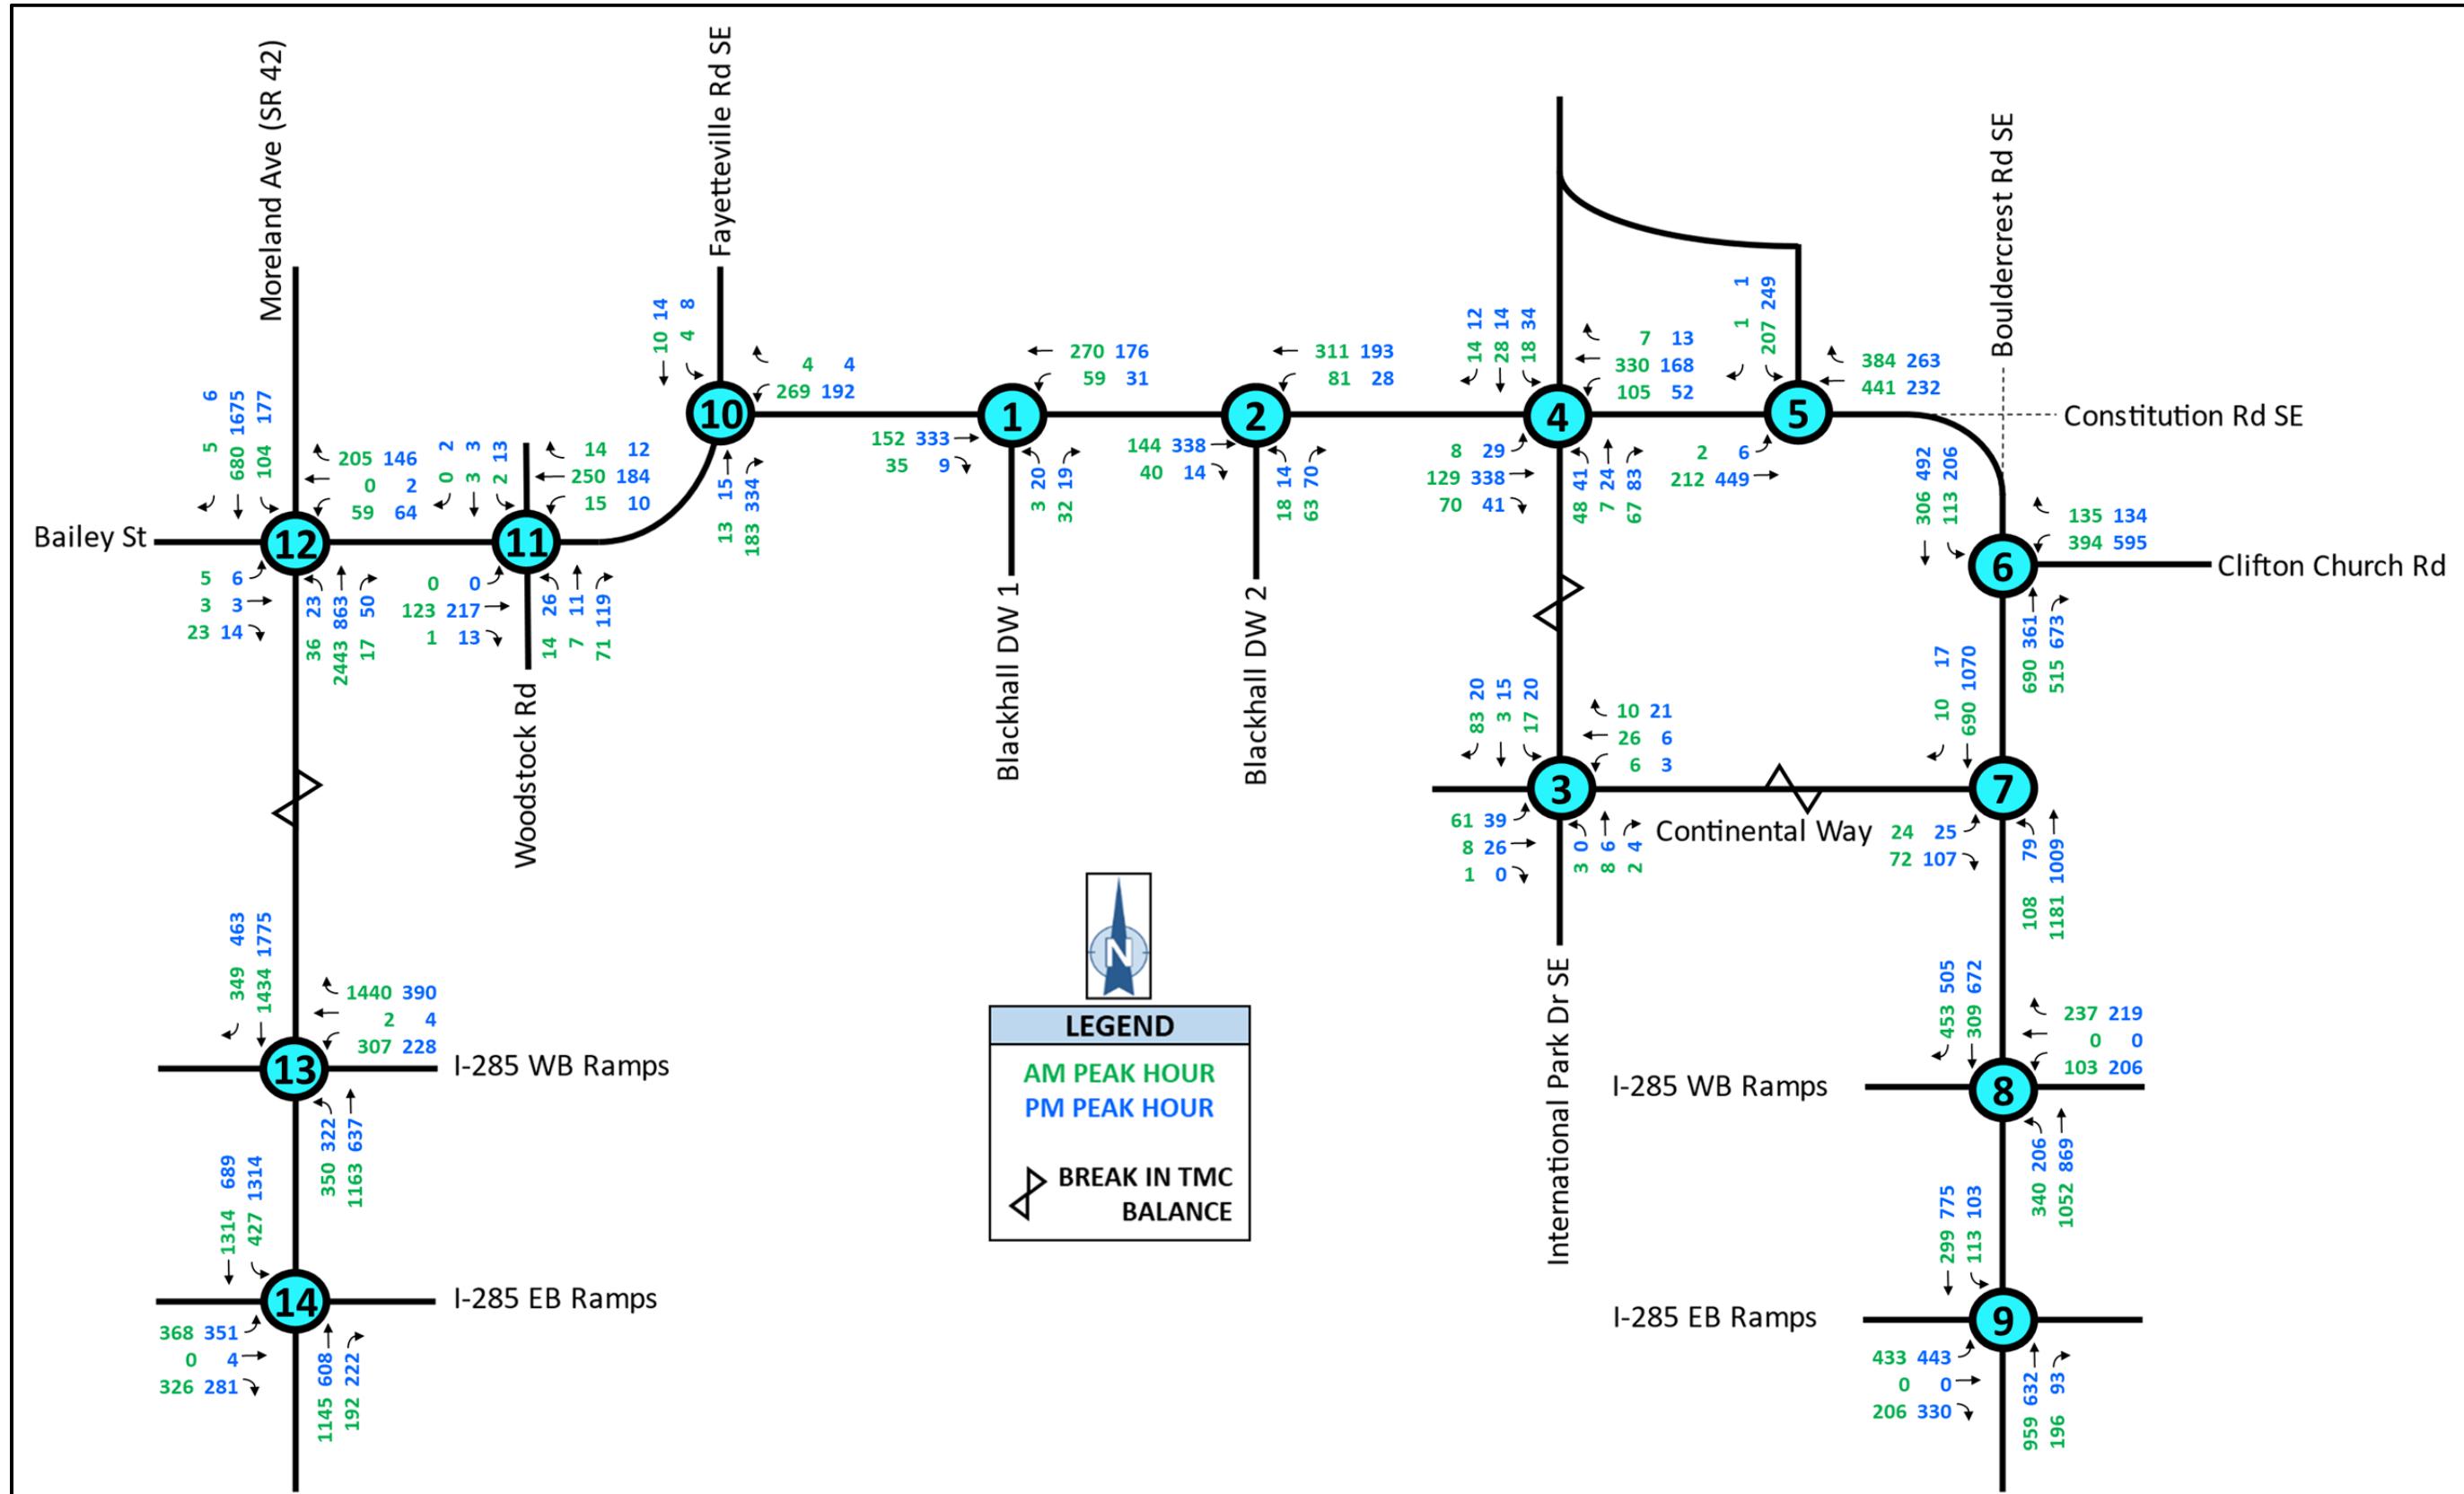

The following includes the methodology used to produce the pre-COVID traffic volumes based on the different roadways/intersections:

- Moreland Avenue (SR 42) (Intersections 12, 13, 14)
 - The grown data from the intersections of Moreland Avenue (SR 42) and I-285 Ramps were used to verify which count was more accurate/higher between the grown and newly counted volumes at the intersection of Moreland Avenue (SR 42) and Bailey Street.
 - The grown volumes for the I-285 Ramps were used and balanced with each other.
 - The larger values between the newly counted and grown volumes were used to establish the adjusted volumes at the intersection of Moreland Avenue (SR 42) and Bailey Street.
- Bouldercrest Road SE (Intersections 6, 7, 8, 9)
 - The grown volumes for the I-285 Ramps were used and balanced with the other intersections on Bouldercrest Road SE.
 - The larger values between the newly counted and grown volumes were used to establish the adjusted volumes at Bouldercrest Road SE's intersections with Clifton Church Road and Continental Way.
- Constitution Road SE/Fayetteville Road SE (Intersections 1, 2, 4, 5, 10, 11)
 - Constitution Road SE and Fayetteville Road SE were balanced proportionately based on the adjusted volumes on Bouldercrest Road SE and the intersection of Moreland Avenue (SR 42) and Bailey Street.
 - The volumes were balanced proportionately, which means that the higher adjusted volumes were distributed to the different movements (left/through/right) based on the newly counted volumes and their weight.
 - For example, the newly counted volumes at Constitution Road SE and Bouldercrest Road SE revealed that in the westbound direction during the PM peak hour, 53% turned right onto Bouldercrest Road SE while the remaining 47% continued through on Constitution Road SE. The adjusted volumes coming from Bouldercrest Road SE and Clifton Church Road were distributed in the same manner.
- International Park Drive SE and Continental Way (Intersection 3)
 - Based on observations of other turning movements in the system affected by COVID, it was determined that all traffic volumes were to be increased by 10%.

- Traffic Volume Balancing Technique
 - Balancing all traffic volumes arriving at an intersection are accounted for at the previous intersection(s).
 - Whenever volumes are balanced, they are balanced from the high point to produce the most conservative results (highest volumes).
 - The I-285 Ramps on Moreland Avenue (SR 42) were balanced together. The volumes were not balanced between Bailey Street and the ramps due to the presence of two intersecting roadways, where larger amounts of traffic can enter/exit, located between them.
 - Once Bouldercrest Road SE and the intersection of Moreland Avenue (SR 42) and Bailey Street were adjusted to pre-COVID traffic, the system was balanced. This includes balancing Constitution Road SE and Fayetteville Road SE proportionately based on the other adjustments.
 - The intersection of International Park Drive SE and Continental Way was not balanced with the rest of the system due to multiple driveways between it and the main roadways.

The newly collected TMCs were adjusted and balanced based on the comparison to the previously collected TMCs grown to the existing year. The pre-COVID adjusted and balanced 2021 volumes are shown below in Figure 13.

Figure 13: PRE-COVID ADJUSTED AND BALANCED 2021 VOLUMES

TRAFFIC PROJECTION METHODOLOGY

Traffic projections consists of background growth and trips generated by the proposed development.

BACKGROUND TRAFFIC GROWTH

Background traffic growth will be estimated for the time between the Existing Year (2021), Base Year (2024), and Design Year (2044). The methodology included in this estimate consists of the examination of historic traffic data and the analysis of historic growth trends.

CENSUS DATA

The census data from the Atlanta Regional Commission (ARC) population forecast for Dekalb County is shown in Table 2.

Table 2: CENSUS DATA

| DEKALB COUNTY | | | |
|---------------|------------|----------|-------------------|
| YEAR | POPULATION | % CHANGE | % CHANGE PER YEAR |
| 2015 | 718,442 | - | - |
| 2050 | 995,591 | 38.58% | 0.94% |

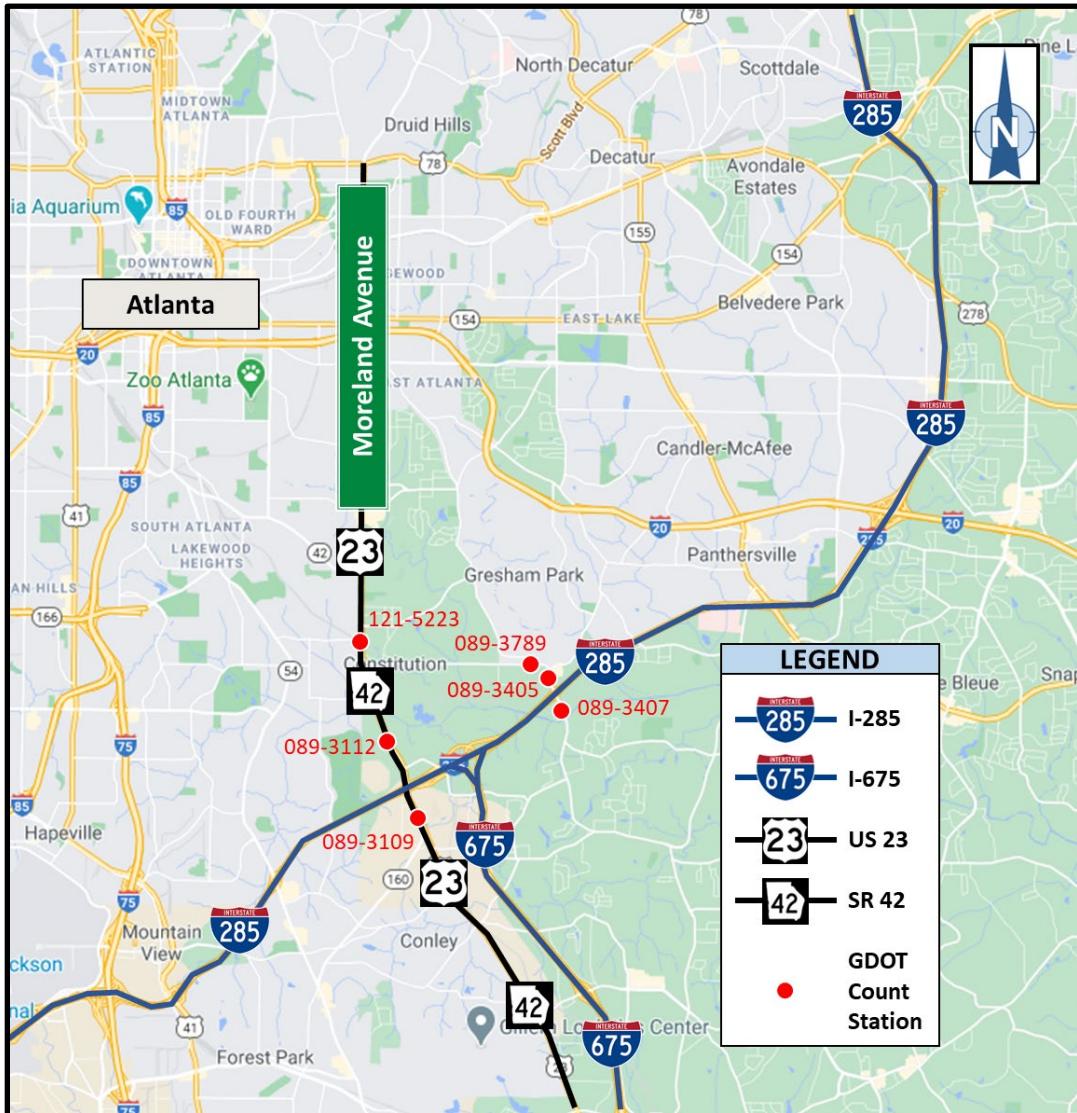

Source: Atlanta Regional Commission (ARC) Dekalb County 2050 Population Forecast

The data shows an increase of the population in Dekalb County of 38.58%, or a yearly rate of 0.94%, between 2015-2050.

HISTORIC TRAFFIC DATA

GDOT maintains multiple annual traffic count stations in the vicinity of the project, six of which were used in the background growth analysis. These stations are shown in Figure 14.

Figure 14: GDOT COUNT STATIONS

TREND ANALYSIS

Five-year and ten-year trend analyses were conducted to establish growth rates around the study area. Table 3 shows the data collected from the GDOT count stations and the resulting trend rates for each count station. Figure 15 on the next page shows graphs of these resultant trend rates for the count stations. Count stations for the area surrounding the development were organized in Table 3 by the roadway on which they are located.

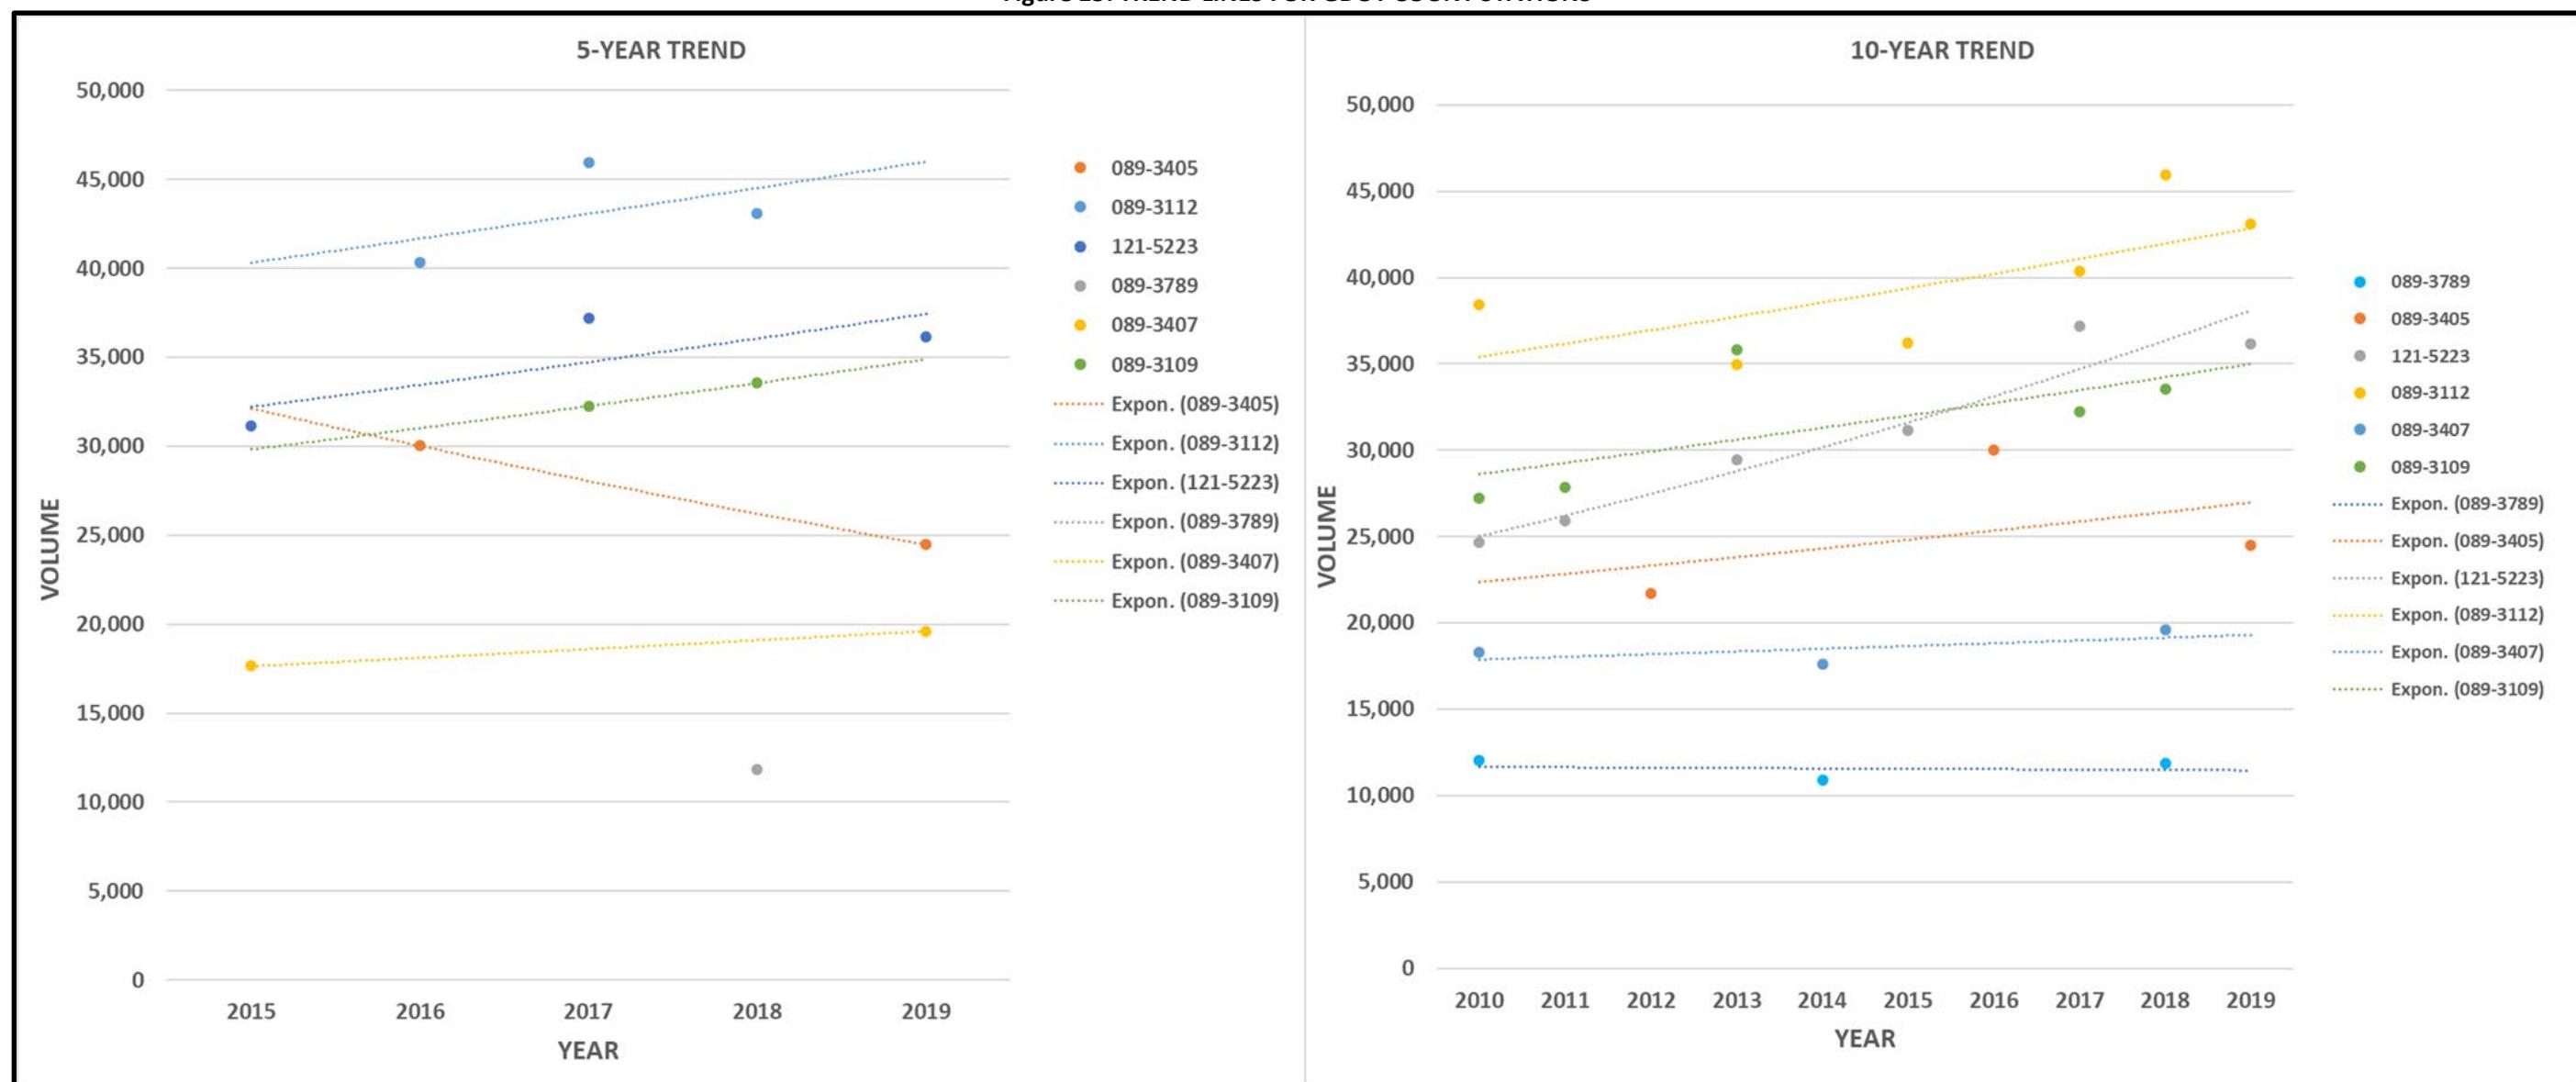

Historic data reported by the GDOT for each of the count stations can be found in Appendix D.

