The data presented in this fact sheet come from the Decennial Census, the American Community Survey, the Longitudinal Employer-Household Dynamics Program, and the Atlanta Police Department.

To better understand the nature of Atlanta’s neighborhoods and neighborhood change over time, Neighborhood Nexus has developed Neighborhood Statistical Areas (NSAs). These areas approximate the city’s neighborhoods using U.S. Census geographies to ensure the most accurate possible data. Please see the end of this report for more details about the data and Neighborhood Nexus.

The map to the right shows Atlanta and its NPUs. The highlighted portion shows the location of the NSA covered in this fact sheet.

The dagger (†) symbol denotes values that cannot be computed.
About Neighborhood Statistical Areas:

Atlanta neighborhoods are “self-identified” by residents. As a result, there are portions of the city that are not part of any neighborhood, while other parts are claimed by more than one neighborhood. Also, some neighborhoods are very small; a few are 1/50 of a square mile or less and have populations of 100 or fewer—much too small to report sample-based statistics. To address these issues, we have defined Neighborhood Statistical Areas (NSAs). These areas: 1) are built from census blocks; 2) nest within NPUs; 3) have a minimum population of 2,000; 4) are comprised of either a single large neighborhood or a set of contiguous smaller neighborhoods and adjacent territory that is not part of a neighborhood; and 5) assign all territory within the city limits to one, and only one statistical area. Because NSAs are formed of census blocks, they are not perfect representations of neighborhood boundaries and may also deviate from the city limits in areas where annexations have taken place since 2010.

About Neighborhood Nexus:

Neighborhood Nexus, powered by the Atlanta Regional Commission, the Community Foundation of Greater Atlanta, Metro Atlanta Chamber, and United Way of Greater Atlanta, is a community intelligence system providing over six thousand data variables from the Census and many other sources at different levels of geography. Bundled state-of-the-art visualization tools help users to understand and analyze these data.

Our goal at Neighborhood Nexus is to support a network of community leaders and residents, government and businesses, advocates and service providers with the information, tools and expertise to make data-driven decisions, help meet challenges, leverage assets, and create new opportunities for policy intervention in community problems.

Neighborhood Nexus supports research, analysis, and community engagement. Our partners use these data and tools to examine past and current socioeconomic and demographic patterns; assess correlations between the equity, health and climate of communities; identify and develop benchmarking metrics; and in so doing make better community decisions. For more information, please visit www.neighborhoodnexus.org.
