TO: Mayor Pro Tem George Turner, City of Stonecrest ATTN TO: Keedra Jackson, Senior Planner, City of Stonecrest

FROM: Mike Alexander, Director, ARC Center for Livable Communities

RE: Development of Regional Impact (DRI) Review

ARC has completed a regional review of the below DRI. ARC reviewed the DRI's relationship to regional plans, goals and policies, and impacts it may have on the activities, plans, goals and policies of other local jurisdictions as well as state, federal and other agencies. This final report does not address whether the DRI is or is not in the best interest of the host local government.

Name of Proposal: Stonecrest Logistics Center DRI 3584

Submitting Local Government: City of Stonecrest

<u>Date Opened</u>: March 17, 2022 <u>Date Closed</u>: April 13, 2022

<u>Description</u>: A DRI Review of a proposal to construct 1,904,300 SF of industrial space on a 138.12 site on Stonecrest Industrial Way in the City of Stonecrest in Dekalb County. Currently the entire site is forested with significant stream and wetland areas. Three one-story industrial space buildings are proposed: Building 1 with 445,500 SF; Building 2 with 456,840 SF; and Building 3 with 1,002,000 SF. A total of 1,286 car parking spaces and 780 truck/trailer spaces are included. The local DRI review trigger is an application for a land disturbance permit. There will be one phase with build-out expected in 2024.

Comments:

Key Comments

The project is not aligned with the applicable Developing Suburbs growth policy recommendations which state: "There is a need in these areas for additional preservation of critical environmental locations and resources, as well as agricultural and forest uses." It could be better aligned through retention of additional wooded area within the site and officially dedicating the proposed undisturbed areas as open space.

The project is expected to generate approximately 2,012 daily new car trips and 1,036 daily new truck trips. Opportunities to utilize multi-modal strategies are limited by the site's warehouse use and location; an internal sidewalk network will connect to the external sidewalk system for general pedestrian access and for connectivity to MARTA bus stops within walking/shuttle distance.

A blue line stream, Swift Creek, and its tributaries run through the property. Plans show a portion of the truck staging area for proposed Building Three intruding over the buffers at the headwaters of the south central unnamed tributary of Swift Creek. The truck staging area, as well as any associated mass grading, that intrudes into buffers may require a variance from the City and the State.

The project will affect regulated wetlands on the site. The applicant has stated that an Army Corp NWP 39 will be obtained and mitigation bank credit will be purchased to offset the impacts.

Incorporation of green stormwater and heat island mitigation approaches for the roughly 1,286 car parking spaces and 1,149 truck loading/trailer drop spaces proposed would be supportive of regional environmental policies.

No EV charging stations are proposed; inclusion of some EV charging stations would be supportive of regional EV infrastructure development plans.

General Comments

According to the ARC Unified Growth Policy Map (UGPM), part of The Atlanta Region's Plan, the site of this DRI is designated as Developing Suburbs. The Plan's Regional Development Guide (RDG) details general information and policy recommendations for Developing Suburbs which are provided at the end of these comments.

Transportation and Mobility Comments

ARC's Transportation Access and Mobility Group comments are attached.

Comments note that the project will be served by Lithonia Industrial Boulevard which directly connects with Rock Chapel Road/SR 124 which is a Regional Thoroughfare and Regional Truck Route.

The project is expected to generate a total of 2,012 daily new car trips and 1,036 daily new truck trips. The Transportation Impact Study does not recommend any roadway improvement conditions of approval.

Opportunities to utilize multi-modal strategies are limited by the site's warehouse use and location. An internal sidewalk network will connect to the external sidewalk system for general pedestrian access and for connectivity to MARTA bus stops within walking/shuttle distance. MARTA comments noted that the actual walking distance from the building entrances to the closest MARTA bus stops may be a little more than a mile.

Care should be taken to ensure that the constructed development provides an interconnected, functional, clearly marked and comfortable pedestrian experience on all driveways, paths, entrances, and parking areas. To the maximum extent possible, new driveways and intersection corners where pedestrians will cross should be constructed with minimal curb radii to reduce speeds of turning vehicles and decrease crossing distances for pedestrians.

ARC Natural Resources Comments

ARC's Natural Resources Group comments are attached.