Table 3: TREND ANALYSIS FOR COUNT STATION DATA

| ROADWAY | GDOT Count Stations | 5-year | 10-year |
|----------------------|---------------------|--------|---------|
| US 23 | 121-5223 | 3.05% | 3.90% |
| | 089-3112 | 3.55% | 1.15% |
| | 089-3109 | 0.79% | 2.11% |
| Bouldercrest Road SE | 089-3789 | 1.70% | -0.15% |
| | 089-3405 | -3.99% | 1.22% |
| | 089-3407 | 2.14% | 0.69% |

Note: Rates are calculated based on annual compounding.

Figure 15: TREND LINES FOR GDOT COUNT STATIONS

BACKGROUND GROWTH RATES

Growth rates for the area surrounding the development were established based on the data collected from GDOT count stations.

Individual count station trend rates were compounded together with other count station rates on roadways near the development to determine the growth associated with each corridor, based on their weighted count station volumes.

Table 4 shows the compounded growth rates for the surrounding area of the development from the GDOT count stations.

Table 4: GROWTH RATES

| COMPOUNDED RATES | |
|------------------|---------|
| 5-YEAR | 10-YEAR |
| 1.89% | 1.94% |

For the purpose of this study, an annual background growth rate of 1.50% will be used for the area surrounding the Blackhall development.

BACKGROUND GROWTH FACTORS

Growth factors for the surrounding area of the development were established by applying each respective growth rate to the following equation:

$$\text{Growth Factor} = (1 + r)^n$$

Where:

r = growth rate

n = number of years

The volumes projections were calculated using the following values as ‘n’, taken as the time period between the Existing, Base, and Design years.

- Existing Year (2021) to Base Year (2024) – n=3
- Base Year (2024) to Design Year (2044) – n=20

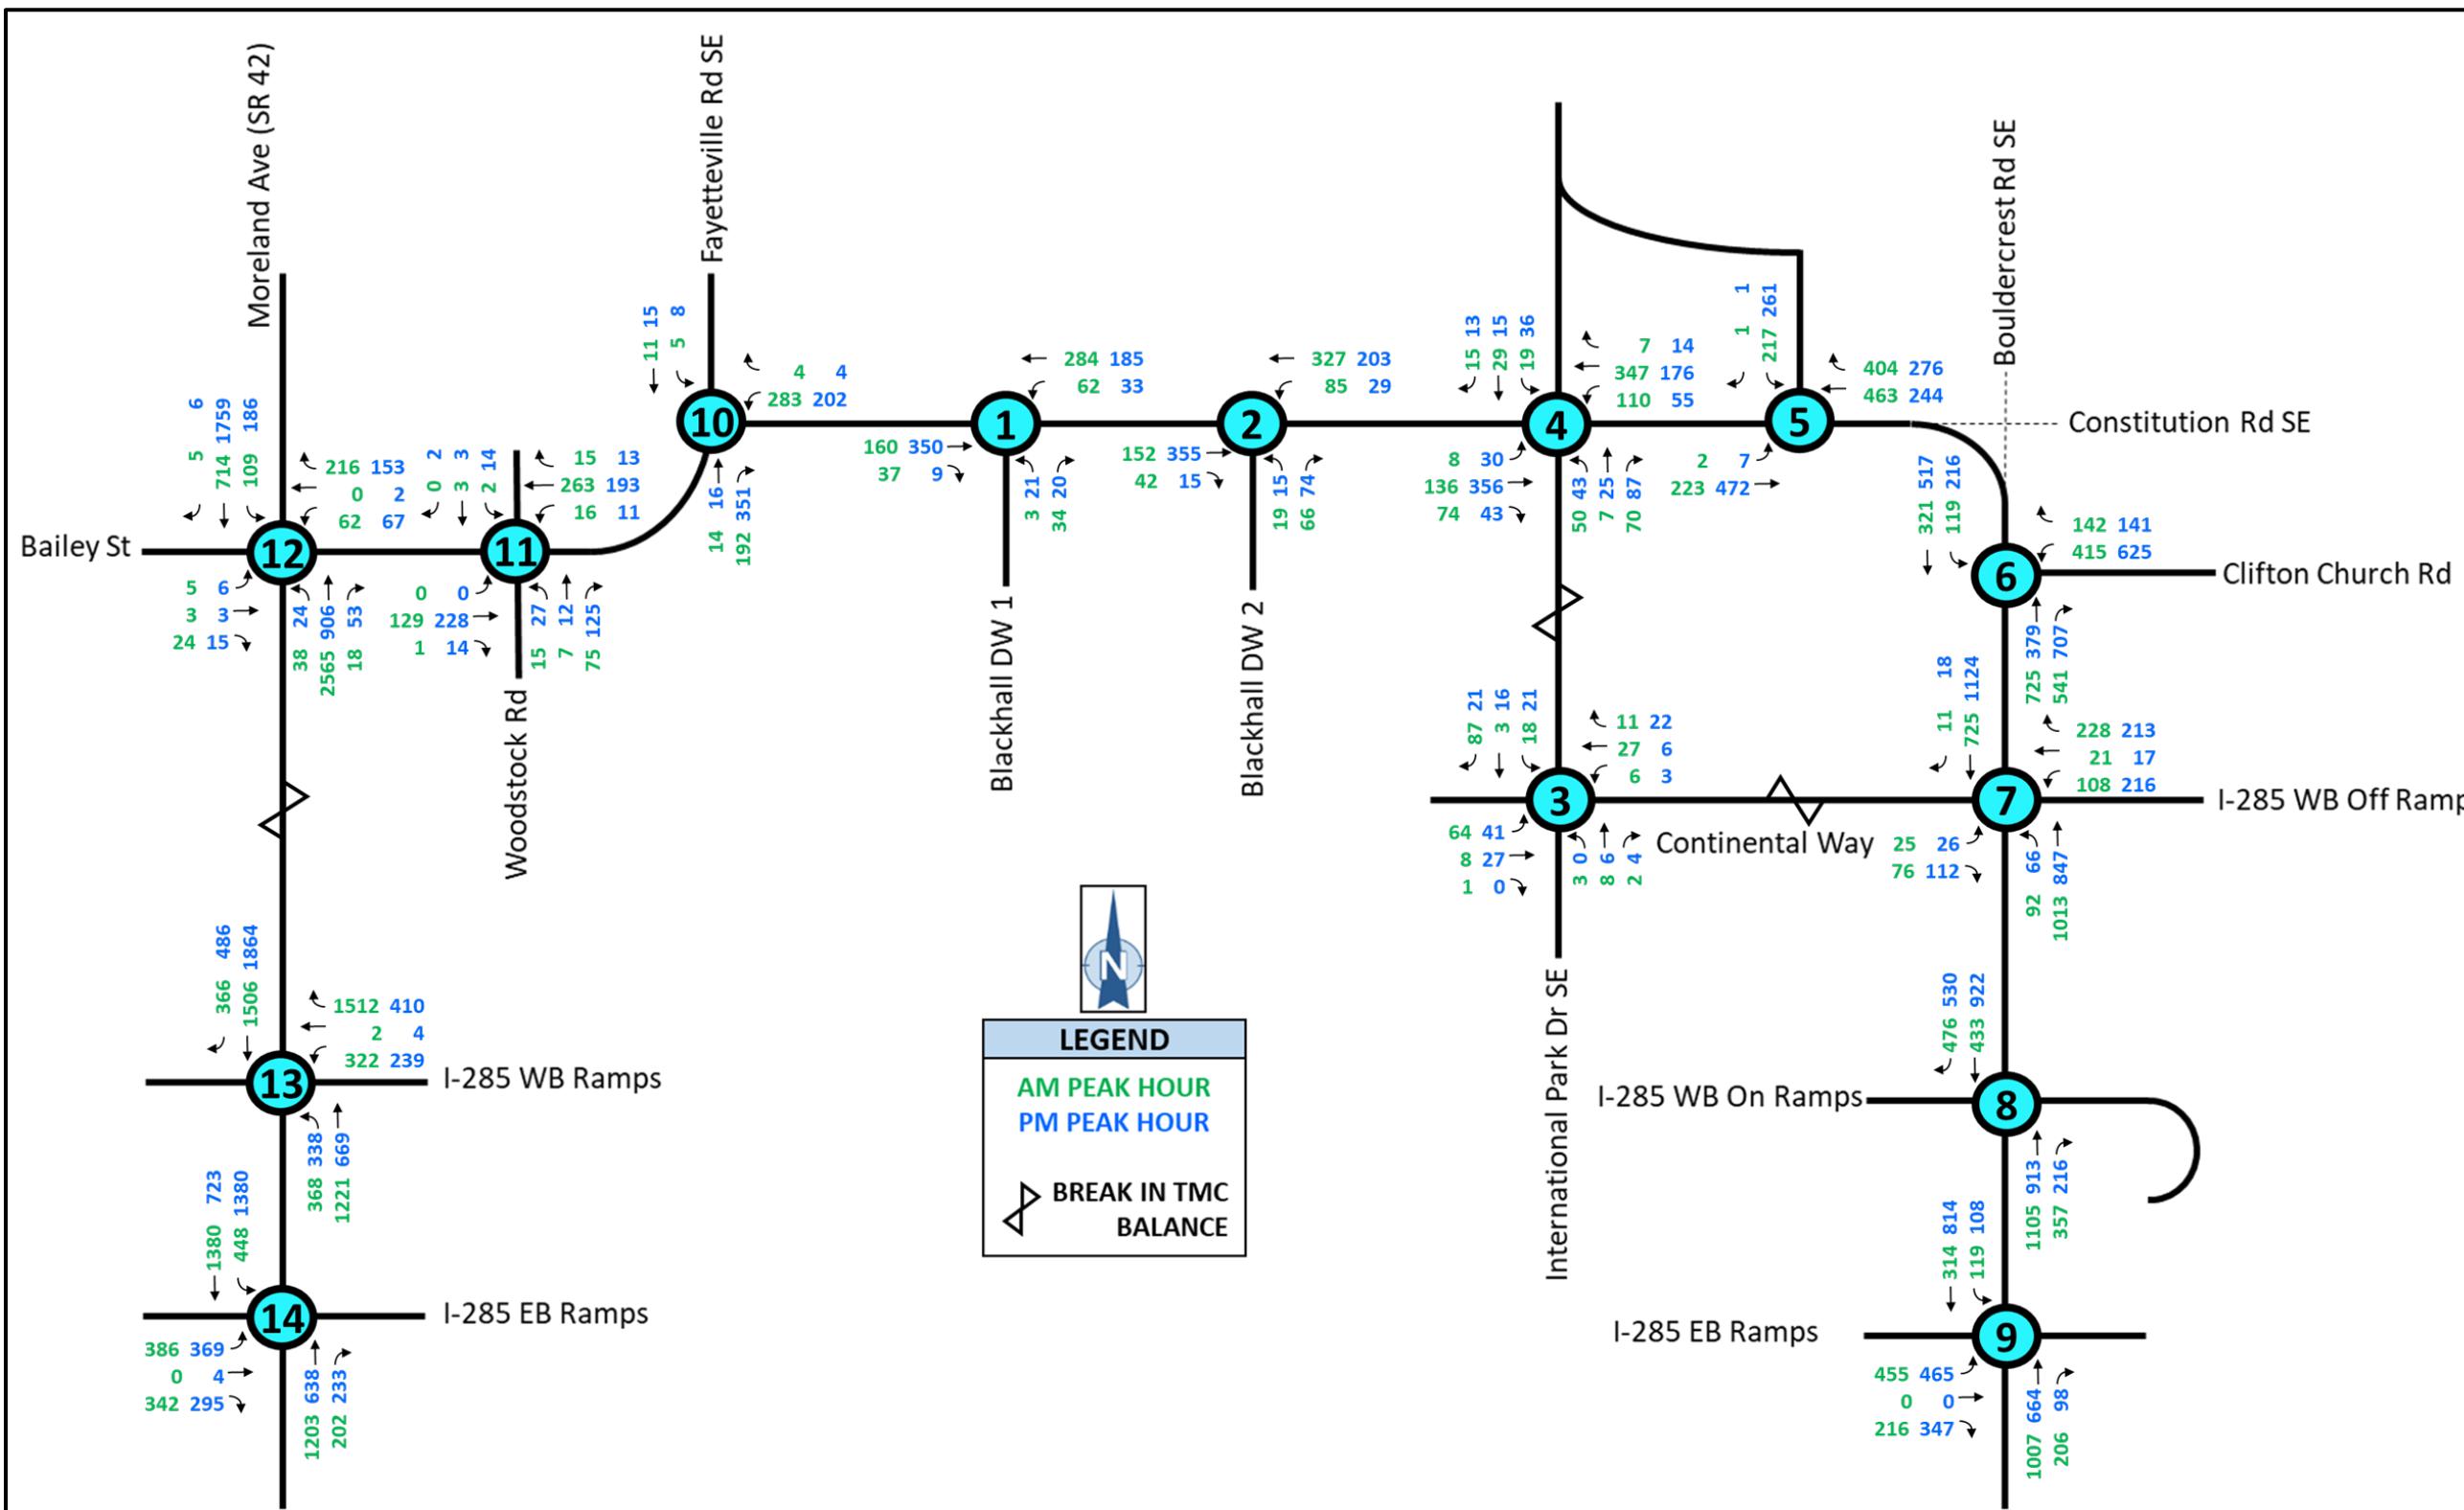

The growth factors for the Blackhall Phase 2 development area are provided in Table 5.

Table 5: GROWTH FACTORS

| PROJECTED | |
|-------------|---------------|
| Base (2024) | Design (2044) |
| 1.05 | 1.35 |

The Pre-COVID Adjusted and Balanced 2021 Volumes were grown to the build year of 2024 using a growth factor of 1.05. The Projected 2024 No-Build Volumes are shown in Figure 16.

Figure 16: PROJECTED 2024 NO-BUILD VOLUMES

PROJECTED CONDITIONS

TRIP GENERATION

Estimates of traffic volumes expected to be generated by the land uses within the proposed development were obtained using *TripGen 10* software from Trafficware. Trip rates were provided in the ITE publication *Trip Generation, 10th Edition*.

Trip generation for the film studio use was taken from the City of Burbank California's Media District Plan (1991) which provides a scaling factor of 75% to the general office land use (ITE Code 710). This rate provides an estimate of trips generated while a film is in production and the number of staff, cast members and extras are at its most. This factor was applied to the film stages land use, which therefore based the trip generation on 415,000 square feet rather than the 553,000 square feet.

For the purpose of this study, it was assumed that all trips would travel to the site in a car and not use the MARTA bus routes or bicycle trail (0% mode split).

Based on the updated site plan, the trip generation was also updated to include the additional 13,936 SF of film stage area. Table 6 shows the generated trips for the land uses within the proposed development. Trip generation data can be found in Appendix E.

Table 6: TRIP GENERATION

| ITE CODE | LAND USE | SIZE | DAILY 2-WAY TRIPS | AM PEAK HOUR | | | PM PEAK HOUR | | |
|------------------|--------------------------|----------------------|-------------------|--------------|------|-------|--------------|------|-------|
| | | | | ENTER | EXIT | TOTAL | ENTER | EXIT | TOTAL |
| 150 | Warehouse | 420 ksf | 731 | 59 | 17 | 76 | 22 | 58 | 80 |
| 710 | Offices | 200 ksf | 2078 | 200 | 32 | 232 | 37 | 193 | 230 |
| 710 ¹ | Film Stages ¹ | 553 ksf ¹ | 4219 | 414 | 67 | 481 | 76 | 401 | 477 |
| TOTAL NEW TRIPS | | | | 7028 | 673 | 116 | 789 | 135 | 652 |
| 787 | | | | | | | | | |

¹ There is no ITE rate for Film Stages, Rates used were taken from City of Burbank, California's Media District Plan which scales ITE Code 710 (Office) by 75%. Rate was based on (0.75 X 553) = 415 ksf of ITE Code 710.

² ksf = thousand square feet

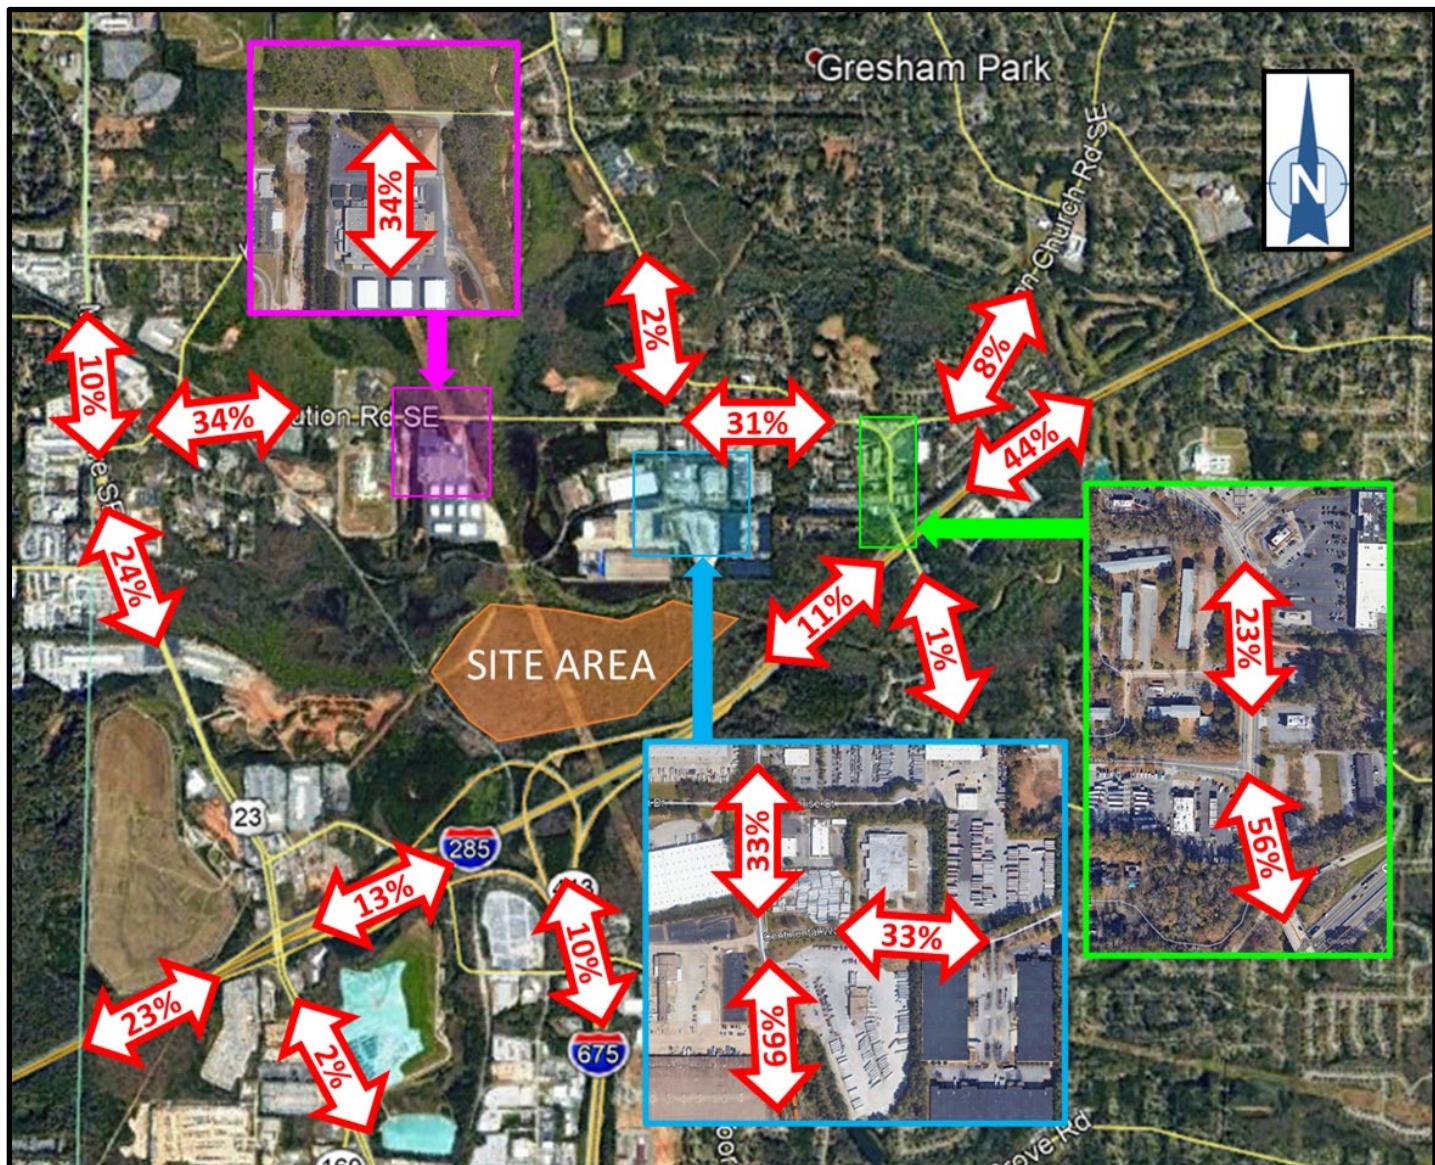

TRIP DISTRIBUTION

Trip distribution percentages were developed for generated external new trips. The GDOT Count Stations around the development area were used to acquire volume counts to develop a gravity model for the new trip distribution.

Due to the Bouldercrest interchange improvement (PI #713300-) planned to begin construction in 2023, a larger percentage of trips have been assigned to Continental Way. The project's concept plan shows that the I-285 WB Off Ramp will be realigned opposite of Continental Way while also incorporating improvements to Continental Way itself.

Figure 17 provides the expected trip distribution for the development.

Figure 17: NEW TRIPS DISTRIBUTION

TRAFFIC ASSIGNMENT

The generated traffic was assigned to the road network based the new trips distribution established using GDOT count stations. Table 7 shows how the assigned trips are expected to reach the development, according to the direction traveled.

