Detailed Description and Justification

The proposed project consists of a bridge replacement on SR 211 at Beech Creek and adjusting vertical curves along the bridge approaches beginning approximately 300 feet north and south of the existing bridge over Beech Creek. The typical section will consist of two 12-foot wide lanes (one lane in each direction) with 10-foot wide rural shoulders (2-foot paved). An offsite detour will be utilized during construction. No additional travel lanes are proposed for this project.