Both the site plan and the USGS coverage for the project area show a blue line stream, Swift Creek running in the northwest portion of the project property. The site plan also shows two unnamed tributaries to Swift Creek in the south central and northern portions of the property. The City's 50-foot stream buffer and 75-foot impervious setback, as well as the State 25-foot Sediment and Erosion Control buffer, are shown along all streams on the plans.

The plans show a portion of the truck staging area for the proposed Building Three intruding over the buffers at the headwaters of the south central unnamed tributary. A sewer easement is also shown crossing this tributary but there is no indication as to whether it is existing or proposed. The truck staging area, as well as any associated mass grading, may require a variance from the City and the State. If proposed, the sewer easement shown may also require variances from the City and State. Any unmapped streams on the property may also be subject to the City and State buffers. Any unmapped waters of the state will also be subject to the State 25-foot Sediment and Erosion Control buffer.

Other Environment Comments

The site is currently entirely wooded. Additional retention of existing trees on the site would be desirable and in keeping with regional goals regarding carbon sequestration and climate change/heat island effect mitigation.

The project can further support The Atlanta Region's Plan in general by incorporating other aspects of regional policy, including green infrastructure and/or low-impact design, e.g., pervious pavers, rain gardens, vegetated swales, etc., in parking areas and site driveways, and as part of any improvements to site frontages.

Approximately 33 acres of the site are shown as not disturbed on the site plan. This includes site boundary buffer and stream buffer areas. There may be potential opportunities for linking these fragmented undeveloped areas with adjacent undeveloped or protected areas to ensure their maintenance and productive use.

No EV charging stations are proposed; inclusion of some EV charging stations would be supportive of regional EV infrastructure development plans.

Unified Growth Policy: Developing Suburbs

Developing Suburbs are areas in the region where suburban development has occurred, and the conventional development pattern is present but not set. These areas are characterized by residential development with pockets of commercial and industrial development. These areas represent the extent of

the urban service area. There is a need in these areas for additional preservation of critical environmental locations and resources, as well as agricultural and forest uses. Limited existing infrastructure in these areas will constrain the amount of additional growth that is possible. Transportation improvements are needed within these Developing Suburbs, but care should be taken not to spur unwanted growth.

While the intensity and use of the proposed project are in keeping with the City of Stonecrest's industrial land use and zoning designations for the parcel, the project is not aligned with The Atlanta Region's Plan's recommendations for Developing Suburbs. The project could be made more responsive to the regional Developing Suburbs goals and policies by retaining as much existing wooded area as possible, officially dedicating conservation areas, and employing green infrastructure in the large surface parking areas. City of Stonecrest leadership and staff, along with the applicant team, should collaborate closely to ensure absolute maximum sensitivity to nearby local governments, neighborhoods, land uses and natural resources.

DRI #3584

DEVELOPMENT OF REGIONAL IMPACT Initial DRI Information

This form is to be completed by the city or county government to provide basic project information that will allow the RDC to determine if the project appears to meet or exceed applicable DRI thresholds. Refer to both the Rules for the DRI Process and the DRI Tiers and Thresholds for more information.

Local Government Information

Submitting Local Government: City of Stonecrest Individual completing form: Keedra T. Jackson

Telephone: 470-542-0057

E-mail: kjackson@stonecrestga.gov

*Note: The local government representative completing this form is responsible for the accuracy of the information contained herein. If a project is to be located in more than one jurisdiction and, in total, the project meets or exceeds a DRI threshold, the local government in which the largest portion of the project is to be located is responsible for initiating the DRI review process.

Proposed Project Information

Name of Proposed Project: Stonecrest Logistics Center Location (Street Address, GPS Stonecrest Industrial Way

Coordinates, or Legal Land Lot Description):

If yes, property owner:

Is the proposed project entirely located within your local

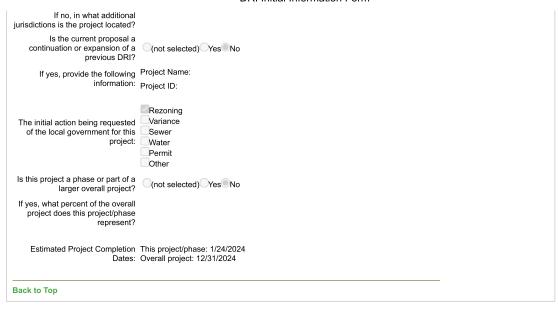

government's jurisdiction?