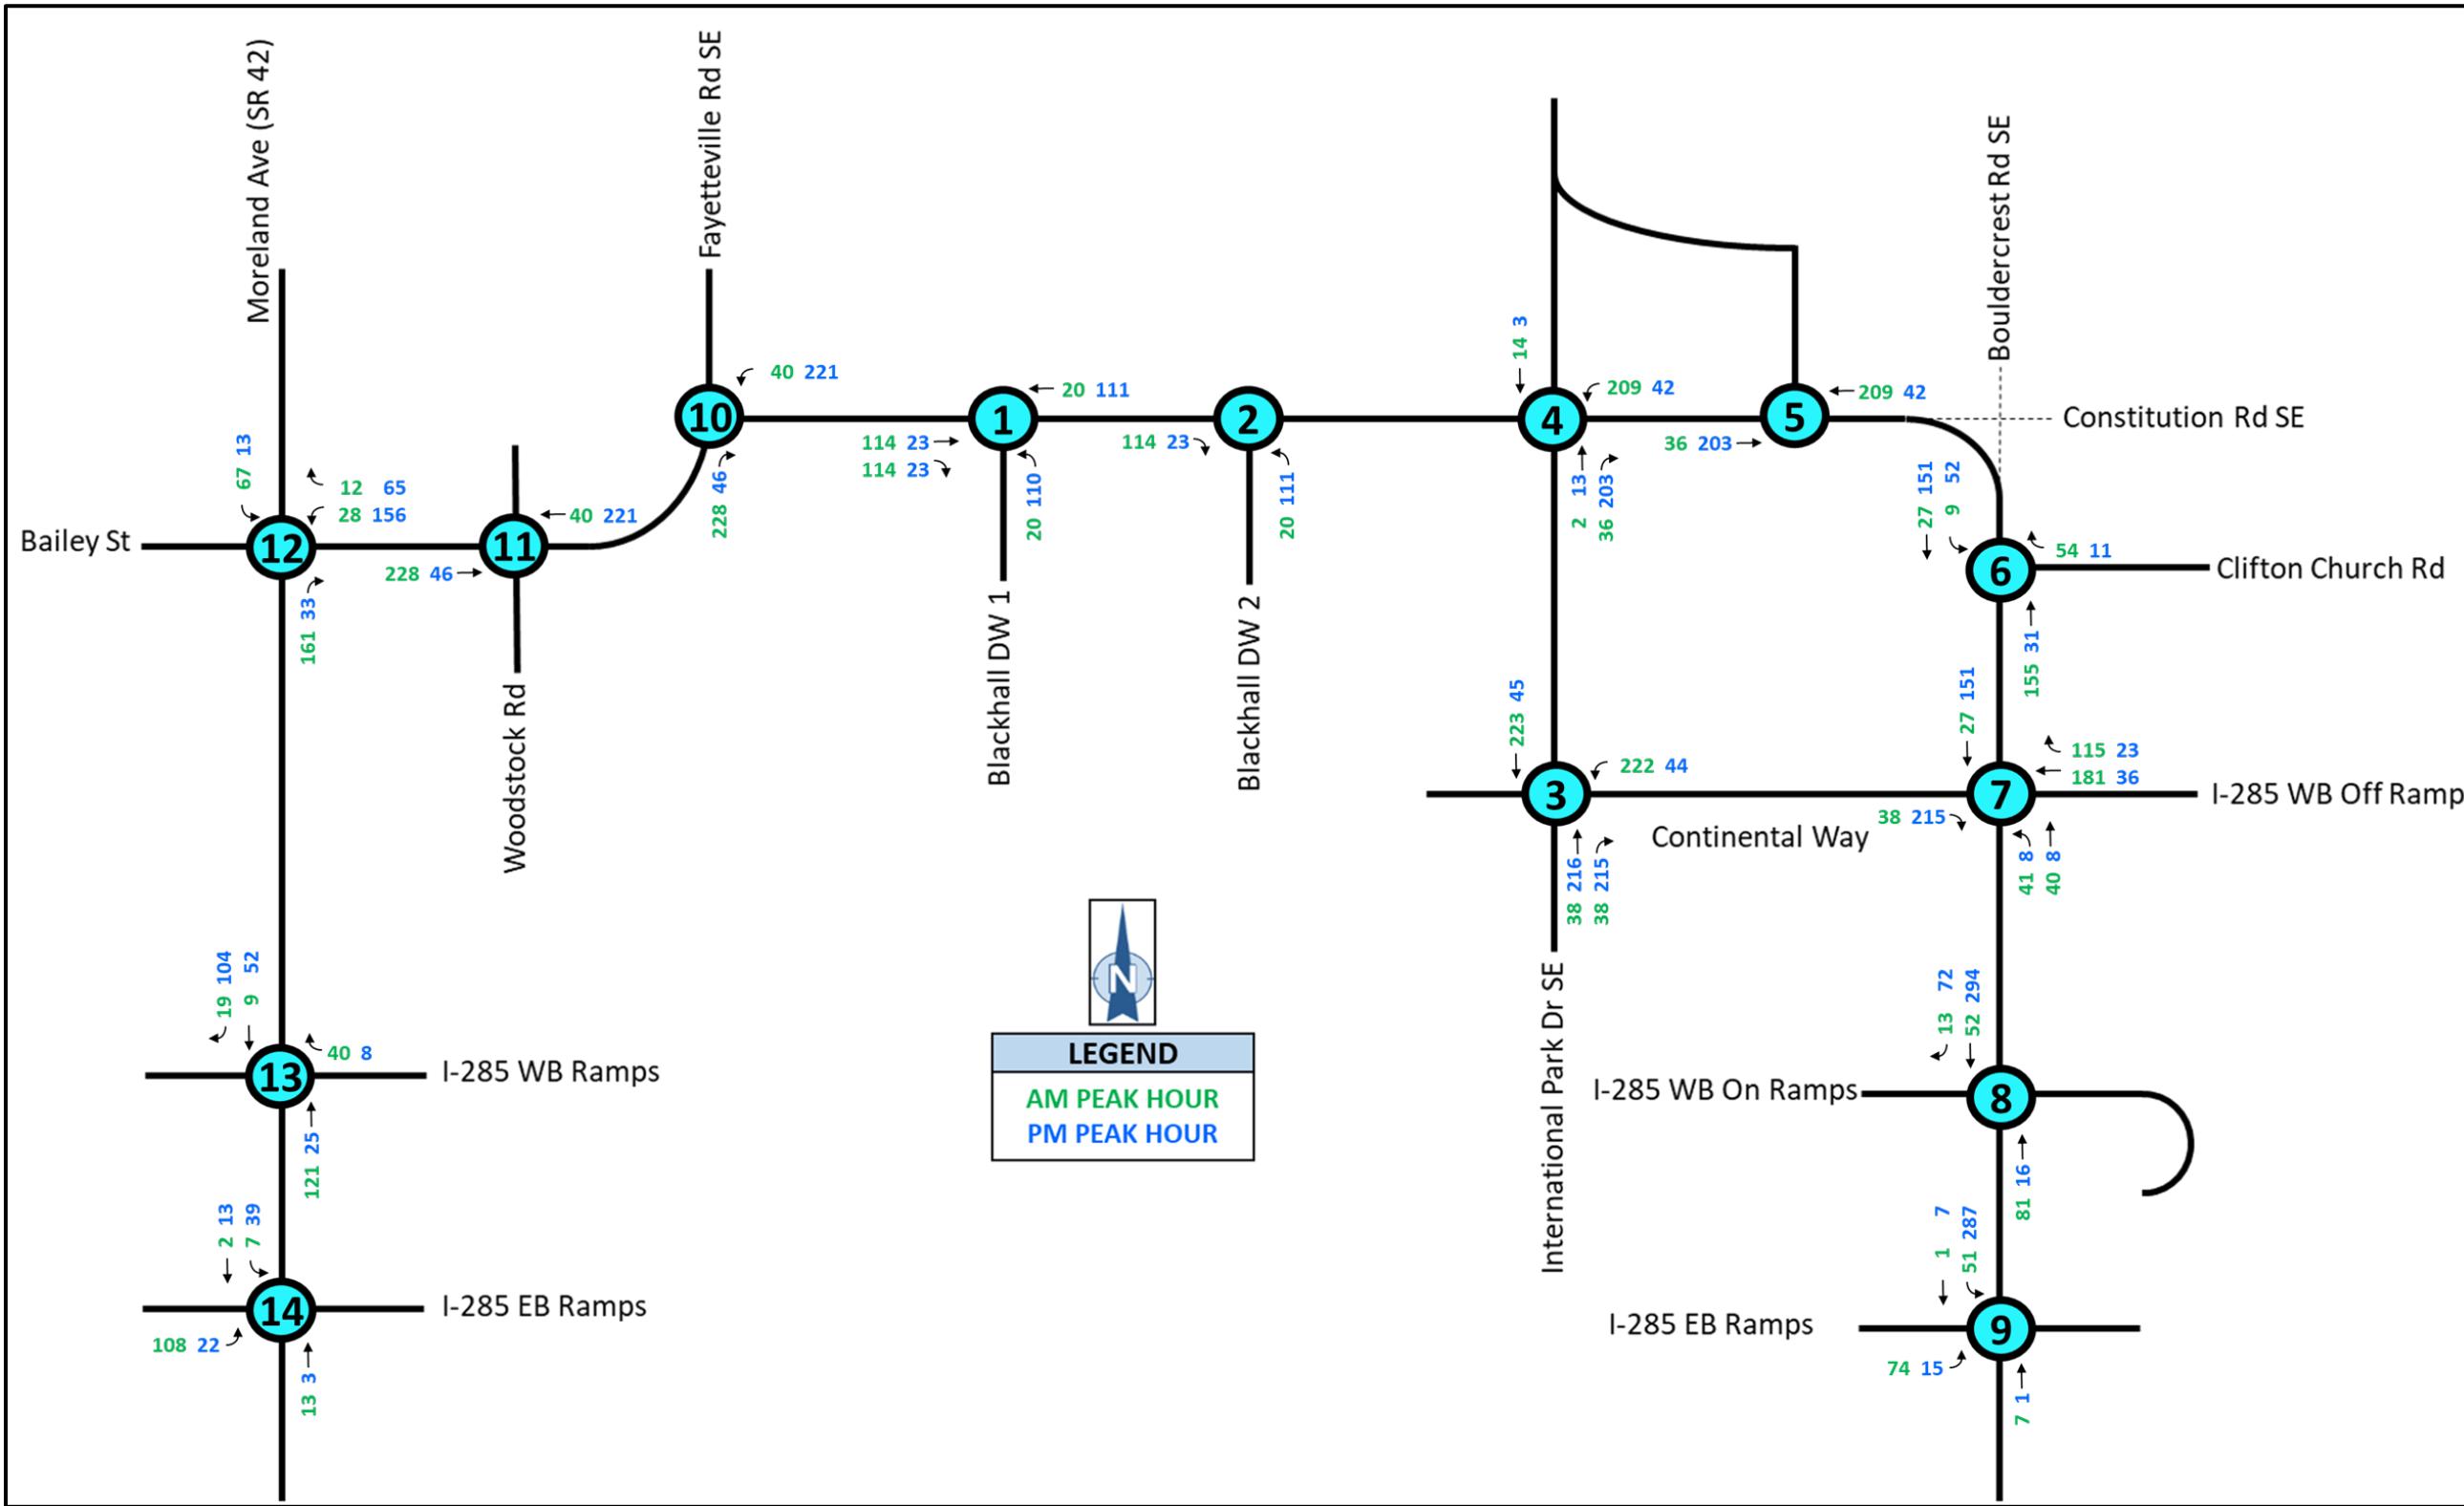

Table 7: NEW TRIPS ASSIGNMENT

| To & From | % 100% | AM | | PM | |
|------------------------------------|-------------|------------|------------|------------|------------|
| | | IN | OUT | IN | OUT |
| North on Moreland Ave | 10% | 67 | 12 | 13 | 65 |
| South on Moreland Ave | 2% | 13 | 2 | 3 | 13 |
| West on I-285 (Moreland Ave) | 16% | 108 | 19 | 22 | 104 |
| East on I-285 (Moreland Ave) | 6% | 40 | 7 | 8 | 39 |
| North on International Park Dr SE | 2% | 14 | 2 | 3 | 13 |
| East on Clifton Church Rd | 8% | 54 | 9 | 11 | 52 |
| South on Bouldercrest Rd SE | 1% | 7 | 1 | 1 | 7 |
| West on I-285 (Bouldercrest Rd SE) | 11% | 74 | 13 | 15 | 72 |
| East on I-285 (Bouldercrest Rd SE) | 44% | 296 | 51 | 59 | 287 |
| Total Trips | 100% | 673 | 116 | 135 | 652 |

New Trips

The generated external trips for each peak are shown in Figure 18. These trips were assigned in accordance with the distribution and assumptions listed on the previous pages.

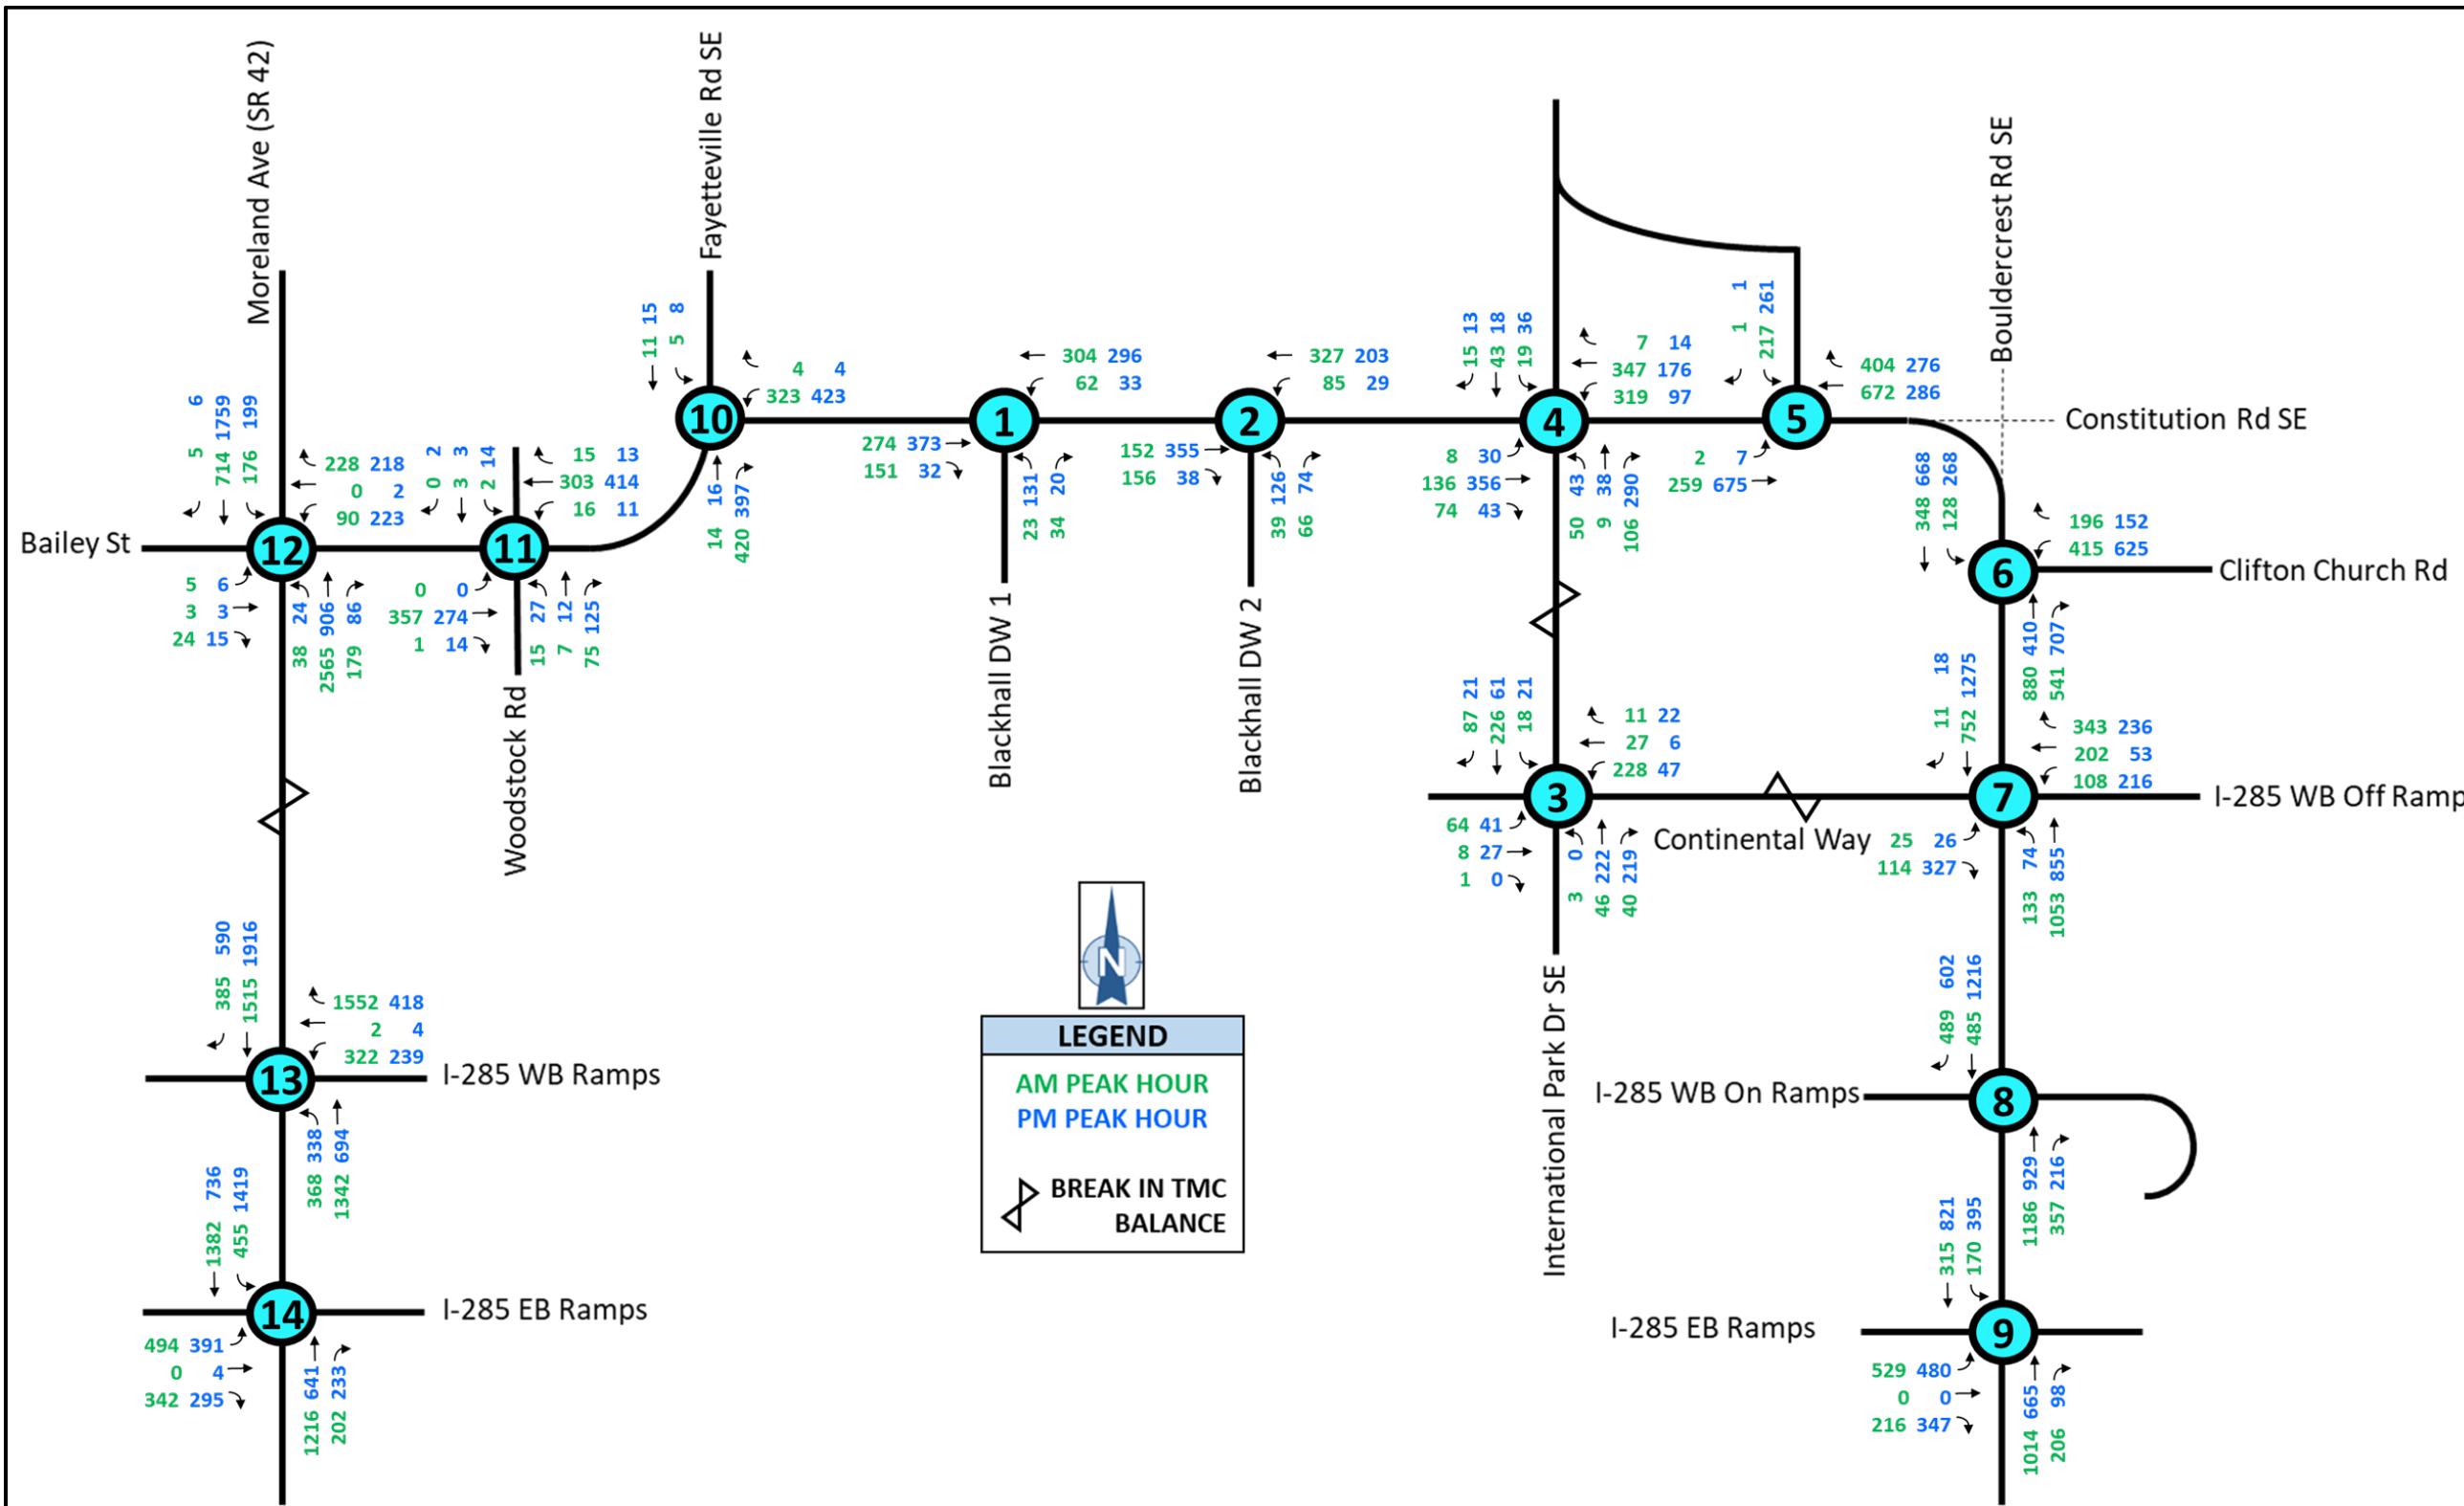

Figure 18: NEW TRIPS

Total Projected Peak Hour Traffic

The Projected 2024 Build Volumes are derived by combining the New Trips (Figure 18) and the Projected 2024 No-Build Volumes (Figure 16). The Projected 2024 Build Volumes are shown in Figure 19.

Figure 19: PROJECTED 2024 BUILD VOLUMES

CRASH HISTORY

Crash data was analyzed to identify collision-prone movements at the study intersections. Data was obtained from the Georgia Electronic Accident Reporting System (GEARS) for the five most recent years of data.

Tables 8 to 21 summarize the crash frequency at the study intersections. Detailed crash data is provided in Appendix F.

Table 8: CRASH DATA SUMMARY, CONSTITUTION RD SE & BLACKHALL STUDIOS DW 1

| YEAR | TOTAL CRASHES | INJURY CRASHES/ INJURIES | FATAL -ITIES | COLLISION WITH VEHICLE | | | | COLLISION WITH ANIMAL OR STRUCTURE |
|--------------|---------------|--------------------------|--------------|------------------------|----------|----------|------------|------------------------------------|
| | | | | RIGHT-ANGLE | HEAD ON | REAR END | SIDE-SWIPE | |

The fatality in 2018 occurred due to a pedestrian crossing Bouldercrest Road SE at 10:55 PM without a crosswalk. A car was traveling southbound and struck the pedestrian as they were crossing. The fatality was a result of an illegal maneuver by the pedestrian, therefore it was determined no preventative measures were necessary.

| Total | 83 | 31/69 | 1 | 37 | 1 | 27 | 13 | 5 |

The fatality in 2018 occurred due to an angle collision, with a car traveling southbound on Moreland Avenue (SR 42) striking a car attempting to exit the UPS driveway in a t-bone manner. This could have been prevented if a traffic signal or some other intersection control that improves safety would have been implemented. Based on Signal Warrant 7, this intersection meets the crash requirements for installing a traffic signal.

Table 20: CRASH DATA SUMMARY, MORELAND AVE (SR 42) & I-285 WB RAMPS

| 2017 | 27 | 5/6 | 0 | 8 | 0 | 10 | 7 | 2 |
| 2018 | 30 | 7/14 | 0 | 7 | 1 | 16 | 6 | 0 |
| 2019 | 24 | 4/7 | 0 | 5 | 1 | 11 | 7 | 0 |
| 2020 | 26 | 9/15 | 0 | 8 | 1 | 9 | 6 | 2 |
| Total | 138 | 32/52 | 0 | 33 | 3 | 65 | 30 | 7 |

During the analysis period (2016 through 2020), the most common crash types were rear end collisions, which account for 46% of all crashes. Two fatalities were recorded over this span, as stated before. One occurred at the intersection of Bouldercrest Road SE and I-285 EB Ramps while the other occurred at Moreland Avenue (SR 42) and Bailey Street.

CAPACITY ANALYSIS

Existing and projected conditions were evaluated using capacity analysis techniques described in the *Highway Capacity Manual, Special Report 209*, published by the Transportation Research Board, 6th Edition, and with the use of *Synchro 10* from Trafficware. HCM Level of Service (LOS) definitions are shown in Table 22.

Table 22: LEVEL OF SERVICE CRITERIA

| LEVEL OF SERVICE | DELAY PER VEHICLE (SECONDS) | |
|------------------|-----------------------------|-----------------------------|
| | SIGNALIZED INTERSECTIONS | UN SIGNALIZED INTERSECTIONS |
| A | ≤10.0 | ≤10.0 |
| B | 10.1 to 20.0 | 10.1 to 15.0 |
| C | 20.1 to 35.0 | 15.1 to 25.0 |
| D | 35.1 to 55.0 | 25.1 to 35.0 |
| E | 55.1 to 79.9 | 35.1 to 49.9 |
| F | ≥80.0 | ≥50.0 |

Source: Highway Capacity Manual, Special Report 209, Transportation Research Board, 6th Edition

EXISTING CONDITIONS

The intersections were evaluated under existing conditions. The results of the capacity analysis are summarized in Table 23 (signalized intersection) and Table 24 (unsignalized intersections) below and on the following page. For each condition, the level of service is shown, followed parenthetically by the average delay per vehicle, in seconds. Capacity analysis reports for existing conditions can be found in Appendix G.

Table 23: CAPACITY ANALYSIS RESULTS, 2021 EXISTING CONDITIONS (SIGNALIZED)

| INTERSECTION | 2021 EXISTING CONDITIONS | |
|---|-----------------------------|-----------------|
| | AM PEAK HOUR | PM PEAK HOUR |
| 5 Constitution Rd SE & Bouldercrest Rd SE | B (10.3) | A (9.7) |
| 6 Bouldercrest Rd SE & Clifton Church Rd | C (32.3) | D (37.4) |
| 7 Bouldercrest Rd SE & Continental Way | A (1.2) | A (1.3) |
| 8 Bouldercrest Rd SE & I-285 WB Ramps | A (5.4) | C (23.0) |
| 9 Bouldercrest Rd SE & I-285 EB Ramps | C (32.1) | C (22.9) |
| 13 Moreland Ave (SR 42) & I-285 WB Ramps | D (41.7) | C (30.3) |
| 14 Moreland Ave (SR 42) & I-285 EB Ramps | C (24.4) | D (40.7) |

Capacity results indicate that all of the signalized intersections operate at LOS D or better in both peak hours under existing conditions.

Table 24: CAPACITY ANALYSIS RESULTS, 2021 EXISTING CONDITIONS (UNSIGNALIZED)

| | SB-L | F (848.5) | C (21.2) |
| | SB-T/R | A (0.0) | A (0.0) |

* = Delay time of over 1000 seconds

Capacity results indicate that multiple movements at Moreland Avenue (SR 42) and Bailey Street are operating at LOS E or worse in both peak hours under existing conditions. The eastbound and westbound movements are failing in both peak hours, except for the westbound right in the PM peak hour. The southbound left fails during the AM peak hour while the northbound left fails during the PM peak hour.

PROJECTED NO-BUILD CONDITIONS

The intersections were evaluated under projected no-build conditions, with projected geometry and projected 2024 no-build traffic volumes. The results of the capacity analysis are summarized in Table 25 (signalized intersection) and Table 26 (unsignalized intersections) below. Capacity analysis reports for projected no-build conditions can be found in Appendix H.

