Detailed Description and Justification

This project will construct a grade separation of Walther Boulevard over SR 316. The existing typical section of Walther Boulevard consists of two 12-foot travel lanes (one in each direction) with a 12-foot flush median. The proposed typical section of Walther Boulevard would consist of two 12-foot travel lanes with a 14-foot two way left turn lane and a 12-foot shoulder. Four foot bike lanes and 5-foot sidewalk would be located on both sides of the roadway. The proposed Walther Boulevard bridge over SR 316 would be a four lane span bridge 404 ft in length.