Brief Description of Project: The proposed development will consist of 1,904,300 square feet (sf) of industrial

space on a 138.12-acre plot.

Development Type:		
(not selected)	Hotels	Wastewater Treatment Facilities
Office	Mixed Use	Petroleum Storage Facilities
Commercial	Airports	Water Supply Intakes/Reservoirs
Wholesale & Distribution	OAttractions & Recreational Facilities	OIntermodal Terminals
Hospitals and Health Care Faciliti	ies Post-Secondary Schools	Truck Stops
Housing	Waste Handling Facilities	Any other development types
Olndustrial	Quarries, Asphalt & Cement Plants	
If other development type, describe:

Additional Information Requested

Has the RDC identified any additional information required in order to proceed with the official regional

(not selected) Yes No

review process? (If no, proceed to Economic

Impacts.)

If yes, has that additional information been provided

(not selected) Yes No to your RDC and, if applicable, GRTA?

If no, the official review process can not start until this additional information is provided.

Economic Development

Estimated Value at Build-Out:

198,000,000

Estimated annual local tax revenues (i.e., property tax,

1.800.000

sales tax) likely to be generated by the proposed

Is the regional work force sufficient to fill the demand created by the proposed

(not selected) Yes No

project?

Will this development

(not selected) Yes No

displace any existing uses? If yes, please describe (including number of units, square feet, etc):

Water Supply

Name of water supply provider for this site:

DeKalb County

What is the estimated water supply demand to be generated by the project, measured in Millions of Gallons Per Day (MGD)?	0.042 MGD		
Is sufficient water supply capacity available to serve the proposed project?	(not selected) Yes No		
If no, describe any plans to e	expand the existing water supply capacity:		
Is a water line extension required to serve this project?	(not selected) Yes No		
If yes, how much additional	line (in miles) will be required?		
Wastewater Disposal			
Name of wastewater treatment provider for this site:	DeKalb County		
What is the estimated sewage flow to be generated by the project, measured in Millions of Gallons Per Day (MGD)?	0.042 MGD		
Is sufficient wastewater treatment capacity available to serve this proposed project?	(not selected) Yes No		
If no, describe any plans to e	expand existing wastewater treatment capacity:		
Is a sewer line extension required to serve this project?	(not selected) Yes No		
If yes, how much additional li	ine (in miles) will be required?		
	Land Transportation		
How much traffic volume is expected to be generated by the proposed development, in peak hour vehicle trips per day? (If only an alternative measure of volume is available, please provide.)	Peak hour trips are 255 (in PM) & 252 (in AM). Daily trips are 3, 048.		
Has a traffic study been performed to determine whether or not transportation or access improvements will be needed to serve this project?	(not selected) Yes No		
Are transportation improvements needed to serve this project?	O(not selected) Yes No		
If yes, please describe below	r.		
Solid Waste Disposal			
How much solid waste is the project expected to generate annually (in tons)?	1,100 tons		
Is sufficient landfill capacity available to serve this proposed project?	(not selected) Yes No		
If no, describe any plans to e	expand existing landfill capacity:		
Will any hazardous waste be generated by the development?	O(not selected) Yes No		
If yes, please explain:			
Stormwater Management			
Miles and the second	FOR		

What percentage of the site 50% is projected to be impervious surface once the proposed development has been constructed?

Describe any measures proposed (such as buffers, detention or retention ponds, pervious parking areas) to mitigate the project's impacts on stormwater management: The site will utilize a stormwater facility with water quality, channel protection and detention to treat the water.		
Environmental Quality		
Is the development located w	vithin, or likely to affect any of the following:	
Water supply watersheds?	(not selected) Yes No	
2. Significant groundwater recharge areas?	(not selected) Yes No	
3. Wetlands?	(not selected) Yes No	
4. Protected mountains?	(not selected) Yes No	
5. Protected river corridors?	(not selected) Yes No	
6. Floodplains?	(not selected) Yes No	
7. Historic resources?	(not selected) Yes No	
8. Other environmentally sensitive resources?	(not selected) Yes No	
If you answered yes to any question above, describe how the identified resource(s) may be affected: An Army Corp NWP 39 will be obtained for the site and mitigation bank credit will be purchased to offset the impacts.