The projected geometry includes the interchange modification project on Bouldercrest Road SE (PI #713300) that is expected to be complete in 2023. The I-285 WB Off Ramp will be reconstructed to intersect Bouldercrest Road SE opposite of Continental Way, creating a 4-leg signalized intersection. The off ramp will include dual left turn lanes, a through lane, and a right turn lane. The existing intersection of Bouldercrest Road SE and I-285 WB Ramps will be reconstructed as a divided roadway with on ramps on both sides of the road (normal on ramp and a loop on ramp for northbound traffic). The bridge will be upgraded to include two southbound through lanes, dual southbound left turn lanes, two northbound through lanes, and a northbound right turn lane.

Table 25: CAPACITY ANALYSIS RESULTS, 2024 NO-BUILD CONDITIONS (SIGNALIZED)

| INTERSECTION | 2024 NO-BUILD CONDITIONS | |
|--|-----------------------------|-----------------|
| | AM PEAK HOUR | PM PEAK HOUR |
| 5 Constitution Rd SE & Bouldercrest Rd SE | B (10.5) | B (10.0) |
| 6 Bouldercrest Rd SE & Clifton Church Rd | C (33.2) | D (39.2) |
| 7 Bouldercrest Rd SE & Continental Way/I-285 WB Off Ramp | B (11.5) | B (11.7) |
| 9 Bouldercrest Rd SE & I-285 EB Ramps | C (22.8) | B (19.6) |
| 13 Moreland Ave (SR 42) & I-285 WB Ramps | D (44.8) | C (31.9) |
| 14 Moreland Ave (SR 42) & I-285 EB Ramps | C (25.1) | D (48.2) |

Capacity results indicate that all of the signalized intersections operate at LOS D or better in both peak hours under no-build conditions.

* = Delay time of over 1000 seconds

Capacity results indicate that multiple movements at Moreland Avenue (SR 42) and Bailey Street are operating at LOS E or worse in both peak hours under no-build conditions. The eastbound and westbound movements are failing in both peak hours, except for the westbound right in the PM peak hour. The southbound left fails during the AM peak hour while the northbound left fails during the PM peak hour.

PROJECTED BUILD CONDITIONS

The intersections were evaluated under projected build conditions, with projected geometry and projected 2024 build traffic volumes. The results of the capacity analysis are summarized in Table 27 (signalized intersection) and Table 28 (unsignalized intersections) below. Capacity analysis reports for projected no-build conditions can be found in Appendix I.

The projected geometry that includes the Bouldercrest Road SE interchange modification (PI #713300) has also been included in the projected build conditions.

Table 27: CAPACITY ANALYSIS RESULTS, 2024 BUILD CONDITIONS (SIGNALIZED)

| INTERSECTION | 2024 BUILD CONDITIONS | |
|--|-----------------------|--------------|
| | AM PEAK HOUR | PM PEAK HOUR |
| 5 Constitution Rd SE & Bouldercrest Rd SE | B (10.9) | B (10.5) |
| 6 Bouldercrest Rd SE & Clifton Church Rd | C (34.6) | D (37.7) |
| 7 Bouldercrest Rd SE & Continental Way/I-285 WB Off Ramp | C (21.9) | B (12.5) |
| 9 Bouldercrest Rd SE & I-285 EB Ramps | C (24.2) | C (20.0) |
| 13 Moreland Ave (SR 42) & I-285 WB Ramps | D (44.3) | C (32.4) |
| 14 Moreland Ave (SR 42) & I-285 EB Ramps | C (28.4) | D (53.8) |

Capacity results indicate that all of the signalized intersections operate at LOS D or better in both peak hours under build conditions.

Table 28: CAPACITY ANALYSIS RESULTS, 2024 BUILD CONDITIONS (UNSIGNALIZED)

| INTERSECTION | MOVEMENT | BUILD CONDITIONS | |

* = Delay time of over 1000 seconds

Capacity results indicate that multiple movements at Moreland Avenue (SR 42) and Bailey Street are operating at LOS E or worse in both peak hours under existing conditions. The eastbound and westbound movements are failing in both peak hours, except for the westbound right in the PM peak hour. The southbound left fails during the AM peak hour while the northbound left fails during the PM peak hour. The northbound and southbound movements at Constitution Road SE and International Park Drive SE are failing in both peak hours and the AM peak hour, respectively.

SEGMENT ANALYSIS

Capacity analysis was also conducted for each roadway segment using the *Highway Capacity Software* from McTrans. Existing and projected volumes were evaluated. The HCM level-of-service definitions for two lane highways (Class III) and multilane highways are summarized in Table 29.

Table 29: ROADWAY SEGMENT LEVEL OF SERVICE CRITERIA

| LEVEL OF SERVICE | TWO LANE HIGHWAYS (CLASS III) | MULTILANE HIGHWAYS |
|------------------------|----------------------------------|---------------------------------------|
| | PERCENT FREE FLOW SPEED (%) | DENSITY (PASSENGER CARS/MILE/LANE) |
| A | > 91.7 | ≤ 11 |
| B | > 83.3 – 91.7 | > 11 - 18 |
| C | > 75.0 – 83.3 | > 18 - 26 |
| D | > 66.7 – 75.0 | > 26 - 35 |
| E | ≤ 66.7 | > 35 – 45 |
| F | Volume/Capacity (V/C) > 1 | > 45 |

Source: Highway Capacity Manual, Transportation Research Board, 6th Edition

The two-lane highway segment analysis defines Level of Service based on Percent Free Flow Speed (PFFS). The LOS for multilane highway segment analysis defines LOS in terms of density (passenger cars/mile/lane (pc/mi/ln)). LOS D and above are considered acceptable conditions. Segment analysis reports can be found in Appendix J.

The existing volumes were evaluated under existing conditions. The 2024 no-build and build volumes were evaluated under projected conditions with the other planned roadway improvements that are to be completed.

EXISTING CONDITIONS

Table 30 summarizes the results of the roadway segment analysis for the existing volumes.

Table 30: SEGMENT ANALYSIS – 2021 EXISTING CONDITIONS

| ROADWAY | SEGMENT | 2021 EXISTING CONDITIONS | | | |

| International Park Dr SE | Constitution Rd SE – Continental Way | 121 vph (NB) 436 vph (SB) 0.26 (v/c) C (81.0%) | N/A | 285 vph (NB) 158 vph (SB) 0.19 (v/c) C (79.0%) | N/A |
| Continental Way | International Park Dr SE – Bouldercrest Rd SE | 66 vph (EB) 346 vph (WB) 0.05 (v/c) C (81.6%) | N/A | 267 vph (EB) 145 vph (WB) 0.18 (v/c) C (79.2%) | N/A |

Segment analysis indicates that all of the roadway segments will operate at LOS D or better during both peak hours under build conditions.

GDOT INTERSECTION CONTROL EVALUATION (ICE)

The GDOT Intersection Control Evaluation (ICE) tool was used to evaluate potential traffic control alternatives for all study intersections involving a state route.

Intersections mentioned below were waived from the ICE tool evaluation since they maintain acceptable operations in the existing, no-build, and build conditions, therefore not being adversely affected by the development. The following intersections were waived from ICE:

- Moreland Avenue (SR 42) and I-285 WB Ramps
- Moreland Avenue (SR 42) and I-285 EB Ramps

ICE spreadsheets are provided in Appendix K. Capacity analysis reports for the ICE alternatives are provided in Appendix L.

Moreland Avenue (SR 42) and Bailey Street

The ICE tool was used to determine feasible types of controls at the intersection of Moreland Avenue (SR 42) and Bailey Street. The following alternatives were identified in ICE for further analysis:

- Traffic Signal
- Signalized RCUT
- RCUT

In order to determine if a signal would be warranted at the intersection, the 8th highest hour volume was estimated and compared to the volume thresholds of Warrants #1 and #2, which are established in the *MUTCD* handbook. The daily volume was estimated from the highest peak hour volume and a K-factor of 9.0%. The 8th highest hour, which is estimated to be 5.6% of the daily traffic in accordance with the GDOT Design Manual, was then calculated from the daily volume through the intersection.

Further analysis was conducted to check the intersection against Warrant 2 – Four Hour Vehicular Volume. The 4th highest hour was calculated to be 7.5% from the K-factor and the 8th highest hour. This percentage was determined through interpolation between the K-factor of 9.0% and the accepted 8th highest hour percentage of 5.6%.

The derived 8th and 4th highest hour volumes were compared to the warrant requirements contained in the *MUTCD* handbook.

Table 33 below summarizes the results of the signal warrants, using 100% thresholds as required by GDOT for the study intersection of Moreland Avenue (SR 42) and Bailey Street. Signal warrants were evaluated using 2021 existing volumes, the 8th highest hour method, and the 4th highest hour method. The alternative method was used with the existing volumes (i.e. the mainline left turn volume was used for the minor street volume).

Table 33: TRAFFIC SIGNAL WARRANTS, MORELAND AVE (SR 42) & BAILEY ST

| HIGHEST PEAK HOUR VOLUMES (MAJOR/MINOR) | ESTIMATED DAILY VOLUME (MAJOR/MINOR) | 8 th HIGHEST PEAK HOUR (Warrant 1) | Warrant 1A (100%) 600/150 | Warrant 1B (100%) 900/75 | 4 th HIGHEST PEAK HOUR (Warrant 2) | Warrant 2 (100%) 1400/80 |
|---|--------------------------------------|---|------------------------------|-----------------------------|---|-----------------------------|
| 2443/104 | 27144/1156 | 1520/65 | Y/N | Y/N | 2036/87 | Y/Y |

The intersection meets the 100% thresholds for signal warrants under Warrant 2 using the alternative method. Therefore, a traffic signal was evaluated as an alternative. Moreland Avenue (SR 42) and Bailey Street is experiencing failing operations in the existing conditions while also warranting a traffic signal.

Of the alternatives analyzed, the GDOT ICE tool identified the Traffic Signal as the most suitable method of traffic control at this intersection. Capacity analysis results for each of the ICE alternatives are shown in Table 34.

Table 34: CAPACITY ANALYSIS RESULTS, ICE ALTERNATIVES

| ALTERNATIVE INTERSECTION DESIGNS | APPROACH-MOVEMENT | BUILD YEAR (2024) | | DESIGN YEAR (2044) | |

| | SB-T/R | A (0.0) | A (0.0) | A (0.0) | A (0.0) |

* =Delay time of over 1000 seconds

Delays for the Signalized RCUT alternative were taken from *SimTraffic* results as HCM 6th analysis would not provide a delay for the side streets.

The traffic signal is projected to operate at LOS B during both peak hours in the Build Year. It is projected to operate at LOS E during the AM peak hour while at LOS B during the PM peak hour. The signal suffers in the Design Year during the AM peak hour due to high northbound through volumes and southbound left turns. Both the signalized and unsignalized RCUT alternatives are projected to experience failing operations in the Build and Design Years due to the high number of mainline through volumes.

OTHER IMPROVEMENTS

The proposed development is projected to cause Constitution Road SE and International Park Drive SE to experience failing operations, therefore alternative methods of control were evaluated at this intersection.

Constitution Road SE and International Park Drive SE

The following alternatives were chosen for further analysis at the intersection of Constitution Road SE and International Park Drive SE.

- Add Northbound and Southbound Right Turn Lanes
- Single Lane Roundabout with a Northbound Right Turn Bypass Lane

Capacity analysis results for each of the alternatives are shown in Table 35. Capacity analysis reports for the alternatives are provided in Appendix M.

Table 35: CAPACITY ANALYSIS RESULTS, OTHER IMPROVEMENTS

| ALTERNATIVE INTERSECTION DESIGNS | APPROACH-MOVEMENT | BUILD YEAR (2024) | | DESIGN YEAR (2044) | |
|--|-------------------|-------------------|-----------------|--------------------|------------------|
| | | AM PEAK HOUR | PM PEAK HOUR | AM PEAK HOUR | PM PEAK HOUR |
| Add NB/SB Right Turn Lanes | EB-L | A (8.2) | A (7.7) | A (8.6) | A (7.9) |
| | EB-T/R | A (0.0) | A (0.0) | A (0.0) | A (0.0) |
| | WB-L | A (8.6) | B (10.1) | A (9.2) | B (11.5) |
| | WB-T | A (0.0) | A (0.0) | A (0.0) | A (0.0) |
| | WB-R | A (0.0) | A (0.0) | A (0.0) | A (0.0) |
| | NB-L/T | F (131.4) | E (35.9) | F (*) | F (155.9) |
| | NB-R | B (10.5) | B (13.5) | B (11.2) | C (16.6) |
| | SB-L/T | F (62.3) | E (37.7) | F (233.1) | F (170.2) |
| | SB-R | B (10.3) | A (9.4) | B (11.3) | A (9.9) |
| Single Lane Roundabout w/ NB Bypass Lane | EB | A (7.3) | A (8.8) | A (8.8) | B (12.2) |
| | WB | B (10.2) | A (7.9) | B (13.4) | A (9.3) |
| | NB | A (1.3) | A (1.1) | A (1.5) | A (1.4) |
| | SB | A (7.1) | A (5.1) | A (9.7) | A (5.8) |

* =Delay time of over 1000 seconds

Capacity analysis results indicate that the northbound and southbound left/through lanes are projected to experience failing levels of service during both peak hours in the Build and Design Years with added right turn lanes. The results indicate that the single lane roundabout with a northbound right turn bypass lane is projected to operate at LOS B or better during both peak hours in the Build and Design Years.

SUMMARY OF FINDINGS

- The proposed Blackhall Phase 2 development is an expansion of the existing Blackhall Studios off Constitution Road SE in Dekalb County, Georgia.
- An interchange modification project (PI #713300) affects the interchange of Bouldercrest Road SE and I-285 and was assumed complete for the projected no-build and build conditions.
- The production studios development will consist of warehouse, office, and film stage land uses:
 - Warehouse: 420,000 total square feet
 - Office: 200,100 total square feet
 - Film Stage: 552,436 total square feet
- There are four points of ingress/egress for the site:
 - Two at Blackhall Studios' current driveways on Constitution Road SE
 - One from International Park Drive SE onto Constitution Road SE
 - One from Continental Way onto Bouldercrest Road SE
- The peak hours were established to be 7:15 to 8:15 AM and 4:00 to 5:00 PM.
- Recent traffic volume counts collected within the past few years were used in comparison with newly counted traffic volumes to establish pre-COVID traffic for the existing year 2021.
- Using data collected from the Atlanta Regional Commission (ARC) and trend analysis from GDOT count stations, the background growth rate was found to be 1.50%.
- The proposed development is projected to generate 7,028 daily trips.
 - 789 in the AM peak hour (673 entering, 116 exiting)
 - 787 in the PM peak hour (135 entering, 652 exiting)
 - The studios are also expected to operate during off-peak hours, reducing the anticipated peak hour impacts.
- Crash history from the past five years was obtained for all fourteen intersections. During this time period, two fatalities were recorded. The most common crash types were rear end collisions, which accounted for 46% of all recorded crashes.
- Capacity analysis results under 2021 existing conditions shows the signalized intersections operating at LOS D or better in both peak hours. Moreland Avenue (SR 42) and Bailey Street is the only unsignalized intersection with failing movements, occurring in both peak hours.

- Capacity analysis results under 2024 no-build conditions shows the signalized intersections operating at LOS D or better in both peak hours. Moreland Avenue (SR 42) and Bailey Street is the only unsignalized intersection with failing movements, occurring in both peak hours.
- Capacity analysis results under 2024 build conditions shows the signalized intersections operating at LOS D or better in both peak hours. As for unsignalized intersections, Moreland Avenue (SR 42) and Bailey Street along with Constitution Road SE and International Park Drive SE are the only intersections with failing movements, occurring in both peak hours.
- Segment analysis results indicate that the only roadway segment to experience failing levels of service is Bouldercrest Road SE from I-285 WB to I-285 EB (interchange bridge) during both peak hours in the existing conditions.
 - Once the interchange modification project (PI #713300) is complete, the interchange is projected to operate at acceptable levels of service during both peak hours in the 2024 no-build and 2024 build conditions.
 - All other roadway segments operate/are projected to operate at LOS D or better during both peak hours in the 2021 existing, 2024 no-build, and 2024 build conditions.
- The GDOT Intersection Control Evaluation (ICE) tool was used to develop possible alternatives at the study intersections involving a state route. The tool identified the most suitable alternatives at the following intersections:
 - Moreland Avenue (SR 42) and Bailey Street
 - Traffic Signal (#1 Ranked Alternative by ICE)
 - Signalized RCUT
 - RCUT
 - The intersections of Moreland Avenue (SR 42) with the I-285 WB Ramps and the I-285 EB Ramps were both waived from the ICE process due to maintaining acceptable operation through build conditions. The proposed development is not projected to adversely affect these intersections.
- Alternatives were also evaluated at the intersection of Constitution Road SE and International Park Drive SE due to the proposed development being projected to cause the intersection to experience failing operation.
 - Add Northbound/Southbound Right Turn Lanes
 - Single Lane Roundabout with a Northbound Right Turn Bypass Lane

RECOMMENDATIONS

Based on the findings from the study, the recommendations are as follows:

- Moreland Avenue (SR 42) and Bailey Street (Illustrated in Figure 20)
 - Install a traffic signal.
 - Implement a left, through/right lane configuration on both side streets.
 - The westbound left turn lane should have approximately 300 feet of full width storage.
 - Extend the southbound left turn lane to be back-to-back with the northbound left turn lane just north of it.
 - Install a northbound right turn lane with a minimum of 175 feet of full width storage.
 - The southbound and westbound lefts should both have a protected/permissive phase.
- Constitution Road SE and International Park Drive SE (Illustrated in Figure 21)
 - Install a single lane roundabout (inscribed diameter of 130 feet) with a northbound right turn bypass lane.
 - The westbound approach on Constitution Road SE will need to be reconfigured/restriped to have the westbound lanes merge into a single lane approach.
 - The northbound right turn bypass lane will merge freely into the right lane of the two eastbound lanes east of the intersection.
- Constitution Road SE and Blackhall Studios Driveway 1 (Illustrated in Figure 22)
 - Extend the eastbound right turn lane to a minimum of 175 feet of full width storage.
 - Install a westbound left turn lane with a minimum of 235 feet of full width storage.
- Constitution Road SE and Blackhall Studios Driveway 2 (Illustrated in Figure 22)
 - Extend the eastbound right turn lane to a minimum of 175 feet of full width storage.
 - Install a westbound left turn lane with a minimum of 235 feet of full width storage if possible due to the bridge crossing over Intrenchment Creek.
 - Implement a right turn radius of 75 feet exiting the driveway for any trucks that may leave the facility.

Figure 20 shows the improvements that are recommended to be made for the intersection of Moreland Avenue (SR 42) and Bailey Street.

Figure 20: MORELAND AVE (SR 42) & BAILEY ST PROPOSED IMPROVEMENTS

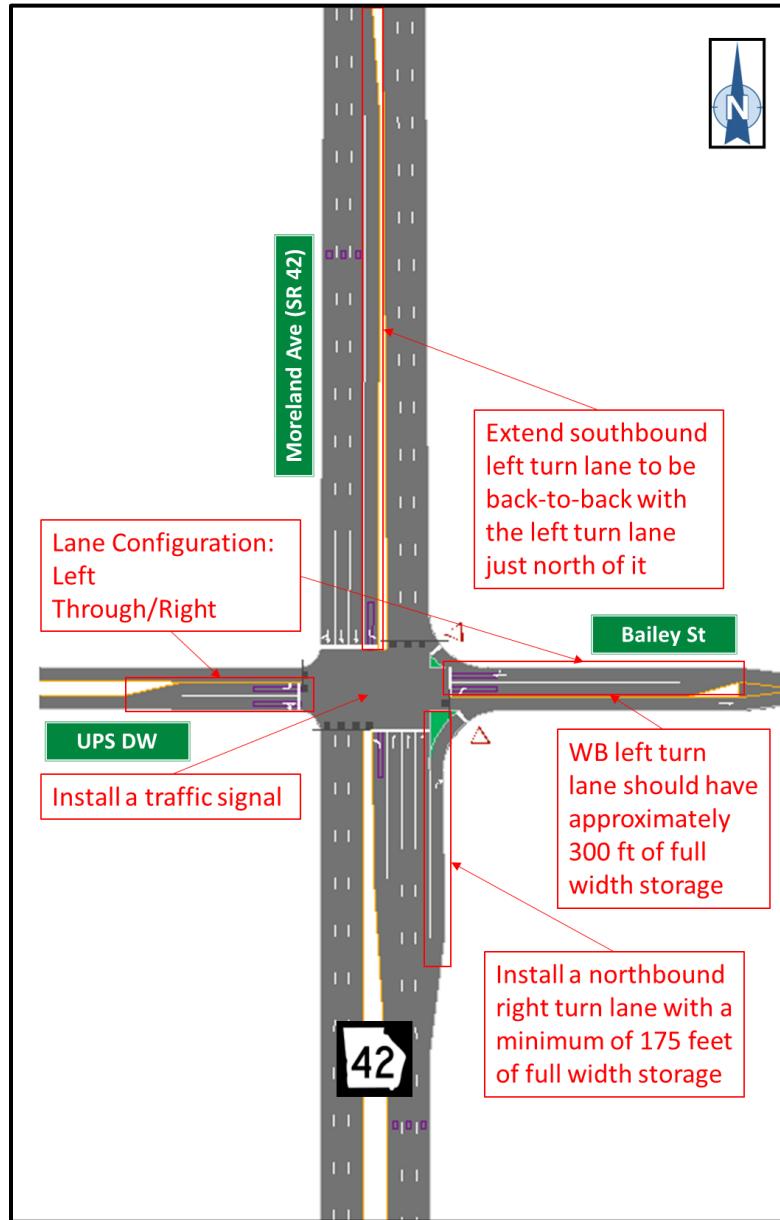

Figure 21 shows the improvements that are recommended to be made for the intersection of Constitution Road SE and International Park Drive SE.

RAILROAD CROSSING INVENTORY FORM

U. S. DOT CROSSING INVENTORY FORM

DEPARTMENT OF TRANSPORTATION

FEDERAL RAILROAD ADMINISTRATION

OMB No. 2130-0017

Instructions for the initial reporting of the following types of new or previously unreported crossings: For public highway-rail grade crossings, complete the entire inventory Form. For private highway-rail grade crossings, complete the Header, Parts I and II, and the Submission Information section. For public pathway grade crossings (including pedestrian station grade crossings), complete the Header, Parts I and II, and the Submission Information section. For Private pathway grade crossings, complete the Header, Parts I and II, and the Submission Information section. For grade-separated highway-rail or pathway crossings (including pedestrian station crossings), complete the Header, Part I, and the Submission Information section. For changes to existing data, complete the Header, Part I Items 1-3, and the Submission Information section, in addition to the updated data fields. Note: For private crossings only, Part I Item 20 and Part III Item 2.K. are required unless otherwise noted.

An asterisk * denotes an optional field.

Crossing Surface (on Main Track, multiple types allowed) <input type="checkbox"/> 1 Timber <input checked="" type="checkbox"/> 2 Asphalt <input type="checkbox"/> 3 Asphalt and Timber <input type="checkbox"/> 4 Concrete <input type="checkbox"/> 5 Concrete and Rubber <input type="checkbox"/> 6 Rubber <input type="checkbox"/> 7 Metal <input type="checkbox"/> 8 Unconsolidated <input type="checkbox"/> 9 Composite <input type="checkbox"/> 10 Other (specify) _____ | Installation Date * (MM/YYYY) ____/_____ Width * _____ Length * _____ | | | |
| 6. Intersecting Roadway within 500 feet? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No If Yes, Approximate Distance (feet) _____ | 7. Smallest Crossing Angle <input type="checkbox"/> 0° - 29° <input type="checkbox"/> 30° - 59° <input checked="" type="checkbox"/> 60° - 90° | | 8. Is Commercial Power Available? * <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No | |

Part V: Public Highway Information

| | | | |
|--|--|--|--|
| 1. Highway System <input type="checkbox"/> (01) Interstate Highway System <input type="checkbox"/> (02) Other Nat Hwy System (NHS) <input checked="" type="checkbox"/> (03) Federal AID, Not NHS <input type="checkbox"/> (08) Non-Federal Aid | 2. Functional Classification of Road at Crossing <input type="checkbox"/> (0) Rural <input checked="" type="checkbox"/> (1) Urban <input checked="" type="checkbox"/> (1) Interstate <input type="checkbox"/> (5) Major Collector <input type="checkbox"/> (2) Other Freeways and Expressways <input type="checkbox"/> (6) Minor Collector <input type="checkbox"/> (3) Other Principal Arterial <input type="checkbox"/> (7) Local <input type="checkbox"/> (4) Minor Arterial | 3. Is Crossing on State Highway System? <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No | 4. Highway Speed Limit 45 MPH <input checked="" type="checkbox"/> Posted <input type="checkbox"/> Statutory |
| 7. Annual Average Daily Traffic (AADT) Year 1988 AADT 003700 | 8. Estimated Percent Trucks 20 % | 9. Regularly Used by School Buses? <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No Average Number per Day 0 | 10. Emergency Services Route <input type="checkbox"/> Yes <input type="checkbox"/> No |

Submission Information - This information is used for administrative purposes and is not available on the public website.

Submitted by _____ Organization _____ Phone _____ Date _____

Public reporting burden for this information collection is estimated to average 30 minutes per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed and completing and reviewing the collection of information. According to the Paperwork Reduction Act of 1995, a federal agency may not conduct or sponsor, and a person is not required to, nor shall a person be subject to a penalty for failure to comply with, a collection of information unless it displays a currently valid OMB control number. The valid OMB control number for information collection is 2130-0017. Send comments regarding this burden estimate or any other aspect of this collection, including for reducing this burden to: Information Collection Officer, Federal Railroad Administration, 1200 New Jersey Ave. SE, MS-25 Washington, DC 20590.

