Detailed Description and Justification

This bridge consists of four spans of reinforced concrete deck girders on concrete columns and concrete caps. The design vehicle used for this bridge is below the current standards. The overall condition of this bridge would be classified as poor to fair. The deck is in fair condition due to concrete cracking, spalling and the presents of efflorescence throughout. The superstructure is in poor condition with advanced concrete spalls, delamination and section loss in the reinforcing steel. One sidewalk and approximately eight feet of roadway are closed to traffic due to the section loss and spalls. The substructure is in fair condition with concrete cracking and spalls. Due to structural integrity of all components of this bridge, replacement is recommended.