TRAFFIC STUDY

Prepared by NV5 Engineers and Consultants, Inc.

Date March 2, 2022

REGIONAL TRANSPORTATION PLAN PROJECTS

01. Did the traffic analysis incorporate all projects contained in the current version of the fiscally constrained RTP which are within the study area or along major transportation corridors connecting the study area with adjacent jurisdictions?
YES (provide the regional plan referenced and the page number of the traffic study where relevant projects are identified)
Click here to provide comments.
NO (provide comments below)
There are no projects identified in the fiscally constrained RTP.
REGIONAL NETWORKS 02. Will the development site be directly served by any roadways identified as Regional Thoroughfares?
A Regional Thoroughfare is a major transportation corridor that serves multiple ways of traveling, including walking, bicycling, driving, and riding transit. It connects people and goods to important places in metropolitan Atlanta. A Regional Thoroughfare's operations should be managed through application of special traffic control strategies and suitable land development guidelines in order to maintain travel efficiency, reliability, and safety for all users. In light of the special function that Regional Thoroughfares serve in supporting cross-regional and interjurisdictional mobility and access, the network receives priority consideration for infrastructure investment in the Metro Atlanta region. Any access points between the development and a Regional Thoroughfare, combined with the development's on-site circulation patterns, must be designed with the goal of preserving the highest possible level of capacity and safety for all users of the roadway.
□ NO
YES (identify the roadways and existing/proposed access points)
There is one full-access driveway proposed on Stonecrest Industrial Way within the cul-du-sac, which it is planned to connect to Lithonia Industrial Boulevard. Lithonia Industrial Boulevard which provides connection to the regional thoroughfare Rock Chapel Road/SR 124.

03. Will the development site be directly served by any roadways identified as Regional Truck Routes?

A Regional Truck Route is a freeway, state route or other roadway which serves as a critical link for the movement of goods to, from and within the Region by connecting airports, intermodal/multimodal facilities, distribution and warehousing centers and manufacturing clusters with the rest of the state and nation. These facilities often serve a key mobility and access function for other users as well, including drivers, bicyclists, pedestrians and transit users. A Regional Truck Route's operations should be managed through application of special traffic control strategies and suitable land development guidelines in order to maintain travel efficiency, reliability, and safety for all users. In light of the special function that Regional Truck Routes serve in supporting cross-regional and interjurisdictional mobility and access, the network receives priority consideration for infrastructure investment in the Metro Atlanta region. Any access points between the development and a Regional Truck Route, combined with the development's on-site circulation patterns, must be designed with the goal of preserving the highest possible level of capacity and safety for all users of the roadway.

] NO
YES (identify the roadways and existing/proposed access points)
There is one full-access point proposed on Stonecrest Industrial Way within the cul-du-sac, which it is planned to connect to Lithonia Industrial Boulevard. Lithonia Industrial Boulevard provides connection to the regional truck route Rock Chapel Road.

04. If the development site is within one mile of an existing rail service, provide information on accessibility conditions.

Access between major developments and transit services provide options for people who cannot or prefer not to drive, expand economic opportunities by better connecting people and jobs, and can help reduce congestion. If a transit service is available nearby, but walking or bicycling between the development site and the nearest station is a challenge, the applicable local government(s) is encouraged to make the route a funding priority for future walking and bicycling infrastructure improvements.