COLLISION FIELDS

| | | | | |
|---|---|----------------|------------------------|-------------------------------|
| Manner of Collision: Not A Collision with Motor Vehicle | Location at Area of Impact: On Roadway - Non-Intersection | Weather: Clear | Surface Condition: Dry | Light Condition: Dark-Lighted |
|---|---|----------------|------------------------|-------------------------------|

NARRATIVE

Based on the physical evidence and statement of parties involved, the following occurred:

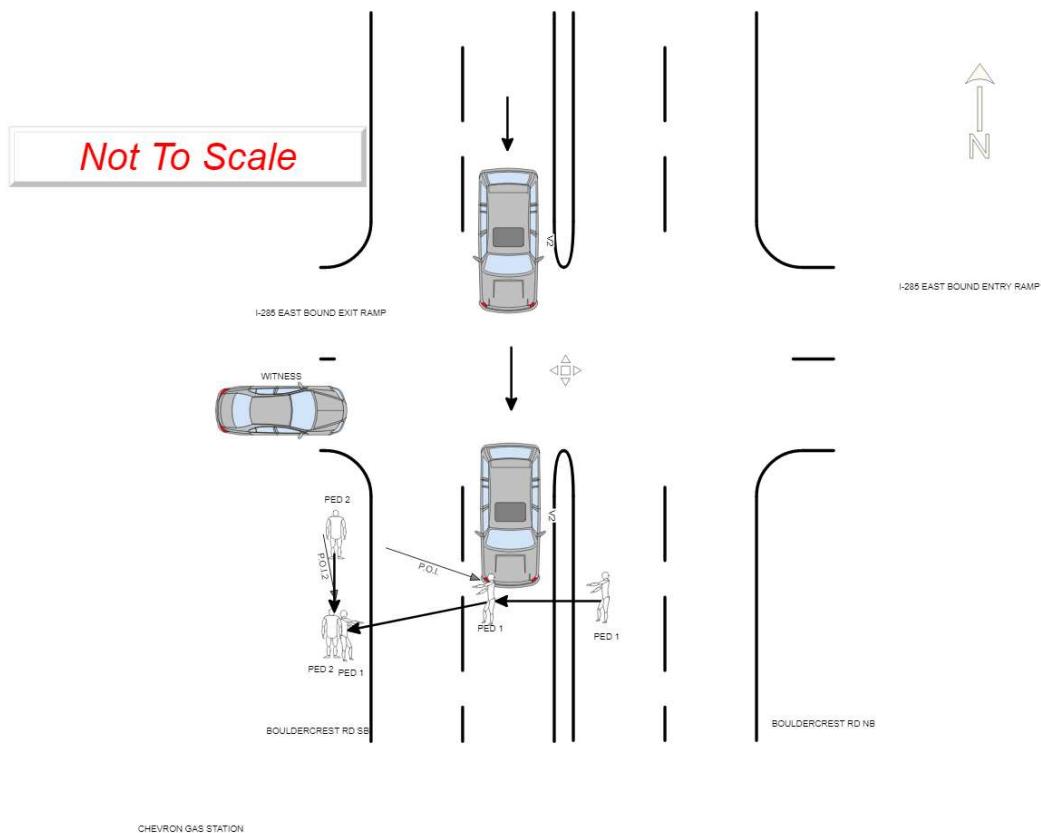

Vehicle #2 the Lincoln MKX (GA tag CFK7880) was traveling southbound on Bouldercrest Road just passed the exit ramp from I-285 East bound when the pedestrian Stanley Owens stepped into the roadway. Mr. Owens stepped into the roadway outside the crosswalk, traveling westbound across Bouldercrest Road. Mr. Owens was struck by the passenger side of vehicle #2 causing a dent to the front headlight area and windshield area of the vehicle. Driver #2 Ken Peebles pulled his vehicle into the parking lot of the Chevron gas station at 2691 Bouldercrest Road and walked over to check on the status of the pedestrian laying on the shoulder of the roadway. The witness Norbert Riggins was stopped on the exit ramp onto Bouldercrest Road in his red Ford Focus (GA tag #AGJ4505) when he observed the impact. Mr. Riggins stated that when the pedestrian stepped into the roadway outside of the crosswalk he was hit by the Lincoln which caused Mr. Owens to launch into the air, and strike Mr. Juarez Claytor walking southbound on the west side of the roadway. Upon my arrival Fire Rescue unit # 10 was on scene and began to treat Mr. Owens as a patient in critical condition. Mr. Owens was unable to speak due to his physical condition and was transported to Grady Hospital by AMR unit # M35. Fire Rescue unit # 10 treated Mr. Claytor who had visible injuries to his elbows, but was in stable condition (not transported to the hospital). I contacted the Dekalb County Traffic Specialist Unit and Detective C. Curtis unit #744, and Detective Ingram unit #749 responded to the scene. Further investigation was turned over to CID. A case number was issued and the vehicles were removed by the drivers.

SUPPLEMENTAL REPORT:

On 09/20/2018, I, Detective C. Curtis, was notified by the DeKalb County Medical Examiner's Office that Mr. Stanley Owens was pronounced dead on 09/19/2018 at 2345 after being placed in hospice care following this collision. His death is attributed to the injuries sustained during this crash. There are no charges pending in this case. This case is closed and cleared.

Supplemental report by Detective C. R. Curtis #2359/TSU 744

NARRATIVE

On Friday 9/21/2018 at approximately 8:48pm I, Ofc J Williams (unit 3308), was dispatched to 2427 Moreland Ave SE for a two vehicle accident with injuries. Upon my arrival, in marked patrol vehicle #32124, I activated my city issued bodycamera and observed two vehicles crashed in the roadway. Multiple Dekalb CO fire engines were on scene blocking traffic on the northbound and southbound sides of the roadway. Dekalb EMS vans were on scene as well. Driver #1 was rushed off in one of the Dekalb EMS vans as I walked into the chaotic accident scene. Dekalb PD Ofc Vann had driver #2 and the passenger from vehicle #2, who were uninjured, inside of his police vehicle. Ofc Vann had most of the call information written down for me upon my speaking to him. A fire Captain advised that driver #1 had a compound fracture to their right leg, a extremely large laceration on the same leg, and probably internal injuries. There were four children in vehicle #1, all of which were transported to Egleston Hospital with various injuries. Ofc King (unit 3311) came on scene after my arrival. I went to speak with driver #2 who advised that they were driving southbound on Moreland Ave SE when vehicle #1 entered the roadway from the UPS freight facility at the incident location. Driver #2 advised that vehicle #1 attempted to "jet" across the roadway onto the opposite side (northbound) and the vehicles collided in the manner of a t-bone. Family members of driver #1 came on scene at this time and I received one of the children's information from them and an address for the occupants for vehicle #1. I could not obtain more information due to the emotional state of the family members. South Metro Towing was called to the location to tow both vehicles off of the roadway. Driver #2 removed sensitive items from their vehicle and vehicle #2 was privately towed. Vehicle #1 was impounded due to the owner not being on scene. Upon speaking with the Dekalb Firefighters it was advised that driver #1 they advised that driver #2 should be ok even though another firefighter was doubtful. Ofc Vann directed traffic on the northbound side of the road. Once the scene was clear I left the location to do a follow up at Grady with driver #1. Upon my arrival at Grady, Dekalb Fire was there and advised that driver #1 had just passed away making the accident a fatality. I contacted Sgt Price (unit 3394) and advised on the situation and that the scene had already been cleared. Unit 3394 spoke with the Hit and Run unit about the accident. Upon speaking with the family members I obtained information for driver #1. It was advised that driver #1 was at the UPS facility to pickup money for her children who were inside of the vehicle. After leaving Grady I did a follow up at Egleston Children's hospital for the passengers of vehicle #1. Two of the children were being admitted for surgery, one had been discharged already, and one still in trauma. A nurse at Egleston advised that the mechanisms of the injuries from the accident showed that the children were not secured properly in the vehicle. It was advised that the passengers injuries varied. Demonic Cousin sustained a liver laceration and was knocked out from the impact. Quintavious Norwood only suffered a hematoma above his right eye. Kimoria Montgomery sustained a skull fracture and a brain bleed. D'Nice Caldwell suffered multiple fractures and a liver laceration. Mr. Caldwell and Ms. Kimoria Montgomery being the ones admitted for surgery. Mr. Norwood being the child that has been discharged already. At this time there is nothing further to note.

Intersection Summary

| | |
|--------------------|------|
| HCM 6th Ctrl Delay | 11.5 |
| HCM 6th LOS | B |

Notes

User approved pedestrian interval to be less than phase max green.

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Unsignalized Delay for [EBR] is excluded from calculations of the approach delay and intersection delay.

Intersection Summary

| | |
|--------------------|------|
| HCM 6th Ctrl Delay | 11.7 |
| HCM 6th LOS | B |

Notes

User approved pedestrian interval to be less than phase max green.

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Unsignalized Delay for [EBR] is excluded from calculations of the approach delay and intersection delay.

Intersection Summary

| | |
|--------------------|------|
| HCM 6th Ctrl Delay | 21.9 |
| HCM 6th LOS | C |

Notes

User approved pedestrian interval to be less than phase max green.

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Unsignalized Delay for [EBR] is excluded from calculations of the approach delay and intersection delay.

| Peak-hour vehicle-miles of travel, VMT60 | 12 veh-mi |
| Peak 15-min total travel time, TT15 | 0.1 veh-h |
| Capacity from ATS, CdATS | 1700 veh/h |
| Capacity from PTSF, CdPTSF | 1700 veh/h |
| Directional Capacity | 1700 veh/h |

Passing Lane Analysis

| | | |
|---|------|------|
| Total length of analysis segment, Lt | 0.1 | mi |
| Length of two-lane highway upstream of the passing lane, Lu | - | mi |
| Length of passing lane including tapers, Lpl | - | mi |
| Average travel speed, ATSD (from above) | 35.6 | mi/h |
| Percent time-spent-following, PTSFd (from above) | 33.7 | |
| Level of service, LOSd (from above) | B | |

Average Travel Speed with Passing Lane

| | | |
|---|-----|----|
| Downstream length of two-lane highway within effective length of passing lane for average travel speed, Lde | - | mi |
| Length of two-lane highway downstream of effective length of the passing lane for average travel speed, Ld | - | mi |
| Adj. factor for the effect of passing lane on average speed, fpl | - | |
| Average travel speed including passing lane, ATSpl | - | |
| Percent free flow speed including passing lane, PFFSpl | 0.0 | % |

Percent Time-Spent-Following with Passing Lane

| | | |
|---|---|----|
| Downstream length of two-lane highway within effective length of passing lane for percent time-spent-following, Lde | - | mi |
| Length of two-lane highway downstream of effective length of the passing lane for percent time-spent-following, Ld | - | mi |
| Adj. factor for the effect of passing lane on percent time-spent-following, fpl | - | |
| Percent time-spent-following including passing lane, PTSFpl | - | % |

Level of Service and Other Performance Measures with Passing Lane

| | |
|--|---------|
| Level of service including passing lane, LOSpl | E |
| Peak 15-min total travel time, TT15 | - veh-h |

Bicycle Level of Service

| | |
|---|-------|
| Posted speed limit, Sp | 45 |
| Percent of segment with occupied on-highway parking | 0 |
| Pavement rating, P | 3 |
| Flow rate in outside lane, vOL | 137.8 |
| Effective width of outside lane, We | 22.08 |
| Effective speed factor, St | 4.42 |
| Bicycle LOS Score, BLOS | 5.27 |
| Bicycle LOS | E |

Notes:

1. Note that the adjustment factor for level terrain is 1.00, as level terrain is one of the base conditions. For the purpose of grade adjustment, specific downgrade segments are treated as level terrain.
2. If v_i (vd or vo) $\geq 1,700$ pc/h, terminate analysis-the LOS is F.
3. For the analysis direction only and for $v > 200$ veh/h.
4. For the analysis direction only.
5. Use alternative Exhibit 15-14 if some trucks operate at crawl speeds on a specific downgrade.

| Percent time-spent-following including passing lane, PTSFpl | - | % |

Level of Service and Other Performance Measures with Passing Lane

| | | |
|--|---|-------|
| Level of service including passing lane, LOSpl | E | |
| Peak 15-min total travel time, TT15 | - | veh-h |

Bicycle Level of Service

| | |
|---|-------|
| Posted speed limit, Sp | |
| Percent of segment with occupied on-highway parking | 0 |
| Pavement rating, P | 3 |
| Flow rate in outside lane, vOL | 203.3 |
| Effective width of outside lane, We | 13.00 |
| Effective speed factor, St | 4.42 |
| Bicycle LOS Score, BLOS | 5.42 |
| Bicycle LOS | E |

Notes:

1. Note that the adjustment factor for level terrain is 1.00, as level terrain is one of the base conditions. For the purpose of grade adjustment, specific downgrade segments are treated as level terrain.
2. If v_i (vd or vo) $\geq 1,700$ pc/h, terminate analysis-the LOS is F.
3. For the analysis direction only and for $v > 200$ veh/h.
4. For the analysis direction only.
5. Use alternative Exhibit 15-14 if some trucks operate at crawl speeds on a specific downgrade.

| Directional flow rate, (note-2) vi | 409 pc/h | 218 pc/h |

Free-Flow Speed from Field Measurement:

Field measured speed, (note-3) S FM - mi/h

Observed total demand, (note-3) V - veh/h

Estimated Free-Flow Speed:

Base free-flow speed, (note-3) BFFS 45.0 mi/h

Adj. for lane and shoulder width, (note-3) fLS 2.6 mi/h

Adj. for access point density, (note-3) fA 0.0 mi/h

Free-flow speed, FFSd 42.4 mi/h

Adjustment for no-passing zones, fnp 3.9 mi/h

Average travel speed, ATSD 33.7 mi/h

Percent Free Flow Speed, PFFS 79.4 %

Percent Time-Spent-Following

| Direction | Analysis (d) | Opposing (o) |
|--|--------------|--------------|
| PCE for trucks, ET | 1.0 | 1.1 |
| PCE for RVs, ER | 1.0 | 1.0 |
| Heavy-vehicle adjustment factor, fHV | 1.000 | 0.996 |
| Grade adjustment factor, (note-1) fg | 1.00 | 1.00 |
| Directional flow rate, (note-2) vi | 404 pc/h | 214 pc/h |
| Base percent time-spent-following, (note-4) BPTSFd | 39.7 % | |
| Adjustment for no-passing zones, fnp | 49.4 | |
| Percent time-spent-following, PTSFd | 72.0 % | |

Level of Service and Other Performance Measures

| | |
|--|------------|
| Level of service, LOS | C |
| Volume to capacity ratio, v/c | 0.24 |
| Peak 15-min vehicle-miles of travel, VMT15 | 61 veh-mi |
| Peak-hour vehicle-miles of travel, VMT60 | 235 veh-mi |
| Peak 15-min total travel time, TT15 | 1.8 veh-h |
| Capacity from ATS, CdATS | 1700 veh/h |
| Capacity from PTSF, CdPTSF | 1700 veh/h |
| Directional Capacity | 1700 veh/h |

Passing Lane Analysis

| | | |
|---|------|------|
| Total length of analysis segment, Lt | 0.6 | mi |
| Length of two-lane highway upstream of the passing lane, Lu | - | mi |
| Length of passing lane including tapers, Lpl | - | mi |
| Average travel speed, ATSD (from above) | 33.7 | mi/h |
| Percent time-spent-following, PTSFd (from above) | 72.0 | |
| Level of service, LOSd (from above) | C | |

Average Travel Speed with Passing Lane

| | | |
|---|-----|----|
| Downstream length of two-lane highway within effective length of passing lane for average travel speed, Lde | - | mi |
| Length of two-lane highway downstream of effective length of the passing lane for average travel speed, Ld | - | mi |
| Adj. factor for the effect of passing lane on average speed, fpl | - | |
| Average travel speed including passing lane, ATSpl | - | |
| Percent free flow speed including passing lane, PFFSpl | 0.0 | % |

Percent Time-Spent-Following with Passing Lane

| | | |
|---|---|----|
| Downstream length of two-lane highway within effective length of passing lane for percent time-spent-following, Lde | - | mi |
| Length of two-lane highway downstream of effective length of the passing lane for percent time-spent-following, Ld | - | mi |
| Adj. factor for the effect of passing lane on percent time-spent-following, fpl | - | |
| Percent time-spent-following including passing lane, PTSFpl | - | % |

Level of Service and Other Performance Measures with Passing Lane

| | | |
|--|---|-------|
| Level of service including passing lane, LOSpl | E | |
| Peak 15-min total travel time, TT15 | - | veh-h |

Bicycle Level of Service

| | |
|---|-------|
| Posted speed limit, Sp | |
| Percent of segment with occupied on-highway parking | 0 |
| Pavement rating, P | 3 |
| Flow rate in outside lane, v _{OL} | 404.1 |
| Effective width of outside lane, W _e | 15.00 |
| Effective speed factor, S _t | 4.42 |
| Bicycle LOS Score, BLOS | 5.25 |
| Bicycle LOS | E |

Notes:

1. Note that the adjustment factor for level terrain is 1.00, as level terrain is one of the base conditions. For the purpose of grade adjustment, specific downgrade segments are treated as level terrain.
2. If v_i (vd or vo) $\geq 1,700$ pc/h, terminate analysis-the LOS is F.
3. For the analysis direction only and for $v > 200$ veh/h.
4. For the analysis direction only.
5. Use alternative Exhibit 15-14 if some trucks operate at crawl speeds on a specific downgrade.

| Bicycle LOS Score, BLOS | 6.36 |
| Bicycle LOS | F |

Notes:

1. Note that the adjustment factor for level terrain is 1.00, as level terrain is one of the base conditions. For the purpose of grade adjustment, specific downgrade segments are treated as level terrain.
2. If v_i (vd or vo) $\geq 1,700$ pc/h, terminate analysis-the LOS is F.
3. For the analysis direction only and for $v > 200$ veh/h.
4. For the analysis direction only.
5. Use alternative Exhibit 15-14 if some trucks operate at crawl speeds on a specific downgrade.

| Length of two-lane highway downstream of effective length of the passing lane for percent time-spent-following, Ld | - | mi |
| Adj. factor for the effect of passing lane on percent time-spent-following, fpl | - | |
| Percent time-spent-following including passing lane, PTSFpl | - | % |

Level of Service and Other Performance Measures with Passing Lane

| | | |
|--|---|-------|
| Level of service including passing lane, LOSpl | E | |
| Peak 15-min total travel time, TT15 | - | veh-h |

Bicycle Level of Service

| | |
|---|-------|
| Posted speed limit, Sp | 45 |
| Percent of segment with occupied on-highway parking | 0 |
| Pavement rating, P | 3 |
| Flow rate in outside lane, vOL | 35.5 |
| Effective width of outside lane, We | 27.98 |
| Effective speed factor, St | 4.42 |
| Bicycle LOS Score, BLOS | 48.25 |
| Bicycle LOS | F |

Notes:

1. Note that the adjustment factor for level terrain is 1.00, as level terrain is one of the base conditions. For the purpose of grade adjustment, specific downgrade segments are treated as level terrain.
2. If v_i (vd or vo) $\geq 1,700$ pc/h, terminate analysis-the LOS is F.
3. For the analysis direction only and for $v > 200$ veh/h.
4. For the analysis direction only.
5. Use alternative Exhibit 15-14 if some trucks operate at crawl speeds on a specific downgrade.

| Peak-hour vehicle-miles of travel, VMT60 | 21 veh-mi |
| Peak 15-min total travel time, TT15 | 0.2 veh-h |
| Capacity from ATS, CdATS | 1700 veh/h |
| Capacity from PTSF, CdPTSF | 1700 veh/h |
| Directional Capacity | 1700 veh/h |

Passing Lane Analysis

| | | |
|---|------|------|
| Total length of analysis segment, Lt | 0.1 | mi |
| Length of two-lane highway upstream of the passing lane, Lu | - | mi |
| Length of passing lane including tapers, Lpl | - | mi |
| Average travel speed, ATSD (from above) | 34.9 | mi/h |
| Percent time-spent-following, PTSFd (from above) | 55.0 | |
| Level of service, LOSd (from above) | C | |

Average Travel Speed with Passing Lane

| | | |
|---|-----|----|
| Downstream length of two-lane highway within effective length of passing lane for average travel speed, Lde | - | mi |
| Length of two-lane highway downstream of effective length of the passing lane for average travel speed, Ld | - | mi |
| Adj. factor for the effect of passing lane on average speed, fpl | - | |
| Average travel speed including passing lane, ATSpl | - | |
| Percent free flow speed including passing lane, PFFSpl | 0.0 | % |

Percent Time-Spent-Following with Passing Lane

| | | |
|---|---|----|
| Downstream length of two-lane highway within effective length of passing lane for percent time-spent-following, Lde | - | mi |
| Length of two-lane highway downstream of effective length of the passing lane for percent time-spent-following, Ld | - | mi |
| Adj. factor for the effect of passing lane on percent time-spent-following, fpl | - | |
| Percent time-spent-following including passing lane, PTSFpl | - | % |

Level of Service and Other Performance Measures with Passing Lane

| | | |
|--|---|-------|
| Level of service including passing lane, LOSpl | E | |
| Peak 15-min total travel time, TT15 | - | veh-h |

Bicycle Level of Service

| | |
|---|-------|
| Posted speed limit, Sp | |
| Percent of segment with occupied on-highway parking | 0 |
| Pavement rating, P | 3 |
| Flow rate in outside lane, vOL | 233.0 |
| Effective width of outside lane, We | 16.00 |
| Effective speed factor, St | 4.42 |
| Bicycle LOS Score, BLOS | 5.66 |
| Bicycle LOS | F |

Notes:

1. Note that the adjustment factor for level terrain is 1.00, as level terrain is one of the base conditions. For the purpose of grade adjustment, specific downgrade segments are treated as level terrain.
2. If v_i (vd or vo) $\geq 1,700$ pc/h, terminate analysis-the LOS is F.
3. For the analysis direction only and for $v > 200$ veh/h.
4. For the analysis direction only.
5. Use alternative Exhibit 15-14 if some trucks operate at crawl speeds on a specific downgrade.

1. Note that the adjustment factor for level terrain is 1.00, as level terrain is one of the base conditions. For the purpose of grade adjustment, specific downgrade segments are treated as level terrain.
2. If v_i (vd or vo) $\geq 1,700$ pc/h, terminate analysis-the LOS is F.
3. For the analysis direction only and for $v > 200$ veh/h.
4. For the analysis direction only.
5. Use alternative Exhibit 15-14 if some trucks operate at crawl speeds on a specific downgrade.

| | | |
|-----------------------|------|------|
| Free-flow speed, FFSd | 45.0 | mi/h |
|-----------------------|------|------|

| | | |
|--------------------------------------|------|------|
| Adjustment for no-passing zones, fnp | 1.1 | mi/h |
| Average travel speed, ATSd | 27.4 | mi/h |
| Percent Free Flow Speed, PFFS | 60.9 | % |

Percent Time-Spent-Following

| Direction | Analysis (d) | Opposing (o) |
|--|--------------|--------------|
| PCE for trucks, ET | 1.0 | 1.0 |
| PCE for RVs, ER | 1.0 | 1.0 |
| Heavy-vehicle adjustment factor, fHV | 1.000 | 1.000 |
| Grade adjustment factor, (note-1) fg | 1.00 | 1.00 |
| Directional flow rate, (note-2) vi | 1168 pc/h | 954 pc/h |
| Base percent time-spent-following, (note-4) BPTSFd | 81.5 % | |
| Adjustment for no-passing zones, fnp | 16.5 | |
| Percent time-spent-following, PTSFd | 90.6 % | |

Level of Service and Other Performance Measures

| | |
|--|------------|
| Level of service, LOS | E |
| Volume to capacity ratio, v/c | 0.69 |
| Peak 15-min vehicle-miles of travel, VMT15 | 29 veh-mi |
| Peak-hour vehicle-miles of travel, VMT60 | 108 veh-mi |
| Peak 15-min total travel time, TT15 | 1.1 veh-h |
| Capacity from ATS, CdATS | 1700 veh/h |
| Capacity from PTSF, CdPTSF | 1700 veh/h |
| Directional Capacity | 1700 veh/h |

Passing Lane Analysis

| | | |
|---|------|------|
| Total length of analysis segment, Lt | 0.1 | mi |
| Length of two-lane highway upstream of the passing lane, Lu | - | mi |
| Length of passing lane including tapers, Lpl | - | mi |
| Average travel speed, ATSD (from above) | 27.4 | mi/h |
| Percent time-spent-following, PTSFd (from above) | 90.6 | |
| Level of service, LOSd (from above) | E | |

Average Travel Speed with Passing Lane

| | | |
|---|-----|----|
| Downstream length of two-lane highway within effective length of passing lane for average travel speed, Lde | - | mi |
| Length of two-lane highway downstream of effective length of the passing lane for average travel speed, Ld | - | mi |
| Adj. factor for the effect of passing lane on average speed, fpl | - | |
| Average travel speed including passing lane, ATSpl | - | |
| Percent free flow speed including passing lane, PFFSpl | 0.0 | % |

Percent Time-Spent-Following with Passing Lane

| | | |
|---|---|----|
| Downstream length of two-lane highway within effective length of passing lane for percent time-spent-following, Lde | - | mi |
| Length of two-lane highway downstream of effective length of the passing lane for percent time-spent-following, Ld | - | mi |
| Adj. factor for the effect of passing lane on percent time-spent-following, fpl | - | |
| Percent time-spent-following including passing lane, PTSFpl | - | % |

Level of Service and Other Performance Measures with Passing Lane

| | |
|--|---------|
| Level of service including passing lane, LOSpl | E |
| Peak 15-min total travel time, TT15 | - veh-h |

Bicycle Level of Service

| | |
|---|--------|
| Posted speed limit, Sp | |
| Percent of segment with occupied on-highway parking | 0 |
| Pavement rating, P | 3 |
| Flow rate in outside lane, v _{OL} | 1168.5 |
| Effective width of outside lane, W _e | 24.00 |
| Effective speed factor, S _t | 4.79 |
| Bicycle LOS Score, BLOS | 4.77 |
| Bicycle LOS | E |

Notes:

1. Note that the adjustment factor for level terrain is 1.00, as level terrain is one of the base conditions. For the purpose of grade adjustment, specific downgrade segments are treated as level terrain.
2. If v_i (vd or vo) $\geq 1,700$ pc/h, terminate analysis-the LOS is F.
3. For the analysis direction only and for $v > 200$ veh/h.
4. For the analysis direction only.
5. Use alternative Exhibit 15-14 if some trucks operate at crawl speeds on a specific downgrade.

Level of Service and Other Performance Measures with Passing Lane

| | |
|--|---------|
| Level of service including passing lane, LOSpl | E |
| Peak 15-min total travel time, TT15 | - veh-h |

Bicycle Level of Service

| | |
|---|-------|
| Posted speed limit, Sp | |
| Percent of segment with occupied on-highway parking | 0 |
| Pavement rating, P | 3 |
| Flow rate in outside lane, v _{OL} | 954.3 |
| Effective width of outside lane, W _e | 24.00 |
| Effective speed factor, S _t | 4.79 |
| Bicycle LOS Score, BLOS | 4.06 |
| Bicycle LOS | D |

Notes:

1. Note that the adjustment factor for level terrain is 1.00, as level terrain is one of the base conditions. For the purpose of grade adjustment, specific downgrade segments are treated as level terrain.
2. If v_i (vd or vo) $\geq 1,700$ pc/h, terminate analysis-the LOS is F.
3. For the analysis direction only and for $v > 200$ veh/h.
4. For the analysis direction only.
5. Use alternative Exhibit 15-14 if some trucks operate at crawl speeds on a specific downgrade.

1. Note that the adjustment factor for level terrain is 1.00, as level terrain is one of the base conditions. For the purpose of grade adjustment, specific downgrade segments are treated as level terrain.
2. If v_i (vd or vo) $\geq 1,700$ pc/h, terminate analysis-the LOS is F.
3. For the analysis direction only and for $v > 200$ veh/h.
4. For the analysis direction only.
5. Use alternative Exhibit 15-14 if some trucks operate at crawl speeds on a specific downgrade.

