Detailed Description and Justification

Funding to provide maintenance of ATMS and ITS components across the metro Atlanta area. Advanced Traffic Management Systems (ATMS, also known as Intelligent Transportation Systems or ITS) encompass a broad range of wireless and wire-line communications-based information, control and electronics technologies. When integrated into the transportation system infrastructure, and in vehicles themselves, these technologies help monitor and manage traffic flow, reduce congestion, provide alternate routes to travelers, enhance productivity, and save lives, time and money.