\boxtimes	NOT APPLICABLE (neare	st station more than one mile away)
	RAIL SERVICE WITHIN OF	NE MILE (provide additional information below)
	Operator / Rail Line	
	Nearest Station	Click here to enter name of operator and rail line
	Distance*	☐ Within or adjacent to the development site (0.10 mile or less)

		0.50 to 1.00 mile
	Walking Access*	Sidewalks and crosswalks provide sufficient connectivity

	Sidewalk and crosswalk network is incomplete
	Not applicable (accessing the site by walking is not consistent with the type of development proposed)
	Click here to provide comments.
Bicycling Access*	Dedicated paths, lanes or cycle tracks provide sufficient connectivity
	☐ Low volume and/or low speed streets provide connectivity
	☐ Route follows high volume and/or high speed streets
	Not applicable (accessing the site by bicycling is not consistent with the type of development proposed)
Transit Connectivity	Fixed route transit agency bus service available to rail station
	Private shuttle or circulator available to rail station
	No services available to rail station
	Not applicable (accessing the site by transit is not consistent with the type of development proposed)
	Click here to provide comments.

^{*} Following the most direct feasible walking or bicycling route to the nearest point on the development site

05. If there is currently no rail transit service within one mile of the development site, is nearby rail service planned in the fiscally constrained RTP?

Access between major developments and transit services provide options for people who cannot or prefer not to drive, expand economic opportunities by better connecting people and jobs, and can help reduce traffic congestion. If a transit agency operates within the jurisdiction and expansion plans are being considered in the general vicinity of the development site, the agency should give consideration to how the site can be best served during the evaluation of alignments and station locations. Proactive negotiations with the development team and local government(s) are encouraged to determine whether right-of-way within the site should be identified and protected for potential future service. If direct service to the site is not feasible or cost effective, the transit agency and local government(s) are encouraged to ensure good walking and bicycling access accessibility is provided between the development and the future rail line. These improvements should be considered fundamental components of the overall transit expansion project, with improvements completed concurrent with or prior to the transit service being brought online.

NOT APPLICABLE (rail service already exists)
NOT APPLICABLE (accessing the site by transit is not consistent with the type of development proposed)
NO (no plans exist to provide rail service in the general vicinity)
YES (provide additional information on the timeframe of the expansion project below)
CST planned within TIP period
CST planned within first portion of long range period
CST planned near end of plan horizon

Click here to provide comments.

06. If the development site is within one mile of fixed route bus services (including any privately operated shuttles or circulators open to the general public), provide information on walking and bicycling accessibility conditions.

Access between major developments and transit services provide options for people who cannot or prefer not to drive, expand economic opportunities by better connecting people and jobs, and can help reduce congestion. If a transit service is available nearby, but walking or bicycling between the development site and the nearest station is a challenge, the applicable local government(s) is encouraged to make the connection a funding priority for future walking and bicycling infrastructure improvements.

OTHER TRA	NSPORTATION DESIGN CONSIDERATIONS
	the site plan provide for the construction of publicly accessible local road or drive aisle ections with adjacent parcels?
arte	ability for drivers and bus routes to move between developments without using the adjacent erial or collector roadway networks can save time and reduce congestion. Such opportunities uld be considered and proactively incorporated into development site plans whenever possible.
	YES (connections to adjacent parcels are planned as part of the development)
	YES (stub outs will make future connections possible when adjacent parcels redevelop)
	NO (the site plan precludes future connections with adjacent parcels when they redevelop)
	OTHER (Please explain)
	the site plan enable pedestrians and bicyclists to move between destinations within the lopment site safely and conveniently?
reli pla des	e ability for walkers and bicyclists to move within the site safely and conveniently reduces fance on vehicular trips, which has congestion reduction and health benefits. Development site in should incorporate well designed and direct sidewalk connections between all key stinations. To the extent practical, bicycle lanes or multiuse paths are encouraged for large reage sites and where high volumes of bicyclists and pedestrians are possible.
	YES (sidewalks provided on all key walking routes and both sides of roads whenever practical and bicyclists should have no major issues navigating the street network)
	PARTIAL (some walking and bicycling facilities are provided, but connections are not comprehensive and/or direct)
	NO (walking and bicycling facilities within the site are limited or nonexistent)
	NOT APPLICABLE (the nature of the development does not lend itself to internal walking and bicycling trips)
	OTHER (Please explain)