2024 NO-BUILD CONDITIONS

Free-Flow Speed from Field Measurement:

Field measured speed, (note-3) S FM - mi/h

Observed total demand, (note-3) V - veh/h

Estimated Free-Flow Speed:

Base free-flow speed, (note-3) BFFS 45.0 mi/h

Adj. for lane and shoulder width, (note-3) fLS 2.6 mi/h

Adj. for access point density, (note-3) fA 0.0 mi/h

Free-flow speed, FFSd 42.4 mi/h

Adjustment for no-passing zones, fnp 3.2 mi/h

Average travel speed, ATSD 35.5 mi/h

Percent Free Flow Speed, PFFS 83.7 %

Percent Time-Spent-Following

| Direction | Analysis (d) | Opposing (o) |
|--|--------------|--------------|
| PCE for trucks, ET | 1.1 | 1.1 |
| PCE for RVs, ER | 1.0 | 1.0 |
| Heavy-vehicle adjustment factor, fHV | 0.990 | 0.990 |
| Grade adjustment factor, (note-1) fg | 1.00 | 1.00 |
| Directional flow rate, (note-2) vi | 146 pc/h | 312 pc/h |
| Base percent time-spent-following, (note-4) BPTSFd | 18.1 % | |
| Adjustment for no-passing zones, fnp | 49.7 | |
| Percent time-spent-following, PTSFd | 33.9 % | |

Level of Service and Other Performance Measures

| | |
|--|------------|
| Level of service, LOS | B |
| Volume to capacity ratio, v/c | 0.08 |
| Peak 15-min vehicle-miles of travel, VMT15 | 4 veh-mi |
| Peak-hour vehicle-miles of travel, VMT60 | 13 veh-mi |
| Peak 15-min total travel time, TT15 | 0.1 veh-h |
| Capacity from ATS, CdATS | 1700 veh/h |
| Capacity from PTSF, CdPTSF | 1700 veh/h |
| Directional Capacity | 1700 veh/h |

Passing Lane Analysis

| | | |
|---|------|------|
| Total length of analysis segment, Lt | 0.1 | mi |
| Length of two-lane highway upstream of the passing lane, Lu | - | mi |
| Length of passing lane including tapers, Lpl | - | mi |
| Average travel speed, ATSD (from above) | 35.5 | mi/h |
| Percent time-spent-following, PTSFd (from above) | 33.9 | |
| Level of service, LOSd (from above) | B | |

Average Travel Speed with Passing Lane

| | | |
|---|-----|----|
| Downstream length of two-lane highway within effective length of passing lane for average travel speed, Lde | - | mi |
| Length of two-lane highway downstream of effective length of the passing lane for average travel speed, Ld | - | mi |
| Adj. factor for the effect of passing lane on average speed, fpl | - | |
| Average travel speed including passing lane, ATSpl | - | |
| Percent free flow speed including passing lane, PFFSpl | 0.0 | % |

Percent Time-Spent-Following with Passing Lane

| | | |
|---|---|----|
| Downstream length of two-lane highway within effective length of passing lane for percent time-spent-following, Lde | - | mi |
| Length of two-lane highway downstream of effective length of the passing lane for percent time-spent-following, Ld | - | mi |
| Adj. factor for the effect of passing lane on percent time-spent-following, fpl | - | |
| Percent time-spent-following including passing lane, PTSFpl | - | % |

Level of Service and Other Performance Measures with Passing Lane

| | | |
|--|---|-------|
| Level of service including passing lane, LOSpl | E | |
| Peak 15-min total travel time, TT15 | - | veh-h |

Bicycle Level of Service

| | |
|---|-------|
| Posted speed limit, Sp | 45 |
| Percent of segment with occupied on-highway parking | 0 |
| Pavement rating, P | 3 |
| Flow rate in outside lane, vOL | 144.4 |
| Effective width of outside lane, We | 21.60 |
| Effective speed factor, St | 4.42 |
| Bicycle LOS Score, BLOS | 5.40 |
| Bicycle LOS | E |

Notes:

1. Note that the adjustment factor for level terrain is 1.00, as level terrain is one of the base conditions. For the purpose of grade adjustment, specific downgrade segments are treated as level terrain.
2. If v_i (vd or vo) $\geq 1,700$ pc/h, terminate analysis-the LOS is F.
3. For the analysis direction only and for $v > 200$ veh/h.
4. For the analysis direction only.
5. Use alternative Exhibit 15-14 if some trucks operate at crawl speeds on a specific downgrade.

Level of Service and Other Performance Measures with Passing Lane

| | | |
|--|---|-------|
| Level of service including passing lane, LOSpl | E | |
| Peak 15-min total travel time, TT15 | - | veh-h |

Bicycle Level of Service

| | |
|---|-------|
| Posted speed limit, Sp | |
| Percent of segment with occupied on-highway parking | 0 |
| Pavement rating, P | 3 |
| Flow rate in outside lane, v _{OL} | 264.1 |
| Effective width of outside lane, W _e | 15.00 |
| Effective speed factor, S _t | 4.42 |
| Bicycle LOS Score, BLOS | 6.91 |
| Bicycle LOS | F |

Notes:

1. Note that the adjustment factor for level terrain is 1.00, as level terrain is one of the base conditions. For the purpose of grade adjustment, specific downgrade segments are treated as level terrain.
2. If v_i (vd or vo) $\geq 1,700$ pc/h, terminate analysis-the LOS is F.
3. For the analysis direction only and for $v > 200$ veh/h.
4. For the analysis direction only.
5. Use alternative Exhibit 15-14 if some trucks operate at crawl speeds on a specific downgrade.

| Directional Capacity | 1700 veh/h |

Passing Lane Analysis

| | | |
|---|------|------|
| Total length of analysis segment, Lt | 0.1 | mi |
| Length of two-lane highway upstream of the passing lane, Lu | - | mi |
| Length of passing lane including tapers, Lpl | - | mi |
| Average travel speed, ATSD (from above) | 33.5 | mi/h |
| Percent time-spent-following, PTSFd (from above) | 68.6 | |
| Level of service, LOSd (from above) | C | |

Average Travel Speed with Passing Lane

| | | |
|---|-----|----|
| Downstream length of two-lane highway within effective length of passing lane for average travel speed, Lde | - | mi |
| Length of two-lane highway downstream of effective length of the passing lane for average travel speed, Ld | - | mi |
| Adj. factor for the effect of passing lane on average speed, fpl | - | |
| Average travel speed including passing lane, ATSpl | - | |
| Percent free flow speed including passing lane, PFFSpl | 0.0 | % |

Percent Time-Spent-Following with Passing Lane

| | | |
|---|---|----|
| Downstream length of two-lane highway within effective length of passing lane for percent time-spent-following, Lde | - | mi |
| Length of two-lane highway downstream of effective length of the passing lane for percent time-spent-following, Ld | - | mi |
| Adj. factor for the effect of passing lane on percent time-spent-following, fpl | - | |
| Percent time-spent-following including passing lane, PTSFpl | - | % |

Level of Service and Other Performance Measures with Passing Lane

| | | |
|--|---|-------|
| Level of service including passing lane, LOSpl | E | |
| Peak 15-min total travel time, TT15 | - | veh-h |

Bicycle Level of Service

| | |
|---|-------|
| Posted speed limit, Sp | 45 |
| Percent of segment with occupied on-highway parking | 0 |
| Pavement rating, P | 3 |
| Flow rate in outside lane, vOL | 368.1 |
| Effective width of outside lane, We | 14.00 |
| Effective speed factor, St | 4.42 |
| Bicycle LOS Score, BLOS | 5.33 |
| Bicycle LOS | E |

Notes:

1. Note that the adjustment factor for level terrain is 1.00, as level terrain is one of the base conditions. For the purpose of grade adjustment, specific downgrade segments are treated as level terrain.
2. If v_i (vd or vo) $\geq 1,700$ pc/h, terminate analysis-the LOS is F.
3. For the analysis direction only and for $v > 200$ veh/h.
4. For the analysis direction only.
5. Use alternative Exhibit 15-14 if some trucks operate at crawl speeds on a specific downgrade.

Directional Two-Lane Highway Segment Analysis

Analyst JS
 Agency/Co. Lumin8
 Date Performed 3/31/2021
 Analysis Time Period AM Peak
 Highway International Park Dr
 From/To Constitution to Continental
 Jurisdiction GDOT
 Analysis Year 2024 - No Build
 Description Blackhall Phase 2

Input Data

| | | | |
|----------------|---------|-------------------------|-----------|
| Highway class | Class 3 | Peak hour factor, PHF | 0.86 |
| Shoulder width | 3.0 ft | % Trucks and buses | 24 % |
| Lane width | 16.0 ft | % Trucks crawling | 0.0 % |
| Segment length | 0.3 mi | Truck crawl speed | 0.0 mi/hr |
| Terrain type | Level | % Recreational vehicles | 0 % |
| Grade: Length | - mi | % No-passing zones | 100 % |
| Up/down | - % | Access point density | 10 /mi |

Analysis direction volume, Vd 83 veh/h
 Opposing direction volume, Vo 213 veh/h

Average Travel Speed

| Direction | Analysis (d) | Opposing (o) |
|---|--------------|--------------|
| PCE for trucks, ET | 1.9 | 1.5 |
| PCE for RVs, ER | 1.0 | 1.0 |
| Heavy-vehicle adj. factor, (note-5) fHV | 0.822 | 0.893 |
| Grade adj. factor, (note-1) fg | 1.00 | 1.00 |
| Directional flow rate, (note-2) vi | 117 pc/h | 277 pc/h |

Free-Flow Speed from Field Measurement:

Field measured speed, (note-3) S FM - mi/h

Observed total demand, (note-3) V - veh/h

Estimated Free-Flow Speed:

Base free-flow speed, (note-3) BFFS 45.0 mi/h

Adj. for lane and shoulder width, (note-3) fLS 2.6 mi/h

Adj. for access point density, (note-3) fA 2.5 mi/h

Free-flow speed, FFSd 39.9 mi/h

Adjustment for no-passing zones, fnp 3.5 mi/h

Average travel speed, ATSD 33.3 mi/h

Percent Free Flow Speed, PFFS 83.6 %

Percent Time-Spent-Following

| Direction | Analysis (d) | Opposing (o) |
|--|--------------|--------------|
| PCE for trucks, ET | 1.1 | 1.1 |
| PCE for RVs, ER | 1.0 | 1.0 |
| Heavy-vehicle adjustment factor, fHV | 0.977 | 0.977 |
| Grade adjustment factor, (note-1) fg | 1.00 | 1.00 |
| Directional flow rate, (note-2) vi | 99 pc/h | 254 pc/h |
| Base percent time-spent-following, (note-4) BPTSFd | 12.3 % | |
| Adjustment for no-passing zones, fnp | 48.1 | |
| Percent time-spent-following, PTSFd | 25.8 % | |

Level of Service and Other Performance Measures

| | |
|--|------------|
| Level of service, LOS | B |
| Volume to capacity ratio, v/c | 0.06 |
| Peak 15-min vehicle-miles of travel, VMT15 | 7 veh-mi |
| Peak-hour vehicle-miles of travel, VMT60 | 25 veh-mi |
| Peak 15-min total travel time, TT15 | 0.2 veh-h |
| Capacity from ATS, CdATS | 1700 veh/h |
| Capacity from PTSF, CdPTSF | 1700 veh/h |
| Directional Capacity | 1700 veh/h |

Passing Lane Analysis

| | | |
|---|------|------|
| Total length of analysis segment, Lt | 0.3 | mi |
| Length of two-lane highway upstream of the passing lane, Lu | - | mi |
| Length of passing lane including tapers, Lpl | - | mi |
| Average travel speed, ATSD (from above) | 33.3 | mi/h |
| Percent time-spent-following, PTSFd (from above) | 25.8 | |
| Level of service, LOSd (from above) | B | |

Average Travel Speed with Passing Lane

| | | |
|---|-----|----|
| Downstream length of two-lane highway within effective length of passing lane for average travel speed, Lde | - | mi |
| Length of two-lane highway downstream of effective length of the passing lane for average travel speed, Ld | - | mi |
| Adj. factor for the effect of passing lane on average speed, fpl | - | |
| Average travel speed including passing lane, ATSpl | - | |
| Percent free flow speed including passing lane, PFFSpl | 0.0 | % |

Percent Time-Spent-Following with Passing Lane

| | | |
|---|---|----|
| Downstream length of two-lane highway within effective length of passing lane for percent time-spent-following, Lde | - | mi |
| Length of two-lane highway downstream of effective length of the passing lane for percent time-spent-following, Ld | - | mi |
| Adj. factor for the effect of passing lane on percent time-spent-following, fpl | - | |
| Percent time-spent-following including passing lane, PTSFpl | - | % |

Level of Service and Other Performance Measures with Passing Lane

| | |
|--|---------|
| Level of service including passing lane, LOSpl | E |
| Peak 15-min total travel time, TT15 | - veh-h |

Bicycle Level of Service

| | |
|---|-------|
| Posted speed limit, Sp | 45 |
| Percent of segment with occupied on-highway parking | 0 |
| Pavement rating, P | 3 |
| Flow rate in outside lane, vOL | 96.5 |
| Effective width of outside lane, We | 30.11 |
| Effective speed factor, St | 4.42 |
| Bicycle LOS Score, BLOS | 10.09 |
| Bicycle LOS | F |

Notes:

1. Note that the adjustment factor for level terrain is 1.00, as level terrain is one of the base conditions. For the purpose of grade adjustment, specific downgrade segments are treated as level terrain.
2. If v_i (vd or vo) $\geq 1,700$ pc/h, terminate analysis-the LOS is F.
3. For the analysis direction only and for $v > 200$ veh/h.
4. For the analysis direction only.
5. Use alternative Exhibit 15-14 if some trucks operate at crawl speeds on a specific downgrade.

|--|---|-------|
| Level of service including passing lane, LOSpl | E | |
| Peak 15-min total travel time, TT15 | - | veh-h |

Bicycle Level of Service

| | |
|---|-------|
| Posted speed limit, Sp | 45 |
| Percent of segment with occupied on-highway parking | 0 |
| Pavement rating, P | 3 |
| Flow rate in outside lane, v _{OL} | 219.6 |
| Effective width of outside lane, W _e | 19.00 |
| Effective speed factor, S _t | 4.42 |
| Bicycle LOS Score, BLOS | 5.78 |
| Bicycle LOS | F |

Notes:

1. Note that the adjustment factor for level terrain is 1.00, as level terrain is one of the base conditions. For the purpose of grade adjustment, specific downgrade segments are treated as level terrain.
2. If v_i (vd or vo) $\geq 1,700$ pc/h, terminate analysis-the LOS is F.
3. For the analysis direction only and for $v > 200$ veh/h.
4. For the analysis direction only.
5. Use alternative Exhibit 15-14 if some trucks operate at crawl speeds on a specific downgrade.

Passing Lane Analysis

| | | |
|---|------|------|
| Total length of analysis segment, Lt | 0.1 | mi |
| Length of two-lane highway upstream of the passing lane, Lu | - | mi |
| Length of passing lane including tapers, Lpl | - | mi |
| Average travel speed, ATSD (from above) | 34.7 | mi/h |
| Percent time-spent-following, PTSFd (from above) | 58.5 | |
| Level of service, LOSd (from above) | C | |

Average Travel Speed with Passing Lane

| | | |
|---|-----|----|
| Downstream length of two-lane highway within effective length of passing lane for average travel speed, Lde | - | mi |
| Length of two-lane highway downstream of effective length of the passing lane for average travel speed, Ld | - | mi |
| Adj. factor for the effect of passing lane on average speed, fpl | - | |
| Average travel speed including passing lane, ATSpl | - | |
| Percent free flow speed including passing lane, PFFSpl | 0.0 | % |

Percent Time-Spent-Following with Passing Lane

| | | |
|---|---|----|
| Downstream length of two-lane highway within effective length of passing lane for percent time-spent-following, Lde | - | mi |
| Length of two-lane highway downstream of effective length of the passing lane for percent time-spent-following, Ld | - | mi |
| Adj. factor for the effect of passing lane on percent time-spent-following, fpl | - | |
| Percent time-spent-following including passing lane, PTSFpl | - | % |

Level of Service and Other Performance Measures with Passing Lane

| | | |
|--|---|-------|
| Level of service including passing lane, LOSpl | E | |
| Peak 15-min total travel time, TT15 | - | veh-h |

Bicycle Level of Service

| | |
|---|-------|
| Posted speed limit, Sp | 45 |
| Percent of segment with occupied on-highway parking | 0 |
| Pavement rating, P | 3 |
| Flow rate in outside lane, vOL | 252.1 |
| Effective width of outside lane, We | 16.00 |
| Effective speed factor, St | 4.42 |
| Bicycle LOS Score, BLOS | 7.52 |
| Bicycle LOS | F |

Notes:

1. Note that the adjustment factor for level terrain is 1.00, as level terrain is one of the base conditions. For the purpose of grade adjustment, specific downgrade segments are treated as level terrain.
2. If v_i (vd or vo) $\geq 1,700$ pc/h, terminate analysis-the LOS is F.
3. For the analysis direction only and for $v > 200$ veh/h.
4. For the analysis direction only.
5. Use alternative Exhibit 15-14 if some trucks operate at crawl speeds on a specific downgrade.

| | | |
|--|---|-------|
| Level of service including passing lane, LOSpl | E | |
| Peak 15-min total travel time, TT15 | - | veh-h |

Bicycle Level of Service

| | |
|---|-------|
| Posted speed limit, Sp | 45 |
| Percent of segment with occupied on-highway parking | 0 |
| Pavement rating, P | 3 |
| Flow rate in outside lane, vOL | 236.8 |
| Effective width of outside lane, We | 13.00 |
| Effective speed factor, St | 4.42 |
| Bicycle LOS Score, BLOS | 7.14 |
| Bicycle LOS | F |

Notes:

1. Note that the adjustment factor for level terrain is 1.00, as level terrain is one of the base conditions. For the purpose of grade adjustment, specific downgrade segments are treated as level terrain.
2. If v_i (vd or vo) $\geq 1,700$ pc/h, terminate analysis-the LOS is F.
3. For the analysis direction only and for $v > 200$ veh/h.
4. For the analysis direction only.
5. Use alternative Exhibit 15-14 if some trucks operate at crawl speeds on a specific downgrade.

| Heavy-vehicle adjustment factor, fHV | 0.994 | 1.000 |
| Grade adjustment factor, (note-1) fg | 1.00 | 1.00 |
| Directional flow rate, (note-2) vi | 256 pc/h | 471 pc/h |
| Base percent time-spent-following, (note-4) BPTSFd | 32.4 % | |
| Adjustment for no-passing zones, fnp | 43.0 | |
| Percent time-spent-following, PTSFd | 47.5 % | |

Level of Service and Other Performance Measures

| | |
|--|------------|
| Level of service, LOS | C |
| Volume to capacity ratio, v/c | 0.15 |
| Peak 15-min vehicle-miles of travel, VMT15 | 38 veh-mi |
| Peak-hour vehicle-miles of travel, VMT60 | 139 veh-mi |
| Peak 15-min total travel time, TT15 | 1.1 veh-h |
| Capacity from ATS, CdATS | 1700 veh/h |
| Capacity from PTSF, CdPTSF | 1700 veh/h |
| Directional Capacity | 1700 veh/h |

Passing Lane Analysis

| | | |
|---|------|------|
| Total length of analysis segment, Lt | 0.6 | mi |
| Length of two-lane highway upstream of the passing lane, Lu | - | mi |
| Length of passing lane including tapers, Lpl | - | mi |
| Average travel speed, ATSD (from above) | 34.3 | mi/h |
| Percent time-spent-following, PTSFd (from above) | 47.5 | |
| Level of service, LOSd (from above) | C | |

Average Travel Speed with Passing Lane

| | | |
|---|-----|----|
| Downstream length of two-lane highway within effective length of passing lane for average travel speed, Lde | - | mi |
| Length of two-lane highway downstream of effective length of the passing lane for average travel speed, Ld | - | mi |
| Adj. factor for the effect of passing lane on average speed, fpl | - | |
| Average travel speed including passing lane, ATSpl | - | |
| Percent free flow speed including passing lane, PFFSpl | 0.0 | % |

Percent Time-Spent-Following with Passing Lane

| | | |
|---|---|----|
| Downstream length of two-lane highway within effective length of passing lane for percent time-spent-following, Lde | - | mi |
| Length of two-lane highway downstream of effective length of the passing lane for percent time-spent-following, Ld | - | mi |
| Adj. factor for the effect of passing lane on percent time-spent-following, fpl | - | |
| Percent time-spent-following including passing lane, PTSFpl | - | % |

Level of Service and Other Performance Measures with Passing Lane

| | | |
|--|---|-------|
| Level of service including passing lane, LOSpl | E | |
| Peak 15-min total travel time, TT15 | - | veh-h |

Bicycle Level of Service

| | |
|---|-------|
| Posted speed limit, Sp | |
| Percent of segment with occupied on-highway parking | 0 |
| Pavement rating, P | 3 |
| Flow rate in outside lane, vOL | 254.9 |
| Effective width of outside lane, We | 15.00 |
| Effective speed factor, St | 4.42 |
| Bicycle LOS Score, BLOS | 5.59 |
| Bicycle LOS | F |

Notes:

1. Note that the adjustment factor for level terrain is 1.00, as level terrain is one of the base conditions. For the purpose of grade adjustment, specific downgrade segments are treated as level terrain.
2. If v_i (vd or vo) $\geq 1,700$ pc/h, terminate analysis-the LOS is F.
3. For the analysis direction only and for $v > 200$ veh/h.
4. For the analysis direction only.
5. Use alternative Exhibit 15-14 if some trucks operate at crawl speeds on a specific downgrade.

HCS7 Multilane Highway Report

Project Information

| | | | |
|---------------------|-------------------|----------------------|-------------------------|
| Analyst | JS | Date | 4/1/2021 |
| Agency | Lumin8 | Analysis Year | 2024 - No Build |
| Jurisdiction | GDOT | Time Period Analyzed | PM Peak |
| Project Description | Blackhall Phase 2 | Unit | United States Customary |

Direction 2 Geometric Data

| | | | |
|-----------------------------------|------------|---------------------------------------|-------|
| Direction 2 | Southbound | | |
| Number of Lanes (N), ln | 2 | Terrain Type | Level |
| Segment Length (L), ft | - | Percent Grade, % | - |
| Measured or Base Free-Flow Speed | Base | Grade Length, mi | - |
| Base Free-Flow Speed (BFFS), mi/h | 45.0 | Access Point Density, pts/mi | 0.0 |
| Lane Width, ft | 12 | Left-Side Lateral Clearance (LCR), ft | 6 |
| Median Type | Divided | Total Lateral Clearance (TLC), ft | 12 |
| Free-Flow Speed (FFS), mi/h | 45.0 | | |

Direction 2 Adjustment Factors

| | | | |
|-----------------------|--------------|--|-------|
| Driver Population | All Familiar | Final Speed Adjustment Factor (SAF) | 1.000 |
| Driver Population SAF | 1.000 | Final Capacity Adjustment Factor (CAF) | 1.000 |
| Driver Population CAF | 1.000 | | |

Direction 2 Demand and Capacity

| | | | |
|-----------------------------|------|---------------------------------------|-------|
| Volume(V) veh/h | 922 | Heavy Vehicle Adjustment Factor (fHV) | 0.962 |
| Peak Hour Factor | 0.92 | Flow Rate (Vp), pc/h/ln | 521 |
| Total Trucks, % | 4.00 | Capacity (c), pc/h/ln | 1900 |
| Single-Unit Trucks (SUT), % | - | Adjusted Capacity (cadj), pc/h/ln | 1900 |
| Tractor-Trailers (TT), % | - | Volume-to-Capacity Ratio (v/c) | 0.27 |

Direction 2 Speed and Density

| | | | |
|--------------------------------------|-----|-------------------------|------|
| Lane Width Adjustment (flw) | 0.0 | Average Speed (S), mi/h | 45.0 |
| Total Lateral Clearance Adj. (fLLC) | 0.0 | Density (D), pc/mi/ln | 11.6 |
| Median Type Adjustment (fm) | 0.0 | Level of Service (LOS) | B |
| Access Point Density Adjustment (fa) | 0.0 | | |

Directional Two-Lane Highway Segment Analysis

Analyst JS
 Agency/Co. Lumin8
 Date Performed 3/31/2021
 Analysis Time Period PM Peak
 Highway International Park Dr
 From/To Constitution to Continental
 Jurisdiction GDOT
 Analysis Year 2024 - No Build
 Description Blackhall Phase 2

Input Data

| | | | |
|----------------|---------|-------------------------|-----------|
| Highway class | Class 3 | Peak hour factor, PHF | 0.86 |
| Shoulder width | 3.0 ft | % Trucks and buses | 24 % |
| Lane width | 16.0 ft | % Trucks crawling | 0.0 % |
| Segment length | 0.3 mi | Truck crawl speed | 0.0 mi/hr |
| Terrain type | Level | % Recreational vehicles | 0 % |
| Grade: Length | - mi | % No-passing zones | 100 % |
| Up/down | - % | Access point density | 10 /mi |

Analysis direction volume, Vd 69 veh/h
 Opposing direction volume, Vo 113 veh/h

Average Travel Speed

| Direction | Analysis (d) | Opposing (o) |
|---|--------------|--------------|
| PCE for trucks, ET | 1.9 | 1.8 |
| PCE for RVs, ER | 1.0 | 1.0 |
| Heavy-vehicle adj. factor, (note-5) fHV | 0.822 | 0.839 |
| Grade adj. factor, (note-1) fg | 1.00 | 1.00 |
| Directional flow rate, (note-2) vi | 98 pc/h | 157 pc/h |

Free-Flow Speed from Field Measurement:

Field measured speed, (note-3) S FM - mi/h

Observed total demand, (note-3) V - veh/h

Estimated Free-Flow Speed:

Base free-flow speed, (note-3) BFFS 45.0 mi/h

Adj. for lane and shoulder width, (note-3) fLS 2.6 mi/h

Adj. for access point density, (note-3) fA 2.5 mi/h

Free-flow speed, FFSd 39.9 mi/h

Adjustment for no-passing zones, fnp 3.3 mi/h

Average travel speed, ATSD 34.6 mi/h

Percent Free Flow Speed, PFFS 86.7 %

Percent Time-Spent-Following

| Direction | Analysis (d) | Opposing (o) |
|--|--------------|--------------|
| PCE for trucks, ET | 1.1 | 1.1 |
| PCE for RVs, ER | 1.0 | 1.0 |
| Heavy-vehicle adjustment factor, fHV | 0.977 | 0.977 |
| Grade adjustment factor, (note-1) fg | 1.00 | 1.00 |
| Directional flow rate, (note-2) vi | 82 pc/h | 135 pc/h |
| Base percent time-spent-following, (note-4) BPTSFd | 9.7 % | |
| Adjustment for no-passing zones, fnp | 52.7 | |
| Percent time-spent-following, PTSFd | 29.6 % | |

Level of Service and Other Performance Measures

| | |
|--|------------|
| Level of service, LOS | B |
| Volume to capacity ratio, v/c | 0.05 |
| Peak 15-min vehicle-miles of travel, VMT15 | 6 veh-mi |
| Peak-hour vehicle-miles of travel, VMT60 | 21 veh-mi |
| Peak 15-min total travel time, TT15 | 0.2 veh-h |
| Capacity from ATS, CdATS | 1700 veh/h |
| Capacity from PTSF, CdPTSF | 1700 veh/h |
| Directional Capacity | 1700 veh/h |