O	the ability for walkers and bicyclists to move between developments safely and conveniently educes reliance on vehicular trips, which has congestion reduction and health benefits. Such apportunities should be considered and proactively incorporated into development site plans whenever possible.
	YES (connections to adjacent parcels are planned as part of the development)
	YES (stub outs will make future connections possible when adjacent parcels redevelop)
	NO (the development site plan does not enable walking or bicycling to/from adjacent parcels)
	NO (the site plan precludes future connections with adjacent parcels when they redevelop)
	NOT APPLICABLE (adjacent parcels are not likely to develop or redevelop in the near future)
	NOT APPLICABLE (the nature of the development or adjacent parcels does not lend itself to interparcel walking and bicycling trips)
se	round safely and pleasantly within the site. To the extent practical, truck movements should be egregated by minimizing the number of conflict points with publicly accessible internal roadways, dewalks, paths and other facilities. YES (truck routes to serve destinations within the site are clearly delineated, provide ample space for queuing and turning around, and are separated from other users to the extent practical)
	PARTIAL (while one or more truck routes are also used by motorists and/or interface with primary walking and bicycling routes, the site plan mitigates the potential for conflict adequately)
	NO long or more truck routes carving the site conflict directly with routes likely to be used beguite
	NO (one or more truck routes serving the site conflict directly with routes likely to be used heavily by pedestrians, bicyclists and/or motorists)
COMME	by pedestrians, bicyclists and/or motorists) NOT APPLICABLE (the nature of the development will not generate a wide variety of users and/or
13. Do	by pedestrians, bicyclists and/or motorists) NOT APPLICABLE (the nature of the development will not generate a wide variety of users and/or very low truck volumes, so the potential for conflict is negligible)

	YES (based on information made available through the review process; does not represent a thorough engineering / financial analysis)
	NO (see comments below)
	Click here to enter text.
14.	. Is ARC aware of any issues with the development proposal which may result in it being opposed by one or more local governments, agencies or stakeholder groups?
	\boxtimes NO (based on information shared with ARC staff prior to or during the review process; does not reflect the outcome of an extensive stakeholder engagement process)
	YES (see comments below)
	Click here to enter text.
15.	. ARC offers the following additional comments for consideration by the development team and/or the applicable local government(s):

STONECREST LOGISTICS CENTER DRI

City of Stonecrest Natural Resources Group Comments March 14, 2022

While ARC and the Metropolitan North Georgia Water Planning District have no regulatory or review authority over this project, the Natural Resources Group has identified City and State regulations that could apply to this property. Other regulations may also apply that we have not identified.

Watershed Protection

The proposed project is in the Yellow River watershed which is not a water supply watershed within the Atlanta Region or the Metropolitan North Georgia Water Planning District and is not subject to the Part 5 Water Supply Watershed Criteria of the 1989 Georgia Planning Act.

Stream Buffers

Both the site plan and the USGS coverage for the project area show a blue line stream, Swift Creek running in the northwest portion of the project property. The site plan also shows two unnamed tributaries to Swift Creek in the south central and northern portions of the property. The City's 50-foot stream buffer and 75-foot impervious setback, as well as the State 25-foot Sediment and Erosion Control buffer, are shown along all streams on the plans. The plans show a portion of the truck staging area for the proposed Building Three intruding over the buffers at the headwaters of the south central unnamed tributary. A sewer easement is also shown crossing this tributary but there is no indication as to whether it is existing or proposed. The truck staging area, as well as any associated mass grading, mat require a variance from the City and the State. If proposed, the sewer easement shown may also require variances from the City and State. Any unmapped streams on the property may also be subject to the City and State buffers. Any unmapped waters of the state will also be subject to the State 25-foot Sediment and Erosion Control buffer.

Stormwater/Water Quality

The project should adequately address the impacts of the proposed development on stormwater runoff and downstream water quality.

During the planning phase, the stormwater management system (system) should meet the requirements of the local jurisdiction's post-construction (or post-development) stormwater management ordinance. The system should be designed to prevent increased flood damage, streambank channel erosion, habitat degradation and water quality degradation, and enhance and promote the public health, safety and general welfare. The system design should also be in accordance with the applicable sections of the Georgia Stormwater Management Manual (www.georgiastormwater.com) such as design standards, calculations, formulas, and methods. Where possible, the project should use stormwater better site design practices included in the Georgia Stormwater Management Manual, Volume 2, Section 2.3.

During construction, the project should conform to the relevant state and federal erosion and sedimentation control requirements.