Passing Lane Analysis

| | | |
|---|------|------|
| Total length of analysis segment, Lt | 0.3 | mi |
| Length of two-lane highway upstream of the passing lane, Lu | - | mi |
| Length of passing lane including tapers, Lpl | - | mi |
| Average travel speed, ATSD (from above) | 34.6 | mi/h |
| Percent time-spent-following, PTSFd (from above) | 29.6 | |
| Level of service, LOSd (from above) | B | |

Average Travel Speed with Passing Lane

| | | |
|---|-----|----|
| Downstream length of two-lane highway within effective length of passing lane for average travel speed, Lde | - | mi |
| Length of two-lane highway downstream of effective length of the passing lane for average travel speed, Ld | - | mi |
| Adj. factor for the effect of passing lane on average speed, fpl | - | |
| Average travel speed including passing lane, ATSpl | - | |
| Percent free flow speed including passing lane, PFFSpl | 0.0 | % |

Percent Time-Spent-Following with Passing Lane

| | | |
|---|---|----|
| Downstream length of two-lane highway within effective length of passing lane for percent time-spent-following, Lde | - | mi |
| Length of two-lane highway downstream of effective length of the passing lane for percent time-spent-following, Ld | - | mi |
| Adj. factor for the effect of passing lane on percent time-spent-following, fpl | - | |
| Percent time-spent-following including passing lane, PTSFpl | - | % |

Level of Service and Other Performance Measures with Passing Lane

| | | |
|--|---|-------|
| Level of service including passing lane, LOSpl | E | |
| Peak 15-min total travel time, TT15 | - | veh-h |

Bicycle Level of Service

| | |
|---|-------|
| Posted speed limit, Sp | 45 |
| Percent of segment with occupied on-highway parking | 0 |
| Pavement rating, P | 3 |
| Flow rate in outside lane, vOL | 80.2 |
| Effective width of outside lane, We | 31.44 |
| Effective speed factor, St | 4.42 |
| Bicycle LOS Score, BLOS | 9.58 |
| Bicycle LOS | F |

Notes:

1. Note that the adjustment factor for level terrain is 1.00, as level terrain is one of the base conditions. For the purpose of grade adjustment, specific downgrade segments are treated as level terrain.
2. If v_i (vd or vo) $\geq 1,700$ pc/h, terminate analysis-the LOS is F.
3. For the analysis direction only and for $v > 200$ veh/h.
4. For the analysis direction only.
5. Use alternative Exhibit 15-14 if some trucks operate at crawl speeds on a specific downgrade.

| Percent of segment with occupied on-highway parking | 0 |
| Pavement rating, P | 3 |
| Flow rate in outside lane, vOL | 103.1 |
| Effective width of outside lane, We | 22.42 |
| Effective speed factor, St | 4.42 |
| Bicycle LOS Score, BLOS | 63.21 |
| Bicycle LOS | F |

Notes:

1. Note that the adjustment factor for level terrain is 1.00, as level terrain is one of the base conditions. For the purpose of grade adjustment, specific downgrade segments are treated as level terrain.
2. If v_i (vd or vo) $\geq 1,700$ pc/h, terminate analysis-the LOS is F.
3. For the analysis direction only and for $v > 200$ veh/h.
4. For the analysis direction only.
5. Use alternative Exhibit 15-14 if some trucks operate at crawl speeds on a specific downgrade.

| Peak 15-min total travel time, TT15 | 0.5 veh-h |
| Capacity from ATS, CdATS | 1700 veh/h |
| Capacity from PTSF, CdPTSF | 1700 veh/h |
| Directional Capacity | 1700 veh/h |

Passing Lane Analysis

| | | |
|---|------|------|
| Total length of analysis segment, Lt | 0.1 | mi |
| Length of two-lane highway upstream of the passing lane, Lu | - | mi |
| Length of passing lane including tapers, Lpl | - | mi |
| Average travel speed, ATSD (from above) | 30.5 | mi/h |
| Percent time-spent-following, PTSFd (from above) | 76.1 | |
| Level of service, LOSd (from above) | D | |

Average Travel Speed with Passing Lane

| | | |
|---|-----|----|
| Downstream length of two-lane highway within effective length of passing lane for average travel speed, Lde | - | mi |
| Length of two-lane highway downstream of effective length of the passing lane for average travel speed, Ld | - | mi |
| Adj. factor for the effect of passing lane on average speed, fpl | - | |
| Average travel speed including passing lane, ATSpl | - | |
| Percent free flow speed including passing lane, PFFSpl | 0.0 | % |

Percent Time-Spent-Following with Passing Lane

| | | |
|---|---|----|
| Downstream length of two-lane highway within effective length of passing lane for percent time-spent-following, Lde | - | mi |
| Length of two-lane highway downstream of effective length of the passing lane for percent time-spent-following, Ld | - | mi |
| Adj. factor for the effect of passing lane on percent time-spent-following, fpl | - | |
| Percent time-spent-following including passing lane, PTSFpl | - | % |

Level of Service and Other Performance Measures with Passing Lane

| | |
|--|---------|
| Level of service including passing lane, LOSpl | E |
| Peak 15-min total travel time, TT15 | - veh-h |

Bicycle Level of Service

| | |
|---|-------|
| Posted speed limit, Sp | 45 |
| Percent of segment with occupied on-highway parking | 0 |
| Pavement rating, P | 3 |
| Flow rate in outside lane, vOL | 556.4 |
| Effective width of outside lane, We | 15.00 |
| Effective speed factor, St | 4.42 |
| Bicycle LOS Score, BLOS | 7.29 |
| Bicycle LOS | F |

Notes:

1. Note that the adjustment factor for level terrain is 1.00, as level terrain is one of the base conditions. For the purpose of grade adjustment, specific downgrade segments are treated as level terrain.
2. If v_i (vd or vo) $\geq 1,700$ pc/h, terminate analysis-the LOS is F.
3. For the analysis direction only and for $v > 200$ veh/h.
4. For the analysis direction only.
5. Use alternative Exhibit 15-14 if some trucks operate at crawl speeds on a specific downgrade.

| Flow rate in outside lane, vOL | 327.7 |
| Effective width of outside lane, We | 14.00 |
| Effective speed factor, St | 4.42 |
| Bicycle LOS Score, BLOS | 7.17 |
| Bicycle LOS | F |

Notes:

1. Note that the adjustment factor for level terrain is 1.00, as level terrain is one of the base conditions. For the purpose of grade adjustment, specific downgrade segments are treated as level terrain.
2. If v_i (vd or vo) $\geq 1,700$ pc/h, terminate analysis-the LOS is F.
3. For the analysis direction only and for $v > 200$ veh/h.
4. For the analysis direction only.
5. Use alternative Exhibit 15-14 if some trucks operate at crawl speeds on a specific downgrade.

Directional Two-Lane Highway Segment Analysis

Analyst JS
 Agency/Co. Lumin8
 Date Performed 3/31/2021
 Analysis Time Period AM Peak
 Highway International Park Dr
 From/To Constitution to Continental
 Jurisdiction GDOT
 Analysis Year 2024 - Build
 Description Blackhall Phase 2

Input Data

| | | | |
|----------------|---------|-------------------------|-----------|
| Highway class | Class 3 | Peak hour factor, PHF | 0.86 |
| Shoulder width | 3.0 ft | % Trucks and buses | 24 % |
| Lane width | 16.0 ft | % Trucks crawling | 0.0 % |
| Segment length | 0.3 mi | Truck crawl speed | 0.0 mi/hr |
| Terrain type | Level | % Recreational vehicles | 0 % |
| Grade: Length | - mi | % No-passing zones | 100 % |
| Up/down | - % | Access point density | 10 /mi |

Analysis direction volume, Vd 121 veh/h
 Opposing direction volume, Vo 436 veh/h

Average Travel Speed

| Direction | Analysis (d) | Opposing (o) |
|---|--------------|--------------|
| PCE for trucks, ET | 1.7 | 1.2 |
| PCE for RVs, ER | 1.0 | 1.0 |
| Heavy-vehicle adj. factor, (note-5) fHV | 0.856 | 0.954 |
| Grade adj. factor, (note-1) fg | 1.00 | 1.00 |
| Directional flow rate, (note-2) vi | 164 pc/h | 531 pc/h |

Free-Flow Speed from Field Measurement:

Field measured speed, (note-3) S FM - mi/h

Observed total demand, (note-3) V - veh/h

Estimated Free-Flow Speed:

Base free-flow speed, (note-3) BFFS 45.0 mi/h

Adj. for lane and shoulder width, (note-3) fLS 2.6 mi/h

Adj. for access point density, (note-3) fA 2.5 mi/h

Free-flow speed, FFSd 39.9 mi/h

Adjustment for no-passing zones, fnp 2.1 mi/h

Average travel speed, ATSD 32.4 mi/h

Percent Free Flow Speed, PFFS 81.2 %

Percent Time-Spent-Following

| Direction | Analysis (d) | Opposing (o) |
|--|--------------|--------------|
| PCE for trucks, ET | 1.1 | 1.0 |
| PCE for RVs, ER | 1.0 | 1.0 |
| Heavy-vehicle adjustment factor, fHV | 0.977 | 1.000 |
| Grade adjustment factor, (note-1) fg | 1.00 | 1.00 |
| Directional flow rate, (note-2) vi | 144 pc/h | 507 pc/h |
| Base percent time-spent-following, (note-4) BPTSFd | 21.3 % | |
| Adjustment for no-passing zones, fnp | 38.6 | |
| Percent time-spent-following, PTSFd | 29.8 % | |

Level of Service and Other Performance Measures

| | |
|--|------------|
| Level of service, LOS | C |
| Volume to capacity ratio, v/c | 0.08 |
| Peak 15-min vehicle-miles of travel, VMT15 | 11 veh-mi |
| Peak-hour vehicle-miles of travel, VMT60 | 36 veh-mi |
| Peak 15-min total travel time, TT15 | 0.3 veh-h |
| Capacity from ATS, CdATS | 1700 veh/h |
| Capacity from PTSF, CdPTSF | 1700 veh/h |
| Directional Capacity | 1700 veh/h |

Passing Lane Analysis

| | | |
|---|------|------|
| Total length of analysis segment, Lt | 0.3 | mi |
| Length of two-lane highway upstream of the passing lane, Lu | - | mi |
| Length of passing lane including tapers, Lpl | - | mi |
| Average travel speed, ATSD (from above) | 32.4 | mi/h |
| Percent time-spent-following, PTSFd (from above) | 29.8 | |
| Level of service, LOSd (from above) | C | |

Average Travel Speed with Passing Lane

| | | |
|---|-----|----|
| Downstream length of two-lane highway within effective length of passing lane for average travel speed, Lde | - | mi |
| Length of two-lane highway downstream of effective length of the passing lane for average travel speed, Ld | - | mi |
| Adj. factor for the effect of passing lane on average speed, fpl | - | |
| Average travel speed including passing lane, ATSpl | - | |
| Percent free flow speed including passing lane, PFFSpl | 0.0 | % |

Percent Time-Spent-Following with Passing Lane

| | | |
|---|---|----|
| Downstream length of two-lane highway within effective length of passing lane for percent time-spent-following, Lde | - | mi |
| Length of two-lane highway downstream of effective length of the passing lane for percent time-spent-following, Ld | - | mi |
| Adj. factor for the effect of passing lane on percent time-spent-following, fpl | - | |
| Percent time-spent-following including passing lane, PTSFpl | - | % |

Level of Service and Other Performance Measures with Passing Lane

| | |
|--|---------|
| Level of service including passing lane, LOSpl | E |
| Peak 15-min total travel time, TT15 | - veh-h |

Bicycle Level of Service

| | |
|---|-------|
| Posted speed limit, Sp | 45 |
| Percent of segment with occupied on-highway parking | 0 |
| Pavement rating, P | 3 |
| Flow rate in outside lane, vOL | 140.7 |
| Effective width of outside lane, We | 26.51 |
| Effective speed factor, St | 4.42 |
| Bicycle LOS Score, BLOS | 11.30 |
| Bicycle LOS | F |

Notes:

1. Note that the adjustment factor for level terrain is 1.00, as level terrain is one of the base conditions. For the purpose of grade adjustment, specific downgrade segments are treated as level terrain.
2. If v_i (vd or vo) $\geq 1,700$ pc/h, terminate analysis-the LOS is F.
3. For the analysis direction only and for $v > 200$ veh/h.
4. For the analysis direction only.
5. Use alternative Exhibit 15-14 if some trucks operate at crawl speeds on a specific downgrade.

| Base percent time-spent-following, (note-4) BPTSFd | 41.3 % | |
| Adjustment for no-passing zones, fnp | 41.7 | |
| Percent time-spent-following, PTSFd | 73.9 % | |

Level of Service and Other Performance Measures

| | |
|--|------------|
| Level of service, LOS | C |
| Volume to capacity ratio, v/c | 0.26 |
| Peak 15-min vehicle-miles of travel, VMT15 | 34 veh-mi |
| Peak-hour vehicle-miles of travel, VMT60 | 131 veh-mi |
| Peak 15-min total travel time, TT15 | 1.1 veh-h |
| Capacity from ATS, CdATS | 1700 veh/h |
| Capacity from PTSF, CdPTSF | 1700 veh/h |
| Directional Capacity | 1700 veh/h |

Passing Lane Analysis

| | | |
|---|------|------|
| Total length of analysis segment, Lt | 0.3 | mi |
| Length of two-lane highway upstream of the passing lane, Lu | - | mi |
| Length of passing lane including tapers, Lpl | - | mi |
| Average travel speed, ATSD (from above) | 32.3 | mi/h |
| Percent time-spent-following, PTSFd (from above) | 73.9 | |
| Level of service, LOSd (from above) | C | |

Average Travel Speed with Passing Lane

| | | |
|---|-----|----|
| Downstream length of two-lane highway within effective length of passing lane for average travel speed, Lde | - | mi |
| Length of two-lane highway downstream of effective length of the passing lane for average travel speed, Ld | - | mi |
| Adj. factor for the effect of passing lane on average speed, fpl | - | |
| Average travel speed including passing lane, ATSpl | - | |
| Percent free flow speed including passing lane, PFFSpl | 0.0 | % |

Percent Time-Spent-Following with Passing Lane

| | | |
|---|---|----|
| Downstream length of two-lane highway within effective length of passing lane for percent time-spent-following, Lde | - | mi |
| Length of two-lane highway downstream of effective length of the passing lane for percent time-spent-following, Ld | - | mi |
| Adj. factor for the effect of passing lane on percent time-spent-following, fpl | - | |
| Percent time-spent-following including passing lane, PTSFpl | - | % |

Level of Service and Other Performance Measures with Passing Lane

| | | |
|--|---|-------|
| Level of service including passing lane, LOSpl | E | |
| Peak 15-min total travel time, TT15 | - | veh-h |

Bicycle Level of Service

| | |
|---|-------|
| Posted speed limit, Sp | 45 |
| Percent of segment with occupied on-highway parking | 0 |
| Pavement rating, P | 3 |
| Flow rate in outside lane, vOL | 449.5 |
| Effective width of outside lane, We | 19.00 |
| Effective speed factor, St | 4.42 |
| Bicycle LOS Score, BLOS | 6.14 |
| Bicycle LOS | F |

Notes:

1. Note that the adjustment factor for level terrain is 1.00, as level terrain is one of the base conditions. For the purpose of grade adjustment, specific downgrade segments are treated as level terrain.
2. If v_i (vd or vo) $\geq 1,700$ pc/h, terminate analysis-the LOS is F.
3. For the analysis direction only and for $v > 200$ veh/h.
4. For the analysis direction only.
5. Use alternative Exhibit 15-14 if some trucks operate at crawl speeds on a specific downgrade.

| | |
|---|-------|
| Posted speed limit, Sp | 45 |
| Percent of segment with occupied on-highway parking | 0 |
| Pavement rating, P | 3 |
| Flow rate in outside lane, vOL | 300.0 |
| Effective width of outside lane, We | 16.00 |
| Effective speed factor, St | 4.42 |
| Bicycle LOS Score, BLOS | 7.61 |
| Bicycle LOS | F |

Notes:

1. Note that the adjustment factor for level terrain is 1.00, as level terrain is one of the base conditions. For the purpose of grade adjustment, specific downgrade segments are treated as level terrain.
2. If v_i (vd or vo) $\geq 1,700$ pc/h, terminate analysis-the LOS is F.
3. For the analysis direction only and for $v > 200$ veh/h.
4. For the analysis direction only.
5. Use alternative Exhibit 15-14 if some trucks operate at crawl speeds on a specific downgrade.

| Percent time-spent-following including passing lane, PTSFpl | - | % |

Level of Service and Other Performance Measures with Passing Lane

| | | |
|--|---|-------|
| Level of service including passing lane, LOSpl | E | |
| Peak 15-min total travel time, TT15 | - | veh-h |

Bicycle Level of Service

| | |
|---|-------|
| Posted speed limit, Sp | 45 |
| Percent of segment with occupied on-highway parking | 0 |
| Pavement rating, P | 3 |
| Flow rate in outside lane, vOL | 484.7 |
| Effective width of outside lane, We | 13.00 |
| Effective speed factor, St | 4.42 |
| Bicycle LOS Score, BLOS | 7.88 |
| Bicycle LOS | F |

Notes:

1. Note that the adjustment factor for level terrain is 1.00, as level terrain is one of the base conditions. For the purpose of grade adjustment, specific downgrade segments are treated as level terrain.
2. If v_i (vd or vo) $\geq 1,700$ pc/h, terminate analysis-the LOS is F.
3. For the analysis direction only and for $v > 200$ veh/h.
4. For the analysis direction only.
5. Use alternative Exhibit 15-14 if some trucks operate at crawl speeds on a specific downgrade.

Directional Two-Lane Highway Segment Analysis

Analyst JS
 Agency/Co. Lumin8
 Date Performed 3/31/2021
 Analysis Time Period AM Peak
 Highway Bailey St
 From/To Blackhall DW2 to International
 Jurisdiction GDOT
 Analysis Year 2024 - Build
 Description Blackhall Phase 2

Input Data

| | | | |
|----------------|---------|-------------------------|-----------|
| Highway class | Class 3 | Peak hour factor, PHF | 0.91 |
| Shoulder width | 3.0 ft | % Trucks and buses | 6 % |
| Lane width | 12.0 ft | % Trucks crawling | 0.0 % |
| Segment length | 0.6 mi | Truck crawl speed | 0.0 mi/hr |
| Terrain type | Level | % Recreational vehicles | 0 % |
| Grade: Length | - mi | % No-passing zones | 100 % |
| Up/down | - % | Access point density | 0 /mi |

Analysis direction volume, Vd 232 veh/h
 Opposing direction volume, Vo 429 veh/h

Average Travel Speed

| Direction | Analysis (d) | Opposing (o) |
|---|--------------|--------------|
| PCE for trucks, ET | 1.4 | 1.2 |
| PCE for RVs, ER | 1.0 | 1.0 |
| Heavy-vehicle adj. factor, (note-5) fHV | 0.977 | 0.988 |
| Grade adj. factor, (note-1) fg | 1.00 | 1.00 |
| Directional flow rate, (note-2) vi | 261 pc/h | 477 pc/h |

Free-Flow Speed from Field Measurement:

Field measured speed, (note-3) S FM - mi/h

Observed total demand, (note-3) V - veh/h

Estimated Free-Flow Speed:

Base free-flow speed, (note-3) BFFS 45.0 mi/h

Adj. for lane and shoulder width, (note-3) fLS 2.6 mi/h

Adj. for access point density, (note-3) fA 0.0 mi/h

Free-flow speed, FFSd 42.4 mi/h

Adjustment for no-passing zones, fnp 2.4 mi/h

Average travel speed, ATSD 34.3 mi/h

Percent Free Flow Speed, PFFS 80.9 %

Percent Time-Spent-Following

| Direction | Analysis (d) | Opposing (o) |
|--|--------------|--------------|
| PCE for trucks, ET | 1.1 | 1.0 |
| PCE for RVs, ER | 1.0 | 1.0 |
| Heavy-vehicle adjustment factor, fHV | 0.994 | 1.000 |
| Grade adjustment factor, (note-1) fg | 1.00 | 1.00 |
| Directional flow rate, (note-2) vi | 256 pc/h | 471 pc/h |
| Base percent time-spent-following, (note-4) BPTSFd | 32.4 % | |
| Adjustment for no-passing zones, fnp | 43.0 | |
| Percent time-spent-following, PTSFd | 47.5 % | |

Level of Service and Other Performance Measures

| | |
|--|------------|
| Level of service, LOS | C |
| Volume to capacity ratio, v/c | 0.15 |
| Peak 15-min vehicle-miles of travel, VMT15 | 38 veh-mi |
| Peak-hour vehicle-miles of travel, VMT60 | 139 veh-mi |
| Peak 15-min total travel time, TT15 | 1.1 veh-h |
| Capacity from ATS, CdATS | 1700 veh/h |
| Capacity from PTSF, CdPTSF | 1700 veh/h |
| Directional Capacity | 1700 veh/h |

Passing Lane Analysis

| | | |
|---|------|------|
| Total length of analysis segment, Lt | 0.6 | mi |
| Length of two-lane highway upstream of the passing lane, Lu | - | mi |
| Length of passing lane including tapers, Lpl | - | mi |
| Average travel speed, ATSD (from above) | 34.3 | mi/h |
| Percent time-spent-following, PTSFd (from above) | 47.5 | |
| Level of service, LOSd (from above) | C | |

Average Travel Speed with Passing Lane

| | | |
|---|-----|----|
| Downstream length of two-lane highway within effective length of passing lane for average travel speed, Lde | - | mi |
| Length of two-lane highway downstream of effective length of the passing lane for average travel speed, Ld | - | mi |
| Adj. factor for the effect of passing lane on average speed, fpl | - | |
| Average travel speed including passing lane, ATSpl | - | |
| Percent free flow speed including passing lane, PFFSpl | 0.0 | % |

Percent Time-Spent-Following with Passing Lane

| | | |
|---|---|----|
| Downstream length of two-lane highway within effective length of passing lane for percent time-spent-following, Lde | - | mi |
| Length of two-lane highway downstream of effective length of the passing lane for percent time-spent-following, Ld | - | mi |
| Adj. factor for the effect of passing lane on percent time-spent-following, fpl | - | |
| Percent time-spent-following including passing lane, PTSFpl | - | % |

Level of Service and Other Performance Measures with Passing Lane

| | | |
|--|---|-------|
| Level of service including passing lane, LOSpl | E | |
| Peak 15-min total travel time, TT15 | - | veh-h |

Bicycle Level of Service

| | |
|---|-------|
| Posted speed limit, Sp | |
| Percent of segment with occupied on-highway parking | 0 |
| Pavement rating, P | 3 |
| Flow rate in outside lane, vOL | 254.9 |
| Effective width of outside lane, We | 15.00 |
| Effective speed factor, St | 4.42 |
| Bicycle LOS Score, BLOS | 5.59 |
| Bicycle LOS | F |

Notes:

1. Note that the adjustment factor for level terrain is 1.00, as level terrain is one of the base conditions. For the purpose of grade adjustment, specific downgrade segments are treated as level terrain.
2. If v_i (vd or vo) $\geq 1,700$ pc/h, terminate analysis-the LOS is F.
3. For the analysis direction only and for $v > 200$ veh/h.
4. For the analysis direction only.
5. Use alternative Exhibit 15-14 if some trucks operate at crawl speeds on a specific downgrade.

Directional Two-Lane Highway Segment Analysis

Analyst JS
 Agency/Co. Lumin8
 Date Performed 3/31/2021
 Analysis Time Period PM Peak
 Highway International Park Dr
 From/To Constitution to Continental
 Jurisdiction GDOT
 Analysis Year 2024 - Build
 Description Blackhall Phase 2

Input Data

| | | | |
|----------------|---------|-------------------------|-----------|
| Highway class | Class 3 | Peak hour factor, PHF | 0.86 |
| Shoulder width | 3.0 ft | % Trucks and buses | 24 % |
| Lane width | 16.0 ft | % Trucks crawling | 0.0 % |
| Segment length | 0.3 mi | Truck crawl speed | 0.0 mi/hr |
| Terrain type | Level | % Recreational vehicles | 0 % |
| Grade: Length | - mi | % No-passing zones | 100 % |
| Up/down | - % | Access point density | 10 /mi |

Analysis direction volume, Vd 285 veh/h
 Opposing direction volume, Vo 158 veh/h

Average Travel Speed

| Direction | Analysis (d) | Opposing (o) |
|---|--------------|--------------|
| PCE for trucks, ET | 1.4 | 1.6 |
| PCE for RVs, ER | 1.0 | 1.0 |
| Heavy-vehicle adj. factor, (note-5) fHV | 0.912 | 0.874 |
| Grade adj. factor, (note-1) fg | 1.00 | 1.00 |
| Directional flow rate, (note-2) vi | 363 pc/h | 210 pc/h |

Free-Flow Speed from Field Measurement:

| | | |
|-------------------------------------|---|-------|
| Field measured speed, (note-3) S FM | - | mi/h |
| Observed total demand, (note-3) V | - | veh/h |

Estimated Free-Flow Speed:

| | | |
|--|------|------|
| Base free-flow speed, (note-3) BFFS | 45.0 | mi/h |
| Adj. for lane and shoulder width, (note-3) fLS | 2.6 | mi/h |
| Adj. for access point density, (note-3) fA | 2.5 | mi/h |

| | | |
|-----------------------|------|------|
| Free-flow speed, FFSd | 39.9 | mi/h |
|-----------------------|------|------|

| | | |
|--------------------------------------|------|------|
| Adjustment for no-passing zones, fnp | 3.9 | mi/h |
| Average travel speed, ATSd | 31.5 | mi/h |
| Percent Free Flow Speed, PFFS | 79.0 | % |

Percent Time-Spent-Following

| Direction | Analysis (d) | Opposing (o) |
|--|--------------|--------------|
| PCE for trucks, ET | 1.1 | 1.1 |
| PCE for RVs, ER | 1.0 | 1.0 |
| Heavy-vehicle adjustment factor, fHV | 0.977 | 0.977 |
| Grade adjustment factor, (note-1) fg | 1.00 | 1.00 |
| Directional flow rate, (note-2) vi | 339 pc/h | 188 pc/h |
| Base percent time-spent-following, (note-4) BPTSFd | 33.3 % | |
| Adjustment for no-passing zones, fnp | 51.9 | |
| Percent time-spent-following, PTSFd | 66.7 % | |

Level of Service and Other Performance Measures

| | |
|--|------------|
| Level of service, LOS | C |
| Volume to capacity ratio, v/c | 0.19 |
| Peak 15-min vehicle-miles of travel, VMT15 | 25 veh-mi |
| Peak-hour vehicle-miles of travel, VMT60 | 86 veh-mi |
| Peak 15-min total travel time, TT15 | 0.8 veh-h |
| Capacity from ATS, CdATS | 1700 veh/h |
| Capacity from PTSF, CdPTSF | 1700 veh/h |
| Directional Capacity | 1700 veh/h |

Passing Lane Analysis

| | | |
|---|------|------|
| Total length of analysis segment, Lt | 0.3 | mi |
| Length of two-lane highway upstream of the passing lane, Lu | - | mi |
| Length of passing lane including tapers, Lpl | - | mi |
| Average travel speed, ATSD (from above) | 31.5 | mi/h |
| Percent time-spent-following, PTSFd (from above) | 66.7 | |
| Level of service, LOSd (from above) | C | |

Average Travel Speed with Passing Lane

| | | |
|---|-----|----|
| Downstream length of two-lane highway within effective length of passing lane for average travel speed, Lde | - | mi |
| Length of two-lane highway downstream of effective length of the passing lane for average travel speed, Ld | - | mi |
| Adj. factor for the effect of passing lane on average speed, fpl | - | |
| Average travel speed including passing lane, ATSpl | - | |
| Percent free flow speed including passing lane, PFFSpl | 0.0 | % |

Percent Time-Spent-Following with Passing Lane

| | | |
|---|---|----|
| Downstream length of two-lane highway within effective length of passing lane for percent time-spent-following, Lde | - | mi |
| Length of two-lane highway downstream of effective length of the passing lane for percent time-spent-following, Ld | - | mi |
| Adj. factor for the effect of passing lane on percent time-spent-following, fpl | - | |
| Percent time-spent-following including passing lane, PTSFpl | - | % |

Level of Service and Other Performance Measures with Passing Lane

| | | |
|--|---|-------|
| Level of service including passing lane, LOSpl | E | |
| Peak 15-min total travel time, TT15 | - | veh-h |

Bicycle Level of Service

| | |
|---|-------|
| Posted speed limit, Sp | 45 |
| Percent of segment with occupied on-highway parking | 0 |
| Pavement rating, P | 3 |
| Flow rate in outside lane, vOL | 331.4 |
| Effective width of outside lane, We | 19.00 |
| Effective speed factor, St | 4.42 |
| Bicycle LOS Score, BLOS | 13.44 |
| Bicycle LOS | F |

Notes:

1. Note that the adjustment factor for level terrain is 1.00, as level terrain is one of the base conditions. For the purpose of grade adjustment, specific downgrade segments are treated as level terrain.
2. If v_i (vd or vo) $\geq 1,700$ pc/h, terminate analysis-the LOS is F.
3. For the analysis direction only and for $v > 200$ veh/h.
4. For the analysis direction only.
5. Use alternative Exhibit 15-14 if some trucks operate at crawl speeds on a specific downgrade.

| Peak 15-min total travel time, TT15 | 0.7 veh-h |
| Capacity from ATS, CdATS | 1700 veh/h |
| Capacity from PTSF, CdPTSF | 1700 veh/h |
| Directional Capacity | 1700 veh/h |

Passing Lane Analysis

| | | |
|---|------|------|
| Total length of analysis segment, Lt | 0.6 | mi |
| Length of two-lane highway upstream of the passing lane, Lu | - | mi |
| Length of passing lane including tapers, Lpl | - | mi |
| Average travel speed, ATSD (from above) | 31.7 | mi/h |
| Percent time-spent-following, PTSFd (from above) | 38.2 | |
| Level of service, LOSd (from above) | C | |

Average Travel Speed with Passing Lane

| | | |
|---|-----|----|
| Downstream length of two-lane highway within effective length of passing lane for average travel speed, Lde | - | mi |
| Length of two-lane highway downstream of effective length of the passing lane for average travel speed, Ld | - | mi |
| Adj. factor for the effect of passing lane on average speed, fpl | - | |
| Average travel speed including passing lane, ATSpl | - | |
| Percent free flow speed including passing lane, PFFSpl | 0.0 | % |

Percent Time-Spent-Following with Passing Lane

| | | |
|---|---|----|
| Downstream length of two-lane highway within effective length of passing lane for percent time-spent-following, Lde | - | mi |
| Length of two-lane highway downstream of effective length of the passing lane for percent time-spent-following, Ld | - | mi |
| Adj. factor for the effect of passing lane on percent time-spent-following, fpl | - | |
| Percent time-spent-following including passing lane, PTSFpl | - | % |

Level of Service and Other Performance Measures with Passing Lane

| | | |
|--|---|-------|
| Level of service including passing lane, LOSpl | E | |
| Peak 15-min total travel time, TT15 | - | veh-h |

Bicycle Level of Service

| | |
|---|-------|
| Posted speed limit, Sp | 45 |
| Percent of segment with occupied on-highway parking | 0 |
| Pavement rating, P | 3 |
| Flow rate in outside lane, vOL | 148.0 |
| Effective width of outside lane, We | 19.13 |
| Effective speed factor, St | 4.42 |
| Bicycle LOS Score, BLOS | 64.08 |
| Bicycle LOS | F |

Notes:

1. Note that the adjustment factor for level terrain is 1.00, as level terrain is one of the base conditions. For the purpose of grade adjustment, specific downgrade segments are treated as level terrain.
2. If v_i (vd or vo) $\geq 1,700$ pc/h, terminate analysis-the LOS is F.
3. For the analysis direction only and for $v > 200$ veh/h.
4. For the analysis direction only.
5. Use alternative Exhibit 15-14 if some trucks operate at crawl speeds on a specific downgrade.

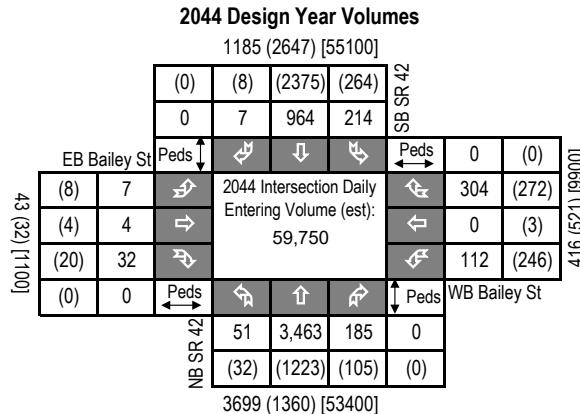

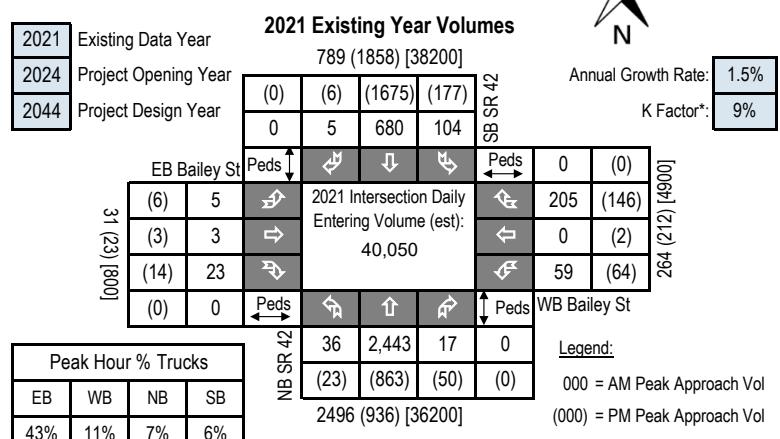

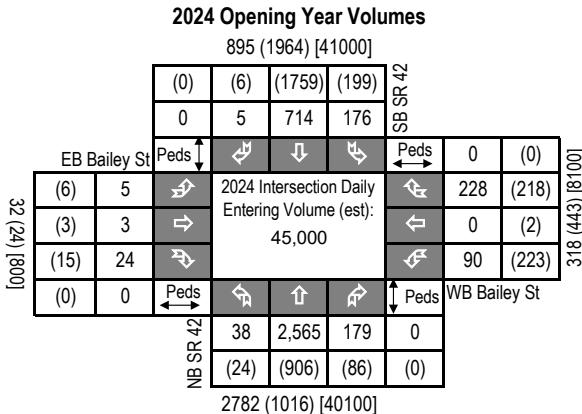

APPENDIX K

ICE SPREADSHEETS

MORELAND AVE (SR 42) & BAILEY ST

| | | | |
|---|-------------|----------------------------------|------------------|
| GDOT PI # (or N/A): | N/A | Request By: | Henrico 183, LLC |
| County: | DeKalb | GDOT District: 7 - Metro Atlanta | |
| Major (State) Road: | SR 42 | Speed Limit: | 45 mph |
| Minor (Crossing) ST: | Bailey St | Speed Limit: | 35 mph |
| Major ST Direction: | North/South | Area Type: | Urban |
| Intersection Control: Conventional (Minor Stop) | | | |
| Prepared By: | Lumin8 | Analyst: | CR |
| Date: | 4/22/2021 | Project ID: | |
| Project Purpose: Evaluate methods of control at intersection affected by Blackhall development. | | | |

Introduction: In 2005, SAFETEA-LU established the Highway Safety Improvement Program (HSIP) and mandated that each state prepare a Strategic Highway Safety Plan (SHSP) to prioritize safety funding investments. Intersections quickly became a common component of most states' SHSP emphasis areas and HSIP project lists, including Georgia's SHSP. Intersection Control Evaluation (ICE) policies and procedures represent a traceable and transparent procedure to streamline the evaluation of intersection control alternatives, and further leverage safety advancements for intersection improvements beyond just the safety program. Approximately one-third of all traffic fatalities and roughly seventy five percent of all traffic crashes in Georgia occur at or adjacent to intersections. Accordingly, the Georgia SHSP includes an emphasis on enhancing intersection safety to advance the *Toward Zero Deaths* vision embraced by the Georgia Governor's Office of Highway Safety (GOHS). This ICE tool was developed to support the ICE policy, developed and adopted to help ensure that intersection investments across the entire Georgia highway system are selected, prioritized and implemented with defensible benefits for safety towards those ends.

Tool Goal: The goal of this ICE tool is to provide a simplified and consistent way of importing traffic, safety, cost, environmental impact and stakeholder posture data to assess and quantify intersection control improvement benefits. The tool supports the ICE policy and procedures to provide traceability, transparency, consistency and accountability when identifying and selecting an intersection control solution that both meets project purpose and reflects overall best value in terms of specific performance-based criteria.

Requirements: An ICE is required for any intersection improvement (e.g. new or modified intersection, widening/reconstruction or corridor project, or work accomplished through a driveway or encroachment permit that affects an intersection) where: 1) the intersection includes at least one roadway designated as a State Route (State Highway System) or as part of the National Highway System; or 2) the intersection will be designed or constructed using State or Federal funding. In certain circumstances where an ICE would otherwise be required, the requirement may be waived based on appropriate evidence presented with a written request. (See the "Waiver" tab to review criteria that may make a project waiver eligible and for instructions to submit a waiver request to the Department). An ICE is not required when the proposed work does not include any changes to the intersection design, involves only routine traffic signal timing and equipment maintenance, or for driveway permits where the driveway is not a new leg to an already existing intersection on either 1) a divided, multi-lane highway with a closed median and only right-in/right-out access or 2) an undivided roadway where the development is not required to construct left and/or right turn lanes (as per the Driveway Manual and District Traffic Engineer).

Two-Stage Process: A complete ICE process consists of two (2) distinct stages, and it is expected that the respective level of effort for completing both stages of ICE will correspond to the magnitude and complexity of the intersection. Prior to starting an ICE, the District Traffic Engineer and/or State Traffic Engineer should be consulted for advice on an appropriate level of effort. The Stage 1 and Stage 2 ICE forms are designed minimize required data inputs using drop-down menu choices and limiting text entry. All fields shaded grey include drop down menu choices and all fields shaded blue require data entry. All other cells in the worksheet are locked.

Stage 1 Screening Decision Record: Stage 1 should be conducted early in the project development process and is intended to inform which alternatives are worthy of further evaluation in Stage 2. Stage 1 serves as a screening effort meant to eliminate non-competitive options and identify which alternatives merit further considerations based on their practical feasibility. Users should use good engineering judgement in responding to the seven policy questions by selecting "Yes" or "No" in the drop-down boxes. Alternatives should not be summarily eliminated without due consideration, and reasons for eliminating or advancing an alternative should be documented in the "Screening Decision Justification" column.

Stage 2 Alternative Selection Decision Record: Stage 2 involves a more detailed and familiar evaluation of the alternatives identified in Stage 1 in order to support the selection of a preferred alternative that may be advanced to detailed design. Stage 2 data entry may require the use of external analysis tools to determine costs, operations and/or safety data that, combined with environmental and stakeholder posture data, form the basis of the ICE evaluation. A separate "CostEst" worksheet tab helps users develop pre-planning-level cost estimates for each Stage 2 alternative evaluated, and a separate Users Guide has been prepared to give guidance on Stage 1 and Stage 2 data entry. Once all data is entered, each alternative is scored and ranked, with the results reported at the bottom of the Stage 2 worksheet to inform on the best of the intersection controls evaluated for project recommendation.

Documentation: A complete ICE document consists of the combination of the outputs from either a completed and signed waiver form or both Stage 1 and Stage 2 worksheets (along with supporting costing and/or environmental documentation), to be included in the approved project Concept Report (or equivalent) or as a stand-alone document.

| | | | | | | | | |
|---|---|--|-----|-----|-----|-----|-----|--|
| GDOT PI # | N/A | Note: Up to 5 alternatives may be selected and evaluated; Use this ICE Stage 1 to screen 5 or fewer alternatives to evaluate in Stage 2 | | | | | | |

MORELAND AVE (SR 42) & I-285 WB RAMPS

| | | | |
|-----------------------|--|----------------------------------|------------------|
| GDOT PI # (or N/A): | N/A | Request By: | Henrico 183, LLC |
| County: | DeKalb | GDOT District: 7 - Metro Atlanta | |
| Major (State) Road: | SR 42 | Speed Limit: | 45 mph |
| Minor (Crossing) ST: | I-285 WB Ramps | Speed Limit: | 40 mph |
| Major ST Direction: | North/South | Area Type: | Urban |
| Intersection Control: | Signal (turn lanes on mainline) | | |
| Prepared By: | Lumin8 | Analyst: | CR |
| Date: | 4/22/2021 | Project ID: | |
| Project Purpose: | Evaluate methods of control at intersection affected by Blackhall development. | | |

Introduction: In 2005, SAFETEA-LU established the Highway Safety Improvement Program (HSIP) and mandated that each state prepare a Strategic Highway Safety Plan (SHSP) to prioritize safety funding investments. Intersections quickly became a common component of most states' SHSP emphasis areas and HSIP project lists, including Georgia's SHSP. Intersection Control Evaluation (ICE) policies and procedures represent a traceable and transparent procedure to streamline the evaluation of intersection control alternatives, and further leverage safety advancements for intersection improvements beyond just the safety program. Approximately one-third of all traffic fatalities and roughly seventy five percent of all traffic crashes in Georgia occur at or adjacent to intersections. Accordingly, the Georgia SHSP includes an emphasis on enhancing intersection safety to advance the *Toward Zero Deaths* vision embraced by the Georgia Governor's Office of Highway Safety (GOHS). This ICE tool was developed to support the ICE policy, developed and adopted to help ensure that intersection investments across the entire Georgia highway system are selected, prioritized and implemented with defensible benefits for safety towards those ends.

Tool Goal: The goal of this ICE tool is to provide a simplified and consistent way of importing traffic, safety, cost, environmental impact and stakeholder posture data to assess and quantify intersection control improvement benefits. The tool supports the ICE policy and procedures to provide traceability, transparency, consistency and accountability when identifying and selecting an intersection control solution that both meets project purpose and reflects overall best value in terms of specific performance-based criteria.

Requirements: An ICE is required for any intersection improvement (e.g. new or modified intersection, widening/reconstruction or corridor project, or work accomplished through a driveway or encroachment permit that affects an intersection) where: 1) the intersection includes at least one roadway designated as a State Route (State Highway System) or as part of the National Highway System; or 2) the intersection will be designed or constructed using State or Federal funding. In certain circumstances where an ICE would otherwise be required, the requirement may be waived based on appropriate evidence presented with a written request. (See the "Waiver" tab to review criteria that may make a project waiver eligible and for instructions to submit a waiver request to the Department). An ICE is not required when the proposed work does not include any changes to the intersection design, involves only routine traffic signal timing and equipment maintenance, or for driveway permits where the driveway is not a new leg to an already existing intersection on either 1) a divided, multi-lane highway with a closed median and only right-in/right-out access or 2) an undivided roadway where the development is not required to construct left and/or right turn lanes (as per the Driveway Manual and District Traffic Engineer).

Two-Stage Process: A complete ICE process consists of two (2) distinct stages, and it is expected that the respective level of effort for completing both stages of ICE will correspond to the magnitude and complexity of the intersection. Prior to starting an ICE, the District Traffic Engineer and/or State Traffic Engineer should be consulted for advice on an appropriate level of effort. The Stage 1 and Stage 2 ICE forms are designed minimize required data inputs using drop-down menu choices and limiting text entry. All fields shaded grey include drop down menu choices and all fields shaded blue require data entry. All other cells in the worksheet are locked.

Stage 1 Screening Decision Record: Stage 1 should be conducted early in the project development process and is intended to inform which alternatives are worthy of further evaluation in Stage 2. Stage 1 serves as a screening effort meant to eliminate non-competitive options and identify which alternatives merit further considerations based on their practical feasibility. Users should use good engineering judgement in responding to the seven policy questions by selecting "Yes" or "No" in the drop-down boxes. Alternatives should not be summarily eliminated without due consideration, and reasons for eliminating or advancing an alternative should be documented in the "Screening Decision Justification" column.

Stage 2 Alternative Selection Decision Record: Stage 2 involves a more detailed and familiar evaluation of the alternatives identified in Stage 1 in order to support the selection of a preferred alternative that may be advanced to detailed design. Stage 2 data entry may require the use of external analysis tools to determine costs, operations and/or safety data that, combined with environmental and stakeholder posture data, form the basis of the ICE evaluation. A separate "CostEst" worksheet tab helps users develop pre-planning-level cost estimates for each Stage 2 alternative evaluated, and a separate Users Guide has been prepared to give guidance on Stage 1 and Stage 2 data entry. Once all data is entered, each alternative is scored and ranked, with the results reported at the bottom of the Stage 2 worksheet to inform on the best of the intersection controls evaluated for project recommendation.

Documentation: A complete ICE document consists of the combination of the outputs from either a completed and signed waiver form or both Stage 1 and Stage 2 worksheets (along with supporting costing and/or environmental documentation), to be included in the approved project Concept Report (or equivalent) or as a stand-alone document.

Waiver Request - Level 2 / 3

In certain circumstances where an ICE would otherwise be required, an ICE may be waived based on appropriate evidence presented with a written request. Scenarios in which an ICE waiver request may be considered include:

1. Proposed improvements do not substantially alter the character of the intersection, and are considered minor in nature, such as extending existing turn lane(s) or modifying signal phasing at an existing traffic signal
2. The intersection consists of a public roadway intersecting a divided, multilane roadway where the access will be limited to a closed median with only right-in/right-out access that will operate acceptably; or
3. The intersection is along an undivided, two-lane roadway that will not be widened and meets the following criteria:
 - Low risk in terms of exposure (total intersection entering volume less than 1,000 vehicles /day)
 - Latest 5 years of crash history is not indicative of a crash problem (no discernible crash patterns coupled with low crash frequency and severity)
 - Layout has no unusual or undesirable geometric features (such as restricted sight distance)
 - The proposed changes are not expected to adversely affect safety

If only one alternative is determined to be feasible from the ICE Stage 1, then a waiver may be submitted in lieu of completing ICE Stage 2. The waiver must clearly explain why there is no other feasible alternative. A Waiver Form should also be submitted to document an agreed upon decision to select a preferred alternative other than the highest scoring alternative in Stage 2.

ICE waiver forms with supporting documentation should be submitted for approval to the Office of Traffic Operations or District Engineer (depending on Waiver level). Questions regarding the waiver process should be routed to the State Traffic Engineer.

| Project Purpose: | Evaluate methods of control at intersection affected by Blackhall development. | | |

Introduction: In 2005, SAFETEA-LU established the Highway Safety Improvement Program (HSIP) and mandated that each state prepare a Strategic Highway Safety Plan (SHSP) to prioritize safety funding investments. Intersections quickly became a common component of most states' SHSP emphasis areas and HSIP project lists, including Georgia's SHSP. Intersection Control Evaluation (ICE) policies and procedures represent a traceable and transparent procedure to streamline the evaluation of intersection control alternatives, and further leverage safety advancements for intersection improvements beyond just the safety program. Approximately one-third of all traffic fatalities and roughly seventy five percent of all traffic crashes in Georgia occur at or adjacent to intersections. Accordingly, the Georgia SHSP includes an emphasis on enhancing intersection safety to advance the *Toward Zero Deaths* vision embraced by the Georgia Governor's Office of Highway Safety (GOHS). This ICE tool was developed to support the ICE policy, developed and adopted to help ensure that intersection investments across the entire Georgia highway system are selected, prioritized and implemented with defensible benefits for safety towards those ends.

Tool Goal: The goal of this ICE tool is to provide a simplified and consistent way of importing traffic, safety, cost, environmental impact and stakeholder posture data to assess and quantify intersection control improvement benefits. The tool supports the ICE policy and procedures to provide traceability, transparency, consistency and accountability when identifying and selecting an intersection control solution that both meets project purpose and reflects overall best value in terms of specific performance-based criteria.

Requirements: An ICE is required for any intersection improvement (e.g. new or modified intersection, widening/reconstruction or corridor project, or work accomplished through a driveway or encroachment permit that affects an intersection) where: 1) the intersection includes at least one roadway designated as a State Route (State Highway System) or as part of the National Highway System; or 2) the intersection will be designed or constructed using State or Federal funding. In certain circumstances where an ICE would otherwise be required, the requirement may be waived based on appropriate evidence presented with a written request. (See the "Waiver" tab to review criteria that may make a project waiver eligible and for instructions to submit a waiver request to the Department). An ICE is not required when the proposed work does not include any changes to the intersection design, involves only routine traffic signal timing and equipment maintenance, or for driveway permits where the driveway is not a new leg to an already existing intersection on either 1) a divided, multi-lane highway with a closed median and only right-in/right-out access or 2) an undivided roadway where the development is not required to construct left and/or right turn lanes (as per the Driveway Manual and District Traffic Engineer).

Two-Stage Process: A complete ICE process consists of two (2) distinct stages, and it is expected that the respective level of effort for completing both stages of ICE will correspond to the magnitude and complexity of the intersection. Prior to starting an ICE, the District Traffic Engineer and/or State Traffic Engineer should be consulted for advice on an appropriate level of effort. The Stage 1 and Stage 2 ICE forms are designed minimize required data inputs using drop-down menu choices and limiting text entry. All fields shaded grey include drop down menu choices and all fields shaded blue require data entry. All other cells in the worksheet are locked.

Stage 1 Screening Decision Record: Stage 1 should be conducted early in the project development process and is intended to inform which alternatives are worthy of further evaluation in Stage 2. Stage 1 serves as a screening effort meant to eliminate non-competitive options and identify which alternatives merit further considerations based on their practical feasibility. Users should use good engineering judgement in responding to the seven policy questions by selecting "Yes" or "No" in the drop-down boxes. Alternatives should not be summarily eliminated without due consideration, and reasons for eliminating or advancing an alternative should be documented in the "Screening Decision Justification" column.

Stage 2 Alternative Selection Decision Record: Stage 2 involves a more detailed and familiar evaluation of the alternatives identified in Stage 1 in order to support the selection of a preferred alternative that may be advanced to detailed design. Stage 2 data entry may require the use of external analysis tools to determine costs, operations and/or safety data that, combined with environmental and stakeholder posture data, form the basis of the ICE evaluation. A separate "CostEst" worksheet tab helps users develop pre-planning-level cost estimates for each Stage 2 alternative evaluated, and a separate Users Guide has been prepared to give guidance on Stage 1 and Stage 2 data entry. Once all data is entered, each alternative is scored and ranked, with the results reported at the bottom of the Stage 2 worksheet to inform on the best of the intersection controls evaluated for project recommendation.

Documentation: A complete ICE document consists of the combination of the outputs from either a completed and signed waiver form or both Stage 1 and Stage 2 worksheets (along with supporting costing and/or environmental documentation), to be included in the approved project Concept Report (or equivalent) or as a stand-alone document.

Waiver Request - Level 2 / 3

In certain circumstances where an ICE would otherwise be required, an ICE may be waived based on appropriate evidence presented with a written request. Scenarios in which an ICE waiver request may be considered include:

1. Proposed improvements do not substantially alter the character of the intersection, and are considered minor in nature, such as extending existing turn lane(s) or modifying signal phasing at an existing traffic signal
2. The intersection consists of a public roadway intersecting a divided, multilane roadway where the access will be limited to a closed median with only right-in/right-out access that will operate acceptably; or
3. The intersection is along an undivided, two-lane roadway that will not be widened and meets the following criteria:
 - Low risk in terms of exposure (total intersection entering volume less than 1,000 vehicles /day)
 - Latest 5 years of crash history is not indicative of a crash problem (no discernible crash patterns coupled with low crash frequency and severity)
 - Layout has no unusual or undesirable geometric features (such as restricted sight distance)
 - The proposed changes are not expected to adversely affect safety

If only one alternative is determined to be feasible from the ICE Stage 1, then a waiver may be submitted in lieu of completing ICE Stage 2. The waiver must clearly explain why there is no other feasible alternative. A Waiver Form should also be submitted to document an agreed upon decision to select a preferred alternative other than the highest scoring alternative in Stage 2.

ICE waiver forms with supporting documentation should be submitted for approval to the Office of Traffic Operations or District Engineer (depending on Waiver level). Questions regarding the waiver process should be routed to the State Traffic Engineer.

| HCM 6th Ctrl Delay | 1.1 |
| HCM 6th LOS | A |

Notes

User approved pedestrian interval to be less than phase max green.

User approved ignoring U-Turning movement.

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Intersection Summary

| | |
|--------------------|-----|
| HCM 6th Ctrl Delay | 1.1 |
| HCM 6th LOS | A |

Notes

User approved pedestrian interval to be less than phase max green.

User approved ignoring U-Turning movement.

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Intersection Summary

| | |
|--------------------|------|
| HCM 6th Ctrl Delay | 99.2 |
| HCM 6th LOS | F |

Notes

User approved pedestrian interval to be less than phase max green.

User approved ignoring U-Turning movement.

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Site Level of Service (LOS) Method: Delay & v/c (HCM 6). Site LOS Method is specified in the Parameter Settings dialog (Site tab).

Roundabout LOS Method: Same as Sign Control.

Vehicle movement LOS values are based on average delay and v/c ratio (degree of saturation) per movement.

LOS F will result if v/c > 1 irrespective of movement delay value (does not apply for approaches and intersection).

Intersection and Approach LOS values are based on average delay for all movements (v/c not used as specified in HCM 6).

Roundabout Capacity Model: SIDRA Standard.

Delay Model: HCM Delay Formula (Geometric Delay is not included).

Queue Model: HCM Queue Formula.

Gap-Acceptance Capacity: SIDRA Standard (Akçelik M3D).

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.
